· PREFACE ·

THE VOLUME LIBRARY has been prepared in response to a well-defined need. In the first place, it assembles reference material to answer the everyday needs of students in their school work. In the second and broader sense, it supplies supplementary information for students both in and out of school, enlarging and enriching their fund of useful information in all the large departments of knowledge.

Advantages of a One-Volume Reference Work.—THE VOLUME LIBRARY is in the best sense of the term a library in one volume composed of fifteen departments, called accurately Books. Through this efficient arrangement, the student finds the desired information speedily. The Books are definitely graded and carefully organized to render the maximum service. The advantages of a one-volume reference work are many. It overcomes the very real discouragement that so often comes to the young student in searching through volume after volume. In one volume all like subjects can be put together, thus avoiding much repetition unavoidable in works of many volumes. The price of this single-volume storehouse is but a fraction of what it would be were the same amount of material bound up into many volumes.

The Plan.—The editors and contributors throughout have been in hearty accord with the plan as stated and have contributed articles, sections and departments which, while being units complete in themselves, have amalgamated into a coherent whole. The writers of THE VOLUME LIBRARY are men and women who speak with authority in their own fields. Furthermore they are authors who have the ability to present material in an interesting way. Experience has amply proved that owners of the volume are users. It is a book that is constantly out on the table and in service.

Visualization has been recognized as a valuable aid in learning. It is a fact that one becomes more interested in and remembers longer information that carries illustrations. To provide more and more good pictures has been the policy of THE VOLUME LIBRARY in successive editions. The subjects are truly visualized for the student.

Simplicity coupled with accuracy has been a goal set and attained in the pages of THE VOLUME LIBRARY. The writers have chosen words that are expressive but easily understood by the ordinary reader. The authors have been selected for their standing in their fields of knowledge, and in addition their work has been further checked and verified by other competent authorities.

School Problems Solved.—The makers of THE VOLUME LIBRARY believe that every school problem should have a solution and to this end they have given help in solving the problems of school children all the way through the kindergarten, grades and high school. The average student finds it increasingly difficult, with the many subjects taught today, to remember dates and other facts in their proper setting. THE VOLUME LIBRARY renders service here. For example, in American history. The question may be to name four events in a president's administration, or four important battles in a war. To solve this query, a pictorial record of every presidential administration and every important United States war provides the answer. Throughout the volume, hundreds of pictures, diagrams and tables solve the student's problems efficiently and interestingly.

The Completeness of THE VOLUME LIBRARY is an outstanding characteristic. Starting with the kindergarten and the primary, with the games, stories and songs of this age, the volume helps day by day all the way through high school. Mathematics, from the simplest number work to algebra and geometry, is handled by experts. The simple geography of the community is designed for the younger child. The older student may find geography covering the entire world. In addition to the customary subjects found in an ordinary one-volume work, THE VOLUME LIBRARY is outstanding in America in presenting such complete accessory departments as a very complete Atlas, based on the 1930 census, and devoting sixty-four pages to this feature. Another remarkable accessory department is the Multiplex Dictionary, where the student may find definition of words. This is enhanced in value by a carefully prepared glossary of new and unusual words.

Home Training Value.—Parents today as never before are realizing the necessity of keeping in touch with the work of their children. No matter how good schools may be, home training is the biggest factor in the real education of a child. The vast majority of the child's hours are spent at home or under home influence. Parents are aware that the more they interest their children in things worth while, the better their chance for success in life. THE VOLUME LIBRARY is dedicated to an attainment of these worthy ideals.

The Index.—The attention of every owner of THE VOLUME LIBRARY is directed at the outset to the index at the back. It has been made by experienced librarians according to the best library practice. It is a cross-reference index; for instance, "American Revolution" may be found under "American" or under "Revolution," thus providing instant access to the desired information. The three columns or more of each page are further indexed by the use of the letters following the page number; for instance, 856b indicates the second column on page 856.

Bureau of Research.—The makers of THE VOLUME LIBRARY realize that no work, in one or in one hundred volumes, can answer every question. As a further service, ***free for ten years,*** any family owning THE VOLUME LIBRARY is given the privilege of consulting the Bureau of Research for the answer to any question when the volume is not sufficient. Merely send a self-addressed stamped envelope. To make this service especially attractive to children, the department has been placed in charge of "Uncle Jim." Address: Uncle Jim, 307 Fifth Avenue, New York City.

In dedicating THE VOLUME LIBRARY to the service of students everywhere, the publishers wish to acknowledge their indebtedness to the editors and contributors for their tireless efforts, extreme care and constant coöperation in making this volume accurate, interesting, clear and comprehensive.

THE PUBLISHERS.

EDITORS AND CONTRIBUTORS

ABRAM ROYER BRUBACHER, PH. D., President New York State College for Teachers.....
....ADVISORY EDITOR, BOOKS I-VI, VIII-X

S. E. FARQUHAR, M. S.....
MANAGING EDITOR, BOOKS VII, XI-XIV, Also Contributor of DICTIONARY OF PLANTS.

ALLEE, WARDER C., PH. D., Professor of Zoölogy, University of Chicago, Co-author *Nature of the World and of Man*.....ZOÖLOGY

ANDERSON, RASMUS B., LL.D., Formerly Professor of Scandinavian Literature, University of Wisconsin. Author *Norse Mythology, Viking Tales of the North*...SCANDINAVIAN LITERATURE

BAILLOT, EDOUARD P., L. H. D., Formerly Professor of Romance Languages and Literature, Northwestern University, Co-author *French Composition*.....FRENCH LITERATURE

BARBER, H. C., M. A., Head of Mathematics Department, Phillips Exeter Academy. Author *Teaching Junior High School Mathematics, Everyday Algebra*. Past President National Council of Teachers of Mathematics.....MATHEMATICS

BENNOT, MAUDE, M. A., Assistant to the Director, Adler Planetarium and Astronomical Museum, Chicago.....ASTRONOMY

BEVERIDGE, JOHN HARRIE, A. M., PD. D. Superintendent of Schools, Omaha, Nebraska. Past President, Department of Superintendence, National Education Association...GEOGRAPHY

BINNS, CHARLES F., D. SC. Director, New York State College of Clay Working and Ceramics. Author *Story of the Potter, Ceramic Technology*
.....CERAMICS

BRITTAIN, MARION LUTHER, LL. D., President Georgia School of Technology. Author *Blue Book of Stories*, etc.....GEOGRAPHY

BROWN, CALVIN S., PH. D., SC. D., Professor of Modern Languages, University of Mississippi. Author *Later English Drama*.....
.....COMPARATIVE LITERATURE

BURGESS, ELEANOR HARRIS, B. M., Accredited Teacher of Dalcroze Eurythmics.....
.....DALCROZE EURYTHMICS

BURPEE, LAWRENCE J., F. R. G. S., Secretary International Joint Commission, Ottawa, Canada. Past President Canadian Authors' Association. Author *Atlas of Canadian History, Encyclopedia of Canadian History*, etc.....
.....GOVERNMENT OF CANADA

BUTLER, G. MONTAGUE, SC. D., Dean, College of Mines and Engineering, University of Arizona. Author *A Pocket Handbook of Minerals*.....
.....MINERALOGY

CHASE, SUSAN FRANCES, PH. D., Late of Department of Psychology and Literature, Buffalo State Teachers College. Author *Talks to Teachers, Outlines of Literature*, etc.....
.....ELEMENTARY EDUCATION

CLARK, LINDLEY D., M. A., LL. B., Deputy Commissioner, United States Employee's Commission. Author *Law of the Employment of Labor, Minimum Wage Laws in the United States*, etc.

CLARK, THOMAS ARKLE, LITT. D., Dean of Men, University of Illinois. Author *English Composition, Great American Authors*, etc.....
.....CORRECT USE OF WORDS

COBURN, FOSTER D., LL. D., Late Secretary, Kansas Department of Agriculture. Author twenty volumes on agriculture.....
.....AGRICULTURE, HORTICULTURE

CODY, FRANK, PD. M., A. M., Superintendent of Schools, Detroit. Past President, Department of Superintendence, National Education Association
.....GEOGRAPHY

CONWELL, GEORGE MAC FEELY, PH. D., Instructor in Mathematics, St. Paul's School, Concord, N. H.....GEOMETRY

CRONEIS, CAREY, PH. D., Assistant Professor of Invertebrate Paleontology, University of Chicago. Writer of scientific articles.....GEOLOGY

DECKER, IRIS, A. B., B. F. A., Musician, Composer *The Outlaw King, Tavas*, etc.....
.....DICTIONARY OF MUSICAL TERMS

DRISCOLL, LUCY C., A. M., Assistant Professor of the History of Art, University of Chicago. Writer of art articles.....PAINTING

DUGGAR, BENJAMIN M., PH. D., Professor of Physiological and Economic Botany, University of Wisconsin. Editor and writer. Author *Fungous Diseases of Plants, Plant Physiology*, etc..BOTANY

ELMQUIST, AXEL L., M. A., Formerly Head of Department of Scandinavian Literature, Northwestern University. Author *An Elementary Scandinavian Grammar*, etc..SWEDISH LITERATURE

FALK, I. S., PH. D., Associate Director, Committee on Costs of Medical Care, Washington, D. C. Formerly Professor of Hygiene and Bacteriology, University of Chicago. Author *Principles of Vital*

Statistics; co-author *The Newer Knowledge of Bacteriology and Immunology*.....HYGIENE

FALK, R. H., B. A. Hygienist, Writer...HYGIENE

FISCHER, LOUIS A., B. Sc., Late Chief, Division of Weights and Measures, U. S. Bureau of Standards. Author *History of Weights and Measures*.....WEIGHTS AND MEASURES

FORTIER, ALCEE, Litt. D., Late Professor of French Languages and Literature, Tulane University. Author *History of French Literature*.....FRENCH LITERATURE

FOX, PHILIP, M. S., LL. D., Director of Adler Planetarium and Astronomical Museum, Chicago. Author *Annals of the Dearborn Observatory, Vols. I and II.* Contributor to astronomical journals.....ASTRONOMY

GARRISON, CHARLOTTE G., M. A., Instructor in Kindergarten-First Grade Education, Teachers College; Principal, Horace Mann Kindergarten, Columbia University. Author *Permanent Play Materials for Young Children*.....EDUCATIONAL PLAYTHINGS

GENUNG, JOHN F., Ph. D., Late Professor of Rhetoric and English Criticism, Amherst College. Author *Practical Elements of Rhetoric*.....FIGURES OF SPEECH

GOETZ, LILLIAN, Teacher of Kindergarten, Schenectady Public Schools. Formerly Instructor, Schenectady City Normal School.....KINDERGARTEN

GOLDEN, MARY E., Ph. B., Assistant Principal and Art Instructor, McCosh (Public) School, Chicago.....GREAT PAINTERS, FAMOUS PAINTINGS

GRIFFIS, WILLIAM ELLIOT, L. H. D., Writer, Lecturer. Late Professor, Imperial University, Tokio. Author *The Mikado—Institution and Person*, etc.

TABLE OF CONTENTS

Book One—Education

Field of Education; Aims in Education; American Education—Kinds of Schools, What to Expect from Schools, Earning a Living, Vocations; Educational Playthings; Primary Education—Methods, Book Shelf, Nature Study and Elementary Agriculture; Dalcroze Eurythmics—a New Note in Education; Kindergarten Education—Methods of Using Materials, Manual Activities, Games, Songs, Stories, Poems, Rhythms, Sense Games; Bibliography.....1

Book Two—Language and Grammar

Correct Speech—Language Games, Misused Words, The Language House; Grammar—Sentence Analysis, Parts of Speech, Principal Parts of Verbs, Conjugations, Syntax, Parsing, Puzzling Constructions, Diagrams, Dictionary of Prepositions; Classification of Languages; Practical English—Composition, Proof Reading, Business English, Letters; Figures of Speech; Dictionary of Words Frequently Misused; Books of the Bible; Dictionary of Abbreviations, Contractions and Degrees; Libraries; The French Academy; Culinary Words and Phrases; Bibliography.....63

Book Three—Literature

Field of Literature; Parallel Outlines of World Literature—From the Beginning to the Birth of Christ, From Jesus to Mohammed, From Mohammed to Dante, From Dante to the Pre-Reformation Period, Seventeenth Century, Eighteenth Century, Nineteenth Century, Late Nineteenth Century and Early Twentieth Century; Graded List of Books for the Reading of Children of All Ages; Dictionary of Authors, Books, Characters and Literary Terms; Dictionary of Pseudonyms and Sobriquets; Mythology—Dictionary of Myths, Pronunciation of Mythological Terms.....121

Book Four—History

Field of History; Maps of World in Series, 3000 B.C. to 1700 A.D.; History Topics Alphabetically Arranged; Picture History of Revolutionary War; Picture History of the Presidential Administrations; Picture History of Civil War; Picture History of World War; The League of Nations; Chronological History of the World—Ancient History, The Middle Ages, Modern History; Parallel Outlines of Universal History—From the Dawn of History to the Time of Abraham, From Abraham to the Assyrian Ascendency, B.C. 2000-1200, Assyrian-Babylonian Period, B.C. 1200-529, Persian-Macedonian Period, B.C. 529-323, Greek-Roman Period, B.C. 323-1 A.D. Period of the Roman Empire, A.D. 1-476, Fall of Rome to Mohammed, 476-622, Mohammed to the Treaty of Verdun, 622-843, Treaty of Verdun to the Dark Ages, 843-936, Period of the Dark Ages, 936-1096, Period of the Crusades, 1096-1273, Period of the Renaissance, 1273-1492, Period of the Reformation and Religious Wars, 1492-1648, Peace of Westphalia to the Death of Louis XIV, 1648-1715, Death of Louis XIV to the Fall of Napoleon, 1715-1815, Fall of Napoleon to American Civil War, 1815-1865, American Civil War to the Present Time, 1865- ; Parallel Outlines of American History—Period of Discovery and Exploration, The Colonial Period, Period of Union and Independence, Period of the Confederation, From Adoption of the Constitution to the Civil War, Civil War and Reconstruction, Period of Economic Development, Period of National Expansion; Notable Wars of History; The World War; Rulers of the World; Bibliography.....179

Book Five—Geography

Field of Geography; Geography and the Life of the Child; Map Drawing; Plays, Games, Collections; Museums; Nature Study and Geography; Economic Geography—Wheat, Corn, Cotton, Forest Products, Coal, Iron, Copper; Political Divisions—United States, North Atlantic States, Southern States, Central States, Western States, Alaska, Porto Rico, Philippines, Hawaiian Islands, Central America, Canada, South America, Europe, British Isles, France, Germany, Belgium, Holland, Greece, Italy, Switzerland, Spain, Scandinavian Countries, Russia, Asia, China, Japan, India, Turkey, Persia, Australia, New Zealand, Africa, The Sahara, Egypt, Ethiopia, Liberia, Union of South Africa; Bibliography.

Universal Gazetteer—Earth, Oceans, Governments and Rulers of Countries of the Worlds, Statistics and Industries of Countries, Panama Canal, Facts Concerning States of United States, Travel Distances, Altitudes of Large American Cities and Health Resorts.....309

Book Six—Trade and Industry

Agriculture—Home and Foreign Markets, Irrigation and Drainage, Agricultural Education, Experiment Stations; Field Crops; Orchard and Garden Crops; Horses, Cattle, Sheep and Swine; Chickens, Turkeys, Ducks and Geese; Shrubs and Hedges; Flower Planting Table; The Rose Garden; Foodstuffs; Narcotics and Medicines; Fibers; Commercial Woods; Gums, Resins and Extracts; Oils, Fats and Waxes; Dyestuffs and Tanning Materials, Animal Products; Mineral Products; Metals; Non-Metals; Money, Banking and Finance; Bibliography.....375

Book Seven—The Atlas

Political Maps of the World, North America, South America, Europe, Asia, Africa, Oceania, Mexico, West Indies, Canada, United States and the Polar Regions; Commercial Map of the United States, Showing Transportation Lines, Location of Mineral Deposits and Crop Distribution; Commercial Map of the World, Showing Ocean Routes, Cable Lines, Ocean Currents; Maps of all the Individual States of the United States; Complete Up To Date Population Figures (1930 for United States). 425

Book Eight—Biography

Important Information and Data of Birth, Education, Business and Professional Achievements, Authorship, Residence; Over Four Thousand Historical and Contemporary Characters. 489

Book Nine—Multiplex Dictionary

Definitions; Pronunciations; Synonyms; Antonyms; Words Frequently Mispronounced; Capitalization; Parts of Speech and Syllabication Indicated for Every Word 633

Book Ten—Mathematics

Arithmetic—Magic of Number, Number and the Child, Fraction Helps, Number Devices, Applied Arithmetic, Addition, Subtraction, Multiplication, Division, Greatest Common Divisor, Least Common Multiple, Common Fractions, Decimal Fractions, Cancellation, Aliquot Parts, Denominate Numbers, United States Legal Weights, Metric System, Foreign Weights, Foreign Coins, Temperature Scales, Percentage, Discounts, Commission and Brokerage, Interest, Taxation, Insurance, Exchange, Stocks and Bonds, Partnership;

Algebra—Equations, Graphs, Scales, Simultaneous Equations, Factoring, Quadratic Equations;

Geometry—History of, Relation to Sciences, Axioms, Postulates, Angles, Triangles, Perpendiculars, Parallels and Parallelograms, Circle and Measurement of Angles, Protractor, Commensurable Magnitudes, Incommensurable Magnitudes, Proportion, Areas, Problems of Construction, Formulas 793

Book Eleven—Science

Field of Science; Outline of Sciences; Astronomy—Astronomical Instruments, Solar System, Sidereal System; Botany—Classification, Histology, Processes Characteristic of Living Organisms; Common Food Plants; Dictionary of Plants; Chemistry—Its Field, Important Phases, Subdivisions of Chemistry; Chemistry of Foods; Table of Chemical Elements; Table of Common Chemical Substances; Ethnology; Geology—Physical Geology, Historical Geology, Synopsis of Major Events of Historical Geology, Geologic Development of Animal Kindgom; Geologic Development of Plant Kingdom; Mineralogy; The Weather; Physics—Heat, Mechanics, Electricity; Radio; Zoölogy—Classification, Embryology, Histology, Physiology, Animal Behavior, Ecology, Zoölogical Theories; Dictionary of Animals; Bibliography. 883

Book Twelve—Hygiene

The Span of Life; Structure of the Body; Systems of the Body and Their Hygiene; Nutrition and the Hygiene of Diet; Types of Disease and Their Causes; Infection and Resistance; Antiseptics and Disinfectants; Communicable Diseases and Their Prevention; Cancer; Community Hygiene and Sanitation; Vital Statistics; Tables of Food Values; Physical Education—Badge Tests, Swimming Tests, Physical Efficiency Tests, Motor Ability Tests; Games, Sports and Recreations—Including Games, Boys' and Girls' Clubs, Camping, Fishing, Skating, etc.; Bibliography 977

Book Thirteen—Government and Law

Field of Government; Government of United States—Congress, Executive, Supreme Court, Indians; Table of Presidential Elections and Inaugurations; Table of Facts Relating to the Presidents; Government of Canada; Law—History of, Classification, Status, Contracts, Negotiable Instruments, Agency, Corporations, Partnerships, Personal Property, Real Property, Legal Remedies, Commercial Law in the Various States; Legal Holidays; Labor Law and Legislation—Employees' Rights, Wages, Hours, Employers' Liabilities, Employment, Labor Organizations, Compulsory Education and Child Labor Laws in the States; Parliamentary Law—Organization, Conduct of Business, Forming a High School Literary Society; Dictionary of Political Science Terms; Declaration of Independence—Table of Signers; Articles of Confederation; Constitution of United States; Bibliography. 1043

Book Fourteen—Fine Arts

Field of the Fine Arts; Architecture; Sculpture—Periods of, Table of Leading Sculptors; Painting—Ancient, Early Italian, Later Italian, Medieval in the North, Northern Renaissance, Seventeenth Century, Eighteenth Century, Nineteenth Century, Twentieth Century, In the United States, Great Painters, Famous Paintings in Important Galleries; The Graphic Arts; Fine Arts Terms; Music—Early History, Greek, Oriental, Folk, Early Christian, Medieval, Opera and Oratorio, Great Composers, Modern Schools of Music, Symphony Orchestra, Brass Band, Pianoforte, Organ, Folk Instruments, Great Names in Music, Dictionary of Musical Terms; Ceramics; Furniture; Interior Decoration; Bibliography 1097

Book Fifteen—Useful Miscellany

Miscellaneous Facts and Information Difficult to Obtain Elsewhere; Answers to Puzzling Questions; Fugitive Facts and Statistics, Classified Alphabetically for Easy Access to Information; Bibliography 1181

IN THE LABORATORY OF EDUCATION

1. The Story Hour. Georgene Faulkner, the "Story Lady," and her group of kindergarten children; Faulkner School, Chicago. 2. The Gardeners. These boys and girls of the kindergarten have been singing their garden song to the motion of spades, hoes and rakes; Doan School, Cleveland. 3. Commerce. A fifth grade geography project concerning the commerce of the United States, worked out on a large floor map; Francis W. Parker School, Chicago. 4. Wood Shop. A seventh grade group at the Francis W. Parker School. 5. Distillation of Water. A science experiment, showing purification by distillation of water that has been colored (in round flask) purple with potassium permanganate; New York Training School for Teachers. 6. Studying Applied Electricity. Senior high school students working in the industrial curriculum; Philadelphia.

BOOK I

EDUCATION

THE FIELD OF EDUCATION

If the 25,000,000 children of school age in this country were placed in a solid line, it would extend from the northeast coast of Maine to the southwest coast of California, and according to Professor Snyder, all except those that stood in the latter state do not go beyond the grammar-grades. Worse than that, the majority of our citizens and voters have probably not gone much, if any, beyond the end of the sixth grade. Thus the problem of doing the most and best for the grammar-school children is one of profound national importance for the safety and welfare of our country.

The end and aim of education is to develop each individual to the most complete maturity of all the powers of the body and mind. In its larger sense, education begins at birth, or with the marriage of the parents, and we must not forget, that, besides the school, there are more than fourscore different types of child-welfare organizations that are essentially educational, dealing with health, morals, recreation, occupation, religion and all the rest.

An educational system naturally falls into four grand divisions: The first deals with the child up to the dawn of the teens; the second, or intermediate or high school, includes the early, and the third, or collegiate, the later pubescent years; the fourth, or professional, deals with mature young men and women.

Primary Education.—The end and aim of primary education may be divided into (a) special, and (b) general. Under the first come reading and writing. The child who has mastered these arts has access to all the literature in the vernacular. He can transcend his own limits of time and space, and commune with the greatest minds that have left their written records and literature in any age or land. He can become a world citizen and learn from the printed page whatever he will about the life of his own community, state, nation, the world; and from this point on, in some sense, his education is in his own hands.

The point now to be stressed is how to insure that he will read the best, and not the worst, things in print. He has before him the world of letters and books. There is, alas, always the possibility that he will be degraded by reading what is vile and demoralizing, for there is printed matter which anti-vice societies destroy by the ton, which causes a moral decay that is impossible to those who cannot read. A graver danger, because one to which all are exposed, is that of spending their reading time upon the second or tenth best, for print now keeps alive masses of material which would have sunk to oblivion but for the printer's art.

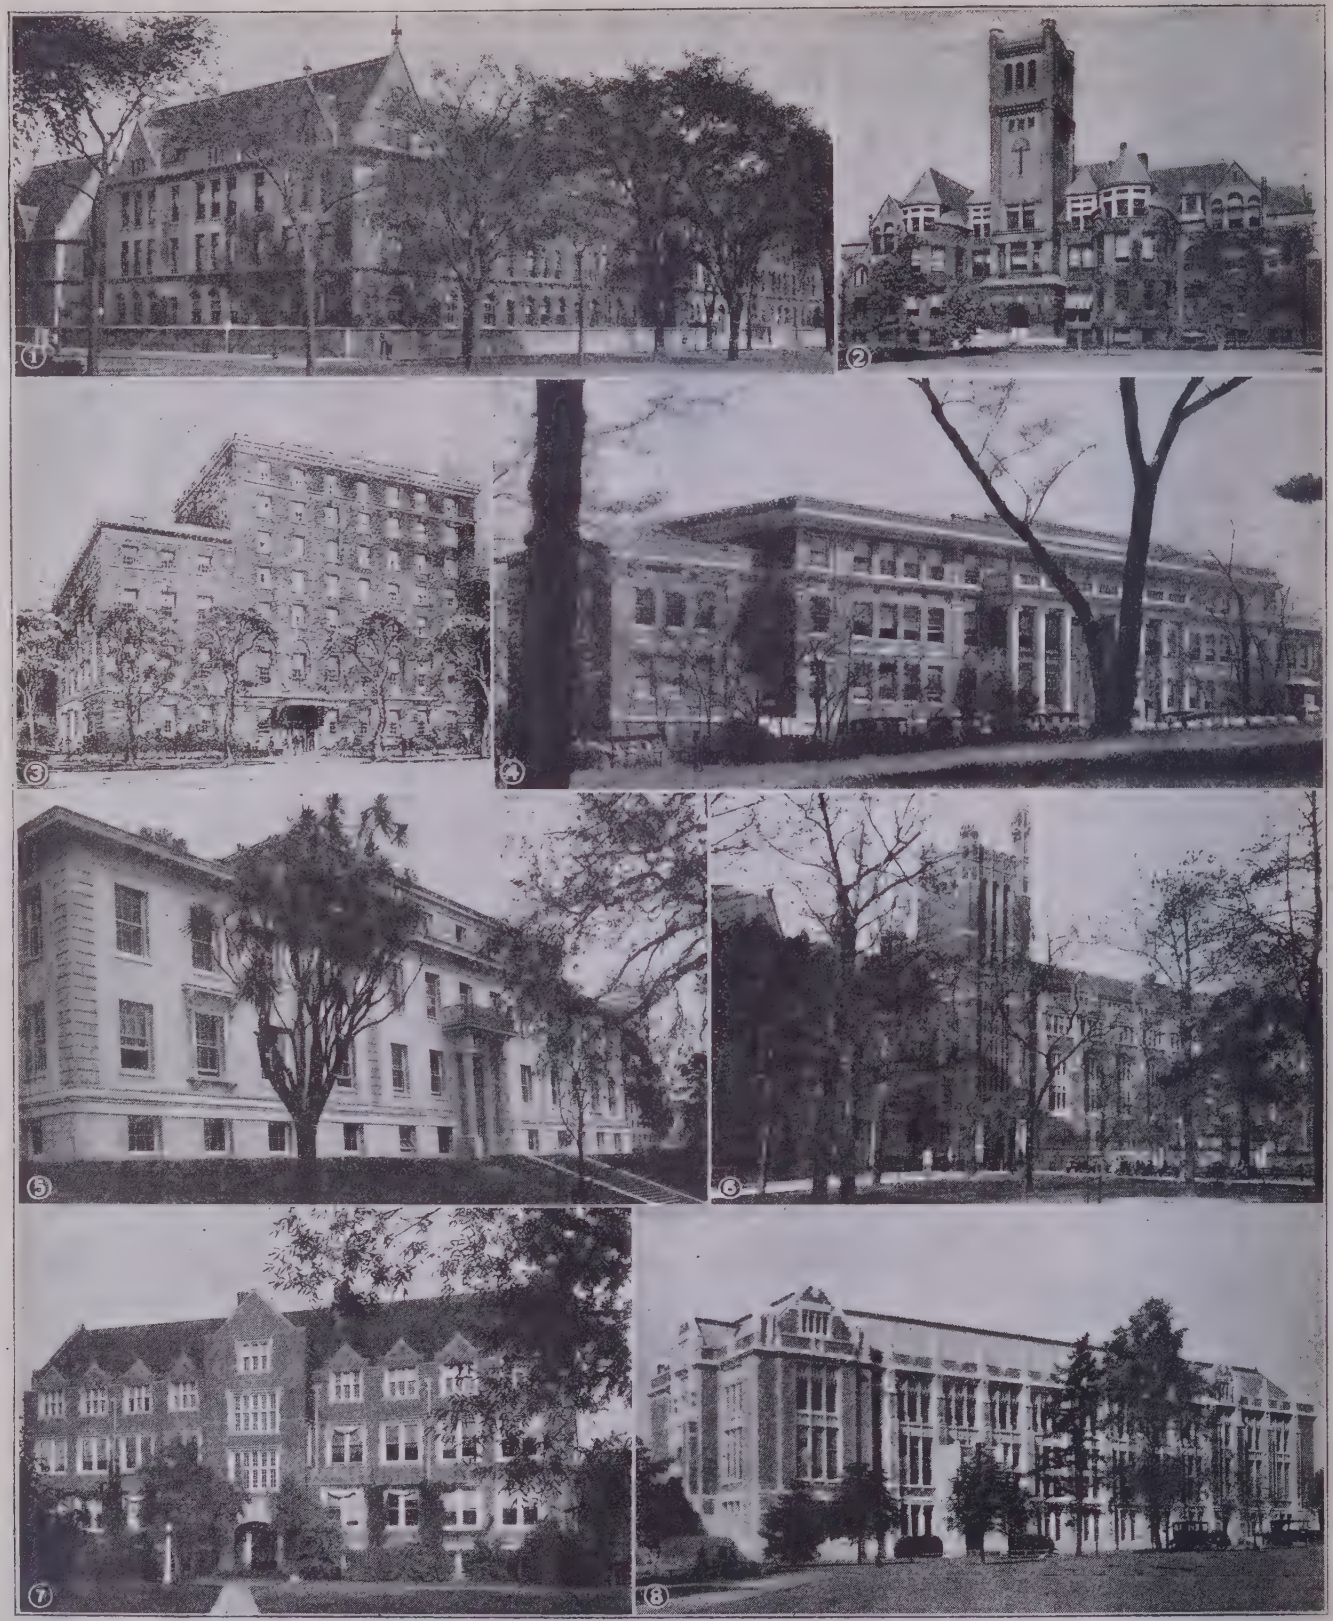
Good Books.—Among the most precious educational agencies are those that determine the content of school readers, advise and list the best books and incite children to read them by means of story telling and libraries in the schoolrooms and arouse and direct the reading habit, which at about the end of the grammar grades reaches the highest point of its curve. At this age, more boys, and many more girls, are liable to have reading crazes than at any other. Hence some have gone so far as to advocate a kind of school Bible or canon so as to make certain that children shall know and feel the uplift of the greatest books that make the world's classic literature, in some epitomized form. By the aid of the story teller's art this ideal is no longer impossible. From the spontaneous reading interest of children, of which there are now several admirable special studies, it would appear that on leaving the grammar grades, each child should have some special reading interest and have acquired the habit of gratifying it in our now universally diffused libraries, to which most children have access.

Arithmetic is the door to mathematics. Although we have doubtless overemphasized it, it is essential that the child command the methods of ready and correct computation which are vital for every vocation. The simple rules of arithmetic and fractions, the laws and tables of mensuration, proportion, the elements of the roots and powers of numbers, with the elements of geometry, but not much of any algebra, should be attained. Fair penmanship and simple composition, with decent command of the English language, are of course essential. The movement to defer writing till the second grade, or the eighth year, is beneficent, and will do much to improve penmanship, while more oral and less written work will tend to give a better command of language, which lives, moves and has its being in the circuit from ear to mouth, and is a dead and lifeless thing on the long circuit from the eye that reads to the hand that writes.

Nature Study, a little school gardening and occupational work, note singing, which should precede note reading by several years and which cultivates not only the voice but the heart, is now believed to be both possible and desirable for nearly all children.

Geography should begin with the knowledge of the immediate environment perhaps of the schoolroom and widen to the town, the state, the nation and the world, in concentric irradiation, with some map drawing and sand modeling, with industrial, commercial and transportational elements always stressed. This work can often be naturally connected with the industries of the locality, sources of raw material, markets for the finished products, and be helped out by regular school visitations to the principal industries of the town.

History and Civics are vital for citizenship. Both may well begin with the locality, with visits to the city hall and other public institutions of knowledge, the historical monuments and their significance and sentiments inspired by the flag.



Besides these, there should be a margin or fringe of accessory influences pervading the grammar grades. Arbor Day and other holidays should always bring their lessons. There should be, if possible, visits to the reformatory and charitable institutions of the vicinity, and their lessons should be inculcated. Before leaving the grades, every child should have a good repertory of plays and games, and should have some practice in the elements of manual training as introductory to some form of skilled labor. The influence of the school house, room and yard should be made the best possible, and the personal influence of the teacher should culminate in occasional serious and carefully prepared talks upon life and its duties, obligations, social relationships.

At the very beginning of the teens, teachers and systems should recognize the marvelous expansion of energy and the new interests that are awakened and therefore the new methods that are necessary to enlist the best powers of the child.

Intermediate Schools.—Every community should have continuation schools to meet the needs of the thousands of children from thirteen or fourteen to sixteen who have left school and who cannot and perhaps should not find vocational employment. The needs of this class of children are now a great problem, and there is a growing consensus that industrial occupations should be provided for all who want them.

Moral Instruction.—In this critical period of life, habits that will endure are being formed more rapidly than any other. Morals need great attention. There is now a new awakening of the community to the dangers of sex errors, and the need especially for boys, if not also for girls, of some definite and personal instruction along these lines. It is when we consider this aspect of the subject that we realize most keenly the need of more male teachers, especially for boys who in these years experience, consciously or unconsciously, something of revolt against exclusive feminine control whether in the home or the school. Every boy needs a personal mentor such as the Big Brother movement contemplates. He also ought to be looked over by a vocation bureau and given hints at least concerning classes of occupations which he should avoid and those which he can hope to enter with some advantage.

A Sound Body.—Every school child should throughout this period have stated and repeated medical examination. The teeth almost always need attention and irremediable injury may follow if it is wanting. Ears and especially eyes should also be tested. The general condition of each child should be inspected and suggestions to parents and teachers made. In some lands a life and health book is kept, recording the observations of teachers, and the suggestions of physicians concerning regimen, diet, etc. Recent studies by the scores of hundreds show how many children are handicapped for life by defects that could be remedied and diseases that could be avoided. To this end, gymnastics, playgrounds, open-air schools, excursions, school meals, dietaries, free dispensaries and all the other health-giving agencies are now greatly desired.

BUILDINGS IMPORTANT IN THE FIELD OF EDUCATION

AIMS IN EDUCATION

OBEDIENCE is usually considered the greatest virtue, and at the same time, the most sacred duty of children. But unless we understand the meaning of the words "duty" and "virtue," we cannot judge of children's obedience rightly.

Virtue is not the same as goodness. Goodness is a quality of the soul which is born with the child. Virtue is the practice of goodness, the doing of good things. You may practice goodness without being good; or you may be good without having the training in practicing goodness. As one writer expressed it: "The tenderness of feeling shown by many children is goodness, not virtue; to abstain from theft in a thief would be virtue, not goodness."

Even the best natured child, the child with native goodness, may not practice the virtue of obedience unless he is trained to be obedient. On the other hand, there are obedient children whose obedience is far from being a desirable thing; it may be cowardice, cunning, fear, design, and what not.

Obedience as a duty has no meaning to the young child. The understanding of duty is based upon the ability to choose between right and wrong. It implies the appreciation of responsibility. But such choice and such responsibility are foreign to the young child.

OBEDIENCE AS A VIRTUE.—When do we owe obedience? Obviously only when we enter into an agreement or contract the carrying out of which requires that we do certain things. Under such a contract we may have to carry out the orders of some other person and obey his directions.

The child has never entered into any contract of this sort with you. Strictly speaking, he cannot therefore owe you anything.

It is true that he would not exist if it had not been for you becoming his parent. But his entrance into life was not of his own choice or will. He has no moral obligation on account of that. If there is any obligation it is that of the parent who owes proper care to the child for whose existence he is responsible.

This consideration may make the problem of training for obedience somewhat clearer.

Rather than to expect his child to be obedient from any sense of duty—a sense which does not exist—the parent must win his child's obedience.

How can this be accomplished?

Winning the Child's Obedience.—Obedience means that the child should respond promptly to his parent's, or teacher's, direction and command, without hesitating, or doubting, or arguing. This response, to be ideal, must become a sort of automatic reaction to a command, just as if the parent were pushing a button, the child doing the rest. This kind of response excludes, for the time being, independent thinking on the part of the child. He should not think for himself; he should mind.

For a number of purposes, this kind of obedience has its value. The child, inexperienced as he is, will be exposed to dangers which he does not understand, and the parent's superior intelligence and experience must have their force.

But we see here that obedience in this sense is necessary in the child's own interest, not to please, or to gratify, or to accommodate the parent.

The parent, therefore, must not expect this kind of obedience when there is no educational or safe-guarding purpose.

Again, obedience like this has its limitations. It is altogether mechanical. It does not appeal to the child's own intelligence and good will. In fact, it has the tendency to destroy the child's sense of independent thought and foresight, of self-control, of responsibility.

THE YOUNG SCULPTOR

A ten-year-old student of the Holmes School, Oakland, Pittsburgh, creating ships out of soap.

THE PRINCIPAL AIM OF EDUCATION MUST FOREVER BE TO GIVE THE CHILD THE POWER OF SELF-CONTROL, OF SELF-MANAGEMENT, AND THE SENSE OF RESPONSIBILITY, OF INDEPENDENT THOUGHT.

This is the reason why the method of securing obedience of the mechanical kind, valuable as it is, has to be employed with great caution.

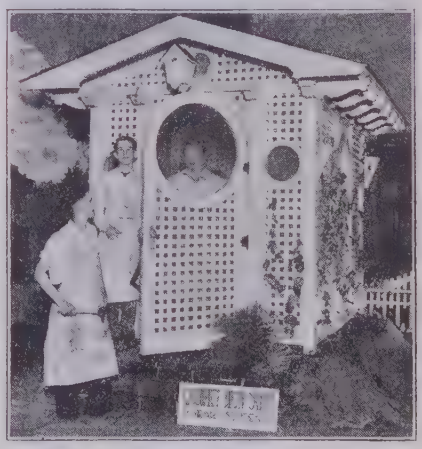
The Motive of Fear.—About the worst method to secure obedience is unfortunately most commonly employed; to frighten the child by threats and punishments.

The motive of fear is the most treacherous of all motives. It breeds cowardice, deception, hypocrisy. It destroys character and personality. It prevents the development of confidence between child and parent, and will never teach a child the real reasons for right conduct.

Different Types of Children.—It must also be remembered that all children are not alike. There are many different kinds.

The timid child can be easily frightened. In fact, he will never be sure of himself unless commanded, or directed. Such a child, instead of being cowed by harsh commands, should be encouraged, cheered, heartened, stimulated, so that he may overcome his natural timidity and look out for himself as much as possible.

Sometimes this timidity is a sign of illness, or of nervous troubles, and then it is advisable to consult the family physician or the specialist.



There is another type of child who, while not really timid, follows the line of least resistance. This is the conforming child. He is also easily led and will learn to obey without much trouble.

This, however, is in a measure his misfortune. In him, it encourages slothfulness of thought, laziness of action, loss of self-respect. Often such a child becomes a misfit in life because he has never learned to assert himself. He will miss his real self, and will drift into a sort of life which requires the least exertion on his part. He will forever be a follower, one of the mass—never becoming a leader, and quite helpless under a change of fortune. Yet, many of these conforming children have individual powers of their own which are well worth developing but which are lost on account of their lack of self-assertion. A strict enforcement of obedience in these cases is fraught with danger.

The non-conforming child, on the other hand, the child that is not easily led, but will assert himself and be contrary to suggestion and leadership, is the problem of most inexperienced parents.

His very self-assertion is a very hopeful sign for the development of a strong personality. Under ordinary circumstances parents ought to be happy for having obstreperous youngsters who will try their parents' skill and wisdom to the utmost. Home education is no sinecure, to be sure; but there is a great satisfaction in dealing with children who have minds of their own. They will be the greatest glory of parents in the end.

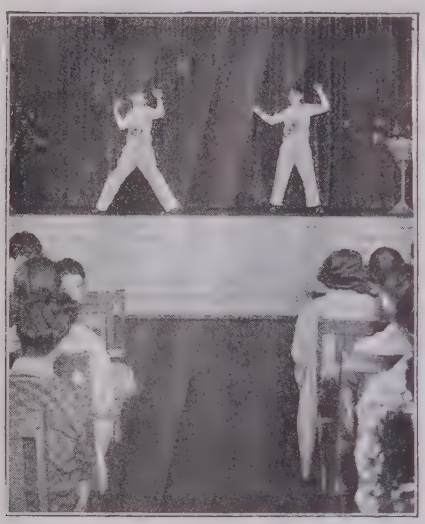
If the sense of self in a child defies all bounds, we may be dealing with a child personality that requires the advice of the psychiatrist. Extreme self-centeredness is a symptom of mental disease. Here it is not discipline, but expert treatment which is required.

HIGH SCHOOL PRODUCTS

Calumet High School, Chicago, students and the garden house made by them. The work of first year students.

The temperamental child is one in whom emotions play a great part. To train these emotions properly is often a great problem. Often we come across nervous disturbances in these children, especially at certain periods of their lives.

Of course, the fault lies sometimes with lack of firmness and consistency on the part of the educator.



Generally speaking, we may assert that wherever there is failure to secure obedience, the fault does not rest with the child, but with the educator. So, do not wreak vengeance on the child, but search your own soul. Somewhere and somehow, you have failed; you have made mistakes.

To blame the child for misconduct without further investigation is just as wrong as for a physician to blame a patient for still having a fever after his treatment has

failed. The wise doctor will realize that his patient has no interest in being sick, and that his, the physician's, diagnosis and treatment must be at fault. Likewise, the child has no interest in being disobedient. He would do the right thing if he knew, or had been trained to do, the right thing.

Beginning Early.—Training in obedience of the right kind must begin early. It is really a training in habits of regularity.

It begins with the regular feeding of the baby, regular hours and habits of sleep, of bathing, of outdoor and indoor life, of play and exercise.

THREE CHEERS FOR OUR SCHOOL

Enthusiastic student body cheer leaders on the stage of the auditorium at the Commodore Sloat Elementary School, San Francisco.

A training in regularity has a remarkably calming and soothing effect upon a nervous child. It is in conformity with nature's laws.

In health, pulse and heart-beat are uncompromisingly regular; breathing follows a definite rhythm. The heavenly bodies move in infinite space with the regularity of a perfect clock. So must the life of a child in all its voluntary manifestations be tuned to rhythmical symmetry.

Life rhythm is the keynote of happiness and success. Only when the body and the mind are well tuned can there be physical and mental health.

The life of the universe is bound by laws of uncompromising regularity. A break in this regularity, and the world would go to smash. So the parent, in training his child in regular habits, must be consistent, firm, uncompromising. No weak giving in to coaxing or wheedling, or to crying and temper on the part of the child. No vacillation or indecision at any time.

A Proper Understanding.—Yet we must remember one thing. The laws of the universe are unchangeable because they are the manifestation of perfect order. We mortals cannot claim infallibility.

Our firmness must neither be arbitrary nor must it be mechanical. It must be based upon such knowledge and understanding of the child's nature and needs as we can obtain. It must be tempered by sympathy and love, terms which are not the same as weakness. It must be moderated by the knowledge that our own judgment may err.

Firm resolution on the part of the parent will not shock or repulse the child if there is a kindly smile accompanying the firm insistence, if the eyes in which an unchangeable resolution is expressed also have the twinkle and radiance of love.

The parent must know what and why he commands, or why he insists. In trifles, there is no need of dramatic force. He may often allow the child to follow his own preference when one way is as good, or about as good, as another. The parent will remember that a child's way is not that of an adult; that a child's standards of accuracy are not the same as those of an adult.

The parent will realize that he is the child's leader, but not his master, or owner. The child has his own rights as a human being. It is the parent's fine privilege to discover in his child a new soul, a new individuality, and to help that individuality to develop through the ages of infancy and childhood until the time comes when it can assert itself in an independent way.

The parent will learn to distinguish between "naughtiness," so-called, and distress. He will make sure that his child's apparent unwillingness to respond is not due to bodily or other causes.

The baby may cry because there is an actual discomfort or illness. The older boy or girl may not answer because he, or she, is, unbeknown to the parent, hard of hearing. The child may not give the right answers to questions because he is color-blind, or defective of vision. Eye-strain may be responsible for ill-temper, just as are indigestion and incipient disease.

The parent will learn to read the danger signs of fatigue, of illness, of nerve-strain, of unhappiness, before he insists upon his point.

The parent will understand situations and emergencies such as occur in the daily life of a child.

Generally speaking, it is necessary that the child should have his regular times for meals, play and sleep. Yet, there may be occasions when the parent's call for supper or bedtime is ill-timed, regularity notwithstanding. A child absorbed in his play is a human being seriously occupied in solving his life's problem. For every bit of play is really an experiment which helps the child to understand his surroundings and his own powers. He may be just in the midst of a fascinating problem, the solution of which is at hand if he can remain undisturbed.

The wise parent will not call his child away from his absorption by shouting from another room, nor scold indiscriminately when not promptly obeyed. He will sympathize with his child's problem, and if he thinks it reasonable to interrupt his child's preoccupation, he will take care that the chain of thought in the child's mind is not rudely broken.

All this calls for discernment, discretion, tact, understanding.

Winning the Child's Confidence.—The youngest child's response depends mainly upon a more or less mechanical habit. But the older the child grows, the more must we enlist his intelligent coöperation. Even the older child, it is true, must learn to obey immediately, instinctively, without at the moment questioning the parent's reason. He will do so if he has confidence in his parent; if he knows that his parent will never demand anything which is not for his good, which is not really necessary, which is not wiser than his own choice would be.

It is a great mistake to think that we must always insist that we are right. This claim of infallibility will quickly destroy a child's belief in his parent's discretion and good will. For our children see much more clearly than we think they do. They will find us out, and will discredit our pretense. They know that we err, as all humans err. They know that we are not perfect, and that to pose before them as perfect beings is, to say the least, a foolish camouflage.

A child honors his parent more, and trusts him more, if that parent is honest enough to admit a mistake promptly, and to rectify a wrong command or suggestion.

The Method of Suggestion.—The sooner the parents take their children into their confidence, the readier will be the response. Counseling is better than commanding; suggestions are better than demands.

When the child approaches adolescence and maturity, we must recognize his own unfolding power of reasoning, and must respect his opinions and convictions. At this critical period of development, the young mind becomes conscious of its own individual rights. A new personality arises. If opposed with too much authority, the young man or woman of fifteen or thereabouts will become rebellious, obstreperous, resentful, sullen or deceitful.

The Parent as His Child's Best Friend.—The most wonderful thing in the world is the friendship between parent and child. There is no need of enforcing obedience when the relationship between parents and their sons and daughters has ripened into mutual respect, reverence and confidence, when there is a firm basis of love. A child who knows that he can come to his mother and father in every crisis that confronts him; that there is no truer, or more sympathetic and understanding friend anywhere to be found than in his own home, whose closest confidants are his mother and his father, will have the strongest safeguard against wrongdoing there is in human life.

This is most necessary in the matter of the gravest problems which confront a boy or girl of adolescent age, namely, those connected with their awakening sex instinct, the problems of love, passion and marriage. If the proper foundation of confidence has not been laid long before this period arrives, the child's moral life may be wrecked on the rocks of unrestrained impulses.

From no other lips should a child learn the truth about the wonderful mystery of life, of motherhood and fatherhood, of his own birth and growth, than from those of his own parents. The sanctity and wonder of the marriage relation, the sweetness of child life as a product of this relation, will become living realities to the child if their true meaning is constantly exemplified to him in the frankness and honesty, and in the spirit and practice of love and purity of his own parents in his own home.

Children thus brought up will not resent their parent's advice and counsel in the matter of their own choice of mates, of their own marriage. Neither will they resent their parents' counsel in the matter of a choice of occupation. There will be a communion of hearts which will lead to mutual understanding and appreciation. If the counsel be not accepted, there will be no bitterness.

What we must develop in our children is not the blind and mechanical kind of obedience, but that which prompts the right-minded man and woman to bow before the laws of nature—a trustful yielding to sympathetic wisdom, a reverence for the law of righteousness.

AMERICAN EDUCATION

WHY go to school? What are the kinds of schools in the United States? What should one expect from studies in the public schools and other schools? How shall one earn a living, and how prepare to do so? These and many other questions are discussed in this department.

Why Go To School?—It pays, in dollars and cents, to go as far as one can in the right sort of school—in almost any school. As a matter of fact, Edison and Ford got along without much formal training; so did Lincoln and Walt Whitman. Very superior persons like these are outside the law of averages. Perhaps their superiority may lie in a specially active will and ambition, spurring an otherwise ordinary person to train himself. Somewhere, somehow, everybody who intends to amount to something in this world must get ready; and schools are the best answer we have learned to make to the problem of getting ready.

It pays in dollars and cents. One who leaves school early is shut out from all the professions. He cannot be a lawyer, a doctor, a teacher, a dentist, a surveyor, a cost accountant, a preacher, an electrical or chemical engineer, a modern architect, without preparation in school. Of course, almost anybody can work with his hands and feet, and we think that everybody ought to do, and keep on doing, some work of that sort; but the boy who quits school early is pretty surely condemning himself to work only with his hands and feet for the rest of his life. A girl may get a place in a ten-cent store as soon as the law allows her to leave school, and a boy who finishes the eighth grade may work at a soda fountain—both perfectly respectable jobs for a summer vacation, and both likely to have tragic consequences if continued after the school bell rings in the fall. Few important business positions go to young people with less than a high school training; and the overcrowding of every American university shows pretty clearly that even college education pays.

The "learned professions" have no monopoly of the new demand for training. For example, the day of the small farmer is passing. Workers have drifted to the towns, and the farmer has been compelled to use labor-saving machinery or give up his occupation. A good machine does the work of from three to ten men, so that a progressive farmer may find the losses in man power more than made up by the gain in machinery. Yet only a born genius can operate and repair all sorts of machines without training in mechanics. And the best place to get that training is in the right kind of school.

Mechanical requirements form only a part of the change in farm conditions. We have passed the years of heavy cropping at the expense of native richness. A return must be made to the land; different soils and varied crops require different treatment; crops that do well in one soil are not adapted to another. The raising of stock under modern conditions requires expert knowledge. In short, while there is still a bare living in old-fashioned farming, the men who make the big money on the farm are students; and the short cut to the things they need to know is the farmers' high school and the farmers' college. If a boy likes farming, but does not like the kind of school in his neighborhood, because he sees no use for Latin and ancient history; if he is in a hurry to get the best training for the big scale modern farming—the farming that pays—there are schools in his state where he can find the very courses he needs, and where he can work out part or all of his expenses while he learns about his own affairs.

Whatever the practical future we dream about, beyond the wheel-barrow and the retailing counter, schools can shorten our road. Reckoning the working wage of a lifetime, it can be fairly shown that every day in the four years of a completed high school course has been worth to an average student about ten dollars. It is work with the head that pays.

But the best rewards of going to school are not in dollars and cents. There is a

THE SENIOR PLAY

A delightful and valuable part of modern education is the opportunity to take part in plays. This scene is from *The Ivory Door*, as given by seniors at the Fifth Avenue High School, Pittsburgh. The picture shows the king and queen on the throne with a lady-in-waiting beside them.

stagnating littleness in the common routine of mechanical tasks, unless the mind has caught the secret of escape into broader fields. Training of the right sort gives a worldwide range to our interest in facts; makes us reluctant to accept mere hearsay; shows how to test information and appearances.

Yet this is only the groundwork of an always fascinating mental experience. However we get our training, in school or out, if it amounts to much, it teaches us to interpret our facts, to find the larger meanings of conduct, the relationships among physical events, in the light of principles. The reasoning student, unlike the news-gathering gossip, values facts as part of a network of cause and effect which it is his duty and pleasure to understand, for the common good.

This last phrase suggests the third degree of training. When facts have been collected, tested and explained, it remains to put our knowledge to practical use. This third function of schools is finding a steadily widening application in every school that attempts to do some definite work in the world, or to prepare for thoughtful citizenship.

The fourth possible service of schools is the training of feeling and taste, so that we come to appreciate life for the rich thing it may be, and to act with consideration for the interests of our fellows. Only the rankest kind of Philistinism attempts to express the value of an art object in dollars and cents. We must live, to be sure; eat, wear clothing, sleep in a house in winter time; but the best part of life is that which the Bible says shall not be by bread alone. Culture, like other desirable graces, cannot be bought and sold, but must be lived through. The big danger of leaving school too early is the danger of personal littleness; of stagnation in a mental treadmill; of the vulgarian's death in life. Students today have the opportunity to act in plays, to sing in musical performances, to express themselves in avenues of creative art.

College days do more than others for mental freedom, catholicity, and taste. When we come along toward the end of our journey, we know that no part of the way has been better worth traveling.

THE KINDS OF SCHOOLS IN THE UNITED STATES

The attempt to divide any big subject into its parts requires first a point of view. We can look at education from many different angles. Who pays the bills? Who directs and controls? Who measures results? How are the schools organized? And so on. The following analysis uses the more obvious viewpoints.

Support.—Schools are supported from one or more of these sources: public money collected by tax; fees, paid by students; assessments levied by societies, as for parochial schools; gifts and endowments. Gifts, endowments, fees and parochial assessments indicate dissatisfaction with the support or the character of public education. Parochial taxes, for instance, always indicate a belief that religion, usually a certain type of religion, is so important that it must be taught in school, and that only religionists should be trusted to teach it. Probably the only reason why religion cannot be taught in public schools is that there is so much practical difficulty in determining just what religion is.

Control.—In a democracy, the state must provide for the future safety of the government by guaranteeing intelligently patriotic citizenship. Schools stand at the head of means for making that provision. In order that the guarantee may hold, there must be sufficient state control for the purpose. In some states, parochial schools may receive a share of public moneys, if they satisfy the tests applied to public schools. In other states, parochial education is an unrelieved charge upon the church.

The amount of state control varies greatly in different parts of the country. New York State, for example, has an elaborate bureaucratic centralization of authority over all its schools, from top to bottom, with regents' examinations as its most characteristic feature. In most states, the control of the schools is practically local, with state aid for those schools which satisfy certain standards. In all parts of the country, college entrance requirements have had a marked influence in shaping public schools, an influence amounting often to practical control.

Testing Results.—How should the efficiency of teaching be measured? Can examinations be framed to measure correctly a pupil's progress? Should a bad examination paper entirely overrule a long period of good classwork? Or a good examina-

tion entirely cancel the memory of year-long failure to do required work well? Should high rating be given to pupils from schools employing trained teachers, along with good libraries and apparatus? What do we really mean by results, anyway? Are there local needs, such that central examining boards can hardly be fair to every region in the state? On all these questions, schools differ widely within each state, and from state to state.

Social Purpose.—There used to be, and still are, under one name or another, "finishing schools", whose function was to put the final polish on a perfect lady. There are schools of "liberal arts," maintained under the belief that one may be "cultivated" by the pursuit of time-honored courses in language, mathematics, history and biography. There are work-a-day schools of trade and industry, where one learns to write fifty words a minute on a typewriter, or to build a sky-scraper or a chicken-coop. Sociological schools aim to open the eyes of students to the needs of their fellows, and the proper means of satisfying those needs. Religion, art, medicine, engineering, agriculture, politics, law, education—schools for every social purpose. Whatever one wants to be or to do is taught by somebody, somewhere. Increasingly, vocational studies are winning a place in the public school.

Age of Pupils.—In "regular" schools, we expect each grade to be occupied by pupils of standard age—kindergartens and first grades from four to six, junior high schools at twelve to fifteen, and so on. But many thousands of people in this country need and should have school opportunities while they earn a living. So we have part time arrangements, especially in evening classes and correspondence schools, continuing the work of day schools, preparing for special vocations, or training for American citizenship. Students in part time schools are of course likely to be older than those in the regular sessions.

Organization.—For a life time, until recently, eight or nine annual promotions have brought average students through the elementary school, and four additional years have completed the high school course. There has been much repetition and much unnecessary subject matter in the eight year period, and so marked a difference in subjects and methods between high school and grades, that many pupils have left school rather than adapt themselves to the change. The discipline and course of study in the upper elementary grades have often been distasteful to adolescents—their studies seemed to have no connection with life. The one teacher in charge of a year's work was too often a misfit, from the pupil's view-point. The answer to all this has been either a "six-six" or a "six-three-three" plan: in both cases cutting short the elementary course—in the first plan, by making a six year high school: in the second, by inventing a new transitional school, with more vocational subjects, more freedom of choice, and departmental instruction. Under the old organization, pupils passed by grades, and a failure in even one subject was likely to hold the youngster back for an entire grade, no matter how brilliant he might be in other subjects. The newer organization promotes by subjects, and tends toward a liberal theory of requirements. The junior or connecting high school seems to be winning a permanent place. One of its best effects is in keeping pupils in school who would have left, under the old system.

Methods.—The kindergarten seeks to develop certain desirable qualities; generosity, team-spirit, resourcefulness, sense of rhythm, of form, and color, skill in simple games and hand-work. Its methods stimulate initiative, at the same time respecting the rights of other folks. Kindergarten methods deserve to influence the entire public school, and even the college; but this can hardly be found in practice. The very worst teaching is likely to be found in the college and university, where class-room procedure implies: *Here are the facts; take them or leave them!*

The recent adoption of the problem or project method is a belated attempt to do for advanced pupils what the kindergarten has so long done for little folks. It is a tardy effort to do things in school with some reference to the methods we must use outside. When the problems are rightly chosen, and really accepted as the youngster's own, school and life are near the proper meeting ground.

Of course the big differences in method are to be accounted for by the teacher's notion of what schools are for, and by his own humane resourcefulness. But within the range of sound intention, methods ought to differ; uniformity is deadening. Sound methods give well-chosen facts a permanent place in mind; build a habit of logical thinking; offer the contagion of enthusiasm for sport, for community affairs, for all sorts of wholesome activities. The final test of method is in the student's doing of his own will useful things which the school has prepared him to do.

Young people who have missed the chance to go to high school or college, and who want to make more of themselves than their present conditions promise, should remember the method of correspondence. Correspondence schools are in many respects the most useful American universities. There are important differences among these schools. Some of them are no doubt catch-penny concerns; but the long-established ones may be fully trusted by any young man or woman of grit and intelligence. Their text-books are authoritative, their methods are thorough, and their practical value in cash promotions cannot be doubted.

Preparation of Teachers.—President Garfield once said that a university could be established anywhere in the woods, by placing an enquiring young man at one end of a log, with Mark Hopkins at the other end. It doesn't so much matter how teachers acquire their information, their insight, their knack of suggestion, but it is immensely important that they acquire them. Schools can hardly differ from each other more widely than in the personality of their instructors. That school may be called inferior whose teachers are not several sizes bigger than their pupils, in the things they know, in their ability to think problems through, in their enthusiasm for studies worth while, and in their clear attractiveness of speech.

Experience is the best trainer of teachers, from the teacher's viewpoint, but it's pretty expensive for the pupils. The quality of work done in the best schools indicates that we should raise the general standard of preparation for teaching, but always with the proviso that a teaching personality is the biggest single item of fitness. It is pretty clear that no one with less than a high school training should teach in elementary schools, and that high school teachers should have the equivalent of a four year college course. In any case, a teacher's training should include psychology, the history of educational reform, and general methods.

Progressiveness.—Teachers differ in their willingness to experiment, and to accept the results of other people's experiments. There is a foolish, unreasoning imitation of fads in education, and there is stubborn insistence on outworn methods. Conservatives are likely to believe in old-fashioned decorum, and in mental discipline by way of the time-honored classics. Liberals tend to emphasize the individuality of their pupils, the importance of vocational training, and the possibility of mental discipline through subjects of practical value.

Progressiveness appears to be a matter of native temperament, modified by age and experience. Though American teachers have followed many fads, the willingness to experiment is a condition of progress. When the experimenter learns to do his experiments in a small way at first, and then to hold fast that which is good, his progressiveness may have fewer setbacks.

Morale.—Schools are unlike in that combination of manners, customs, morals, community spirit, and general motivation which may be called *morale*. School tone is another good name for it. Every school room, every class room even, has its own tone. If we listen to the treble notes from Vassar and Wellesley and the baritones from Harvard and Yale, we find that every college is playing its own social tune. Schools differ in personality even as individuals do, and we do well to choose among them as carefully as we choose among persons.

Many distinctions remain unmentioned in this series: Nationality of students, location of schools, entrance requirements, social position of graduates, vocational value of diplomas, general prestige of the school—all these offer means of comparison, and show great diversity. Within limits, diversity is a good and necessary thing. The test is always the value of the school or of the process for life purposes. To take a simple example: Fair trials of round vertical penmanship may give an average of fifteen or twenty words to the minute, while semi-slant or Spencerian script will under like conditions record twenty-five or thirty words a minute. When we find that slant writing is less fatiguing and fully as legible, only one conclusion is possible. Yet our pedagogues put us through the wholesale experiment in vertical round-hand.—It appears that some experiments in diversity are not worth the trial.—There are plenty of wise texts in the philosophy of education, but not enough working philosophers to go around.

An Ideal School is a dream, of course, but it is a dream worth working for, and not wholly unattainable. Its general principles are:

Society has needs, not always adequately stated in terms of cash, which schools must help to satisfy, by the development of socially useful personalities; including, in due time, for every student, vocational guidance and vocational training.

Every pupil has potentialities which it is the business of the school to discover, in order that, by stimulus and training, he may be fitted for the work which society needs at his hands.

It is easy enough to formulate such maxims. Fortunate centers of wealth, intelligence, and varied industry may go far toward realizing the ideal school. But before the country as a whole can follow their example, we must have a better public understanding of what education means, we must spend many times over more money for schools than we now spend, we must attract teachers from the finest American types, and we must give teachers a training adapted to their highly difficult task.

WHAT TO EXPECT FROM SUBJECTS IN THE PUBLIC SCHOOLS

Arithmetic.—The simple process arithmetic of the third and fourth grades is by far the most practical. Then in importance come [1] a working knowledge of common fractions, [2] tables of measurement, [3] simple interest. "Mental arithmetic", now unfortunately out of fashion, was one of the two best gymnastics of the grammar school a generation ago. Some of its problems were absurdly impractical, of course, but it did build a habit of picking apart complicated situations, item by item to find the key idea; and its handling of common fractions and quick cost computing had practical value. Beyond the few processes named above, most of the arithmetic taught in school might well be saved for a commercial course, given only to those who will need it in their business. Commercial arithmetic is the arithmetic of actual business practice, full of short cuts and tabulations, and entirely empty of much that was formerly insisted upon.

Composition.—Everybody should know how to write a clear, correct business letter and a pleasant friendly letter. The business letter leaves out everything unnecessary, but uses tact in putting its case. Old stock phrases are not so effective as words chosen directly for the object in mind. The friendly letter must know how to describe persons and places, must tell a story well, and should set forth the writer's opinions attractively. For the descriptions, it is important to find the right adjectives and the right comparisons. We understand new things best when we see how they resemble or differ from the things we already know well. A well told story has a plan and a point; it gives us in the beginning some clue to the persons and places of the action, but takes care not to be dryly descriptive. It keeps the secret of its climax until near the end; puts in nothing that doesn't help to make the point, has the sense to stop when its point is made. Good stories do not message a moral—it may be there, but the reader is credited with enough intelligence to find it. The friendly letter of incidents and descriptions may be pleasant, even charming, but the best moments of friendliness are in the sharing of opinions. Of course there are two good sides to such a transaction. Letters will reach their best when there are ideas in them worth sharing, sincerely held and frankly put, with literary skill. In general, sentences loosely strung together with *ands* are very bad in speech and much worse in writing. Students who really want to write well must be interested in words—for their exact meaning, for the notions they suggest, and for their sound. Much of the pleasure in reading prose comes from the rhythm of the phrases. We discover that it is possible to beat a sort of time as we read. But rhythm is not the first thing to take care of in writing. The one thing always needed is clearness. After that come strength for the business in hand, and whatever graces we can manage.

Drawing, like photography, is of two principal sorts, the mechanical and the pictorial. One measures precisely, works to scale, omits nothing necessary for exact reproduction; the other selects what will bring out certain characteristics and moods, omitting everything else. Mechanical drawing may be taught to anybody who has a little imagination and a great deal of patience. It is useful wherever any kind of building or making with tools is going on. Only those who learn the language of mechanical drawing can read it, but for them it is a means of giving and getting, almost without words, details which the draughtsman could not put into words if he wanted to, and could not understand if somebody else succeeded in wording.

Pictorial drawing is quite another matter. We can all of us do something at it, but only folks born with the knack and the impulse can go very far. Here the last word is to *draw the thing as one sees it.* The idea is not to reproduce *exactly,* as though for a carpenter or a tinsmith. A picture without a mood and a meaning quite beyond its actual lines isn't much of a picture. Every clever worker with pencil and brush puts himself into his picture. *Style,* that indefinable mixture of individuality and charm, is present in drawing just as truly as it is in literature.

At present, the bulk of professional drawing in this country goes to advertise our wares—a state of things which cynics enjoy. The offset is that while we are undoubtedly cheapening art by putting it to "base uses," we are at the same time giving an almost compensating charm to our commercialism, and are making sure that artists can live—at least on a par with other professions. An exhibit of advertising "originale", without their propaganda for this or that talcum or talking machine, is a really excellent art collection. The worker has his own standards of excellence, not altogether for sale; and meantime, the good by-product of better advertising is a training of the public taste in art.

The practical value of skill in drawing is very high, if it is combined with a trained general intelligence.

Folks who study music, pictures, poems, and other art forms find out after a while that all these things are alike. Each piece of art work is *one* with all its parts bound together by subject, intention, and treatment. There is pretty surely a climax or chief focus, to which, and from which, everything points. There is repetition, refrain, rhythm, balance of parts, so that one unit answers another, light answers dark, colors set each other off; yet all these things with such a personal selection and emphasis that an expert can surmise who the artist must have been.

Geography.—One of the best all-round values in school. Very useful in general reading. Necessary in government and in business. More important each year, by reason of the inventions which have made life so complex, every nation selling goods to every other, buying goods from every other, with instant communication and swift travel. If it isn't interesting, there is something wrong with the books or the teacher. Try testing yourself on the geography of places, peoples, and objects mentioned in the daily paper, and in magazines like the Outlook, Independent, World's Work, Review of Reviews. When our knowledge of geography is rich enough, maps become the most fascinating of publications. We see and climb the mountains, smell the salt marshes, hear the fog horns and the bells. We do not read "words, words" about towns and folks—we see them all as mental pictures. On this account it is better to have geography books with many pictures. The best aid to vivid imagining of distant places is travel, and the best travel is deliberate, with stops to find what the people are like and how they live. Of course, for practical purposes, geography of products—their growth, preparation, transportation, and values—is very important.

Grammar is good for two things, in the main. It does help to keep straight our difficult and crooked English speech, by framing and drilling on Rules of Syntax. Would you say *I did not believe it to be he,* or *I did not believe it to be him?* Rules of Syntax, simple ones at that, settle all such questions. If our speech falls below the level of the place we are seeking, the chances are against our getting the place. Nothing more surely marks the vulgarian than bad syntax, for cultured people are painstakingly correct in their use of the Mother Tongue.

But grammar has bigger uses than syntax. Folks who hear good speech at home have little need for Rules in Grammar, but everybody can find high values in analysis. The analysis of English sentences is not a grinding formality. The right kind of analysis looks for the real relationships among ideas. Learning how other people think is one of the very best ways to learn to think for ourselves. People who protest against the teaching of analysis in grammar have probably never really mastered it themselves. No single discipline in school can do more to make reading easy and accurate. College professors complain that their students have never been taught to read. What they mean is that students do not readily and always get the core idea of a sentence and a paragraph and fasten to that central idea such modifiers as are worth keeping. Analysis really *teaches us to read.*

Handwork in General.—Skill with simple tools is useful for everybody and is not inherited. Do you hoe or bat right handed? Try breaking yourself in to the other holding. Indian clubs give two arms, in place of one, for many useful movements. Laboratory manipulation takes the blundering suddenness out of our starts and stops; gives a patient control of our fingers; shortens the time of learning any other similar work with the hands. Many thousands of times in everybody's life, it is handy to be handy. We can save time and money by it; we can have and do things impossible to folks who wait for somebody else to do their tinkering for them.

History and Government of the United States.—Government of the people, by the people, for the people will perish from the earth if the people do not keep informed about public affairs and learn to make sound decisions. Government for the people really means one compromise after another, setting limits to the healthy aggressiveness which would go too far if it were not checked. Every American should know how full his country is of these "checks and balances"—nation and state; senate and house; legislature and courts; imports and exports; labor and capital; statute law and common law—to the end of a

long chapter. History will show how high have been the prices paid for the wisdom of compromise, and how sure is the failure of the peoples who do not learn to put wise limits on individual and local powers, for the general good. History helps us to avoid the blunders of the past; gives us the keen satisfaction of prophecy, along with the duty of citizenship. Civics gives a sense of the value of our institutions; shows us the distinctly American idea, worth keeping at heaviest cost; helps us to know from what points the dangers will come, with some hints of possible prevention or remedy; and trains us in the practical duties of citizenship.

Languages.—Latin.—The arguments *for* Latin are its help in the use and understanding of English, its "discipline," the culture from close acquaintance with fine literature, and the relatively good results from indifferent teaching. The arguments *against* Latin are that equal time spent on English would bring more results for English; that it is best to find our discipline in subjects of practical value; that the real appreciation of Latin literature comes only after so many years of study that the results are not worth the expenditure, especially in view of the wealth of English literature likely to be neglected by specialists in Latin; and that it is the duty of school authorities to provide teachers who can handle well the subjects we really need to know and use. It seems to the writer that the "antis" have rather the better of the argument, *theoretically*. Practically, if the best teachers of English, history, and science in any school cannot lead their pupils to think hard and work steadily in those subjects, it is probably well to fall back on the time honored Latin and mathematics. The first two years of Latin are especially useful in English. If English grammar has been badly taught, Latin grammar will insure an idea of sentence structure. The roots, prefixes, and suffixes derived from Latin make up a big percentage of literary English words. Time on the first two years of Latin is undoubtedly well spent. Beyond those years there is a period of rather neutral value in the study of Latin, before the real mastery of the language begins to bring delight. So our recommendation is two years of Latin for everybody who hopes to make something of himself mentally, and then either no more or at least four years more.

Modern Languages. — The world war shifted our emphasis on the modern languages in school. Not so many years ago, German was our most popular foreign language, with French second, Spanish negligible, and Italian practically untaught. After the war, French was easily in first place, Spanish had become popular, and German had dropped almost out of sight, along with Italian. The real reasons for studying any of these languages are some combination of these: to be ready for business, for travel, for advanced study in a foreign tongue, to bring social reputation, or for pleasure and discipline. Taking these points one by one, every great nation has its worthy literature. The interests of travel lead to the languages of those lands whose history has been of importance in shaping the traveller's own nation. Social eclat is a bubble hardly worth chasing. Pleasure in language study is largely a matter of personal taste. Advanced students will always need the languages used by science and philosophy. One who has studied Latin will find more of discipline in German than in the Romance tongues, but the adverse notion affirms that the time required to master German will give fair acquaintance with *two* of the languages derived from Latin. Tested by these principles, our popular eclipse of German is rather absurd, for every one of the values lost to the German language by war will come back and find us unready to use it. The new interest in Spanish has economic and political support, of a sort that should probably give it a third rank in general popularity, with French and German in the first and second places. Perhaps in the general order of values, business reasons for knowing a language rightly come first. It is this motive, along with the idea of Pan American union of interests, and the negative reaction against everything German, which has so greatly stimulated the study of Spanish. Just why Italian is neglected in America is hard to understand, unless it be on the ground of an already over crowded curriculum.

English Literature aims to inform, to convince, to persuade, to arouse, to entertain, or to charm. In the first service, it teaches us something new, or puts something old in a new light. Literature of conviction is not satisfied to teach by telling; it makes sure to give all the reasons in the case, so that we accept the opinions presented. To persuade is to reach the springs of decision, with action in a desired direction as a result; we arouse another when we excite him toward prompt and vigorous, or even violent, action. The word entertain speaks for itself. It includes the idea of charm, but the words are not interchangeable. We are not always charmed when we are entertained. Charm in literature lies for the most part in the style—the combination of fitness with unexpectedness, the happy suggestion of more than is really contained, the graceful, melodious, harmonious flow of words, the total unique attractiveness in the manner of writing—or speaking.

So when we read or write, some combination of these half dozen aims and effects is under way. The commonest and least important is mere entertainment. Ordinary gossiping conversations are like that. If the writer has a peculiarly attractive way of saying things, we grant him charm. Henry Van Dyke is charming when he writes of Little Rivers; R. L. Stevenson is charming in all his accounts of persons and places; the attractiveness of G. K. Chesterton is in the unexpectedness of wit; J. M. Barrie wins by the happy perverseness with which the youthful and the unconventional live on beyond their time in his pages; and so on. There is, then, a *mental* quality in charm which is more than idle entertainment. A wealth of rich satisfaction is to be had through pleasure in literary style. We haven't learned to read until this is a part of our satisfaction.

Of course we read in school a big bulk of things for their value as information; and this is a very respectable, worthy, necessary procedure. The richer our store of facts, the richer may be all the rest of our mental experience. When once we become absorbed in a subject for its own sake, it doesn't so much matter how the author says things. If we really want to know about some big subject—say the History of Religion, for example, we will plough through whatever the Encyclopedia Britannica has to say about that subject; but few people read in an encyclopedia for the fun of the thing. We may be peculiarly grateful to the writers who say important things in so pleasant or striking a way that we enjoy the learning process, and are thus painlessly led to become students. Literature has almost a monopoly of this insinuating cleverness of approach. For whenever the manner of the writing is so cleverly attractive as to win a reading regardless of content, the material has satisfied the first test of literature.

The second test of literature is that it shall be true, or seem to be true. The real student is always trying to find out which of these two he has in hand. Is the thing true, or does it only seem to be true? Does the author intend that we shall believe him, or does he only ask that we shall grant his *seeming* truthfulness? If he aims to have us accept his words as wholly and literally true, we must have a care. There are facts to be looked into, there is reasoning to think through, with eyes wide open for fallacies—those reasoning steps in which too much is assumed, or in which we allow our feelings to bias our judgment. If the writer merely asks us to admit that what he says seems true, well and good. He is aiming at the literature of sheer charm; or perhaps he is teaching indirectly, "as though he taught us not". When Maude Adams used to come to the foot-lights and challenge the house "Do you believe in fairies?"—we all rose, of course; but we meant that we believed in *her* kind of fairies. She made them seem real. So the student of literature must keep a good conscience in this matter of distinguishing between the real truth and the seeming truth.

Again, real literature is about subjects and problems permanently interesting. There was a time when good writing was expended on the question of how many angels could find standing room on the point of a sewing needle. However important and literary the discussion may have seemed to medieval school men, we have lost interest in the matter. We do not believe in that sort of angels any more; so it would require the combined skill of Barrie and Maude Adams to lift the discussion to the rank of literature, through seeming truth and seeming importance.

Young people of intellectual promise are pretty sure to be keenly interested at some time in the big meanings of life. They want to know what it is all for and about; why we should be in the church and obey the laws; how the world and the things in it were really "made"; what the stars and the flowers are; why is pain, and how much does goodness deserve because it is good? What is it to be good, anyway, and what is the use? Great books deal with these thousand and one haunting questions of youth. They do not always agree, and for many of the problems no answer worth hearing has ever been made. Yet literature is the speaking voice recording man's best answers to the riddles of experience; and the history of literature is a study of the groups, the influence, the fashions, of man's comment on life. Schools of writers may follow and imitate a leader; may band together in acknowledged acceptance of a set of ideas; or may simply write alike because certain subjects and opinions are "in the air." However that may be, English Literature serves its best purpose when it makes us bigger; brings new and richer information; gives clues for answering Pilate's question, "what is truth?" and supplies important specimen answers; expands us with new

meanings, new delights, new intentions.

Music.—The approach to musical appreciation is in a general way the same as the approach to literature, painting, or any other art. It has to do first with the composer's purpose, his *motif* or musical theme, and his intellectual problem. When a composer writes music for a great lyric poem, for example, his problem is to parallel the author's revelation in words by a second revelation in musical tones, both aiming to convey the same basic idea and emotion.

All art forms have structure or design. The commonest form is introduction, development, climax, conclusion. Wherever there is progression, this pattern is pretty sure to appear. The introduction brings in the persons, the setting, the motif, the problem; development puts these elements into action and reaction, with a tendency to build up to a point of strongest interest or crisis. Powerful effects may end abruptly with the climax. In any case, the conclusion must not be long-drawn, even if its service is to let us "down to the C Major of this life."

Literary composition recognizes a series of telescoping unities—the unity of the sentence, the paragraph, the chapter, the book. There may be a like simple complexity in music. A large purpose may bind together parts which are in themselves quite dissimilar. In that case, the subject is of course big enough to include all the subdivisions.

In music, as in all art forms, the basis of successful portrayal is technique. There is not the slightest hope of reaching high effectiveness except through patient study and repetition of exercises.

The word style has about the same meaning in music that it has in prose and verse. Give to each of two composers the same lyric poem for setting to music, agree as best possible about the mood, even assign the musical motif or key melody—each man's thought will take a characteristic manner of expression. Give to two violinists the same *Ave Maria*, or to two singers the same *O Sole Mio*, the two interpretations will differ not only in quality of tone, but in rhythm, phrasing, shading, intensity, and total effect. Each will have his own way of doing the thing—in other words, his own style. Style is thus tremendously important. It is almost true that the style is the man.

The big question about a book, a picture, a piece of music is not *Do I like it?* but *Does it do well the thing it set out to do?* When a singer finishes his song, he should have managed to make voice, style and all *incidental*, so that we find ourselves making impersonal comments, rather than personal ones. All art is a representation of human experience. The large problem of both appreciation and interpretation, the problem of art itself, has to do with the fidelity and the fullness of the interpretation.

To be sure there are social phases of art. No matter how well a thing may be done, it is possible that it is not worth doing; even possible that it is worse than worthless in its social tendencies. On this point, the typical views of the realist and the romanticist break apart. The realist recognizes no social obligation of art but the obligation of fidelity; while the broader view judges even art by its molding effect upon society.

High School Mathematics.—Values in school are practical, cultural, or some combination of the two. Algebra, geometry, and trigonometry are direct money makers only for teachers, scientists, surveyors, and certain higher industrial workers. But since these form a considerable bulk of the possible future occupation of young students, and since practically all colleges require them, it would be bad policy to omit the high school mathematics. There are other more general grounds for the use of these subjects. It is doubtful if ordinary mortals outside the groups named above will ever have the slightest direct need for the formulas of trigonometry or the demonstrations of geometry; but the indirect uses are very great. Abraham Lincoln once said that even after he had become a practicing lawyer, he had no satisfying notion of what proof meant *until he read Euclid*. To be sure there is very little value in memorized demonstrations—we might better be memorizing Mother Goose, for our grandchildren-to-be. The value lies where Mr. Lincoln put it, in the training of a reasoning habit. Students who have an eye on the future will allow nobody and no book to do thinking for them which they can do for themselves. This means that we shall close the text-book after reading the theorem, and work out our own proofs. It means that the so-called "originals" of geometry are the best part of the book. It means that when we have really mastered the subject, we can reproduce it; not by memory alone, or chiefly, but through step by step reasoning. Incidentally, it means that the attempt to teach reasoning to youngsters who have not yet reached the reasoning stage is necessarily a disheartening waste of time. There is another proviso. Some folks reason pretty clearly in one field, at least they get across to desired results somehow, without being able to tell how they do it, or to reason formally in another field of our choosing. This means that if first trials of high school mathematics show us to be at the time ill adapted to the work, it should be at least deferred, perhaps omitted altogether. Actual tests of college students show that nearly half of them have memorized their demonstrations in high school, as the best way out of an unwelcome predicament. Where we clearly cannot adapt the youngsters to their studies, we should adapt the studies to the youngsters; and we should try to so handle every subject that it shall have the largest possible character-building effect. For it is quite certain that the scholar in one subject is likely to be the ignoramus in another, and that the accurate reasoner in one field may be the hesitating blunderer in another, unless it has been possible to develop through Latin, history, physics, what-not, a general method of accurate analysis, selection-rejection, and synthesis, amounting to a trait of character.

High School Science.—Why? It is very interesting to see how big a proportion of the man-sized jobs in production, transportation, and even salesmanship require a natural science in order to master them. Our civilization depends on applied science. All men now fifty years old have lived through an age of miracles, and there is every indication of further discovery. It is the scientist who points the way. He is the Columbus of economic advancement. For the "other half" of us, who teach, write, draw, sing, entertain, argue, buy and sell, keep accounts, work with fingers and feet, science is the enlightener, showing us the kind of world we live in; making it comprehensible; delivering us from stupid superstitions, and opening far vistas of absorbing contemplation. The supreme intellectual conception is of an all-inclusive unity, of which every shifting phenomenon is but a shifting phase. Two panoramas are always unfolding—the world of nature, and the world of men. Science tries to understand both, and the best of all reasons for studying science are that the real student never knows a dull moment, and that at any time an unexpected surmise on the border-land of things known may bring new areas of the unknown into our service.

HOW SHALL I EARN A LIVING, and HOW PREPARE?

I. **Vocations in General.**—Vocational studies are supposed to fit the student to earn a living. "Living" should be figured as considerably more than a comfortable subsistence of food, clothing, and shelter. A bare living wage shuts out the worker and his dependents from many of the finer satisfactions of life. Married or single, a man ought to save from twenty-five to fifty per cent of his gross income. Money "saved" is stored and accumulated toward lump expenditures or lump investments. Lump investments are made either in the hope of enlarging the sum available for future lump expenditures or with the idea of "developing" something or other, playing finance or industry as a boy plays a game. The cash return may be the end in view, but more likely the game is played for its own sake. Many a rich man dies rather unconcerned about how his money shall be spent, or by whom. He has had his fun making the money.

Two variables make saving possible: one is the income, the other the outgo; and both are largely under control. Vocational studies of the right sort reduce the time necessary to reach a satisfactory income. Such studies are well chosen when they are adapted to the taste and talent of the worker, in a useful field not over-crowded. We have, for example, too many pettifogging lawyers, too many town doctors; not enough big preachers, not enough scientific farmers; and so on.

"Livings" are graded all the way up from pure brawn work to pure brain work; and the pay roughly follows the grade. There is also possible upward movement of compensation or gross income from year to year, say from twenty-one to forty-five or fifty years of age. Leaving school too young is very likely to fix one's place lower in both these grades than it might have been. The young man of thirty doing pure brawn work is not likely to do any other kind of work, nor to make any great improvement in his income, as time goes on.

The right sort of high school and the right sort of home, taken together, will probably lead a boy to know what his future work should be—and this is becoming more true also of American girls, each year.

Very often one work must be chosen as a stepping stone to another. In such cases, it is desirable that the temporary occupation should be useful in the permanent one, if possible. For instance, short-hand, type-writing, simple accounting are valuable on the way to big business

positions; pharmacy is highly practical in a doctor's occupation; carpentry is almost necessary to a building contractor; classroom teaching is indispensable to a wise supervision of schools; and so on.

The great American game for adults is undeniably the pursuit of wealth. From this angle, vocations are of two sorts—those from which the worker may properly hope to amass a considerable fortune in his own lifetime—say $100,000 or better—and those which are sure to fall below this result. In general, it is equally clear that big fortunes come through fees and profits, rather than through wages and salaries. Few professional men become wealthy by fees alone—they too must invest their surplus, for profit. Again, any wide awake, studious, "right-hanging" wage worker in this country may pass up through the salaried group into the employing and investing class, on the way to fortune.

Schools can do much more than they have yet done toward the pursuit of fortune through practical efficiency. The big business man needs a great store of *information* about all sorts of things; his conduct of business will be much more efficient if he himself is a *technical expert;* his larger business judgments depend upon *careful reasoning* in the big field of actual facts. Schools can furnish information, can develop technical skill, can provide for the exercise of judgment on typical industrial and commercial problems. It must be said that as yet in this country correspondence schools are making the only comprehensive effort to set the young worker on his way upward through wages and salaries toward the larger efficiency.

Getting an Education always means a Hard Climb

Notwithstanding the reactions set up by classicists, and the more serious reactions set up by faddists in Education, there is a very sure and legitimate drift toward the use of the people's schools as definite training grounds for the people's work in a work-a-day world.

When all is said about the possible service of schools to business and industry, two interesting rejoinders are yet to make. One, unless a man is born for it, and rightly circumstanced, no amount of school training can make him a rich man. The knack of money-making is perhaps more inherent than acquired, and more social than technical.

The other rejoinder is that the great American pastime of getting rich doesn't interest quite everybody. The writers, the painters, the sculptors, the musicians, the preachers, the philosophers, the scientists have another notion of what life means. They want to *understand,* to *enjoy,* and to *share* the world they live in. To get and to give the biggest possible sum of the finest possible satisfactions appears to them to be an end which justifies their means of living. It guarantees a certain roundness of interest; insures that the pleasure of practical achievement will be matched by the pleasure of philosophical meditation; provides that art shall alleviate materialism; and that philanthropy will help to take away the curse of unfair accumulation. Here the practical, the thoughtful, the artistic, the fraternal-philanthropic, meet and fuse in a union which gets most out of life because it gives most.

II. What Shall I Do For A Living? An analysis of occupations for aid to students in choosing a life work.

Accounting. — Good possibilities for advancement. Leads toward business management and financial expert's work, with hardly a limit to the possible cash returns. But the accountant who intends to go above $2000 or $3000 a year must study widely and have an ambition to outgrow every position short of the top. High schools can give him only a beginning toward the knowledge required in his profession—the rest he must work out for himself in spare time, or in a school of business administration. Here are a few of the studies recommended in preparation for the high salaried appointments: Partnerships, Cost Accounting, Analysis of Accounts, Corporate Organization and Accounting, Auditing, Graphs, American Business Law, and Special Accounting for Railroads, Mines, Banks, Brokers, and Cities.

Preparation. The commercial course in any good high school or commercial college; the accounting courses in a reputable correspondence school—in either case, with special reference to the methods used in the business which the student is likely to connect himself with.

Advertising.—Advertising agencies make big sums, and individual workers are salaried above $15,000 a year in many instances. Requirements: understanding of salesmanship in general; knowledge of human nature; command of attractive, convincing English; ability to seize the winning points of an article or a project; skill in drawing or photography, or both. Variety of assignments, constant challenge to ingenuity and skill, and big financial

returns make advertising one of the best of business opportunities.

Preparation. Special courses in college, in technical schools, or in correspondence schools. Factory experience and selling experience highly desirable.

Architecture.—A clean, interesting business, but variable in its returns. It is doubtful if the average income of architects would reach $3000 a year. Established firms of wide reputation do much better than that, but two uncertainties work against even them—an uncertainty due to competition from other architects, and a periodic uncertainty which follows the tide of building conditions. If work were constant and were paid according to the knowledge, skill, and responsibility involved, it would be hard to find a more desirable occupation.

As superintendent of construction, an architect should have a practical knowledge of every trade called for in the construction of the building he plans. In the modern division of labor, this means that during the construction of an ordinary city dwelling, for example, the architect will be called upon to pass judgment on labor and materials for fifteen or more different sets of tradesmen. He must know how to compute quantities, prices, and strength of materials; he must be able to do mechanical drawing, free hand and perspective drawing, and color work from specifications. He will need all the mathematics offered in the best high schools, including geometry, trigonometry, and logarithms. And at the top of his profession he will need the general theory and history of architecture, for every type of building in use. All told, architecture offers a fascinating combination of the aesthetic and the practical, with the possibility that the architect may become also the contractor—which is another financial story.

Preparation. As indicated above, architects need a wide range of information and experience. There are two main types of preparation: the technical college and the correspondence school. Actual residence in a school of engineering is recommended.

Automobiles.—There are four phases of interest in motor cars—manufacturing, selling, operating, and repair. At the moment of this writing, an automobile is in use in the United States for every nine or ten inhabitants. When we figure that the retail price of these machines has run from $500 to $13,000, with perhaps an average of nearly or quite $1,000 a machine, the volume of this mushroom business is staggering. Tremendous fortunes are being made in the manufacture of trucks and motor cars, and respectable fortunes are being sunk there. Competition is now so severe, and the market is so nearly filled that a second rate machine or an inefficient selling system may spell ruin for its company. Some companies have tardily learned that the future depends upon keeping the customer satisfied, and that means service.

Only second to the fortune for the successful dealer is a good motor car. Dealers' commissions on sales run from twenty per cent to as high as forty per cent, so that in every good-sized town there is likely to be at least one man whose income is $50,000 a year from the sale of motor cars.

The operating of motor cars, for hire, is of course not an occupation to be taken seriously, except as a temporary expedient, perhaps in vacation time. Hardly more can be said for the repairing of cars, as a business. A young man who might have been satisfied, a few years ago, to be a carpenter or a blacksmith may be contented now as an auto-mechanic. Sixty or seventy cents an hour may look big to the boy of sixteen, but if he stays a few months too long at that sort of thing he will find that he has mortgaged his future beyond redeeming.

Preparation. The ordinary practice of picking up the trade of auto mechanic in a garage does not commonly lead far. One should take a mechanical engineering course in some school which specializes in the problems of motor transportation. Perhaps the best schools for the purpose are in Detroit, the motor car headquarters.

Banking.—An honest, dependable young man or woman will find a clerkship in a bank to offer a tranquil, unharassed existence, at moderate salary, with promotions so far apart that even ambition commonly ceases to disturb. If a young man is in love and wants to settle down, really settle, with $2,000 or $3,000 as the pretty sure limit of his income, almost any minor place in a bank will do.

Even the higher positions in ordinary banks do not pay big salaries. $5,000 is perhaps a fair average for the managing officials. But these men, being close to big business and fully informed, have opportunities for the quick turn-over of their private funds, and by this means their banking business becomes profitable. Bank officials do not become rich by economizing on their salaries. Either they have capital before they become bankers, or they acquire their capital on the side. One of the commonest sources of profit to banks and of personal income to their officials is in the underwriting of bonds—a process by which, with little cash actually invested, large sums may be realized in a short time, by reason of the big face values of the securities transferred.

One would say that the first requirement for a bank official is downright honesty. The temptation to borrow from the bank, in one way or another, for private speculation, is very strong. Other requirements are: very broad business information, wide social acquaintance, and very shrewd judgment of men and affairs. The general policy of the bank is determined by its board of directors, but the carrying out of that policy, the actual decision of a thousand and one points of practice, is in the hands of the cashiers, the vice presidents, the presidents. These are positions of great importance, great responsibility, and great opportunity.

Preparation. Studies in economics, in the history of public finance, in business management, in banking and bank accounting. All these courses are now offered in good colleges. A bank clerk who wants to study without leaving his job will do well to consider the correspondence schools.

Building—Contracting.—Big profits in honest building are most likely to be made in connection with real estate operations and on a large scale. But if the profits in this joint operation are to be both big and quick, the purchase of land must be made at the right price in the right locality, and in the nick of time; and the purchasing of materials must be managed with discounts for quantity, and with a view to saving money by doing a large amount of machining in the contractor's own plant.

Contracting is, then, one of the many occupations in which money can be made most rapidly by those who already have money, or have money and credit to carry them through to the period of returns.

One of the worst drawbacks on contracting is that it is subject to seasonal fluctuations. There are years, and series of years, in which practically nothing is doing; as there are dead towns and live ones, dead regions and live ones. The contractor must know when it is time to lie low, and when it is time to crowd the game through with every dollar he can command.

We are still in the period of national expansion; still in the period of congestion into manufacturing centers. This means that for a long time to come there will be a good opportunity for the building contractor.

Like an architect, a contractor should know all about materials, the handling of workmen, the processes involved in all sorts of building. If he knows drawing, so much the better. But his chief money making traits lie in the combination of executive ability to keep things going at high pressure, keenness in judging men and affairs, largeness of vision, good ability in buying and in salesmanship.

It's a man's job.

Building Trades.—Four years after the World War, tenders and helpers were getting $3.50 to $5.00 a day, and masons, carpenters, mechanics of all sorts, from $5.00 to $10.00 a day. This is fully four times the wage paid a generation ago If one tried to account for it, he would have to name among other things the continued effects of war; the American system of tariffs and living standards; the pressure of labor unions; the rapid industrialization of a once rural people; the continued expansion of America by development and by immigration; the interdependence of values, such that uplift or depression in one part of the field tends to produce a similar change all over the field.

He would also have to note that apparent high wages, if long continued, are pretty sure to be only apparently high. Necessity, or an unmistakable preference for work with the hands, of course justifies a boy or girl in choosing a mechanical trade. The satisfaction of building, making, and mending things is a strong one and a worthy one. If ambition lasts, there is always the possibility that the helper will become mechanic; the mechanic, foreman; the foreman, superintendent; the superintendent, employer. But let him beware of becoming a human machine. Every accumulation of automatic contrivances of steel in factories and shops tends to make a new set of flesh and blood automatons. To be one of these is to be cursed with the curse of modern industrialism. No matter how attractive the mess of pottage may seem in our restless younger days, the human birthright to freedom, vision, and the finer satisfactions of life should not be bartered away, of our own wills. The loss is even greatest when we are least aware of it.

Business Management.—Business management is so severe in its requirements that few men claim or attempt to know all

about it. Yet there are men whose knack of organizing and administrating amounts to genius. Such men find their place in the continued development of growing enterprises; or they may make a profession of setting weak and run-down industries on their feet, one after another. There is hardly any limit to the salaries such men may legitimately claim. When a company has several millions of investment and possible profits at stake, there will be no hesitating over a little matter of $50,000 a year to the right man.

Obviously one must be born for that sort of thing. But there are youthful indications of promise. The traits that make successful business managers for high school and college enterprises may expand into bigger effectiveness. No other type of engineering is likely to excel business management in the union of exciting adventure and big rewards.

The efficient manager is a constant student, always picking up facts, thinking out methods, testing and checking devices. He learns about his job from both books and men. There are schools for his profession nowadays. A few of the things he studies are: filing, indexing, correspondence; accounting, cost accounting, auditing, graphs; bonds, banking, brokerage, credit, collection; insurance, safety; business law; management, personnel, production; advertising, selling.

Civil Service.—Good for the man or woman who is willing to accept secure, steady employment at the sacrifice of high salary or fortune in business. Compensation from $1,000 to $4,200 or thereabouts, with the average around $1,600 or $1,800. The day's work is not more than eight hours; vacations of two to four weeks are given with pay. Provision is made for retirement on pension. Appointments are made from a list of persons eligible by examination, and the only favoritism on this list is in the interest of ex-service men. About equal numbers of men and women are appointed.

Civil Service examinations lead to positions as stenographer, typist, clerk, inspector, cashier, store keeper, gauger, light-house keeper, and general field work for the government, especially in the Post Office, Railway Mail, Internal Revenue, Immigration, and Customs Service. The probability of appointment may be judged from the fact that 20,000 to 45,000 appointments are made annually. Examinations cover elementary subjects actually needed for the work of the department. Separate examinations are given for Typist, Stenographer-Typist, Book-Keeper-Typist, Book-Keeper, First Grade Clerk, Post Office Clerk, Railway Mail Clerk, and Immigration Inspector.

One may study these subjects at home, or in the commercial courses of any good high school or business college.

Dentistry.—An established city practice in dentistry is worth at least $10,000 a year. The hours are regular, and there is little of the surgeon's or physician's responsibility for life and death. As compared with other occupations yielding a like income, the work of a dentist is narrow, monotonous, and unpleasant. But dentistry is necessary service, and an honest worker can find sustaining enthusiasm in it. There appear to be four general divisions of dentistry, concerned with diagnosis, repair, removal, and replacement. A good deal of scientific ingenuity has gone into diagnosis, repair, and replacement in recent years, to the advantage of the public health and of the dentist's finances.

A course in dentistry requires two or three years of residence in a dental college, sometimes more, with clinical practice.

Drawing, Designing, Illustrating, Cartooning.—Draftsmanship, or mechanical and architectural drawing, is a clerical member of the arts family, useful in bringing the creative notions of designers into form for the guidance of workmen. It requires patient exactness, and some training in the theory of mechanics and in the interpretation of conventional drawing. One who intends to do commercial designing should have some knowledge of mechanical drawing. Like other clerical positions, drafting cannot long hold a young man of ambition and talent, but it supplies a useful lower round in the ladder of progress.

This Man studied Hard for Nineteen Years

Designers are creative artists, whose practical success is limited only by the public demand for their inventions. The field for drawing a design is very great, in all sorts of enterprise. The commercial success of every milliner and garment maker depends on *design;* every house and all its furniture is first a mental, then a material, design; design is the interesting indispensable beginning of every lovely and every practical work of man's hand. Its contribution is as important in the foundry as in the studio. As our civilization progresses, the union of beauty with utility will be more and more insisted upon; and the man or woman who can effect this combination will be handsomely rewarded for work that is always a pleasure. Naturally, the studies which aid in designing will depend on the type of product intended. The big requisite is a creative fancy, and some means of giving form to that fancy so that less gifted folks can take up the work of material production where the artist-producer leaves off.

Illustrating gives visible body to the fancies recorded only in words until the illustrator takes hold. Good illustrations are an important second to good inventions of all sorts, especially in books and magazines. Of course, illustration at its best is also creative.

Cartooning.—There are many sorts of comment on life with pencil and brush. That comment may be serious or funny; highly imaginative and closely founded on fact; definitely limited or generally applicable. Cartoons are humorous pictured remarks on men and affairs. At their best, they make wise and influential recommendations. There is probably no surer way to keep people straight, inform their ignorance, and correct their crookedness, than the way of humorous public comment in drawings. A good cartoonist is therefore much more than a skillful worker with the pencil. He is a thoroughly informed and broadly experienced philosopher, with a responsibility and a power fully as great as that of editors themselves. Such combinations are rare, and the rewards to the few who possess them are correspondingly great. A youngster with a talent for sketching and an interest in history and politics might very well adopt cartooning as a future vocation; hold to it, and train himself for it in every election of studies and in his use of free hours.

Courses in design form an important part of every program in schools of fine and applied art. The better correspondence schools offer many excellent courses in industrial and artistic designing.

Dressmaking, Millinery, Tailoring. — A good business for those whose taste and skill lie that way, *if* they run their own shops or factories, and particularly if they have the cleverness to design beautiful apparel. Only a fair trade to follow for wages. Somewhat steadier than the building trades, but confining and sedentary.

Engineering.—*Civil Engineering.*—Survey, ing, Leveling, Sewerage, Draining, Irrigation and Water Supply, Road, Railroad and Bridge Building, Water Wheels, Stone, Brick, Concrete, Reinforced Concrete, are all within the scope of strictly civil engineering. 50,000 men are professionally engaged in this work in the United States. The rank and file of this army receive salaries of $2,000 or $2,500 a year. The greater the scope of work a man can effectively manage, the higher is likely to be his compensation. The big rewards in engineering go to a combination of two or more of the types in one man. For example, there is great demand now and will be greater future demand for men able to design, construct, install, and operate hydro-electric machinery. But this requires a working acquaintance with civil, mechanical, and electrical engineering. A man who has all that, with business ability, is able to command from $10,000 a year upward.

Mechanical Engineering, unmixed, has as its field general machine shop and foundry practice and the entire theory, construction, and operation of steam boilers and steam engines. There is enormous demand for competent mechanical engineers, but there is better compensation for the man who also knows about electrical machinery.

Electrical Engineering deals with all means of generating, controlling, and using direct and alternating currents. When we remember that a really up to date dwelling house has electric communication, electric lighting, electric kitchen and laundry appliances, and even electric heating; when we recall that our great cities use electricity as their chief means of transportation; that electric motors

and electric machines are in every modern factory and are bound to be; when we reflect that water power becomes widely available only through electric power; and that with all this we are only in our first fifty years of electrical invention, the profession of electrical engineering stands out as one of the best possible occupations.

Preparation.—Engineering requires such a broad foundation in mathematics and laboratory science, that four solid years in an engineering college make only a fair preparation. A man who is already engaged in elementary engineering may continue his studies by correspondence.

Engine Running.—At its simplest, an ill-paid, easily learned occupation hardly in the class with mason's helper; at its best a highly technical and expert profession, commanding many thousands of dollars a year. Good for the boy whom machinery fascinates, if he will study and move up.

Preparation depends on the type of machinery to be operated. Head engineers in big plants, on steamships, in power houses, and the like should be machinists capable of making prompt repairs. To rise in their profession, they should have studied mechanical and electrical engineering.

Farming.—No finer work could be found, for the right man, either as a general farmer or a specialist. Probably the greatest success will be made by the man who uses general cropping as a basis for a specialty. In the central states, there is a fortune in high grade cattle, with alfalfa; a fortune in fruit; middle westerners grow rich on wheat and corn; farmers near great cities will serve their local market. Any one of a score or more of plant or animal products may prove to be the one best adapted to a particular farm, farmer, or locality.

But the day of haphazard small farming is over. Farming as a desirable business is for the man of affairs who is also a student. Agriculture is decidedly the most popular course in some American Universities—Cornell, for instance. A successful farmer needs a working knowledge of soils and soil improvement; of the raising, harvesting, and marketing of all staple crops; of live stock and dairying; fruits and storage; market and truck farming; poultry; farm machinery; and general farm management. An up-to-date farmer is necessarily something of an engineer; understands motors, and all sorts of automatic farm machinery; can operate tractors, set up, run, and make simple repairs to the dozen or twenty complicated machines about the place. A real farmer who is also a real mechanic and a real business man can make in his own lifetime and under his own honest management a fortune comparing favorably with those of the cleverest operators in cities.

Forestry.—An interesting business, of very great public service in its preparation for future need. Followed for these reasons rather than for gain. Our country is still too eagerly absorbed in the present to draw any very searching lessons from the past, or make any adequate preparation for the future. A young man who likes the simple life of the woods and the burned over districts; who is best pleased to be in the wilderness for weeks at a time; who has a vision of checking needless waste in the forests, preventing timber theft, and restoring the essential life of the cutover barrens, may find no more congenial employment than forestry, either for his state or national government. Of course there is another phase of the forester's work—the raising of young trees. This is fully as important as the field work, but it is likely to be a bit monotonous. Each seedling brings forth many thousands of plants, all alike, all to be treated alike. Even so, *if the pay were the same*, which would you do, cultivate ten thousand pine trees, or drill and fill ten thousand decaying teeth?

Agricultural colleges and many universities now offer courses in forestry.

Journalism.—It all depends. We have no absorbing respect for the gossipy trade of news gathering and news purveying. In general, reporters are glad to print whatever their customers are glad to read; and the newspaper public is pleased to read a good many things that were better

This Man stopped Studying when Twelve Years Old

unread. The dividing line between gossip and legitimate news is probably in the mind of the reader or hearer of the tale.

Yet there is such a thing as a proper responsibility for the quality of news, and the difference between news and gossip is that one stops with the fact, enjoys the fact for itself, enjoys it most when there is a good odor of carrion about it; while the other always goes beyond the fact to the interpretation of the fact and the problem of proper social response. The slogan "All the news that's fit to print" sounds well, but the fitness depends on both the news and the public reading the news. The commercial maxim "Give the public what they want" has for the back-ground "The public be damned." The chief ground of objection to reporting as a trade is that so much "news" is damning. A second, very practical, objection is that the initial stages of reporting do not pay. One may shorten his apprenticeship by study. There are even "Schools of Journalism" now—perhaps the most important being connected with Columbia University.

Journalism proper is an occupation of dignity and importance second to none. The shaping of public opinion is very largely in the hands of men who write for newspapers and magazines. The ambition of every "cub" should be to shorten the time which must pass before he can print over his own signature the opinions which he believes are needed by his public. The truer and more far reaching the opinions, and the better they are put, the larger will be the ultimate financial compensation. Journalism is a first rate vocation for a wide awake youngster who can learn to think through the tangle of twentieth century society, business, and politics, and learn to put his ideas in a forceful, popular way.

The big profits of journalism do not come to the real journalist, but to the newspaper owner, who perhaps does not write at all. The running of a big newspaper is a business proposition, purveying news, feature articles, editorials, advertising, for a double consideration—major and minor. Circulation may pay costs, but advertising brings profits. Thousands of Americans have grown rich in the business, and it has a fascination which few escape who have once known it.

Preparation.—Good English courses in high school and college help, but the student must expect a savage aftermath of training in the daily rush and grind of newspaper work. College courses or their equivalent, the broader the better, are necessary for editorial positions. Newspaper management, as a business proposition, requires a business training, in school or out. On the general problem of learning to write, see whatever notes you can find on the methods of successful writers—for instance, read Stevenson's "A College Magazine" and Smith's Biography of O. Henry.

Laboratory Science.—There are three main services of laboratory science: the maintenance of public health; the supplying of technical information for use in business and industry; the discovery of new truth by research. The inner fascination of a scientist's work is in the third of these phases. There is always the brooding possibility of "a new planet swimming into his ken." Our half century differs from all others chiefly because so many discoveries have been made through research. When once a new substance, a new principle, a new technique has been demonstrated, the pot boiling question of practical utilization comes on. In fact, few men can afford to be pure scientists. Most laboratory workers are salaried employees whose personal satisfaction is in their work for its own sake, but who earn an honest living by turning their analysis to public or corporate advantage. If the discoverer can put his new notion into a contrivance that will catch the popular fancy, protect, manufacture, and market it himself, he is on the way to the pot boiler's high reward of fortune. This is the familiar history of those American inventions whose inventors are also business men.

Law.—If in doubt, don't choose Law as your profession. There are too many lawyers now. If you're bound to be a lawyer, be a big one—and an honest one. The temptation of a lawyer to be a parasite, a pettifogger, or a pander is great under our social conditions. Lawyers make the law and too often match each other in the game of circumventing, for a consideration, the laws that lawyers have made. Mr. Lincoln's type will always be needed, always be worthy of high respect, and always fairly well paid. There are thousands of lawyers of this sort, less famous.

To build a law practice requires hard, painstaking work with long hours of labor. A successful lawyer must have a strong personality, ingenuity, careful study of the law of many centuries. The legal profession is discouraging, because it usually deals with the troubles of other people. The greatest compensation goes to the attorney who can guide big business safely between the law and the gospel.

The study of law as preparation for a business career is becoming more and more popular each year. A college education is recommended before entering law school. Law courses require not less than three years of residence in a law school.

Manufacturing in General.—See Business Management, in this series. The safest way to go into the manufacturing business is to serve an apprenticeship in an already going concern, working up through the producing, the selling, and the managing phases of the business. There is great risk in undertaking the production of a wholly new article. The first thing to be investigated is whether the article itself will sell, after a reasonable campaign of publicity. Often the advertising costs are many times over the cost of production. Granted that the article is salable, one must make sure of *finance*. There must be enough good money in sight to see the project through to the stage where income more than matches outgo. A business cannot be regarded as established until its returns above all producing and distributing costs provide for refunding of original investments through profits.

When all is said, the men who make more money than they know what to do with are the men who have hit the happy combination of producing and marketing something all the people want, or something that enough folks can be made to think they want.

Medicine and Surgery.—These two fairly distinct professions must still be united in the fundamental training of doctors, and united to a considerable degree in country and small town practice. The big money goes to specialists in both departments; the limit is the sky and the patient's ability to pay; but since big fees cannot be collected in the country and can be collected in town, only city doctors can hope to become rich through the practice of their profession. Again, a popular physician in the country is likely to work himself out with sixteen or eighteen hours a day every day in the year; while city specialists have fixed hours of their own choosing, and at their own pleasure. All of which points to a condition needing remedy but very difficult to cure.

Every business has its own set of temptations. It is literally true that most people like to be humbugged. So big a proportion of human ills are "mental" that treatment by sugar pill and suggestion is a common practice. The two together constitute a faith healing for which the charge is no doubt legitimate enough, but it makes a genial cynic of the doctor. The faith tablet is particularly valuable in city practice, where so many women are worn out by their social duties. Country folks are commonly too busy to be sick above the ears.

The great advances in the doctor's profession in our time have been in bacteriological discovery, in general appliances, and in the instruments and methods of surgery.

Country practice and special surgery are the two departments most attractive. One to the humanitarian for its genuine service where help is much needed; the other to the scientific business man for its opportunities to make searching diagnosis and skillful operation, with an aftermath of possible riches.

The best courses in medicine and surgery require six years in college—two years of studies from the college of arts, and four years of strictly professional training.

Mining Engineering.—A doubtful occupation, unless one is willing to go to any remote part of the world where mining interests may lie; doubtful also because of the social conditions of mines and mining towns; attractive through possibility of adventure and discovery, technical interest, and fair remuneration. Managing engineers are likely to get from $2,500 to to $10,000 a year. Adequate preparation is a matter of several years' intensive study at a college of mines, with severe training in mathematics, physics, chemistry, geology, mineralogy, shop practice, smelting, reduction of ores, field and underground work.

Navigation.—The captain of an American merchant ship on the high seas makes about $400 a month; the four officers, from $250 down to $150 each. Board and room are furnished by the company, both at sea and in port. The prospect of employment at sea depends on the national policy in handling the merchant marine. At present, the outlook in the United States is not favorable. There is, however, always a tremendous tonnage of big boats on the great lakes. Lake navigation is a comparatively simple matter, though very definite information is needed, for navigation from point to point in all weathers.

Ocean navigation requires mathematics through trigonometry and logarithms, elements of navigation, piloting, chart, lead, log, dead reckoning, nautical astronomy, latitude, longitude, azimuth, meterology, methods of reckoning whereabouts, international rules and signals. These subjects may be studied either in school or by correspondence.

Nursing.—Professional nurses with diploma receive $30 to $60 a week, and maintenance, with prospect of fairly steady employment. Their professional interests are much like those of physicians and surgeons, with less responsibility. The indirect responsibility of nurses is very great, since the treatment of so many ailments consists in maintaining the conditions under which nature can eventually conquer the disease. The profession of nursing is likely to divide into two chief interests, like those of the doctor. Some nurses become almost assistant surgeons, by reason of their quick perception of what is needed, and their deftness of manipulation. Strange as it may seem to a layman, surgery has a fascination hardly equalled by any other calling, so that most hospital nurses would work only in the operating room, if they were free to choose. Nursing has the advantages of comparative freedom from monotony, strong technical and social interest, the satisfying of an instinct for fellow-kindness, and a fair financial independence.

Preparation.—Two or more years in an authorized school for nurses.

Preaching.—An indispensable social service, with a unique combination of reward and sacrifice. A preacher is not expected to seek riches, though his ability may guarantee comfort. Perhaps more than any other man in the community, he may know the keen satisfaction of eloquent leadership, and may enjoy the inner approval from an honest devotion to the really important interests of his people. No other man in the community gathers to himself such a wealth of affection as the priest or Protestant clergyman may receive. For in sickness and in health, for this world and for whatever other worlds there are, his devotion is for all who need him. The efficient clergyman is a very busy man. He must know his people intimately; he must christen, marry, confess and bury them; he must interest himself in the public welfare, through education, philanthropy and patriotic citizenship; and his duty as a sermonizer demands that he be a constant student, always learning, always thinking, so that he may not come empty-minded to his great opportunity on the seventh day.

Preparation.—Not less than a full college course of four years, with emphasis on history, sociology, literature, and public speaking. A really modern preacher will find more value in applied psychology than in metaphysics, and will have more use for science than for theology.

Railroad Operating and Management.—Many causes have reduced the desirability of railroad stocks, in recent years. One of the chief causes of the reduction or cancelling of dividends has been the great increase of operating costs, especially in wages for the maintenance of way, repair, and moving of trains. It has been possible for locomotive engineers to make $300 or more a month, with other wage employees grading downward from that sum, but all at rates which would have seemed incredibly high at the beginning of the century. What the future may hold does not appear, but probably wage earners will continue to find railroading one of the best paid employments in the country. Railroad agencies in the larger towns are positions of comfortable income; and at the top of each division are a group of men who earn excellent salaries by business management or technical efficiency as civil, mechanical, and electrical engineers.

Preparation.—High salaried positions in railroading are likely to be filled nowadays by graduate engineers, with practical experience. Ambitious men in lower positions will do well to investigate correspondence courses.

Salesmanship.—A vital necessity in all business enterprises. One should either choose a commodity line he knows a good deal about, or put himself through a rigid training. Actual factory experience in making the product one is to sell is often the best item of preparation. But it is necessary also to understand men; to be able to interest, entertain, and win by good-fellowship; to put very clearly the selling points of the article in mind; to compare it tactfully, without knocking rival articles; and to clinch a good impression into an actual sale. Retail salesmanship differs materially from wholesale; long range arguments are not like those close at hand. Great enterprises

have a sales organization and a sales management. At the top of his ambition a salesman sees one of these managing positions. On the way to it, he must perfect himself not only in the art, but in the theory of his business. He must know commercial law; the principles of credit and collection. Perhaps the three big requirements are: Know your goods; know your man; and learn to say the right thing in the right way.

There are books and schools of salesmanship. The graduate from these books and schools may some day graduate from salesmanship itself, into business management for his company.

Secretarial Work.—A secretary is a superstenographer and infra-manager; worth very much more than a typist, but still definitely responsible for the carrying out of suggestions, rather than for marked initiative. Secretarial work is a comparatively recent development in business and professions, to the advantage of everybody concerned. A position of dignity, and of better than clerical compensation. Worth training for, especially for women. Definite courses in secretarial work are now available in women's colleges, and in schools of business.

Teaching.—Financially, teaching now ranks with preaching, among the upper groups of wage positions, or at the lower end of salaries. Measuring the actual service of schools by the theoretically possible service, perhaps teachers get all they earn; but weighing the importance of schools with the importance of other trades and professions, there is still scant justice in the salaries of teachers.

The best teachers do not choose that work because they can make more in that way than in any other, or because they think they can make it more easily. Teaching is not a proper substitute for typewriting or clerking in a store. Good teachers, like good clergymen, give up something in choosing to teach. If they amount to much as teachers of literature, they themselves might write; if they can train business men, it is because they themselves could make money in business; if their physics and chemistry are sound, they could be consulting specialists for big corporations; if they have mastered history, the roots of statesmanship are in them. Now if all this is true, it is at once the condemnation of the schools of the present and the program of the schools of the future. Our schools are not close enough to our life. Teachers who come to their work because they like the subject-matter of the courses they teach, or because they enjoy their week-ends and summer vacations, even teachers who have a mothering fondness for children, or who take to teaching as a "sad mechanic exercise, like dull narcotics, numbing pain" are probably not the ones the schools most need. Good salaries help, but are not a guarantee of good teaching. Perhaps if salaries were advanced to a point where rigid selection might reject the unfit from a surplus of candidates, the schools would profit by the condition. To stop the advance of salaries short of that point is to invite indifferent typists, counter and kitchen girls to try their hands at teaching for a while.

Real teachers know their subject matter and know how to use it. But they have also a constitutional liking for seeing other folks grow, and for helping on the process. To guide a youngster in the mastery of facts worth while; to make and carry out a program of thinking which causes the student to keep on thinking after he leaves the school; to so relate schools to life that even while he is in school the student will begin to do well the things which it will be his life work to do well—that is teaching. It is a magnificent work. Its best rewards are not in any salaries, high or low; but in the life long gratitude and affection of the old boys and girls who know what it all meant.

One may begin teaching with only the background of an elementary school, if he can pass an examination in the subjects he is to teach, and in the theory of education; but such beginnings are necessarily at the pupils' expense. Proper training reduces the blunders of even the born teachers. It is character, personality, that really does the teaching; and personality is built up of what we were born to be, plus every experience we have gone through. It includes not only what we know, but what we have done, what we can do, what we enjoy, what we dislike, what we intend, at every turn. Other things granted, the richest personality will guarantee best teaching.

Writing.—The profession of writing, apart from news-mongering, business correspondence, or sermonizing, appears to be attracting every year a larger number of practitioners. Even poets, flocks of them, make a living by writing, supplemented by writing and talking about their writings. The popular maw for fiction is unfilled, though our presses are busier than the German Reichsbank making marks. We read everything, and so almost anything. The sheer bulk of our reading prevents a searching test of the things we read.

America is cosmopolitan in its fusion of standards in art. We have now an American realism, if such a thing can be anywhere—smoky gray, ill-smelling, clattering with discordant rackets on occasion, unmoral or immoral, quite continental in its notion that everything is grist to the artist's mill, but also continental in its tendency to grind only the coarser grains. We have symbolism, with real objects—stark, discordant lumps of stuff—standing for heaven knows what ideal opinions; and hazy cloud-banks of uncertainty portraying to the elect the solid facts of life. We have imagists, lifting incidental pictures into the dignity of a commentary on experience—the china decorators of art, leaving pleasant minor impressions of pleasant little things. And we have still some Anglo-Saxon art, thanks to our stars, mingling all the types that are fit to print, and judging fitness by a combination of fidelity to fact and safe social tendency. Of course it is possible to allege that a bad book is not bad to a good reader. On this ground we come at Mr. Pope's famous vindication of the ways of God to man; Whatever is, is right, at least when the right man looks at it.

All this indicates that there is plenty of room and a hearing for everybody who has something to say in print. Big fortunes are made in popular fiction, if the author is prolific, and comes into vogue. There is reason to think that many books are made with the fortune chiefly in mind. At its best, writing is a profession blending the art impulse with social melioration; the whole so cleverly done that the writer may forget about the compensation, as a thing assured. Necessity may bring lagging reluctance to the difficult moment of invention, but if we are to invent anything permanent in literature, necessity stops at the gate. Art is its own wage.

Schools can produce fair or good writers; there their power stops. They cannot make great ones. The English departments of our colleges encourage talent, and develop technique. They point out how this and that master of English learned his trade. They give local vogue and sometimes national reputation to promising undergraduate writers. Probably the best initial training to write may be found in college classes. But life itself furnishes the stuff that books are made of. Young people haven't really much to say until they have lived and thought, suffered and enjoyed. Even experience will be inert stuff without the born gifts of intellectual curiosity, imagination, and unflagging creative impulses.

TEACHERS IN TRAINING

Future teachers in the New York Training School for Teachers are delving into the secrets of radio, the study of which occupies a place in the curriculum.

COMMERCIAL TRAINING

In this display is featured the work of the commercial high schools of Chicago. Training includes instruction in office management and secretarial work.

EDUCATIONAL PLAYTHINGS

PLAY is the business of life of little children and good toys are the necessary materials for the success of this play if it is to hold for them rich, vital and joyful experiences.

Selection of Toys.—Great care must be taken to provide an environment and materials which will encourage wholesome and creative play, for it is in this play that the child is finding ways to interpret the physical and social life surrounding him; it is through constructive play that the child is having opportunities for proper physical, intellectual and social development and thus day by day becoming a useful member of society even while he is a child.

In selecting playthings for children, certain fundamental qualities and characteristics must be secured. All toys if they are to hold the interest of the child must have a "do with" quality—the toy must be one with which the child can experiment and through this experimentation produce creative results.

Value of Simple Playthings. — Children want to understand their playthings and the simple, easily used, easily taken apart and put together toy is more satisfactory in every way to the child than the elaborate and mechanical toy of which he cannot understand the workings, and which will be broken and useless if he does more than wind the key and watch it go.

The elaborate toy, such as the fully furnished doll house, the doll supplied with a trunk full of fussy, flimsy, unpractical clothes and toilet articles, the grocery store with every detail perfect, are overwhelming and are only interesting to the child for a short time and are then pushed aside and forgotten, whereas if the little girl is given materials and encouraged and helped to make her own doll house and simple furniture or the boy his own grocery store, the pleasure and profit will be far greater and the child's interest in using them more lasting.

Construction of Toys.—Toys must be well made and very strong and of some nonbreakable material if they are to withstand the constant vigorous and inexpert handling which they are sure to get if they are worthwhile and embody the qualities which make them interesting to children.

Toys should, as far as possible, be of such material, finish and workmanship as will allow of thorough washing and sterilization—especially those playthings designed particularly for the use of very little children.

Toys should be pretty and gay as well as durable; good line, proportion, material and workmanship, all help to make the plaything artistic, while bright colored paint adds very much to the attractiveness of many toys although certain wooden toys are more suggestive and attractive when left unpainted. Only nonpoisonous paints and dyes should be used on children's toys.

Toys should be realistic, representing as faithfully and simply as possible the things children see and use in the world around them; that is, toy animals should resemble real animals and not be grotesque caricatures of them; dolls should be pretty, childlike in feature, natural, and simply and attractively dressed and not oddities or overly sophisticated.

Toys should be large enough to be easily handled and manipulated; playing with tiny toys such as small blocks or small beads may strain the smaller muscles and cause nervous tension, while handling, pushing, pulling, grasping and lifting larger toys is of definite physical benefit. Care must be taken not to go to the other extreme and give the children toys which are too heavy and unwieldy to handle easily.

Toys which embody humorous characteristics and possibilities without being grotesque are great favorites; these toys are hard to find but there are some constructive materials which can be put together in all sorts of fantastic and funny combinations without being ugly or gruesome and there are some good picture puzzles with funny pictures.

There should be some toys or playthings which satisfy the child's dramatic interest, which can be used as properties in his dramatization of social situations in the life around him. Dolls, housekeeping playthings, toy animals, trains, boats, automobiles, the sand box and simple materials for dressing up and fanciful play are all valuable in his life.

Blocks.—Probably blocks are the playthings which stimulate the best construction as well as the most profitable form of dramatic play. Perhaps nowhere in the toy world has there been such a change and development for the better as there has been with blocks; instead of children sitting at tables handling a few small blocks which hold very limited possibilities of play, we now find them building on the floor, exercising their whole bodies in lifting, carrying and placing big blocks—blocks large enough to make real things of such size, form and combinations of construction as will enable the children to experiment and make the buildings they need in their play.

There are available some sets of blocks with which children can build structures big enough and strong enough to get into and use in their dramatic play; the blocks are simply and securely fastened together in such a way as to prevent danger of falling.

The children can build their own playhouse with as many rooms as they need to accommodate the group. They can build a two-story house with a staircase or an elevator. They can build their own automobiles or truck which will move on wheels provided in the set of blocks. They can make their own train or boat big enough to take any number of children traveling by land or sea.

Think of the satisfaction in this type of block building, of the possibilities for valuable social contacts and adjustments, for physical exercise, for planning and construction! Above all consider the possibilities of children making their own usable playthings, and of being able to change, reconstruct and build over whenever their play needs demand!

Experimenting.—Young children enjoy and benefit from playing with toys which give them much opportunity to handle, manipulate and experiment in a simple way; they like to put things together, to put one thing into another, to put a smaller object into a larger one. Such materials as large peg boards, nests of blocks, wooden beads, simple sets of colored wooden tablets which can be strung on a stick or laid out in patterns, large stone tiles for making simple designs are all interesting to them as simple materials for experimentation. They also enjoy as they grow older such materials as a magnet, scales, thermometer, measuring cups of different proportions, rulers, artiscope and magnifying glass. The materials afford opportunity for further and more exact handling and experimentation and stimulate an interest in additional scientific study.

Providing Physical Activity.—Very definite care should be taken to provide playthings and apparatus especially designed for physical activity—a few well chosen pieces of apparatus which will give opportunity for all round exercise. It is wise to keep a balance in this selection and provide equipment for climbing, swinging, hanging, pulling, balancing and similar play. This type of play material is particularly necessary for the city child whose opportunity for vigorous exercise is likely to be more limited than that of the country child, both in the house and out of doors.

There are many large pieces of apparatus now available for schools and playgrounds and for those who have large nurseries, such as the jungle gym, the tower gym, the highlow gym, low parallel bars, climbing rope, see saw, rocking boats and slide. For those who have only limited space there are excellent compact combinations of swing, swinging bars and rings and these, with balls, hoops, horse lines, wagons and toys to pull for the younger children, will provide good exercise in play form.

Where to Keep Toys.—A convenient place to keep playthings is necessary. A set of low open shelves is suggested—these shelves made wide enough to hold the large toys and close enough together to provide ample space for everything without having to pile one plaything on another. If children have a convenient place for their toys they can soon be taught to keep them in order and learn to be responsible for their own belongings.

Progression.—Children who when young have used and experimented with the kind of toys and play materials which we have been discussing will continue as they grow older to want playthings which enable them to pursue constructive experimental scientific and artistic activities. They will continue their interest in construction, but soon, instead of using blocks, they will use materials which offer more exact and elaborate possibilities such as erecto and mechano. They will be interested in more elaborate puzzles and materials which call for careful handling and they will enjoy using the magnifying glass, the microscope and simple sets of materials which are available for first experiments in chemistry and physics.

Many playthings at one time are confusing and over-stimulating. It is better for a child to have a few good, well chosen playthings with a new toy added from time to time as his play needs grow and require them.

And so we realize that the selection of children's playthings is a serious and significant matter, in that the interests, habits and attitudes of life are set up in these early years and the play life of the little child is setting the pattern for all future development.

NOTE: In the accompanying pages many educational playthings are illustrated.

PRIMARY EDUCATION

PRIMARY instruction is at first a parents' problem and very properly begins in the home. In no way can parents more helpfully coöperate with the school than by taking in hand the home-work, limiting it within reasonable time and holding the child to his best and most vigorous use of the time. In this way the home may supplement the school or become a check upon the school when such check is needed.

The Child and His Mother.—The world has recognized in art and story the sacredness of mother love. The intimacy of companionship between mother and child begins in the days of earliest infancy. We scarcely need Pestalozzi to teach us that in early education nothing can be compared with a mother's influence. The home training of a good mother is a preparation which sends the child out into life ready to profit by the best that life can give. The lullabies the mother sings her baby have in them more than calming into rest. "Sleep and rest, sleep and rest, father will come to thee soon." They give faith in mother love and father care and lead to that larger faith which illumines adult years.

The Child and His Father.—In these days of prominence given to club life, and to mothers' clubs in particular, there is danger that the importance of a father's relation to the child may be overlooked. The boy and his father, the father and his little companion daughter, these are comradeships that give the noblest impulses to home life.

It was a woman far past the meridian of life who wrote, "My most blessed memories are of my father. He was my first teacher and all through childhood he was my best friend. I learned to love whatever he loved and all that he loved was good and noble." Again a woman writes, "It is years since my father left me, but I can hear his rich voice now as he read to me out of my favorite books and gave me an introduction into the great world of his books." It is the father's privilege as well as the mother's to begin that nursery training that gives refinement and joy through all the coming years. What delight the child and father may have together as they wander hand in hand through storyland!

The father or the mother who is a good story-teller may be the child's greatest asset of bliss. The story hour may become not only the bright spot of the day but it may be looked back upon as the brightest spot or memory. Through the gentle art of story-telling the child may be given companionship and laughter and right teaching.

The ethical value of the story of moral conduct, the story that teaches without seeming to instruct, is beyond any amount of deliberate argument—stories that inculcate the virtues of childhood, such as kindness, gentleness, obedience to parents, respect to the aged, honesty, self-denial, truthfulness, usefulness, sympathy. Stories of pure laughter are equally good—quick, responsive, joyous laughter. Oh, the merry heart of Eugene Field, and the merry heart of children who have laughed with him!

The Child and the Teacher.—It remains for an artist to express by brush or chisel what a noble-hearted teacher may become in the life of a little child—a radiance to guide throughout life. Such influences were Pestalozzi, Froebel, Arnold of Rugby, Horace Mann, Mary Lyon, Alice Freeman Palmer, and an innumerable host of others whose names are written in letters better than gold.

Superintendent Maxwell relates an anecdote of a teacher in his school, which shows the divine possibilities of such a worker. With the unmistakable Yiddish accent the Jewish mother exclaimed, laying a respectful hand on Miss K's arm: "I cannot help seeing how these children love you. You know my Bennie and Rosie? They're in your school. Do you know, lady, when you stand on that platform in the school and you say something it is just like when God speaks."

Owen Kildare gives a graphic account of the effect upon him of the first gentle touch he had ever felt. One day a strange woman, it must have been a mother or a teacher, patted him on the cheek and he tells us that he almost cried for joy. "With a light pat on my cheek and one of the sunniest smiles ever shed on me, she put a penny into my hand. She was gone before I realized what had happened. Somehow I felt that had she come back, I could have said to her: 'Say, lady, I haven't got much to give, but I'll give you all me poipers, me pennies, and me knife if you'll do that agen.'" For such children it was written, "Give me no pity, but a place where falls the sunlight on my face."

Parent and Teacher.—For the mutual helpfulness of home and school it is desirable that parents and teacher should know and understand each other better. Mothers are awakening to the need of child study and are appealing to teachers for guidance. Parents and teachers are seeking mutually for instruction and parent-teacher associations are formed. Through the intelligent direction of such organizations the school may arouse the home to a fuller sense of its duties toward the child's education, for often the ignorant or unthinking home is woefully lax. The physical and moral welfare of the child, through the neglect of the home, must often become of the deepest concern to the teacher.

Moral development depends upon physical development. This means that the child's moral welfare must depend upon the economic conditions under which he lives, and just in proportion as we improve these conditions, just to that extent do we increase the chances of the child to become a healthy, happy, moral citizen. No school has done its full duty unless it has aroused the entire community to a sense of its responsibility and acquainted it with the real meaning of intelligent coöperation in the training of children.

Natural Understanding.—The teacher should be intimate enough with the parent to talk candidly and freely about the interest of the child, and whenever peculiar conditions demand it, parents and teachers should together make a careful study of the nature and the needs of the child. Late entrance into school, irregularity of attendance, indifference to school work, physical defects are important causes of retardation which can often be overcome to a great extent through intelligent coöperation.

THE STORY HOUR—FAIRMONT ELEMENTARY SCHOOL LIBRARY, DENVER

No parent should trust for his understanding of the rules of discipline of the school to the fragmentary and biased account of a child's interpretation. It is a fine service to the school when parents emphasize the fact that the school exists for the sake of helping the child and that the teacher is his good friend always.

The principal aid for children of incompetent homes must come from the school and the personal interest of the teacher. Of the worth of such a school and the method of such a teacher Judge Ben Lindsey has given this fine testimony: "Personal influence comes through personal contact, and since personal influence is perhaps the most powerful factor in moral or immoral development, there comes a grave responsibility to the teacher. With this responsibility comes also a great opportunity, that from the standpoint of service to mankind ought to be welcome, since there is no class of our citizens, not even parents themselves, who can do or are doing more to mold the character of the coming generations than the teachers in the schools."

Home Study.—The subject of "home study" has been regarded as so important that the National Education Association gave it a place upon its program, and these are some of the points reviewed in round table discussion:

(1) We must teach children how to study if we would secure the independence, concentration, organization, and persistence we desire.

(2) Should children do any home study? If so, how much and when?

(3) Parents should understand the aim of all home assignments and should agree with the teacher where the child should be given help in his work and where he should not.

(4) Children get none too much sunshine as it is, hence the question of time for home study and time for play.

(5) Children must be taught how to study, and this teaching should be by first guiding

them in pleasant work; then making them conscious of the process they are employing, noting its value and economy; third, arousing the will to do and to persist whenever desired; and fourth, selecting worthy subject-matter to give practice in the different fields—especially in concentration, persistence and independent thinking.

Home study fitted to advance this plan should in no way be detrimental to a child nor should it tax the parent unduly.

The following facts as formulated seem to be quite generally accepted: Children in the first four grades should be required to do very little, if any, study at home. The time out of school should be devoted to playing, occasional reading, and a little helpful service at home.

The children in the fifth and sixth grades should be required to do systematic reading at home under the direction of the teacher. Such reading should be closely related to the study of subjects in geography, history and literature.

The children in the seventh and eighth grades should be required to study one subject, as history, at home, and also to do systematic reading which should be closely correlated with the subjects taught in school. The home reading should be carefully selected, and graded as the subject-matter of the regular course has outlined.

WHEN THE CHILD FIRST GOES TO SCHOOL.—For most children the first grade is the first year in school, as the majority of children cannot attend the kindergarten. The program of the first year should be organized to meet the needs of the six-year-old child so that he may adapt himself to the life of the schoolroom as comfortably as possible. Ample opportunity should be given for outdoor exercize and physical development. The program of the first year work should include nature study, music, and handwork, language, reading, phonics, spelling, writing, some simple number work, not taken as separate and distinct subjects, but each illustrating and emphasizing the others, and all uniting to enlarge the child's experiences, to stimulate his curiosity, and to organize his knowledge. These subjects should be so arranged that they unify knowledge.

A child is interested in watching the preparation of its food. Interest is closely connected with curiosity. A child desires to know what can be known about objects that are interesting to him, such as his pet animals, his toys, etc. From this it is apparent that the mother or teacher has at the outset to seek to awaken in the child's mind a feeling of interest in the subject presented to it. This she will do partly by bringing out all that is striking, pretty, etc., in the subject, and partly by connecting it with known sources of interest in the child's surroundings. One chief aim of the instructor should be to develop new interests, answering to the different domains of knowledge to be dealt with, as history and natural science. It is evident that in order to awaken such a feeling of interest and study, attention must be paid to individual differences of sensibility.

Interest describes the effect of feeling, and more particularly pleasurable feeling, in rousing and sustaining the attention. The feeling may be the immediate result of the action of an object on the mind, as when a child is attracted by a pretty picture; or may be due to process of association and suggestion.

LEARNING TO READ — READING TO LEARN.—The mechanics of reading are so difficult that during the first and second years the energy of the reading lesson must be directed chiefly toward learning to read. This does not mean that the first reading lessons have no thought content, but this content comes at first chiefly through the suggestion of the teacher. But this is all to be changed. By the time the child has reached the third or certainly the fourth year in school the mechanics of reading should have been pretty thoroughly mastered. He reads independently now to get the thought for himself. If books have been presented to him in the right way the printed page becomes an open door by which he enters storyland. He enters because he loves it and reading is no longer a compulsion.

Two motives are strong enough to make any intelligent child a good reader—to read to himself because he wants to know, and to read aloud to others because he wants to make them understand the thing that is so well worth knowing. This involves two things—well selected reading and companionship, some one at hand, mother or father, teacher or class, to whom there is some joy in telling the story gathered from the printed page. It is not necessary to describe the method of such a lesson or the spirit of such a teacher.

Drill in Phonics.—As children are to be made self-helpful they must be taught the method of attacking new words in their daily reading. Phonic drill should be given daily in all the lower grades.

At first train the ear and vocal organs to recognize and imitate sounds. Clear distinct oral expression should be secured before any attempt is made to teach the written form. Not a few of the difficulties met by the child in mastering the mechanics of reading would be removed if his ear were trained to hear the correct sound. Very careful attention should be given to each child's ability to speak distinctly. If defects of hearing or speech are detected they should be attended to at once, for often such defects may be corrected in the young child.

After a little oral drill in clear and correct enunciation, written representations of sounds may be given, beginning with consonants and long and short vowels. New words which occur in the reading lesson should be broken up in the oral spelling lesson into syllables and spelled by sound or the sound of the vowel in the accented syllable should be given. As early as the second school year children should be able to pronounce with a fair degree of confidence almost any word that occurs in their reading lesson if they have been given the help of the accent and a few diacritical marks.

Exercises like the following may be multiplied for phonic drill: Review the consonant sounds in words with long or short vowels, and without using marks except over the first word of the groups. Place the phonogram *at* on the board. Let the pupils build the group of words *fat, bat, cat, hat, mat, rat, sat.* Beginning with *ate* they will construct the group—*ate, fate, gate, slate, plate, state.* In like manner use *an* and *ane, ad* and *ade, ap* and *ape, ag* and *age, am* and *ame, ack, ake* and *ace, ang* and *ange, and, ank, act, amp, ash.* Notice the effect of final *e* on the sound of *c* and *g*, and also on the sound of the preceding vowel.

Then take the phonograms containing short or long *e, i, o, u, y*, and make families of words as above. Give exercises in the same way with initial and terminal consonants: *sh, ch, wh*—she, shall, shell; cash, hash, lash; chin, chip, chick, child; much, such, touch; which, when, while, white.

Drill on final phonograms in words of more than one syllable: *ing*—coming, having, making, taking, living; *er* — hunter, mother, shiver, farmer; *en* — seven, garden, chicken, broken, woven; *est*—safest, surest, sweetest, dearest, kindest, honest; *ed* — lived, asked, raised, looked, wished, called, learned; *es*—waves, makes, takes, moves, loves, comes; *or*—sailor, honor, favor, savor; *et*—hatchet, bonnet, jacket; *y*—pithy, dusty, stormy; *ny* — sunny, funny, bunny; *ly*—slowly, truly, lovely; *ty*—kitty, empty, plenty.

In this way take other combinations and give frequent and thorough drills until the child can immediately produce the vocal sound from the written symbol. It is not sufficient to think that a sound once learned has been acquired. It must become a habit to speak with distinct utterance. Use phonics not only as a key to new words, but as an exercise in articulation. Divide words into syllables. Give drills on the small words that are frequently slurred over, as *to, was, of, for, from, get, just, can.* Attention should be given to voice and expression, such as characterize good conversation.

Such systematic drill in phonics should secure for the child the correction of bad habits of speech, such as nasal tones, drawling, dropping final sounds, mumbling, talking without movement of lips and jaw, and every kind of indistinct utterance, and in addition should give him power to read the printed page for himself.

Story-Telling as a Language Exercise.—Children delight in hearing good stories and in telling them again and again. The old, old story is the favorite. With the telling of the story there is often free dramatic action which may be developed into a fine method of interpretation. The story-teller gains power and freedom in the use of language. He enriches his vocabulary by unconsciously using the words of others; he enriches his life by entering into the lives of others and understanding the essential relation between motive and conduct.

The story may be made the basis of all kinds of language exercise. As in the first and second grades, what the child reads becomes the center of the school program so in the third grade language expression becomes the leading thought.

As *Hiawatha* has proved a very attractive story center for the second grade, so *Robinson Crusoe* has been found to furnish an excellent center for history, geography and language in the third-year course. From the fourth grade, on through the grammar course, history and geography form two important and interrelated centers of interest and study around which crowd many human interests and from which any amount of language teaching may be derived.

Written Work should follow as a natural sequence the oral lesson. Artificial writing is poor writing. The child talks because he wishes to talk and he talks well. In the same way he should write because he has something to write about. The technique of the art of good writing is laid down in a succession of well-organ-

ized lessons in our language books, but the practice of this art belongs to every lesson in the school and to the habit of every day. The study of grammar in the upper grades is important only as it becomes an intelligent means to the one great end, power and fluency in the use of the mother tongue.

Reading to Children.—It has been often repeated that the teacher must know literature and must read often to her class and that above all she should be a good reader as well as a good story-teller. Parents and teachers, all who mingle with little children, should know and love the books and poems that the children love. Let the teacher practice on a few of the best poems and read them to her class with responsive appreciation in her voice and she will never again be afraid that she cannot learn to read or that she cannot hold the interest of her class. A few beautiful poems are suggested here as suitable selections. Let each teacher add to these others of her own choosing. Select a few poems that appeal most strongly and then read those again and again until the words seem to be your very own. Let the teacher do this and she will in time find herself classed among the very few who are worthy to be called good readers.

Poems to Read to the Children

Rock-a-bye, thy cradle is green	Nursery rhymes.
The world is so full of a number of things	Stevenson.
What does little birdie say	Tennyson.
Twinkle, twinkle, little star	Jane Taylor.
Angels at the foot. (Watching Angels.)	Christina Rossetti.
Rockaby, lullaby, bees in the clover	Josiah Gilbert Holland.
Jam and jelly and bread are the best of food for me	Edward Lear.
The quangle-wangle's nest	Nonsense Book.
To-whit! to-whit! to-whee! Who stole the bird's nest	L. M. Child.
Who has seen the wind	C. G. Rossetti.
Great, wide, beautiful, wonderful world	W. B. Rands.
How many seconds in a minute?	Christina Rossetti.
What does the bee do?	Christina Rossetti.
Baby wants a lullaby. (Innocents' Island)	William Brightly Rands.
This is the way the ladies ride (Rhymes about a Little Woman)	William Canton.
Baby bye, here's a fly, let us catch him, you and I	Josiah Gilbert Holland.
Over hill, over dale. (Midsummer Night's Dream)	William Shakespeare.
O Lady Moon	Christina Rossetti.
While shepherds watch their flocks by night	Found in Golden Numbers.
Dark brown is the river. (Where Go the Boats)	Robert Louis Stevenson.
When the elf king went to battle. (The Magic Casement)	R. C. Lehman, Alfred Noyes.
As soon as the fire burns red and low. (The Sleepy Song in Pinafore Palace)	Josephine Dodge Daskam.
There is ever a song somewhere, my dear	James Whitcomb Riley.
The wind-broom sweeps so wondrous clean. (The Wind-Broom)	Richard Burton.
As I walked over the hills one day. (A Nursery Song, Pinafore Palace)	Mrs. Carter.
There's a merry brown thrush	Lucy Larcom.
Now the day is over. (Childs evening hymn)	Sabine Baring-Gould.

Both at home and in school read and reread: *Bed in Summer Time, I Saw You Toss the Kites on High, A Child Should Always Say What's True, How Do You Like to Go in a Swing?* Rossetti's *Who Has Seen the Wind? O Lady Moon, What Does the Bee Do?* Field and Riley and Cary and Others: *Waiting to Grow, Plump Little Baby Clouds, Sleep, Baby, Sleep, Rockabye Lady.* Jingles from the Jingle book and over and over read the rhymes of Mother Goose. Sometimes read selected psalms. Read with reverence and exaltation until the children, too, catch the uplift of the words. "When I look up unto the hills, behold, Thou art there." "The heavens declare the Glory of God, and the firmament showeth His handiwork."

Suggested Material for Help of Teachers.—The teacher of language and literature must know literature at its best. She must appreciate the double aim of language teaching—facility in the correct use of language and appreciation of good literature. For herself she needs the stimulation of the best that has been written and for her class she needs to know the literature for her grade. This is especially true for the teacher of the little ones. She must know the literature that children love, their poems and their stories, and she must practice well the art of story-telling.

The book-loving teacher will have a book-loving school. To lead children to the proper use of books the teacher must know children's books and enjoy using them.

An occasional period set aside during the week for the purpose of talking over with the children the books they have read will be found valuable. Every schoolroom should contain a library selected for the use of every child in every grade. Nowhere is the privilege of individual selection more valuable than in the choice of books. When "learning to read" has given place to "reading to learn" and "reading to enjoy" them the drudgery of learning has been overcome.

Poems that Children Love and Books that Help in Story-Telling

And I must follow, would I ever find
The inward rhyme to all this wealth of life.

Ingfen	One thousand poems for children	Jacobs Co., Geo. W.
Hazard	Three years with the poets	Houghton.
Burt	Poems every child should know	Doubleday.
Wiggin and Smith	Pinafore Palace	Doubleday.
Smith, Eleanor	Song books I and II	Milton Bradley.
Matthews	Poems of American patriotism	Scribner.
Harris and Gilbert	Poems by grades	Maynard-Merrill.
Barlee	Famous poems explained	Hinds, Noble & Eldrege.
Lear	Nonsense rhymes	Little.
Palgrave	Child's treasury of English song	Macmillan.
Bryant	How to tell stories to children	Houghton.
Bryant	Stories to tell to children	Houghton.
Houghton	Telling Bible stories to children	Houghton.
Harrison	In story land	Central Pub. Co.
Harrison	Two children of the foothills	Sigman Pub. Co.
Wiltse	The place of the story in early education	Ginn.
Wiggin and Smith	The story-hour	Houghton.
Wiggin and Smith	The posy ring	Doubleday.
Baldwin	Fifty famous stories retold	Am. Book Co.
Burt	Prose every child should know	Doubleday.
Burt	Legends every child should know	Doubleday.
Mabie	Myths every child should know	Doubleday.
Foster and Cummings	Asgard stories. (Valuable to teachers for its introduction)	Silver-Burdett.
Baldwin	Old stories from the East. (Bible stories)	American Book Co.
Richards	Five minute stories	Little.
Richards	Golden windows	Little.
Poulsson	Through the farmyard gate	Lothrop.
Poulsson	In the child's world	Milton Bradley.
Scudder	The children's book	Houghton.
Harrison	Uncle Remus. His songs and sayings	Appleton.
Pyle	Wonder clock	Harper.

Fairy tales from Andersen and selected tales from Grimm belong to every child. For other books of poems and stories see lists of books for children's library. Some books have been given in both lists because they belong equally to the teacher and to the child.

For Children at Home and the First Two Years in School

Jewett	The three baby bears	Dutton.
Dodge	Baby days. (Songs, stories, pictures)	Century
Burgers	Goops and how to be them	Stokes & Co.
Burgers	More goops and how not to be them	Stokes & Co.
Greenaway	Under the window	Warne.
Potter	The tale of Mrs. Jeremy Fiskes	Warne.
Potter	Peter Rabbit. Jeremy Fiskes	Warne.
Grimm	Fairy tales; ed. by Wiltse	Ginn.
Adelborg	Clean Peter and the children of Grubbylea	Longmans.
Lear	Nonsense books. Nonsense rhymes	Little.
Flanagan	Child stories and rhymes	Flanagan & Co.
Mother Goose, or the old nursery rhymes		Warne.
Mother Goose melodies, or songs for the nursery		Houghton.
Æsop	Child's version of Æsop's Fables; ed. by Stickney	Ginn.
Andersen	Fairy tales; selected and edited by Turpin	Maynard.
Brooks	Stories of red children	Ed. Pub. Co.
Beming	Little Indian folk. Little brothers of the West	Stokes.
Turpin	Child's book of poetry. Classic fables	Maynard.
Holbrook	Hiawatha primer	Houghton.
Alexander Blake	Graded poetry. Separate volumes for each grade	Merrill.
Andrews	Seven little sisters. Each and all	Ginn.
Brown	Stories of woods and fields	Globe.
Blaisdell	Little Boy Blue and his friends	Little.
Long	Nursery rhyme book	Warne.
Richards	Five minute stories	Estes.
Poulsson	Child stories and rhymes. Finger plays	Lothrop.
Grover	Sunbonnet babies. Overall boys	Rand-McNally.

Picture books by Nelson, Warne, Tuck, Dutton, bring a wealth of joy into the nursery.

Story of the three little pigs	Warne.
Story of the three bears	Warne.
All sorts of animals	Nelson.
Animals and their young. (Natural history series)	Tuck.
Cinderella and Red Riding Hood	Dutton.
Cosy nook farm. (Cosy nook farm series)	Tuck.
Our dogs. (Picture land series)	Tuck.
All about wild animals	Tuck.
Johnny Crow's garden	Warne.

LANGUAGE AND LITERATURE—Under teaching the child how to read, a detailed outline of suitable material arranged for first and second year language has been given, but the question may still be asked by the mother or the teacher how to instruct the little ones who are beginning to read. What is the method or what are the steps in the process?

Very little is heard nowadays about word method, sentence method or phonic method as separate methods in themselves. The best teaching chooses from all methods.

How the Several Methods May Be United in the First Reading Lessons: 1. Words as wholes. (a) Use of objects representing the word; (b) spoken word used in connection with the object; (c) the word as form, either script or printed form — the object, the idea, the vocal symbol, the written symbol, all in combination.

2. Words in combination. (a) Groups of words or words grouped in phrases; (b)

words arranged in sentences, grouped in paragraphs or as story wholes.

3. Analysis of words. (a) Words broken up into sounds—phonics; (b) words broken up into separate forms—letters.

The Eclectic Method as It Has Been Outlined for a Training School.—1. Conversational work whereby teacher gains knowledge of child's interests, intelligence, maturity, habits, home training, environment, and use of English. Here objects are often introduced.

2. (a) Blackboard work. Action sentences largely such in form and in content as have been used by child in conversational work. (Thought and sentence method.) (b) Discovery of parts of sentence words. (Word method introduced.) (c) Discovery of parts of words, letters, names and sounds of letters. (Phonic method.)

The test of good teaching is the drill that follows the development lesson. After the child has learned the nature of word symbols and has acquired a small reading vocabulary the importance of such drill exercises must be emphasized.

Analysis of a general plan for reading drill.—

1. Preparation through word mastery.

2. Results to be obtained. (a) Recognition of words at sight, (b) correct and easy enunciation, (c) mastery of sound and form elements, (d) knowledge of their meaning.

3. Methods by which this word mastery is acquired. (a) Writing new words, (b) reading new words, (c) spelling by sound and by letter, (d) meaning of new words, (e) use in original sentences. Briefly summarized, the reading drill should fix vocabulary and form word images.

4. Reading the new lesson. The test of good preparation is the grasp of thought and feeling as expressed through good vocal expression. The three arts of education—seeing, reading, thinking—should be combined in every reading lesson.

From the beginning give the child in his lesson something worth thinking about and from the first give him an interested audience—a teacher and a class who care for what he reads and will listen with interest. This will lead the child in his reading to form the habit of complete thought and complete expression as found not only in the single sentence but in the entire selection. Then what he reads will seem to him worth while and he will learn to love the printed page. As has been fitly said, he will enter the path "which our forefathers blazed through the wilderness and make of it a highway down which he may ride a king in his power to use the English language."

Things to Be Remembered in Teaching Reading.—1. Teach only such words as are needed for use.

2. Keep a complete list of all words taught.

3. Keep a separate list of all words found difficult. Review and review until mastered.

4. Call for silent reading. Have child tell you what he has read.

5. Call for silent reading of a dramatic passage. Have child act out what he has read.

6. Again call for silent reading, this time a longer passage. Have child tell in his own words what he has read.

7. From the very first sentence require natural tones. This can easily be done by simple, natural questioning.

8. Do not let any member of the class interrupt one who is reading aloud. There should be confidence, not confusion, when one is reading.

9. A few minutes of rapid drill in correction of errors common to the class is a good preliminary exercise. The teacher should correct, but not nag. Remember that drill exercises should be short.

10. Encourage every child to do his best and when he has done his best receive it in a pleasant, gracious manner. Children are sensitive to the atmosphere of approval. Encourage, suggest, do not repress.

11. Young children cannot study undirected. Work of a definite, concrete kind should be assigned to them. Through occupation they learn concentration.

12. Make the sentence or the thought a unit. By skillful questioning lead the child to the thought he is to give you from the reading, as, What did the dog do? Why did he like the boy? Such indirect help is the best way of suggesting right expression.

13. Short daily exercises of a rapid, decided, vigorous character should be given to train the class to quick recognition of words and sentences. It is a great gain in education to make a person quick and resourceful.

Suggestions and Devices for the Inexperienced Teacher.—The experienced teacher has long ago invented many of her own devices, has outgrown them and invented others. There are no fixed methods of teaching. It is a continual round of interesting change, the more interesting to the original mind which is always inventing something new. It must be remembered, however, that novelty is not the aim, but growth. The growing teacher welcomes that which adds new interest or in any way yields better results.

1. The first language lesson must begin with oral exercise—something interesting to talk about.

2. The unit of thought is the sentence. The child gives his thought, and the teacher writes it on the board, underlining the important word. It may be the child tells what he picked up from the table, as, "I have a book." Other children tell their story, as, "I have a ball," "I have a box." Each child finds his own story and his own particular word. This game of hide and seek gives zest and holds attention. It may be worked out in many ways.

3. Write the children's names. Let each child find the name of some other child or the age of some other child or the brother of some other child. Such exercises can be multiplied. The teacher makes her crayon talk, and the children talk to her. Write a nonsense rhyme upon the board. Read it to the class. Read again, pointing slowly to each word. Let children point to principal words.

B was a bat who slept all day,
Brown little bat!

Some teachers have enriched the child's fancy by adapting Lear's *Nonsense Rhymes* to the teaching of the alphabet.

C was a cat, crafty old cat,
D was a duck, dear little duck.

The pictures and the words make good seat exercises for copying.

4. Find and pronounce all words on the board containing a given letter, as *e, f, c*, etc.

5. Arrange the words of a paragraph in alphabetical order.

6. Write on the blackboard or on paper all the words of the reading lesson beginning with a certain letter. Instead of writing on the board the material in the word boxes may be used.

7. Words written upon the board promiscuously, so far as the initial letter is concerned, are to be grouped alphabetically in columns, each group with the initial letter at its head. Many forms of dictionary work may be given. Children must learn the alphabet, but there are better methods than the old mechanical method of the a, b, c's.

8. Build or write in columns all the words containing a given vowel sound.

9. Write in columns all words containing a given phonogram.

10. Words of the lesson are written on the board. Words are erased one by one and the child tells which word was erased.

11. Arrange words in duplicate columns except that the order of words is changed. Give to one of the class a pointer, and have him point to a word pronounced by the teacher. The game consists in seeing which child points first.

12. A child finds and pronounces all the words with a given ending or a given beginning. Valuable for prefixes and suffixes.

13. The teacher points to a word, the child arises and gives a sentence containing that word.

14. The singular form of nouns whose plurals are formed by adding *s* may be written upon the board. Let the children build the plural form by adding *s*.

15. Draw a doll house. Let children tell what furniture they want to put into it. Write these words in a column. Let children furnish by pointing to word and then to the place in the house where the furniture should be. Make, mark, or write word in the house. Picture of a ball game might be done in the same way.

16. Have pupils look through a paragraph and tell what has been read.

17. Have pupils look through a sentence or paragraph and act out the meaning.

18. Have pupils read a paragraph silently and illustrate the meaning by drawings or a series of drawings.

19. Give dialogue exercises frequently where one child replies to another. Encourage dramatic expression in voice and body.

20. The teacher should often read to the class and with the class. Exact imitation is not wanted but through suggestion and the glow of her own spirit the teacher may awaken her class to the love of interpretative reading.

Three Essentials in the Teaching of English.—1. Fixing the word in the child's vocabulary. 2. Fixing the word symbol through the activity of the eye and ear and hand. 3. Centering attention upon thought, rather than mere symbol getting, that in the end the child may gain mastery of thought and speech.

Suggestions for Seat Work Related to Primary Readings.—1. Seat work should be related to the lesson. The aim in all exercises should be to train the child to look for something in the lesson and expect to find it. It is the active mind, the attentive mind, that can be educated.

2. Provide worn-out books, magazines, advertisements, etc., which can be cut up. Provide blank books, one for each child. Print the letters of the alphabet on the board. Let the children find them, cut them out, and paste them neatly in order. *a* at top of page 1, *b* at top of page 2, etc., to *z*.

3. New words occurring in the reading lesson may be printed or written on the board; children may find these words, cut them out, and paste them on the proper page. This will give each child the printed vocabulary of his grade. When they can read words children may make dictionaries or word books by writing the words instead of cutting and pasting.

4. Put several alphabets in the same

box. From the letters in the boxes let the children build words that the teacher writes on the board.

5. Prepare sets of hektographed pictures with the name of the object printed plainly beneath the picture. Each set should contain twice as many cards as there are pupils in the class. Take half of each set and cut off the names. Now let the children, with the uncut card before them, match the separated pictures with their appropriate names.

6. Hektograph sentences on strips of cardboard. Cut these sentences into words or phrases and put each sentence into its own envelope. Write or print the sentence on the board and let the children build.

7. As soon as a few words can be recognized at sight, the pupils should build their own sentences, using separate words on bits of cardboard. Continue building sentences until the reading is taken up.

8. Copy from the board for form and punctuation. Very careful supervision should be given to all such copied work.

9. Copying memorized passages for exactness of form is a valuable extension of the previous exercises.

10. The teacher should use judgment as to the amount of seat work and its nature. Every child should be kept busy at some profitable employment. Playing with sticks, marking with a pencil, or doing anything else with no definite aim should not be permitted. The child should not be aided at every turn but should be left to his own resources as much as possible. He should be encouraged to think himself out of his own difficulties. Independence in action, accuracy and skill in mechanical work, are the large results to be sought in seat occupation.

The Children's Book Shelf—Third Grade

Scudder	Verse and prose for beginners	Houghton.
Dodge	Rhymes and jingles. When life is young	Scribner.
Wilson	Myths of the red children	Ginn.
Husted	Stories of Indian children	Pub. Sch. Pub. Co.
Husted	Stories of Indian chieftains	Pub. Sch. Pub. Co.
Defoe	Robinson Crusoe	Am. Book Co.
Kipling	Jungle book	Century.
Johonnot	Book of cats and dogs	Am. Book Co.
		Ginn.
Miller	Little people in feathers and furs	Dutton.
Lang	Blue fairy book	Longmans.
Ingelow	Three fairy tales	Heath.
Judd	Wigwam stories	Ginn.
	Arabian Nights; ed. by Clarke	Am. Book Co.
Andersen	Christmas tree and other stories	McLoughlin.
Coolidge	Nine little goslings	Little.
White	When Molly was six	Houghton.
Deming	Red folk and wild folk	Stokes.
Wade	Our little brown cousins	Page.
Wade	Our little Indian cousins	Page.
Wade	Our little Japanese cousins	Page.
Dodge	Stories of American history	Lothrop.
Dutton	In field and pasture. (World at work series)	Am. Book Co.
Hazard	Three years with the poets	Houghton.
Howliston	Cat tails and other tales	Flanagan.
Harris and Gilbert	Poems by grades. (2 vols.)	Scribner.
Dodge	Donald and Dorothy	Century.
Macdonald	Light Princess and other fairy tales	Burt.
Carter	Lion and tiger stories	Century.
Alden	Cruise of the canoe club	Harper.
Coolidge	What Katy did. (3 vols.)	Little.
Diaz	William Henry letters	Lothrop.
Stoddard	Talking leaves. Two arrows. (Indian stories.)	Harper.
Howells	Christmas every day and other stories	Harper.
Smith	The Browns, (7 vols., a series of books describing good times in the Brown family.)	Little.
Jewett	Town and city	Ginn.
Lane	Industries of to-day	Ginn.

The Children's Book Shelf—Fourth Year

Wiggin and Smith	Golden numbers	McClure.
Wiggin and Smith	Posy ring. Fairy ring	McClure.
Shute	Land of song. (3 vols. arranged for grades.)	Silver.
Baldwin	Old Greek stories	Am. Book Co.
Francillon	Gods and heroes	Ginn.
Alcott	Little men. Little women. Aunt Jo's scrap book	Little.
Daylor	Juan and Juanita	Macmillan.
Carroll	Alice's adventures in wonderland. Through the looking-glass	Macmillan.
Otis	Ten days a newsboy	Harper.
Otis	Toby Tyler, or ten weeks with a circus	Harper.
Guerber	Stories of the thirteen colonies	Am. Book Co.
Baldwin	Four great Americans	Am. Book Co.
Beebe	Four American naval heroes	Am. Book Co.

Larned	Books, culture and character	Houghton.

NATURE STUDY.—Pestalozzi said that the child's first tutor is nature, and her tuition begins from the moment that the child's senses are open to the impressions of the surrounding world. Since his time nature study has been defined as "learning those things in nature that are best worth knowing to the end of doing those things which make life most worth living." Its aim is a happy, helpful adjustment. It is to set the child in the midst of nature as a companion worker.

The School Garden.—To this end, "happy, helpful adjustment," the school garden has proved most practical. Froebel recognized this long ago. "It is of the utmost importance," he said, "that every child should acquire the habit of cultivating a plot of ground. Nowhere as in the vegetable world can his action be so clearly traced by him, entering in as a link in the chain of cause and effect."

Value of School Gardens.—What do the children get out of the school garden. The teaching of the school is brought into contact with life, and, best of all the lives and experiences of the children. The point of contact reaches the home interests just as directly as those of the school. The tiny garden of the school is sure to be duplicated at the home—probably on a larger scale; and this alone is worth the whole effort. The responsibility of the garden develops strength and independence in character. Honest effort wins. Judgment, as well as physical effort and steadfastness of purpose, is demanded.

The first school garden in the United States regularly authorized by a board of education was planted in Boston in 1891, but the value of such school instruction was recognized as early as 1824, when it was argued that "Agriculture and the Gospel are the two great instruments of Divine Providence to check the voluptuousness and exercise the virtues of man." In 1900 vegetables were first planted in this Boston garden. Since that time the development of school gardens and the advancement of agricultural education in the United States have been very great.

How the School Garden May Become a Vital Part of the School Instruction.—A few practical illustrations from two of our own American schools will show how the school garden may become a center of great interest and a vital part of school instruction.

Connected with the school garden is a chicken yard. The children visit it every day and it has been the subject of daily conversation with their teacher. This is the story as they told it to her one day:

We went to see Biddy.
Biddy sat very still.
She looked at us.
We stood near Biddy's nest.
She was not afraid of us.
We would not hurt her.
Biddy had eleven little chicks.
They were white, black, and yellow.
They said, "Peep, peep, peep."

The teacher wrote these stories on the blackboard as the children told them to her and they became their reading lesson. Then she wrote for them this story on the blackboard and they read it to her:

I think that when a little chicken drinks,
he takes the water in his bill.
And then he holds his head up so that the
water can run down hill.

The children copied all these sentences on paper and illustrated them with drawings and free-hand cuttings of their own.

NATURE STUDY AND ELEMENTARY AGRICULTURE.—Elementary agriculture in the country schools should include the fundamental principles of agricultural practice, illustrated in large measure by such laboratory and field work as will be directly and immediately helpful and practical on the farms in the midst of which the school is located. Through the teaching of elementary agriculture in the country schools, the introduction of such needed reforms as seed improvement, improved culture of soils, and the checking of waste, is entirely practicable and possible. Since the country school term does not extend throughout the whole year, the work in agriculture cannot be very satisfactorily unified upon the basis of farm operations in season, yet there are certain topics best studied at each season of the year when first-hand contact with materials is possible. The following topics as outlined in Nolan's *One Hundred Lessons in Elementary Agriculture* suggest a course for a year's work.

Topics for Autumn Months.—1. Composition of soils. 2. Relation of soils to water. 3. Fertilizers. 4. Seeds and their germination. 5. Selecting and storing seed corn. 6. Tree planting. 7. Weeds. 8. Insects. 9. Fruits. 10. Pastures. 11. Agricultural clubs. 12. Storing fruits and grains for winter.

Topics for Winter Months.—1. Judging seed corn. 2. Elements of forestry. 3. The horse and its care. 4. The cow. 5. Milk and butter. 6. Sheep, hogs, poultry, etc. 7. Feeding and care of farm animals. 8. Comparative studies of agricultural products of various states. 9. Crop records and farm bookkeeping. 10. Roads, rural mail, parcels post, etc. 11. Farm machinery, fences, etc. 12. Farm buildings.

Topics for Spring Months.—1. Testing seed corn. 2. Hot-beds. 3. Gardening. 4. Cultural requirements for vegetables. 5. Beautifying home grounds. 6. Pruning. 7. Budding, grafting, etc. 8. Spraying for scale and codling moth. 9. Plowing, harrowing, and cultivating. 10. The potato crop. 11. Transplanting. 12. Valuable birds to agriculture. 13. Sowing farm crops.

In teaching the topics suggested above the aim should be to bring out the essential principles involved in the practice, and to lead the pupils to first-hand contact with the material in as many ways as possible. The country school-teacher should strive in each case to have the lesson tried out on the pupil's home farm. The aim of each lesson should be definite, to bring out and apply one single principle relating to the topic in hand.

An excellent method to unify and organize the work of elementary agriculture in the country schools is for the pupils and teacher to imagine that they have just purchased an unimproved forty acres of land, or perhaps better still, select a forty-acre field near the school grounds, and in theory manage it for one year. Require each pupil to provide a good permanent notebook and keep a record of every detail of procedure as the farm is selected, laid out, equipped with buildings, planted, cultivated, and managed throughout an imaginary year. The practices that would properly come next in point of time in the actual management of such a farm would furnish order and sequence for the topics of study and practical exercises throughout the school course. In this method the pupil should be required to read all the farm papers, bulletins and books available, and keep a diary record of an imaginary year of actual farming.

Such a course in elementary agriculture could be well adapted to the seventh and eighth grades. Three recitations a week would be sufficient for introducing the subject, giving the last half hour of the school program to this subject.

Suggested Lessons for School and Farm.—The most helpful method of conducting experiments and developing the outlines that follow is to assign to a certain pupil or group of pupils the responsibility of the experiments or particular tests that are to be made. From parents, and from books and bulletins with which the school library is supplied, the children gather any and all information possible bearing upon the subjects under study. After free class discussion and much questioning of the pupils, the class and teacher should together work out a simple outline according to which the children will write the results of their study and observations in composition form. Some of these productions should be read in class; all errors both in fact and in English should be noted, but the compositions need not be rewritten. The sheets as first written can be put together in booklets with original designed covers. This disposition of the compositions furnishes excellent motive for careful and correct composition work and a basis for prize and competitive contests.

Alertness on the part of the teacher for the practical and everyday problems that are constantly presenting themselves to the intelligent farmer will keep an industrious teacher busy finding room for the discussion and solution of the problems in the time usually allotted to such subjects in the school program. It is well to carry with the course and experiments practical mathematical problems such as construction and capacity of cribs and silos; amount of rainfall; estimating quantity of seeds needed per acre for planting; judging corn; value of fertilizers needed for land; shrinking of corn in cribs; profit per acre on the different crops; return from one bushel of seeds, and many others that will suggest themselves to the teacher. (For problems in agricultural arithmetic write for extension bulletins published by Ohio State University Agricultural College, Columbus.)

There are the best of reasons why teachers, especially in the rural districts, should be interested in these agricultural problems as school exercises. First, the spread of the knowledge and practice of scientific agriculture has vast economical value in improving the products of American agriculture; second, the teaching of it in the rural schools exerts a strong influence toward interesting the parents in the permanent worth and importance of the school. The teacher who enters intellectually into the simple and practical exercises in agricultural nature study here suggested will not be long left in doubt as to the community's responsive interest in the school and its estimate of its practical importance to the community. Children love to do things, especially things that are obviously useful; they need only judicial direction in order to turn their instincts into the various forms of self-education, which is the only kind of education that "sticks."

Special interest and profit result from investigating the literature and different writings in which allusions are made to corn and wheat and relative subjects. Splendid use can be made of that part of Longfellow's *Hiawatha* referring to Mondamin, with whom Hiawatha wrestled after the feast. To have a number of the pupils read a collection of such selections to the school and visitors Saturday afternoons makes a most interesting hour's exercise. Topics and practical tests can be made from the following outlines suited to the various grades. Perhaps the pupils of the first four or five grades may be too young to be taught the science of agriculture, but they are not too young to gain an abundance of knowledge along the line of nature study.

Exercises on Soil.—How Soil Is Formed.—When the earth cooled it was composed of solid rock, upon which the water acted, changing or breaking it up into small particles. This was caused by the force of falling rain and hail and the expansion, by freezing, of the water in the small crevices of the rock.

Lichens then grew on the rocks and sand, obtaining their food from the air, and in their death and decay bacteria acted upon them, forming humus. Plants then grew on the sandy loam formed, and the roots, reaching down into the rocky crevices, split the rocks.

The soil and remaining rocks were then acted upon by oxidation, gravitation, wind, tides, animals, glaciers and earthquakes. All of these tended to break up and loosen the soil and prepare it for the action of water and carbonic acid, which dissolves the rock.

There are three distinct classes of soil—the alluvial, which has been brought from other places by streams; the sedimentary, which is the soil which was originally formed there; and the glacial, which was carried there by glaciers.

I. To Show Retention of Water on Soil.—Materials — Samples of clay, gravel, sand-loam, leaf mold; five glass bottles or fruit jars and five funnels.

Fill each funnel with a different kind of soil, same amount in each by weight. Tie a muslin cloth over the small end of each funnel to prevent the earth from washing through and place them over the jars. Pour an equal amount of water into each at the same time, note the soil that permits the water to pass through the fastest and the soil that retains the water the longest. Find how each soil ranks in its power to retain moisture. After two or three pourings weigh each funnel, and note the slight difference in weight; which soil retains the most water; which soil dries off the soonest after a heavy rain; which will be ready to plant first in spring; which soil will stand a very dry summer best.

II. To Show Effect of Air on Soil.—Materials—Two chalk boxes.

Fill one with loam, loosely packed. Fill the other box with clay or leaf mold, tightly packed. Plant the same kind of seed in each one and give both the same attention. In which does the plant seem to grow better?

III. To Show the Advantage of Soil Foods or Fertilizers.—Materials — Four chalk boxes or boxes slightly larger.

Fill each box with the same kind of soil. In No. 1 place a small quantity of stable fertilizer. In No. 2 a small quantity of high-grade commercial fertilizer. In No. 3 same quantity of cheap commercial fertilizer. In No. 4 omit fertilizer. Plant

same kind of seed in each box; cultivate all plants in each box by the same method. Notice the difference between the plants that receive the fertilizers and those that do not.

Outline *for the Further Study of Soil, With Test Questions and Sources.*—

(a) Origin and tillage of soil.
(b) Moisture and drainage of soil.
(c) Fertilization and improvement of soil.
(d) Adaptation to vegetation.
(e) Effect of wind upon soil.
(f) Study of properties of soil.
(g) Renovation of worn-out soil.
(h) Alkali lands.

Questions.—1. What is soil?
2. What is subsoil?
3. How is soil formed?
4. What is humus?
5. How does the earthworm influence soil?
6. Why should soil be plowed before corn is planted?
7. Why should crops be well cultivated?
8. Name three plants that improve soil. How?
9. What is meant by rotation of crops?
10. How are the following produced? Sinking coasts, rising coasts, earthquakes, volcanoes, natural bridges, lakes, cataracts, oxbow loops, deltas, glaciers, coral reefs, coal gas, oil, deserts, tundras, and estuaries. (See U. S. bulletin No. 257.)

Sources and Summary *of Bulletins Needed.*—U. S. farmers' bulletins Nos. 77, 245, 257, 262. (See list.)

Exercises on Plants.—It is assumed that the pupils who are to take up elementary agriculture have had some nature study work, and in this way have learned something of the structure of common plants—that is, they know the names and understand to some extent the functions of their essential parts: roots and stems, leaves and flowers, including the reproductive organs, stamens, pistils. When the pupils do not have such knowledge some time should be spent on these simple exercises in the study of plant anatomy.

I. To Learn and to Find the Parts of the Flowers.—Gather flowers that have all the parts, and with a sharp knife take each out and name. Cut a cross section of the cherry blossom and name the parts present.

II. To Find Stamens and Pistils and to Compare Perfect and Imperfect Flowers.—Perfect flowers have both stamens and pistils present. From a strawberry blossom point out these organs. Flowers having pistils only are imperfect flowers. Find such a blossom and compare it with a perfect flower. Will an imperfect flower produce fruit? What kind of a flower is found on Indian corn plant? Where are the stamens on the corn plant? The pistils?

III. Roots and How They Get Their Food From the Soil.—Materials—(1) A large mouthed bottle, a glass tube, an egg, some sealing wax and water. (2) Sawdust and a marble slab.

Plant food must be in liquid condition before it can be absorbed by the plant. The root structure of the plant is very intricate. There are little roots attached to the rootlets that are so small the naked eye cannot discern them. These are called root hairs and through them the plant receives its food. They are composed of a single cell filled with an albuminous substance, called protoplasm, which is similar to the white of an egg.

As the covering of the cell is not porous in the ordinary sense of the word, the question arises as to how the liquid food enters the cell. This is accomplished by the principle of osmosis. It has been proved by scientists that if a dense liquid is separated from a less dense one by a thin membrane, they will flow together, the less dense fluid flowing into the more dense one in greater proportion than *vice versa.* This can be proved in the schoolroom with an egg, a glass tube, a large mouthed bottle, some water and some sealing wax.

The glass tube is inserted into the small end of the egg and sealed in place with the sealing wax. The shell of the large end of the egg is then broken off to expose the membrane, and the large end put into the water. The water and the white of the egg will, in the course of a few hours, flow up the tube.

After the liquid enters the root hair cell, it is carried up to the plant by means of capillary attraction, which is a power which tends to raise the water.

The root hairs of a root system can collect nourishment from the undissolved plant food by tending to dissolve it with an acid secreted in the membrane of the root hair. To prove this, cover a polished piece of marble with wet sawdust and plant a few seeds in it. The root hairs will sprout, and, when removed, the marble will be rough.

IV. To Show That Plants Give Off Moisture and the Rise of Water in Plants.—Materials—Crock or pot of earth containing a plant, a piece of cardboard, glass tumbler, and a piece of wax or tallow.

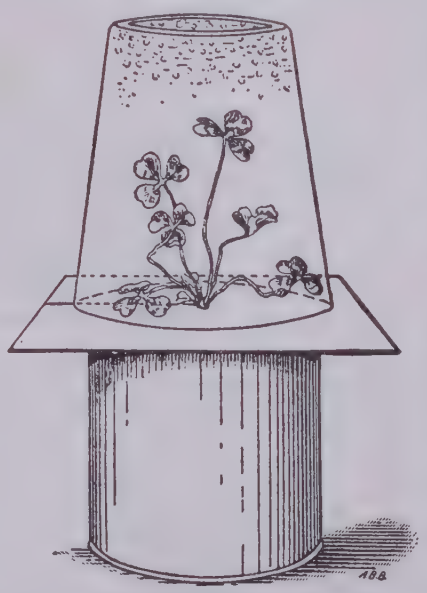

Figure to show that plants give off part of the moisture absorbed from the soil

Take a plant that is well started. Cut a slit in the cardboard and draw it around the plant. Seal the slit with wax or tallow so that no moisture can come up through it from below; cover the plant with the glass and set in a warm, sunny place. Moisture will condense on the inner surface of the glass. Where did the moisture come from? Does this experiment prove that water rises in plants? Why? Cut a stalk of green corn or the stem of a geranium three or four inches above the ground. Observe the moisture that gathers on the point where the stalk was cut. Where did this moisture come from?

V. To Show Root Development on Cuttings.—Materials—Branches ten to twelve inches long taken from a willow tree; a glass jar.

Place these cuttings in a glass jar partly filled with water. Place the jar in a warm place and in about twenty or thirty days you will observe the roots formed on many different parts.

VI. To Prepare Soft Cuttings.—Soft cuttings are sometimes made from leaves, but often from the stem. Insert the edge or a piece of a leaf in moist, warm sand; or lay the leaf, top side up, on the surface of the sand and fasten it down by running splinters through the veins in different places. Plants may spring up from the edges or at cut places in the leaf. In case of stem cutting secure thirty shoots from any strong herbaceous plant, such as the verbena or geranium, and divide them into cuttings of at least two nodes and several leaves. Break off a part of some of the leaves to check evaporation. Pack the sand firmly around the cuttings and they will soon take root.

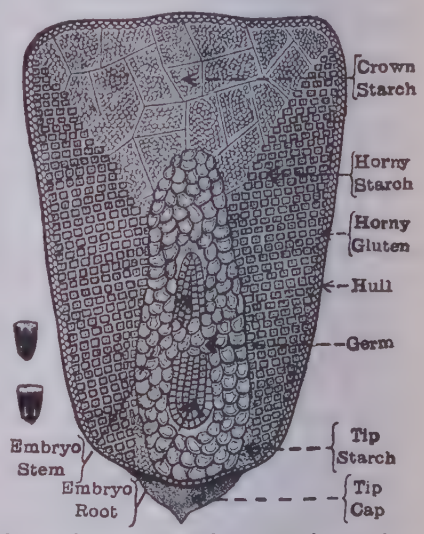

Figure showing parts and contents of grain of corn

* * * * * *

The suggestions here submitted cover the essential operations taught in our schools. They are not intended to teach the parent to take the teacher's place, but rather to supplement the school work of the child and to help the child over such difficulties as the parent may discover. The parent, by being the child's constant confidant and adviser, will remove many an obstacle in the way of the child's progress, and mitigate many an unfortunate experience. To the child, experiences in school, with their ambitions, their failures and their disappointments, are of the most vital importance, just as our adult life experiences are to us. There are many tragedies in childhood which we do not always realize. May the parent be always ready to help the child remove them or pass them by, so that he may not be checked in his career by an unnecessary tumble.

MENTAL TEST PICTURES

WHAT IS WRONG WITH EACH PICTURE?

THE UNFOLDING FLOWERS

These little students of the Dalcroze method are listening to improvized music, coming up from the floor as the music rises. This is a combination musical and physical exercise and teaches relaxation and control and trains the ear in graduations of pitch. This is a kindergarten group in the Faulkner School, Chicago.

THE YOUNG DIRECTOR

The girl in the center is changing the beat from 2 to 3, 4, 5 or 6. The others must watch and accent strongly the first beat. The young director changes the beat at her pleasure and the children get the cue from the movement of the baton. This develops spontaneity and concentration. First and second grade children.

DALCROZE EURYTHMICS—A NEW NOTE IN EDUCATION

THE pictures on this page present Dalcroze eurythmics, which has been briefly described by J. J. Findlay, Professor of Education in the University of Manchester, England, as "the use of the body as a musical instrument." This method of making rhythm a physical as well as an intellectual reality was conceived about the beginning of the present century by Emile Jaques-Dalcroze, Professor of Theory at the Conservatory in Geneva, Switzerland.

Dalcroze evolved a system of definite musical accuracy which the pupil feels as well as knows. Very simply explained, the arms carry the conductor's beat, while the feet realize the rhythms played. From this basic principle all musical subjects, such as syncopation, phrasing, notes and rests are worked out on the floor.

Dalcroze eurythmics has enlisted the support of eminent musicians and educators in Europe and the United States. In America the method is being taught in a number of the leading schools for children. As shown in one of the illustrations, it is used in the kindergarten. The same principles are applicable in the training of older children and adults. Normal courses have been established and properly accredited teachers are trained for the field.

Dalcroze utilizes the child's instinct for play to develop in him the ability to learn, and what is of equal importance, the desire to learn. Speaking of her group of children from three to six years of age, a kindergartener of long and successful experience says that the children can hardly wait for the day to arrive when the Dalcroze teacher comes. "They change from prancing ponies to fluttering butterflies, to sturdy Indians, or to seeds and growing flowers, responding immediately to the magic touch of the music played by the teacher on the piano. She not only improvizes at the piano, but at the same time directs and helps her group, and yet she never seems to direct them. She is one with them and they all play with each other and suggest to each other games to be worked out in the group."

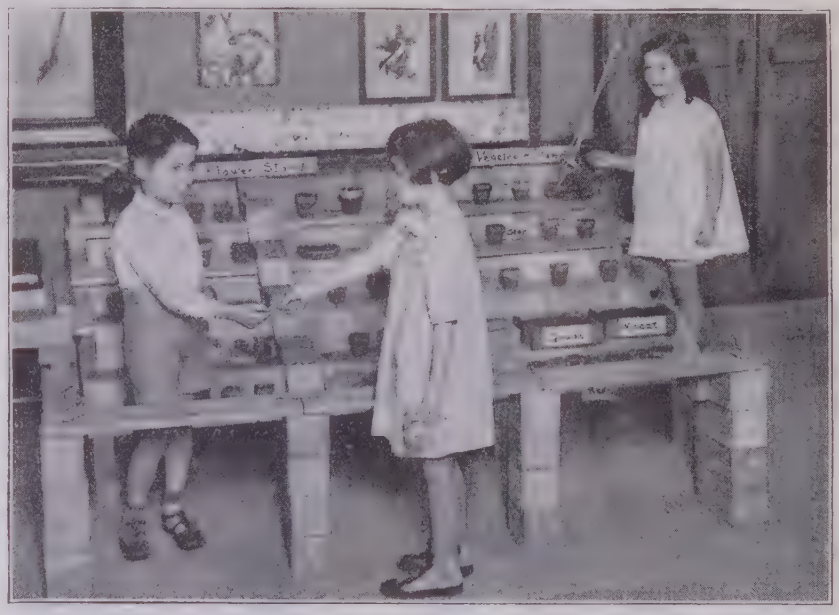
A STUDY IN CRESCENDO AND DE CRESCENDO

A group of seventh grade students of Dalcroze eurythmics. The girls in the center rise as the accompanying music increases in volume. Those in the surrounding circle drop correspondingly. The value of this exercise consists in the pupils creating different movements—even opposite in character—to the same music. It enlarges their vocabulary of gesture, and enables them to express themselves musically in any posture.

KINDERGARTEN EDUCATION

THE kindergarten program is designed to interest the child in the various helpers who serve the community, and directly, or indirectly, the home; to give him the right kind of experience, to explain that experience, to correct past experience and enlarge upon it; to help him to grow more kindly, courteous and unselfish, and to gain right habits of work and play.

Introduction.—When the little child enters Kindergarten, he is entering the world arena for the first time. It is his first real parting from his mother, in the majority of cases, so the Kindergarten aims to give him as much of the home atmosphere as possible, not only by making the surroundings attractive and homelike, with plants about, a piano, if possible a phonograph, comfortable looking chairs and tables that are just right for him, pictures hung low, so he can enjoy them, a sand table that is sure to delight his heart, but on the tables plenty of things to play with: beads to string, pegs of the different rainbow colors to put into the boards made for them, and dolls for the little girls to play with.



After he has enjoyed playing with his playthings, he can play with soft rubber balls, rolling them back and forth to each other, at first to anyone, then to a particular child. Some familiar games may also be played.

When the games have made us feel better acquainted we will march like soldiers to some martial tune played on the piano or phonograph.

The first day or two may be spent in this way, but when we have learned to greet each other with the "Good Morning" song, to march fairly well together, to carry our chairs where we want them, we are ready to gather around for a little talk, as we do for a little while every morning, a talk about some experience, a picture, or a story relating to the topic we are interested in.

As we grow accustomed to each other and have learned school ways a bit we are ready to follow the talk with some activity associated with it, either to build with blocks, with sand, or clay, or make something we can take home.

The topics the teacher chooses are those that not only *appeal* to the child as being most interesting and important, but *are* most important and have the largest meaning in social life, subjects relating to the community life about him and the world of nature, choosing, for nature material, things the child can use in his play projects.

RAISING PLANTS FOR SALE AND SELLING SEEDS

In this kindergarten project the boy is selling some flower seeds to the girl customer and they are using paper money. They had grown the plants in the flower pots from seed. Doan School, Cleveland.

A BUSY KINDERGARTEN SCENE

Teacher and children of the kindergarten of the Steele Elementary School, Denver. The toys are large, strong and simply constructed. Large floor blocks are used for building projects.

The songs and games relating to the topics are sometimes unrelated, but appealing to the child's emotional nature, make his day happier and full of music, developing as they do his sense of rhythm. The songs should be simple and the words learned before the tune is taught. The games chosen are those which not only relate to the topics but give them the right kind of physical exercise by means of rhythmic representation, teach them to coöperate with the larger group and learn fair play, as well as to follow their natural inclination to live in the world of "make-believe," which to them is very real.

The games chosen for this volume represent the various types of games used, that is:

Sense games, to increase the keenness of perception.

A Ball game, to teach direction and color.

A Skipping game, for agility, grace and courtesy.

The Family game, to show mutual helpfulness as represented by the family spirit.

Ten Little Indians, for imitation and counting.

The Kitty and the Mouse, a silent game for concentration and quiet.

The Squirrel, for attention and agility as represented by animals.

The Snowman, for dramatization and good physical exercise.

The Knight game, to teach civic ideals through play, and to introduce another physical exercise, the galloping horses.

The Parade, for the patriotic spirit, and to teach precision.

The Windmill, introducing another physical exercise as well as a demonstration of nature.

The Snail game, to teach coöperation by means of rhythmic activity.

Humpty Dumpty, for dramatization of a simple story.

A Bird game, showing how young birds are fed and thereby encouraging humane treatment of them.

The game called "Where, Oh, Where Has My Little Dog Gone?" for a running exercise.

The Farmyard game, in which the characteristics of different animals are imitated.

The Farmer game, for a dramatization of an industrial activity.

Stories.—The story gives the young child his background for literature, consequently there should be on our list stories which will make him appreciate good literature. Such stories may be repeated many times,

and eventually almost learned by heart. Children of this age enjoy fairy tales, especially, and love to have them repeated again and again. If the story is simple and within his comprehension, the child will be able to repeat it and even dramatize it, thus making it a part of himself. Humorous stories like "The Johnny Cake" or "The Gingerbread Boy," should be told for pure enjoyment.

Some stories should be read to the children as they will then concentrate all attention on the story itself rather than on the Storyteller. Stories like "Peter Rabbit" and "Little Black Sambo" are illustrations.

All stories should be simple and concise. Those in which some phrases are repeated over and over are much enjoyed by the children and help them to add words to their vocabulary.

Watercolor paper, also, paint brushes and watercolor in tubes.

Thin white paper for free cutting, and blunt pointed scissors.

Bogus paper or colored construction paper for making boxes, baskets and wagons.

Colored paper for folding boats, doll-hats and pin-wheels.

Colored paper cut in strips for making chains (standard colors only).

Pieces of soft wood, hammer, nails, and a saw for making sign-posts and ladders.

Weaving mats and fringes of heavy paper, mats made of linen, or looms may be made by the older children on the frame work of an old-fashioned slate, and set up with pieces of cloth dyed and cut in strips, or heavy jute.

Pieces of cloth and burlap, needles with large eyes and heavy thread for sewing.

These materials may be supplemented by many materials found at home, such as milk bottle tops for wagon wheels and spool boxes for wagon bodies.

GOING TO THE GROCERY

The children have built the store with the large Hill blocks. They have made their baskets and the shop is supplied with real groceries. Kindergarten group at the Faulkner School, Chicago.

Manual Activities.—First of all there are the playthings in Kindergarten, for example, dolls, a cradle, a doll house, toy animals, tin dishes, scoops, and shells for the sand table, bean bags, balls of various kinds, and picture books.

Wooden beads, large and small for stringing, that are shaped like balls, cubes and cylinders and colored with the six colors of the rainbow in standard shades.

Pegs of the six colors to put in square boards with round holes in them. Enlarged sticks from one to five inches long, either white or colored. Balls covered with colored worsted covers and string attached, the colors red, orange, yellow, green, blue, and violet.

Two-inch wooden balls, cubes, and cylinders for rolling, twirling, and building. Rubber balls for rolling, and bouncing.

Boxes of blocks like those originated by Froebel the founder of the Kindergarten.

These blocks may be supplemented by the still larger Hennessy building blocks. Many Kindergartens are supplied with the very large blocks, such as the Hill blocks, with which one may build a house large enough to play house in.

For making the more permanent things to take home, we have the plastilena or clay flour for modeling.

Drawing paper of a soft cream or gray tint and colored crayons to draw with.

Method of Using Materials.—With all Kindergarten materials the first exercises should be experimental. Just as the child when he first plays with the sand likes to scoop it up and run it through his fingers to see how it feels and how it flies through the air, so with his other materials; he wants to feel them and try experiments with them in his own way, before suggestions come from outside.

If the child has been truly interested in the stories and talks, he will have something in mind that he will like to make, to carry out the ideas conveyed; but if he merely plays aimlessly with the material, suggestions may be offered by means of questions to interest him in some project.

The best educators lead the child to think out his own projects rather than to imitate the work of some adult.

Froebel, the great Kindergartner, tells us to foster this impulse of creative self-activity if we would have our children grow to be valued citizens of the community.

A grocery store may be constructed in one corner of the room or one corner of the room may be screened off to make our store, then when the grocery man is established and buying and selling begins, we will make other things as we feel the need for them, keeping our store a week or two as the interest lasts. Other incidental projects may be carried out in addition to this one, but our aim being to increase the child's span of interest, we will give him every opportunity to enlarge upon the first project and help him to become an independent thinker.

We will proceed much the same way with the blocks shaped like bricks; then, having learned the possibilities of these, combine the two, when we find it to our advantage. The blocks divided diagonally make our houses seem much more real, so we use them as the work progresses for the roofs of our houses, but, of course, if we have the very large floor blocks, we use those in preference to any of the others, for our group projects. The sand table lends itself readily to this kind of progressive work as the picture can be added to each day, everyone contributing, working hard to see who can make the best product, as only the best may be used in the picture.

The sticks, tablets and rings may be used for flat pictures or patterns on the tables and many little number stories may be told as we make border designs or life forms with them. For instance, one ring for the head, one four-inch stick for the body, two two-inch sticks for each arm and each leg, and two one-inch sticks for the feet, make a little man, whom we can have running or walking; and we can make pictures of him.

SEPTEMBER

"The dusty road goes winding
Through the nodding yellow frame
When the bright September weather
Sets the goldenrod aflame."

Topics

The Home—Family Life.

The Carpenter, Who Builds the Home.

In our first talks we naturally think of the family at home, as heretofore the home has been the child's world. If there is a baby at home, what do we do for him? What does mother do? How can we help mother? Shall we sing to baby? Sing some familiar song like "Rock-a-bye-Baby." Then start a new lullaby. We might use the colored balls for babies and rock them to sleep; then tell a story about a baby.

Soon we will inquire about the other members of the family. What does mother do for us? Her different tasks lead us to ask for the game "Around the Mulberry Bush." When we talk about father's duties, sister's and brother's share, we may introduce the Family Song which we love to illustrate by finger-plays and games.

In connection with the activities of the father we may find that somebody's father is a carpenter and we can talk about how he builds the home and the tools he uses. Pictures of the carpenter working and an excursion to watch him building a home will add to the interest, and little girls as well as boys will enjoy building by means of dramatization, or with their materials.

If we have found milk-weed pods we will want to examine them, pick out some seeds and blow them as the wind blows them out-of-doors. The flowers that are brought in we may name, tell the color, and something about how they grow.

Stories.—The "Go Sleep" story or "Wake Up" story, furnish good examples of stories about a baby.

Thumbelina, in *Stories and Story-Telling* follows a little fairy girl on her first journey from mother and brings her back home to

tell all about her experience. All experience is valuable to the person who has it, only when he can tell about it to others or give out some product as the result of that experience.

The story of the "Three Bears" found in any collection of fairy stories, is intensely interesting to children at this age and with a little help in the way of properties, lends itself very readily to dramatization. All that is necessary is a table with three different sized bowls upon it, and the three chairs, and the children will do the rest. Great care is always exercised by the teacher that the children's expressions are correct, that is "Who has been *sitting* in my chair?" "Who has been *lying* on my bed?"

For the Carpenter there is the story "How the Home Was Built" in *Mother Stories*, by Maud Lindsay.

Songs.—Good Morning to You.
Here's a Ball for Baby.
The Family Song, in this volume. (*P. 40*)
The Milk-Weed Cradle.

Games.—Ring-a-Round-a-Rosy, or London Bridge for old familiar games.
Did You Ever See a Lassie?

Ball games, rolling the rubber ball to the center of the ring, or to some child whose name we call, and clapping when it reaches its destination.

Bouncing the ball to individual children, at first, by the teacher, then by the children who are most expert.

Around the Mulberry Bush.
The Family game, in this volume. (*P. 40*)
A Hiding game, in which one child hides his eyes and another goes out of the room so he can guess who has gone.

Manual Activities.—Among the various kinds of balls, those with worsted covers are most interesting when the child first comes to Kindergarten, as they are at a still earlier age. With these balls, color and direction may be taught by means of plays like the Ball Game in this volume, having the children mention the color when the balls are distributed and collected or choosing own color and naming it, then starting with the first motion round and round and adding a new motion each time the game is played, gradually learn the whole game.

The two-inch wooden balls may be rolled to hit a target which may be a tower built of a cube, cylinder, and ball on top, or anything that will fall easily when hit.

With our crayons we will enjoy making pictures of our balls, using the free arm movement for the motion round and round. With the water colors, if the six different colored balls are made, the three colors red, yellow, and blue will be sufficient and the opportunity may be given to paint yellow on a red ball to make orange, yellow on blue to make green, and blue on red for purple.

The colored wooden beads used in Kindergarten are strung on shoe strings and arranged according to color, or when the colors are learned, according to any rhythmic design, as two of one color, and one of white, etc.

The sand table is used a great deal for free play this month, especially with sea shells which make fine gardens in the moistened sand.

The soap bubble gives us the ball again and since we can make it float, it is still more fascinating to us.

After we have played with our blocks and handled them freely, we will want to make the chairs and table that the three bears used. If we would like a table cloth we will get out paper and scissors and cut a fringe for the cloth, then perhaps the three bowls. With the plastilena we can make the three bears, and still better bowls.

The family plays and those of the carpenter lead us to want to build a house, so we set to work with a will, building different kinds of houses with our cubes and playing at housekeeping with our dolls and housekeeping toys.

Pegs are used a great deal at this time for color arrangement, red, orange, yellow, green, blue, and violet, or to make gardens.

The art instinct is developed by drawing pictures of the fall flowers that are brought in, with our crayons, being careful to have our flower in the middle of the paper and neither way up to the top nor down to the bottom. Wire grass grown to seed makes a good subject for our drawing.

OCTOBER

"October's bright blue weather
When on the ground red apples lie,
In piles like jewels shining,
And redder, still, on old stone walls,
Are leaves of woodbine turning."

Topic
PREPARATION FOR WINTER

How Mother Prepares.
How Nature Prepares.
How Animals Prepare.
Hallowe'en.

Mother's work, canning and preserving, gives us much to talk about. Where does she get fruit and vegetables? How do they grow? Have different kinds of fruit and vegetables and talk about shape, color, and growth. The making of jelly is a simple process which the children may help to carry out if there are facilities for it.

Nature's preparation as shown by the falling of the leaves which have put on different colored dresses at the touch of Jack Frost; the falling of flower seeds and their protection from the cold by the leaves, and later the snow; the protection of baby buds on trees and bushes with a thick coating of varnish; the flight of the birds to seek a warmer home for the winter; all interest us and we like to help by planting bulbs to sleep under the ground and on our excursions by gathering cocoons which the caterpillar has built for his winter home. These nature talks may be carried over into the month of November, but before October has gone we will be interested in watching.

The preparation of animals is shown by Mr. Squirrel and his family, who can teach us all the greatest lessons in thrift and industry. If possible we would like to watch him carrying the nuts to his pantry in his mouth, if not we may have pictures and tell stories. The thickening of his coat for winter, as well as that of Brother Bear, who sleeps in his cave during the cold weather may be mentioned, too.

Hallowe'en preparations will occupy all our attention the last few days of this month for we must make many preparations for our first party and our fathers and mothers must be invited to see the fun.

Stories.—The Big Red Apple.
The Seed Babies' Blanket.
The Lion and the Mouse, in *Æsop's Fables*.

The Squirrels' Harvest, in *Half a Hundred Stories*, are good stories for this month, to which may be added a Hallowe'en tale.

Songs.—The songs started last month still hold our interest but to them may be added some Mother Goose songs. Some of the best are: Baa, Baa Black Sheep, Diddle, Diddle Dumpling, Wee Willie Winkie, Bye Baby Bunting, Jack Be Nimble, Polly Flinders, and from *Ring Songs and Games*: Jack and Jill, and Bo-Peep.

If a few Mother Goose songs are quickly learned because the words are already familiar, a song about the falling leaves may be introduced.

October Has No Butterflies.
Falling Leaves.

Mr. Squirrel, in *Small Songs for Small Singers*, are some of the best to add this month.

Games.—In connection with the Mother Goose songs, dramatic plays like Humpty Dumpty, in this volume, or Jack and Jill, will be interesting.

The Sense game for hearing, in this volume. (*P. 33*)
The Squirrel, in this volume. (*P. 38*)

Hiding the Ball, a game in which the six colored balls are placed in a row and while the child is hiding his eyes, one ball is taken away, so he may guess which color has gone.

Rhythms.—Marching, flying like birds, running lightly, skipping, and for dramatization, trees blown by the wind, leaves falling and blowing about to fall asleep at last on the ground.

Manual Activities.—Mother's activities lead us to play about the fruit and vegetable man, who walks the streets singing his wares and we find that the colored balls make fine fruit and vegetables, as so many are shaped like the balls. An excursion to the grocery store or bringing vegetables and

As October's Leaves Come Down
Kindergarten children dancing out of doors on a beautiful October day.

fruits to school encourages us to talk about their shape, size, and growth, which is especially well illustrated by cutting a cross section of the apple and showing the blossom form in the seed pockets. If we want to play preserving, as mother does, we will build the cellar and shelves for the cans with our cube blocks using the beads shaped like cylinders for the cans, the cube beads for boxes, and the larger cylinders for barrels of apples and potatoes. With our cube blocks we may also build the train that carries the fruit from one city to another, the telegraph poles along the road, and the railroad station.

With our clay or plastilena we may mould vegetables and fruit, with paper and scissors cut them out, free hand, or else paint them with crayons and then cut out for our market basket. Squash and carrots may be painted in mass on large sheets of paper.

With colored circles we may arrange a bunch of grapes on a card and paste it.

Beads are still popular and after an excursion to find nature material, we will enjoy making strings of hollow grasses and seeds, using seeds brought from home as squash, bean and pea, or rose-hips and berries.

Leaves collected may be pressed and pasted in designs, or a leaf marked on paper and colored and cut out by the children.

For Hallowe'en, pumpkins may be colored and cut out, with eyes, nose and mouth, for room decorations; also black cats and witches may be cut out of black paper and baskets made of construction paper for the nuts. The envelopes for the Hallowe'en invitations may be made by the children, and they may enjoy dressing in costume for the occasion.

NOVEMBER

"The valley is going to sleep,
The birds in their nests are still,
And the maple branches bend and break
Over the leafless hill."

Topic
THOSE WHO SERVE THE HOME

The Farmer.
The Cow.
The Baker and the Miller.
Thanksgiving.

The Farmer.—The city child may be interested in the farmer's Fall work by means of pictures, but the child in the country will readily tell how the farmer is cutting the grain, gathering fruits and vegetables to store for the Winter, or to sell to the grocer, and cutting hay for Lady Cow to eat.

The Cow.—Questions about our breakfast and where the milk and butter come from, will make us want to see how butter is made. The making of butter is a very simple process which can be carried out by the children with a little glass churn. When each child has turned the handle several times and the butter has come, they may watch the pressing and molding and taste the buttermilk, but the butter we will keep for our Thanksgiving party.

Lady Cow's food and how it is grown, makes us realize that she is not the only helper to make our glass of milk and our butter possible.

The Baker—is another interesting helper to the city child as mother with her bread board is to the country child. They love to visit the Baker and watch him make all his goodies, or look at pictures of him at his work.

When we inquire what he makes bread of, where flour comes from, where the Miller gets the grain, what the Farmer does to help, how it would be impossible to grow grain without sunshine and rain which God gives us, we realize the true Thanksgiving spirit, and are ready for a real Thank You day.

Biscuits are made if there are facilities, but the making may be postponed until the day we celebrate for Thanksgiving.

Thanksgiving.—The historical significance of the day is a bit beyond the little people, but they do enjoy dressing like Indians and Puritans for the Thanksgiving party, so a simple version of the story may be told to introduce the characters, who relish heartily the biscuits, butter and jelly we made.

Stories.—Pig Brother.
The Birthday Present.
The Johnny Cake.
Ole Man Rabbit's Thanksgiving Dinner.
Billy Bob-Tail.

Billy Bob-Tail learns the lesson of interdependence, when he goes out to seek his fortune. As he goes along he meets his different animal friends who ask him, separately, "Where are you going, Billy Bob-Tail?" To which he replies each time, "I am going out to seek my fortune." Then they ask, "May I go with you?" and he replies, "Yes, if you wish."

They all walk along until they come to the woods, when each one tells Billy Bob-Tail what he can do in case they hear a noise. When that danger is passed, they continued their journey until they reach a deserted house where each one begs to be allowed to stay with Billy Bob-Tail, all telling him, namely, the cow, the goat, the sheep, the dog, the cat, the turkey, the rooster, and the hen, what they can do to help him gain his livelihood.

Songs.—Mother Goose Songs.
Jack Frost.
The Mill.
Pat-a-Cake.
Song of Thanks.
Thanksgiving.

Games.—A Sense Game, in this volume. (*P. 38*)
A Skipping Game, in this volume. (*P. 37*)
The Muffin Man.
Ten Little Indians, in this volume. (*P. 37*)

Rhythms.—Skipping, galloping horses, and and Indian dance.

Manual Activities.—So far we have been using the sand table for free play with shells, making gardens, or just molding balls, but now we may be interested in building a group picture of the farm: the field for hay, and pasture for the cows, the barn of blocks, and anything they may suggest for use in the making of butter. The people and animals may be toys this time, but the buildings, fences, etc., are made by the children.

The sand table is again useful when we talk about the baker, for, with our different molds and moist sand, all kinds of cakes, pies, and bread may be made, and also the oven to bake them in.

With our blocks, we might like to play milk-man, making the wagon which we will fill with cylinder beads for the milk-cans, or else have a grocery store built of cubes, with large beads for the canned goods, and the larger cylinders for barrels, cutting out circles for paper money if we want to buy and sell, and perhaps a basket for our goods. To advertise our wares we can make a picture of a dish of fruit for Thanksgiving, by marking around patterns of fruit, coloring them, then cutting out and placing on a card with a white paper dish pasted over, that we have cut, free hand.

If simple weaving is to be used, the children should start early in the month, first learning the process by means of a game in which the children who represent the strip join hands and march in and out between other children who stand in rows several feet apart, then with wooden slats weaving in the heavy manila mats found in all packages of weaving, before using the other material.

When we talk about the Indians, another opportunity is given for a sand table picture for which tents, canoes and log-houses may be made.

DECEMBER

"Oh, holly branch and mistletoe,
And Christmas chimes wher'er we go,
And stockings hung up in a row,
These are thy gifts, December."

Topic
PREPARATION FOR CHRISTMAS

Loving and Giving.—Among the Mother Play pictures used by Froebel, the founder of the Kindergarten, is one called "The Flower Basket" which illustrates the Christmas thought better than any other. It is a picture of a mother and her children picking flowers that they have cultivated with care in order to fill a basket for the father's birthday, showing their great love for the father who has done so much for them. When the children have seen this picture, or one similar to it, and told their stories about it, the teacher can lead up to the thought that Christmas Day, or Christ's birthday, is celebrated by us because Christ did so much for us. We are glad he lived, and because he lived and taught us to be loving and kind, we celebrate the day by giving gifts to those we love best. Since we love father and mother best, we will want to make something for each of them, as well as plan an entertainment for their benefit on the last day of school before the holidays.

When the children have this thought they will be most enthusiastic about doing things for others, and enter into the real Christmas spirit of Loving and Giving with a will, playing at being Santa Claus' helpers as Santa Claus does for them. The toyman is visited, his different toys talked about, and the Toyman Game is played in school, the children being the toys and imitating their mechanical movements when exhibited. Santa furnishes a great deal of amusement and entertainment, while "The Night Before Christmas" is practically learned thru constant repetition as well as dramatic play.

Stories.—Christmas Stories are many and varied, but some of the best are:
The Shoemaker and the Elves.
The Story of the Christ Child.
The Legend of St. Christopher.
The Christmas Stocking.
The Story of Gretchen.
The Three Little Christmas Trees That Grew on a Hill.

Songs.—Every Kindergarten song book has one or two attractive Christmas songs for individual children to sing or for the whole group. Some of the simple ones are:
Santa Claus.
Martin Luther's Cradle Hymn, "Away in a Manger."
Holy Night, Silent Night.

Games.—The Toyman.

Dramatize "The Night Before Christmas."

Dame Get Up and Bake Your Pies.

Rhythms.—"Around the Christmas Tree," which is sung to the tune of "Mulberry Bush." Each verse ends with the words "so early Christmas morning" and when we have gone thru the motion of reaching for some toy on the tree we will finish with "This is the way we blow our horns," or "beat our drums" and suit the action to the words.

Manual Activities.—A sand table picture of Santa's Land with cotton for snow, his house built of blocks or cardboard and his sleigh filled with toys will keep some of the children busy while others are making their gifts.

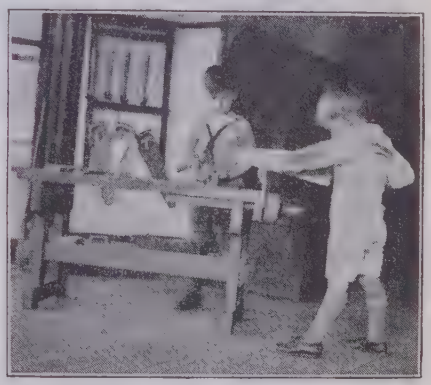
The fireplace may be built with our largest blocks and paper stockings hung in it, or Santa Claus' sleigh with the reindeer drawing it, also boxes filled with toys. For room and tree decorations we will make chains out of strips of paper; cut out bells of red cardboard; make lanterns of paper by folding a square paper like a book, cutting slashes from the folded end toward the open, then opening out to paste the sides together; tissue paper balls, by cutting circles of paper, folding twice for the center, then holding by the center crush toward the outside and string on white thread until when pulled together a fluffy ball is made; and for strings, spaghetti cut in short lengths and cranberries, or just fluffy popcorn. For our gifts, we may make calendars, by painting a little scene for the picture at the top, and place the calendar pad just a little below in the center, or let the children cut out any simple design that is appropriate for Christmas, a tree, a bell, or some holly for the top; memorandum books with some design on the cover colored by their little hands, or the cover woven of linen mats; candle shades with the design on each of the four sides cut out and another colored paper for the facing; needle books with the cover design colored with crayons or watercolors; napkin rings woven or wound with raffia, and many other things that one's ingeniuty may suggest. The invitations for the entertainment may be printed by the teacher with some design at the center top colored by the children, and the envelope made entirely by them. Little songs and verses are now being learned by the children in anticipation of the great day, but even though our brains and hands are busy nearly every minute we will take time to sit in front of the fireplace we have made and tell Christmas stories or play about "The Night Before Christmas" so we may not lose all the joy of the festival in the bustle of preparation for it.

A Thanksgiving Party

JANUARY

"Summer fading, winter comes—
Frosty mornings, tingling thumbs,
Window robins, winter rooks,
And the picture story-books."

Topics



The Little New Year.
Natural Phenomena.
Community Life.

The Little New Year, who is, we learn, Old Father Times' messenger and has for companion, Sister January, with her gifts of ice and snow, is welcomed by the little people with a glad New Year's song and New Year's resolutions. These resolutions may be as different as the little people are different, but hearing others tell about their faults may help us to realize ours. Some one may resolve to come to school every day with clean hands and fingernails, some one else to remember to be polite and not interrupt others who are talking, some one else to brush his teeth every day, and still another, to come on time every morning. This leads us to discuss the importance of being on time for everything and what the clock does for us. A clock dial will help us to learn how to tell time, at least for the hours.

Natural Phenomena present new wonders to us at this time: the snow on the ground, icicles hanging from roofs, the frozen ponds, and the child is anxious to know how it all came about. If he has an opportunity to make a real snowman, the action of the sun on the snow will be shown when the snowman melts away; or, when cold water is put out for Jack Frost to kiss, the expansion of the water is clearly shown. The story "How the Cold Broke the China Pitcher" illustrates this very well.

We observe also the aspect of the sky these clear cold nights, the changing moon, growing from a tiny baby to the full round ball and then growing smaller every night, also the wonder of the stars, perhaps finding the Great Dipper and Orion.

Community Life. We have talked about the various food products and perhaps played grocery store, now we are ready to talk about the other buildings that make up the city or village. If we live in the city there will be churches, factories, office buildings, the armory, dwelling houses, stores and the post-office. If we live in the country there will probably be a church, a store, dwelling houses, a schoolhouse, and a mill in the village. After we have discussed what is necessary to make a city or village, we may concentrate on the furniture as our next project, and will ask: What shall we find there? What are they made of? Where does wood come from? How is it brought to the mill?

Kindergarten Carpenters

Songs.—The many pretty songs about The Little New Year, The Clock, The Snow, The Snowman, The Moon and Stars, keep us happy through this month. Some of them are:

The New Year.
Tick, Tock.
Storm and Sunshine.
The Moon Song.
Snowman.
Twinkle, Twinkle, Little Star.

Stories.—The Three Pigs.
Ten Little Fairies.
The Stars in the Sky.
Ludwig and Marlene.

paper, and the ice of cubes which we may cut and take to the ice-house.

Later we can make a snow picture on paper, representing the sky with blue crayon and leaving the ground white or tearing white paper to represent a hill and pasting it on; also the moon and a tree. The children will like to experiment with paper and scissors to see who can cut out the best tree and moon. Snowmen may be made with plastilena, of wet sand or with white chalk on paper. Pictures of snow-shovels may be made with sticks, or painted on paper with crayons.

When community life is discussed the problem will be to make the various buildings with our blocks, lay out streets with

FEBRUARY

"Step by step lifts bad to good
Without halting, without rest,
Lifting better up to best."

HEROES AND HERO WORSHIP

Topics

The Knights of Old.
The Postman.
St. Valentine's Day.
Lincoln's Birthday.
Washington's Birthday.

The Knights, of whom we have many interesting pictures, notably Sir Galahad, represent all the virtues: purity, truth, bravery, good cheer, and kindness, and

BUILDING WITH THE LARGE BLOCKS

One of the greatest developments in the toy world has been in the adoption of the large building blocks. They provide exercise for the children in lifting, carrying and placing the blocks in construction projects. This view, showing a completed ship, is in the kindergarten department of the Faulkner School, Chicago.

Games.—The Snowman Game, in this volume. (*P. 39*)
A Skating Game.
Sense Games, in this volume. (*P. 38*)

Rhythms.—Sally Go 'Round the Stars.
Marching with a book placed on the head to gain poise.

Manual Activities.—After Christmas the inclination will be to talk about our gifts so we are allowed to bring one of our toys to school to show the other children and play with. When we have had a good time with them we will make pictures of the simple ones: the horns, engines, cars, or the Christmas tree, as we remember it.

When we talk about the clock we can make clocks with construction paper and paste on a dial after we have built clocks with our fourth gift blocks. When we talk about the snow, we may want to make another sand table picture using cotton for the snow, sleds made of construction

our square tablets, make trees with sticks and fringed paper, etc. These problems should be thought out by the children and executed by them with the different kinds of blocks they have learned to use at this time.

The furniture store may be made, at first, by each child, then, when the need is felt for it, a community store should be made in one corner of the room, which is screened off for this purpose. Now the little hands will be busy making furniture of heavy paper or, possibly, wood, and weaving rugs. If we are fortunate enough to have a doll house, we can paper the rooms with wall-paper made by painting with our crayons back and forth across the paper until it is covered with straight lines and making the borders with stencils. The rugs could be made of paper mats, of burlap with overcast edges, or, on the home-made looms, with strips of colored cloth. If we do not own a doll house, individual ones may be made of shoe boxes.

appeal strongly to the little people as the pictures show them with their gayly plumed hats and warlike aspect on their prancing steeds. They love to imitate them in their games and learn many valuable lessons in their worship of the ideal. The *Mother-Play* pictures by Froebel, show the Knights searching for a good child, and the mother who has one, comes out joyfully to show him to them. Another picture shows the Knights turning away from the home because the child is naughty and cannot come out to see them. Through these pictures and stories about the Knights, the children learn many lessons in obedience, and how necessary it is to have the approval of others. The Knights will have nothing to do with the naughty child, will not even take him for a ride. Here is a fine opportunity to appeal to public opinion about the individual child's behavior and discover whether he has learned to live with the larger group, giving and taking as he will have to, in the world of affairs. The penalty for his disobedience

in Kindergarten is that no child can be a Knight in the games who has not been obedient all the morning.

If the projects for January carry over into the month of February, it may only be possible to start the talks and stories of the Knights before we take up the Postman and our national Heroes, but we will have another week at the end of February to continue the thought for, after all, they are all Knights in the best sense of the word.

The Postman, too, is something of a Hero, coming as he does to serve us in all kinds of weather. We talk about him, sing a Postman song and play Postman just before Valentine's Day.

Lincoln's and Washington's birthdays are celebrated just because they are national Heroes, but very simple stories are told about their childhood, as little children are not ready to appreciate their real service to mankind.

Songs.—The Postman.
America.
Our Flag.

Stories.—The stories for this month, may include such stories as:
The Search for a Good Child, in *More Mother Stories.*
David and Goliath, in *The Bible.*
How Cedric Saved His Kitten.
A Little Lad of Long Ago.
Stories About George Washington.

Games.—The Knight Game, in this volume. (*P. 38*)
The Parade, in this volume. (*P. 37*)
A Sense Game, in this volume. (*P. 38*)

Rhythms.—A Soldier's March.
An Orchestra which is formed by the children with different kinds of toy instruments and one of their number to lead them with a stick for a baton, while the teacher plays the tune on the piano. The orchestra can hardly do more than keep the rhythm, but the effect is interesting and the practice very fine for rhythmic sense.

Manual Activities.—When we see pictures of the Knights' castle we may want to try our skill at making a castle with our blocks using both the cubes and the bricks; cut out flags and paste a red cross on them for the Knights to carry; model the Knights on horse-back with our plastilena or clay, make horse lines with heavy cord or roving, or else with our colored folding paper, fold the square into sixteen squares, as we did for our baskets, boxes, wagons, houses, etc., and cut out these squares to lay on a paper in the form of a castle and paste. The Knights' hats may be made by folding two squares on the diagonal and pasting the short edges together with paper strips for a plume at the top.

For the soldiers we may make a sand table picture, folding tents, cutting out soldiers and fastening them on wooden foundations so they will stand or parade, or else painting flags with our crayons to fasten on sticks and place on the fort we have made.

When we talk about Lincoln, we can construct a log cabin of sticks, then make one of construction paper to take home, with Lincoln's picture pasted on a card. The log cabin is made by folding sixteen squares, then cutting up the three creases from the front edge one square space, the same from the back edge and pasting the center squares on top of each other; for the roof, bring the outer squares just to lap about half an inch so the house will stand squarely on the table.

St. Valentine's Day is celebrated by making valentines, the envelope to contain them and perhaps the Postman's bag by sewing two pieces of paper together overhand.

For Washington's birthday we will want to fold soldier hats, paste his picture on a card, paint a flag with crayons, and draw pictures of soldiers marching. If it is desirable to keep some things in book form a Washington book may be made, and the work drawn or pasted on the leaves. The soldiers we draw may be just like the men we make with our sticks on the table but carrying a flag; and a soldier hat makes them real to us.

Busy Moments in a Modern City Kindergarten
Children engaged in a variety of activities in a Philadelphia kindergarten

MARCH

"The brook is brimmed with melting snow,
The maple sap is running,
And on the highest elm, the crow,
His black wings is sunning."

HEROES OF LABOR

Topics

The Fireman.
The Blacksmith.
The Policeman.

NATURAL PHENOMENA

Topics

Water.
The Wind.

A visit to *The Fireman* and *The Blacksmith* will serve to show us some Heroes of Labor and the little people re-live their experience by means of dramatization. Little boys are always attracted by spectacular callings like that of the Fireman and the Policeman but deep in their hearts they do appreciate the importance of their work.

The kindly man who helps us across the crowded busy streets when we go to town, who watches our home or store, so thieves cannot take our goods, but is also ready to punish the wrongdoer, is a true Knight to the children if ever there was one, and this is the attitude they should have toward *The Policeman.*

If we are not able to show him the real Policeman, Fireman, or Blacksmith, pictures will serve to acquaint the child with their good work.

Water. — The forces that bring about the rejuvenation of nature are noticed now, as Water and Wind play such an important part in Mother Nature's house-cleaning. Water in the streets or roads, the result of melting snow and the Spring rain washing away as it does some of the accumulated dirt of the Winter, leads us to ask: What does water do for us? How it is used for bathing our bodies inside and out, by drinking one or two glasses of water before each meal, then by bathing our bodies regularly, cleaning our teeth and our hair. How we use it for washing our clothes, our dishes and our homes. How it sends the boats along the river that carry lumber and other goods for us, and how it makes everything grow.

The Wind's work is an interesting topic for the little people and at this stage we should expect them to tell all about the Wind's work, or about some picture illustrating the Wind's work, telling what they know by means of grammatical sentences even though simple and child like in form. The Wind, that mysterious unseen force which Mother Nature uses for her house-cleaning, by blowing the leaves and refuse about or to turn the windmill that pumps water from the ground, to dry the clothes on the line, to sail our boats, or our kites, is always interesting, and some day we will go out to watch the weathervane turn and hear the song Mr. North Wind sings while we wonder why we cannot see him when he takes our hat off our head.

"The Wind" by Robert Louis Stevenson, may be read to the children.

The bulbs we planted in the Fall may be brought out now and cared for by the children. If they are the white Narcissus bulbs, they may be put in individual glass jars, so the growth can be watched more closely.

Stories.—The Little Gray Pony.
The Wind's Work.
Aqua, the Water Baby.
The North Wind and the Sun.

Songs.—The Blacksmith
The Wind.
Who Has Seen the Wind?
Waiting to Grow.
I had a Little Pussy.

Games.—The Fireman, in *A Baker's Dozen for City Children.*
The Windmill, in this volume. (*P. 40*)
Oh, Where, Oh, Where Has My Little Dog Gone?, in this volume. (*P. 41*)
The Kitty and the Mouse, in this volume. (*P. 37*)

Manual Activities.—Of course, there will be the Fireman's hat to make, a ladder with sticks on the table, a real ladder with pieces of wood, if we have the tools for it, and perhaps a lantern of paper, to hang on the truck we make with our blocks. Now we may take time to make a picture book, making the cover of colored construction paper and the four pages of two sheets of drawing paper about nine by twelve inches large with the pictures cut out of magazines by the children and very carefully placed, one large one, or two small ones on a page. If some child has been out a long time we must be sure to make one for him.

HOUSEKEEPING PLAY WITH DOLLS AND SIMPLE FURNITURE

This type of play is valuable and interesting to boys and girls. In the kindergarten department of Teachers College, Columbia University.

For the Blacksmith, we will enjoy the free cutting of horseshoes or wagon wheels, then making his shop with our blocks and the horses to go into the shop. Boats may be folded to sail on the sand table pond, the bridge that goes over the water constructed of blocks and possibly the steam engine to go over the railroad bridge; Dutch boys and girls cut out and their clothes colored; windmills constructed of paper, steamboats for the ocean built of blocks, or anything the children suggest to make the picture complete. Water scenes may also be made by coloring the sky and water, and pasting on the sailboat we have cut out.

When we talk about the wind we will paint pictures of kites, of children flying kites, make pin-wheels and construct real kites.

Rhythms.—The Hansel Gretel folk dance, a Victrola record.

APRIL

So soft and gentle falls the rain,
You cannot hear it on the pane;
For if it came in pelting showers
'Twould hurt the budding leaves and flowers.

Easter.
Sources of Clothing.
Farmer's Spring Work.

If *Easter* comes early in April, we stop now to devote a week to the Easter thought and preparations for an Easter party, as we would have, had the date fallen in March. If the season is advanced the grass is beginning to grow, the brooks are flowing merrily along, and the buds are beginning to open on trees and bushes. If we are fortunate enough to have chickens there may be some little ones ready to come out of the shell, that we can watch. The crocus flowers peeping out of the earth or the bulbs that we planted in the Fall waking from their long sleep make us realize the awakening of Nature, and when this thought is followed by the story of "The Caterpillar and the Butterfly" the children gain the spiritual significance of the day without any other reference to it. The week's work might well culminate in a party to which we may wish to invite our parents.

After Easter we will want to tell what we did that day. If we went to church, all about the glad music, the flowers, and the beautiful church building. Then we will surely be quite eager to tell when we hear the first Robin, and our Audubon bird chart will be brought out to see if we can find Mr. Robin on it. Each day we will be interested to hear about how the birdie builds her nest, what she builds it of, and where. When other birds come, or we listen to their songs on a Victrola record, if not in reality, we may learn to find them on the chart.

If we have dolls in Kindergarten, they will need new clothes, so we will begin to talk about where we will find materials. If it is possible to visit the dry goods store we may see how it is bought and from that lead to the *Sources of Wool and Cotton*, showing pictures of the farmer shearing his sheep and of the cotton growing. At this time of year the children should be ready to tell some interesting stories about their pictures, and if some child is away on a visit or ill at home, we may enjoy composing a letter to him telling about our new picture. The community letter gives us an opportunity to show how well we can compose sentences, and helps to increase our vocabulary by comparing our story with others.

The Farmer's Work in Spring, the preparation of the ground, the planting of the seed, interest us through pictures when not through actual experience. Excursions to see the planter working give us the best idea, of course, and we come back quite ready to imitate his activites in our small way.

Songs.—To Baby Land.
Happy Easter.
Nature's Easter Story.
The Robin.
Raindrops.
The Rainy Day.

Stories.—The Caterpillar and the Butterfly.
Little Half Chick.
Peter Rabbit Stories.
Patty's New Dress.

Games.—The Snail, in this volume. (*P. 39*)
The Farmer, in this volume. (*P. 41*)
The Swing, a dramatization of Robert Louis Stevenson's verse, found in *"A Child's Garden of Verse."*

Rhythms.—O'er the High Hill, a folk dance.

Manual Activities.—For Easter we will be busy making Easter baskets, coloring Easter eggs, by marking around a pattern, and cutting them out, cutting and mounting Easter Rabbits, or making little chickens coming out of the eggs and coloring butterflies for room decorations. If we plan to invite the parents for an Easter party, we will have to fold envelopes and an Easter design on the invitation card. This party may be one for which the table is set and if there is time we may decorate doilies and napkins for the occasion, or make place cards. A little entertainment, an egg hunt, games and the lunch at the tables, will give us a happy time together. After the party the little people should be the housekeepers, clearing the tables, washing and drying the dishes, and putting them away, but if this is not possible because of numbers and lack of assistance, they should be given the opportunity after the daily lunch, or a birthday party, which is occasionally celebrated in this way.

After Easter we will build churches with our blocks, an organ for our church, boats to load with cotton and send down the river, or factories where cloth is made. With paper and watercolors we can make a fine church window by blending the different colors on an oblong paper, coloring a border and cutting out in the shape of a church window. Then when we have brought from home some pieces of cotton or woolen cloth we may make dresses for our dolls, cutting out the pattern first. A sunbonnet is easily made and is a welcome addition to the dolly's wardrobe.

For birds' nests there is plastilena or clay, blocks to build bird-houses with and sticks for the fence on which we may have a birds' store. Birds may be colored and cut out of paper and a slit cut in the body for the wings so when the bird is hung from a fine black thread he seems to fly.

A bath arranged in the school yard for the birds will make a fine place from which to observe their habits. The birds' store is merely a section of the fence devoted to things the birds may like to use in the building of their nests, with a bit of seed or other food to attract their attention.

Our pictures at this time should show great improvement. They should always have the sky and ground completely covering the paper and made with a much lighter stroke than at the beginning of the year; and the little boys and girls drawn may wear bright colored clothes while rolling their hoops, flying kites, or doing any of the activities the children wish to represent.

A rainy day may be celebrated by making umbrellas, cutting them free hand and mounting on a sheet, or drawing pictures of umbrellas.

MAY

"All the birds have come again,
Come again to greet us;
And a joyous song they raise
Chirping, singing merry lays;
Pleasant Springtime's happy days
Come again to greet us."

Topics

May Day.
Nurture of Growing Things.
Of Animals.

May Day.—When the season is early and the blossoms are already out the first week in May, we will have practised dancing around the Maypole in April and changed our program, but if blossoms are late in coming out we will begin now to prepare for our May Day celebration. To dance around the Maypole is great fun, but since we are so small we are content to just wind the streamers around the Maypole instead of weaving them, having two circles of children skipping if there are too many for one circle, with one, the outside circle, skipping clockwise and the other counter-clockwise. To entertain our visitors we will learn little flower songs and verses and perhaps have a Queen of May to preside.

After May Day we observe the busy gardeners all about us and talk about their work and tools used. If we have the opportunity to make our own little garden outside, we can plant and care for something that is easy to grow, like lettuce or radishes. The entire care of a plant teaches the child one of the greatest lessons in life—that loving care brings its own reward; also that responsibility goes with service, for our plant soon droops and fades if neglected. Our talks will be about how to prepare soil, tools to use and what to do for growing plants. If we cannot have a garden out-of-doors, we will at least have a box for a few seeds in our room and encourage conversation through pictures of a little gardener. How the sun and rain help the little plant to grow are brought to our attention by means of the stories. At this time, too, we will enjoy playing The Light-Bird game, making the Light-Bird by holding a piece of glass so the sun can shine upon it and send the reflection on the wall. When we try to catch the Light-Bird we will begin to realize that there are some things we may not grasp with our hands, but can hold the picture of in our eyes and hearts.

Songs.—The Woodpecker.
My Garden.
The Tulip.
Daffy-Down-Dilly.
Daisies.
The Dandelion.
Little Yellowhead.
Buttercups.
Pansies.
Good Morning Pretty Sunshine.

These are some of the best flower songs to select from, for individual children or groups of children for May Day.

Stories.—The Little Pink Rose, in *Stories to Tell to Children*, by Bryant.
Chicken Little.
The Kitten Who Forgot Kitten Talk.
Prince Harweeda.
The Line of Golden Light.

Games.—The Bird Game (p. 40).
The Farmyard Game (p. 39).
Chicken Little.
The Little Pink Rose.

Rhythms.—The Maypole Dance, which is really a skip for us.

Manual Activities.—May baskets for our May flowers, tulips colored and cut out, then pasted on a card as though they were growing out of a pot. Daffodils may be arranged the same way, or we may paint with our crayons from the real flower for May Day projects. The garden may be worked out in the sand table with shells for the borders, on our tables with sticks and seeds; or if we have half rings flowers may be made with those. The tools for use in the garden may be cut out of thin paper, freely, after we have made them on the table with our sticks, that is, tools like the rake, the hoe, the shovel. Pictures of the shovel or the hoe may be made with crayons, or pictures of children working with them. We take frequent walks these days and usually find some flower we like to make a picture of.

THE JUNGLE GYM

The jungle gym is an example of the large pieces of play apparatus now available for school equipment. Other equipment includes the tower gym, the highlow gym, low parallel bars, climbing ropes, see-saw, rocking boats and the ever popular slide.

The Farmyard furnishes a project that we will enjoy working out in our sand table, where we can make paper animals for the pig pen, for the dog kennel, for the sheep fold, and for the barn. These animals will stand up if two animals are cut out and pasted together leaving the legs free. Chicken coops and fences may be made of paper by the children. If we have a chicken we can make a runway for the chickens with our blocks.

With our clay, we may make a flower pot, dry it, paint it with shellac, and plant a flower seed in it, which we will take home for mother.

Educational play devices, such as the junglegym or the tower gym, are useful. With the coming of good weather the outdoor slide is much in demand by the kindergarten children.

JUNE

"Just to bloom beside your way
That is why the flowers are sweet;
You want fresh ones every day
That is why the flowers are fleet."

Topics

The Circus.
The Bees.
The Park.
Flag Day.

The Circus has come to town and our interest centers on that for a while. Now we tell about the different animals in the parade. Which are the wild animals? What are their names? What did the elephant do at the circus? Show us how he walks. How does the bear walk? Where do they like best to live? Tell about the clowns and the horses.

When the circus has gone we will be out in the fields again watching the busy bees at work among the flowers. To gather under the shade of a tree and tell stories about how the Queen Bee gathers her family of workers and drones and allots to each his particular task, which is zealously performed, and then be able to watch the honey bees as we gambol over the fields makes us more eager to do our work well, when we return to our room; so we go out for all relaxation periods these days and tell our stories there, if possible. The lesson we learn from the bees and birds and flowers is that all are as busy as can be at their particular tasks; the bees making honey and caring for their household; the birds with their little ones and eating the insects that trouble the trees and plants, and the flowers gathering all the sunshine and dew they can in order to grow fast and give forth perfume. They are always busy. Why should we play all the time.

Shorter periods of work and play are the rule at this time of year, although it is always understood that we must not be kept too long at a task. After a change we will be glad to go back to our project, but little children cannot concentrate on any project very long at a time. The last project for the year may be:

The Park, if we can visit one. We may find there a pond with ducks or swans in it that will attract our attention first; then buildings, flower beds, tennis courts, swings, and a merry-go-round; also automobiles that drive through the big gate—all of which we may represent in our sand table or on the floor.

THE OUTDOOR SLIDE

With the coming of spring the outdoor slide again leaps into popularity. The assistant director is shown here with children of the kindergarten.

On Flag Day we will tell the story of the first flag made by Mrs. Betsy Ross and learn to salute our flag as the soldiers do.

The closing festivities for the year might be a picnic at which we will serve in sandwiches the lettuce and radishes we have grown in our garden.

Stories.—Little Black Sambo.
The Baby Queen.
The Little Gray Grandmother.
The Coming of the King.

Songs.—The Kitten and the Dog.
Mr. Frog, in *Small Songs for Small Singers.*
Zoom, Zoom, Zoom.
Two Little Roses.
Away Among the Blossoms.

Games.—Merry-Go-Round.
Hide the Button.
A *Flower Game*, in which the gardener plants children for flowers, and names them as he plants. They curl up on the ground while the gardener waters them and the sunbeams shine on them, then some of the children represent birds and fly around waking the flowers which come up slowly and gradually unfold their blossoms, when other children representing bees and butterflies, fly among them. After a while the gardener picks a few of his flowers to sell or give to some one who is ill.

Rhythms.—Here We Go Up the Green Grass, or,
A Dolly's Dance which the children may do to music like that of the Dance of the Marionettes.

Manual Activities.—The Circus Parade will be eagerly made after we have talked about or, better still, really seen it. The wagons may be made of red cardboard, or of boxes turned so the open end is at the side, strips of cardboard for the bars, across the open end, and wheels cut out of the papers, or milk bottletops fastened on with brass paper fasteners. The horses and other animals may be cut out and pasted together so they will stand, and the horses harnessed to the wagons with strips of cardboard. Free drawing or a group product in which the animals and wagons are cut out and pasted on a large sheet upon which the background has been colored, may suit us better if we cannot make the real wagons. The Bradley *Picture Cut-Outs* make fine action figures for a circus border, as the arms and legs are cut out separately and fastened on with little fasteners.

Flowers may be made of parquetry circles, or free cutting and pasted for borders.

When we visited the park so many projects occurred to us that we will be kept busy, perhaps making the trolley that takes us there, with our blocks; making the Merry-Go-Round; the house where ice cream is sold; the flower-beds; the pond, which may be just a piece of glass for the toy ducks and swans, if we make our picture in the sand.

On Flag Day we will make a flag to place on the flagpole which is inside the big gate which we may make with out blocks.

Our last festivity, the Picnic for which we have grown lettuce and radishes, will be the occasion for a jolly good time under the trees, when we will sing the songs and play the games we like the best.

ATTAINMENTS

Through the topics discussed, we should gain much valuable information, through the exchange of ideas and suggestions by the teacher to feel a closer kinship with the environment, kindliness toward those who help to make our homes possible, toward animals, toward birds, and a definite feeling of responsibility for their care.

Habits of attention, of independent thinking, of closer observation, and ability to relate experiences by means of grammatical sentences, should have been acquired.

The stories and poems should make for a better appreciation of good literature, and through frequent repetition create better habits of attention as well as exercise the memory and increase the vocabulary. The power to dramatize simple stories and incidents should be increased because the feeling of self-consciousness has been overcome to some extent, also the ability to originate simple stories should have been fostered.

The singing of songs in the Kindergarten should make for better voice control, the use of the head tones instead of the throat, ability to listen to and reproduce tones on the piano, or with the voice, and to change the pitch of a song if started too low. The group as a whole should have learned to sing a number of simple songs, and each child should be able to sing a few of these alone.

The games and rhythms should have given us better control of the muscles, more poise, and should correct some physical defects. With the games, they should have acquired the ability to play with the larger group in a spirit of fairness and co-operation; greater ability to dramatize situations brought out by other activities. And the power for leadership and organization should have been increased. The feeling that he is part of a great whole and that his part should be done as well as possible if we are all to have a good time is best gained through games and folk dances, or rhythms.

The manual activities we engage in should gain for us better ability to imitate the best forms, to create new ones, to concentrate on a particular problem, to express our thoughts by means of pictures, and to make associations with the subject matter by choosing our own projects to work out. Habits of neatness, orderliness, and artistic arrangement should have been gained and a feeling for color and form should have been developed with a better knowledge of the laws of growth, through the nature material used.

Habits of courtesy, such as: "Good Morning Miss ———, Thank you, Excuse me, or Pardon me, and If you please" should become second nature as should the habit for the little boys of removing the hat when in the house.

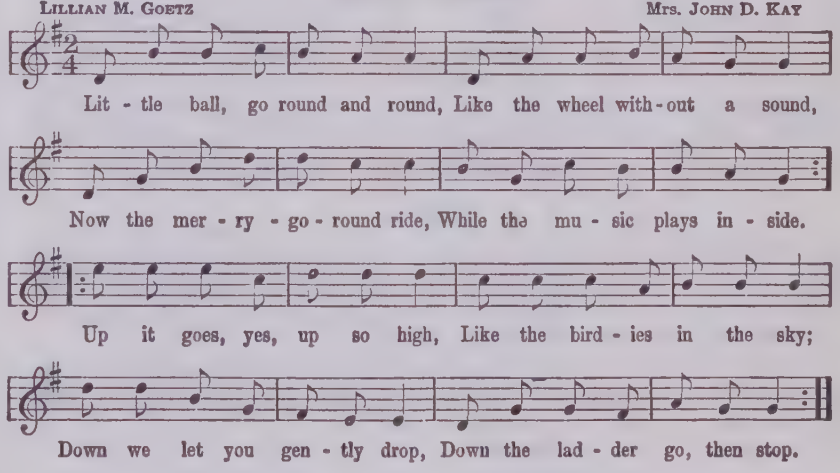
THE PARADE

Lillian M. Goetz



Sung to the tune of "The Five Knights."

Here comes Drum-major marching, marching, marching,
Here comes Drum-major marching, can you march, too?
Here comes a soldier marching, marching, marching,
Here comes a soldier marching, can you march, too?
Here come two soldiers marching, etc.
Here comes a bugler marching, etc.
Here come two buglers marching, etc.
Here comes a drummer marching, etc.
Here come two drummers marching, etc.
Here comes a fiddler marching, etc.
Here come two fiddlers marching, etc., until all are chosen.

Directions—The first child marches in front of the others until the words "can you march, too" when he salutes the one nearest him. That child then marches behind the Drum-major until time for him to choose a second soldier or a bugler according to the number of children playing. If there are enough children choose two of each kind to march together until all are in the line of march, then play some martial music while the band pretends to play.

BALL GAME

LILLIAN M. GOETZ — MRS. JOHN D. KAY

2.

Right and left swing like the clock
As it softly says, "Tick, tock."

Tick, tick, tick, tick, tick, tick, so
Mother's little clock will go.

Forward, back, for big church bell,
Ding-dong, ding-dong, ding-dong, dell.

Quickly make our cradle here
Sing "Bye-low" to baby dear.

Play with colored worsted balls with string attached If there is a loop on the string the children can hold and swing balls much more comfortably.

SKIPPING GAME

Tune, "Comin' Thru the Rye."
Words, Lillian M. Goetz.

On this bright and happy morning
Come and skip with me.
I will bow then take your hand,
And merry we will be.

Chorus.

Sing tra-la, la, la, la, la, la, la, etc.
(While the children skip.)

Now our happy skip is over,
Walking we will try,
'Till the lassie makes a curtsy,
Just to say, "Good-bye."

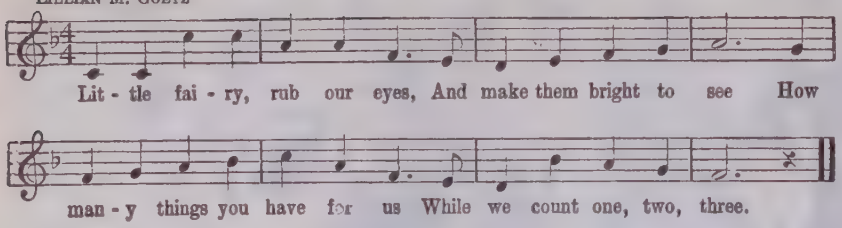
Directions—Let one child choose a partner and skip. When their skip is over let both go to other children and choose, making four to skip this time. Continue this way until all are chosen.

THE KITTY AND THE MOUSE

Kitty curls herself on a chair and goes to sleep, her pan for milk by the chair. Mouse creeps up on tiptoe to get pan, without waking kitty. If kitty hears the mouse she wakes and says "Meouw," scaring the mouse. If kitty does not waken and the mouse gets the pan, that mouse becomes the kitty for another game.

TEN LITTLE INDIANS

(A Game for Imitations)

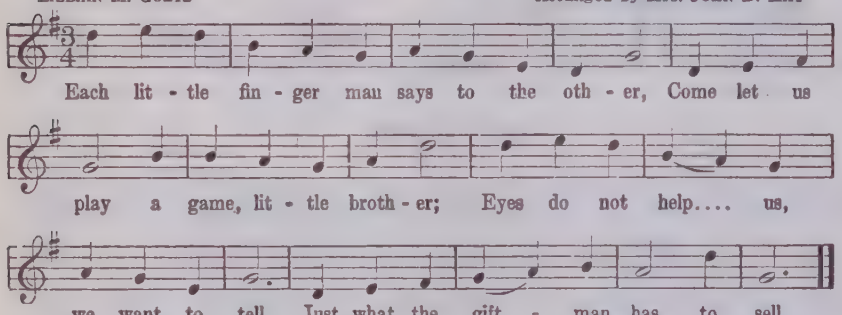


One little, two little, three little Indians,
Four little, five little, six little Indians,
Seven little, eight little, nine little Indians,
Ten little Indian boys.

Directions—As the song is sung, the children stand up one by one, and form a long line. The next time the song is sung, each child will imitiate the motions made by number one who is always the leader. He may imitate the activities of the baker, the carpenter, the soldier, the musician, etc.

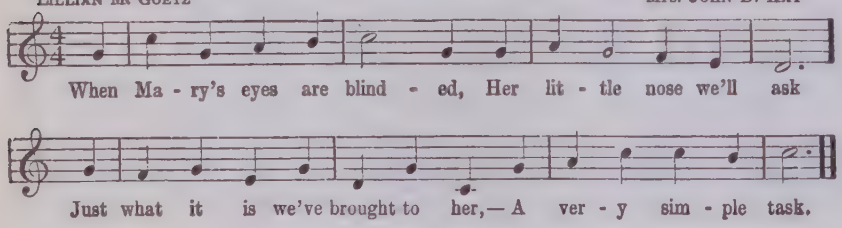
SENSE GAMES

1. SIGHT



LILLIAN M. GOETZ

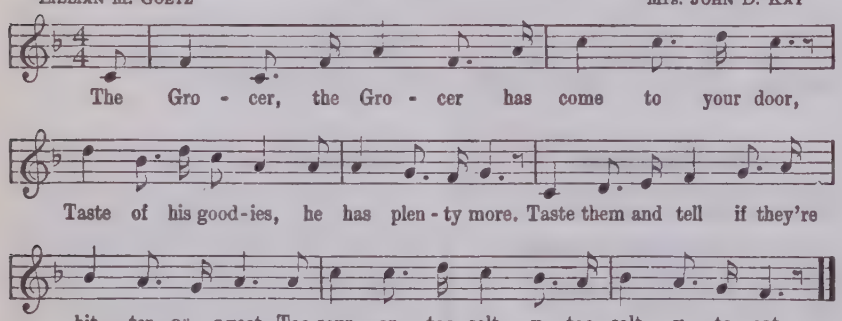
SENSE GAMES



3. TOUCH

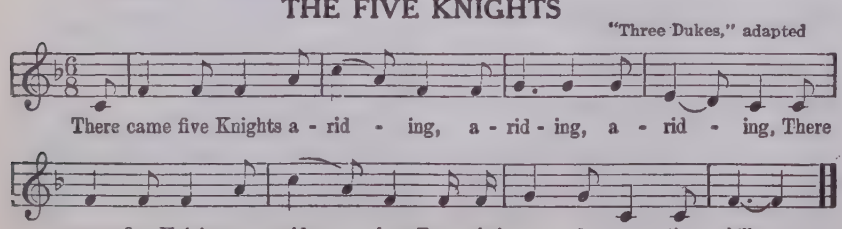
LILLIAN M. GOETZ — Arranged by Mrs. JOHN D. KAY

4. SMELL



LILLIAN M. GOETZ — Mrs. JOHN D. KAY

SENSE GAMES



5. TASTE

LILLIAN M. GOETZ — Mrs. JOHN D. KAY

THE FIVE KNIGHTS

"Three Dukes," adapted

SENSE GAMES

1. SIGHT

Directions—Place a number of objects in front of the children, who are standing in a row or circle with their eyes closed, and cover the objects with a cloth. When all is ready have them open their eyes and sing, lifting the cloth only during the last measure. When the cloth is on again let each one tell what he saw.

2. HEARING

One child sits in a chair with eyes blindfolded.

Another child tiptoes back of him and raps on the chair, saying, "Little sister who knocks?", or "Little brother who knocks?" When the first child guesses the name, the second child sits in the chair and some one else knocks at the door.

3. TOUCH

Directions—The children stand with their hands behind them, while the gift-man walks up and down with his bag singing and placing some object in each pair of hands. When the children all have something, they feel of the object and tell its name or what it is like.

4. SMELL

5. TASTE

THE SQUIRRELS

Let two children represent the hollow tree by facing each other and joining hands as for London Bridge, stretching out arms shoulder high. A third child represents the squirrel and stands between the raised hands. When several trees are made, let another child stand in the center between the trees. At a given signal all the squirrels change trees and the odd child tries to find a tree to stand in. The squirrel who is left out stands in the center for another game.

THE FIVE KNIGHTS

O, what is it you wish, sirs, you wish, sirs, you wish, sirs,
O, what is it you wish, sirs, for your castle on the hill?

We've come to find a good child, a good child, a good child,
We've come to find a good child for our castle on the hill.

O, please take one of us, sirs, of us, sirs, of us, sirs,
O, please take one of us, sirs, to ride with you today.

The very best child that I see, that I see, that I see,
The very best child that I see, shall ride with me today.

And now we'll all go riding, a-riding, a-riding,
And now we'll all go riding to the castle on the hill.

THE FARMER

(Danish) '07

Music harmonized by Elizabeth D. Root

Would You Know the Farmer, etc.

Repeat for the succeeding verses, changing the words for the last two measures thus:

2nd time—Is cutting his wheat.
3rd time—Is gathering his wheat.
4th time—Is thrashing his wheat.
5th time—Is grinding his wheat.
6th time—Is baking his bread.
7th time—Is taking his ease.

Children join hands in a circle. As they begin to sing they move toward the left with long running steps for the first four lines of the song. The next four lines are sung more slowly to enable the children to demonstrate the words being sung, and children stand still during the action.

Verse 1. When the word "how" is sung, children take seed in their right hand from the bag they are pretending to carry on their left arm, and cast seed from right to left.

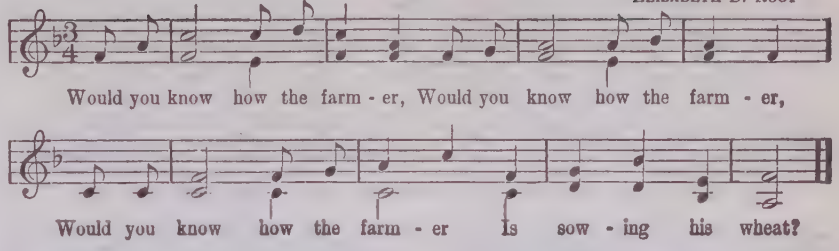
Verse 2. Cut the wheat by bending forward and forming the scythe by a bent right arm. The left hand is placed far up the right arm, as if for a scythe.

Verse 3. Form a wheel by bringing children close together with their hands on one another's shoulders. Step briskly on heels to imitate the sound a rolling wheel makes over the cobbles of a farmyard.

Verse 4. The right arm represents the flail which will thrash out wheat. This arm is stretched and bent alternately. At the same time stamping foot.

Verse 5. Grinding is done by turning "pancake". Couple join hands and turn under own arms.

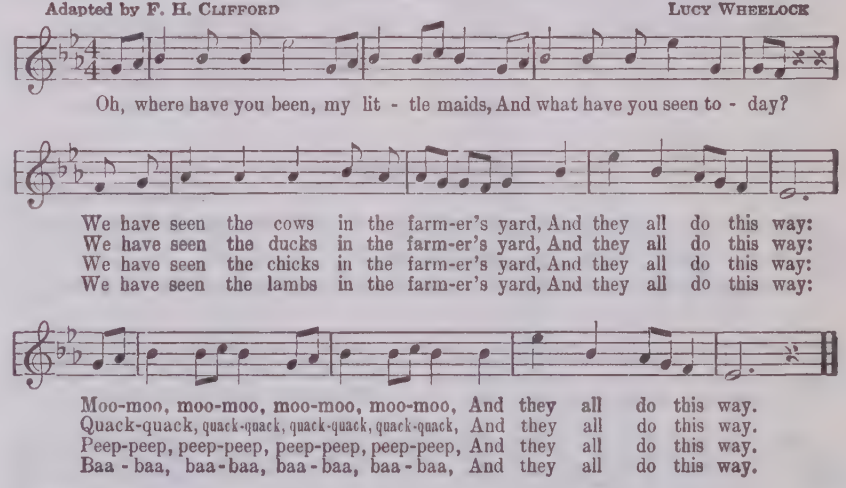
Verse 6. Kneading is done by pushing clinched fists downward and forward.



Verse 7. Baking bread: the right hand represents the long-handle shovel, upon which bread is placed in a big hot oven. Hold hand horizontally to keep bread from falling. Place left hand high on right arm to push shovel.

Verse 8. Children drop on left knee, put right hand under chin, rest elbow on knee and nod to child first on left then on right.

By permission, from *"Hinman Gymnastic and Folk Dancing," Vol.* III, published by A. S. Barnes, New York.



THE FARMER

(Danish, '07) Music harmonized by Elizabeth D. Root

THE FARM-YARD

Adapted by F. H. Clifford — Lucy Wheelock

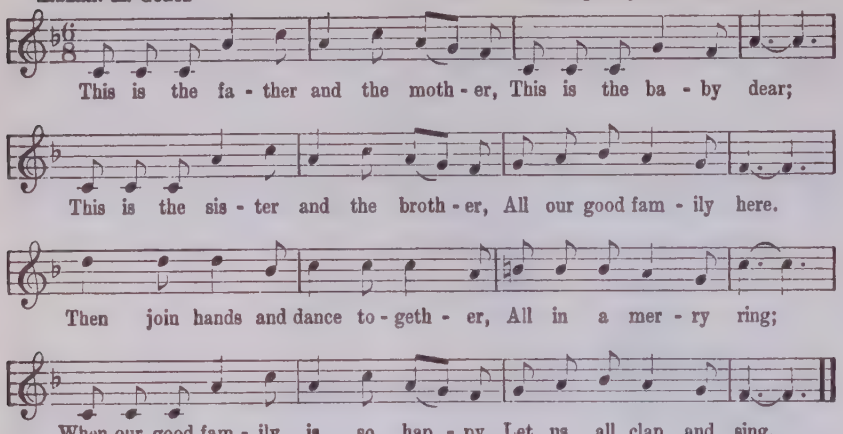
THE FARM-YARD

By permission of authors and publishers, from *"Ring Songs and Games"*, published by Milton Bradley & Co., Springfield, Mass.

Directions—The children chosen to represent animals leave the room and decide what they would like to do. When they return the other children sing to them and they reply, imitating the action of the animals represented.

THE SNOWMAN

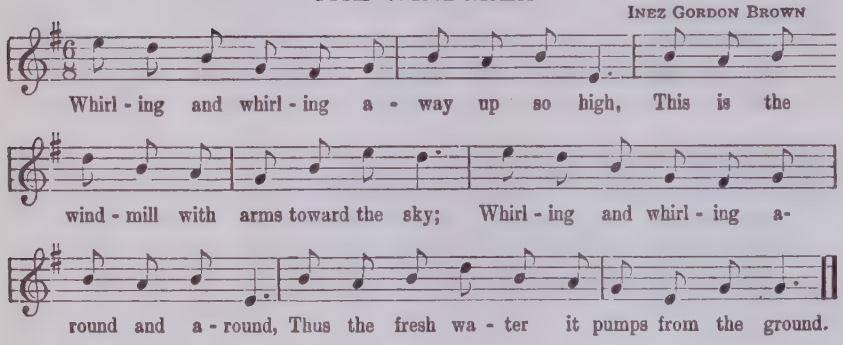
Lillian M. Goetz



Snowstorm—Have all the children represent snowflakes and whirl softly about while some soft music is being played on the piano. After they have whirled about a bit they fall on the floor like sleeping snowflakes, then get up softly one by one until all are standing on the circle.

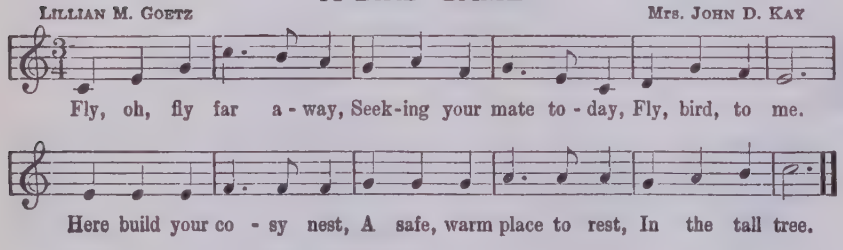
Snowman—All roll snow toward the center, where one is selected for the snowman and a hat is placed on his head.

Snowballs—When all are some distance away from the snowman each child will pretend to make a pile of snowballs. When each has a pile let them throw together knocking off the hat, first, then the arms, then all the snowman. When the snowman is down the children gather around while the sunbeams melt him. The fact that he joins the other children when they all drift back makes the melting of the snowman seem quite realistic.



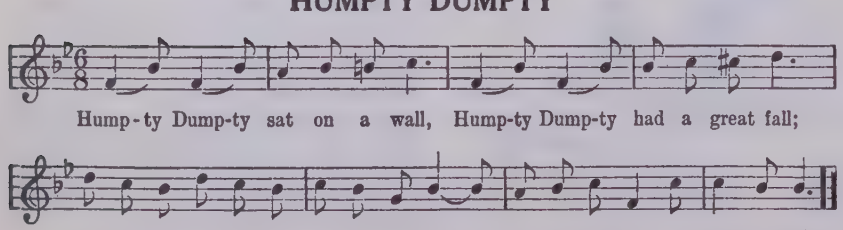
THE FAMILY

LILLIAN M. GOETZ — Arranged by Mrs. JOHN D. KAY



THE WINDMILL

INEZ GORDON BROWN



A BIRD GAME

LILLIAN M. GOETZ — Mrs. JOHN D. KAY

HUMPTY DUMPTY

THE WINDMILL

By Inez Gordon Brown

Directions—Two children stand in the center of the circle, back to back. Each extends arms, left high and right low. On accented words the right is lifted and left lowered, so there is an effect of whirling as the children's arms are constantly crossed. The other children in the circle sing the words of the song. After this, the music is repeated so that all have an opportunity to be windmills.

From *"The Kindergarten and First Grade"* magazine, published by Milton Bradley & Co., Springfield, Mass.

A BIRD GAME

2.

Mother-bird spreads her wings
Over two tiny things
Two wee blue eggs.
Some day she'll hear a call,
"Peep, peep, we're birdies all,
For food we beg."

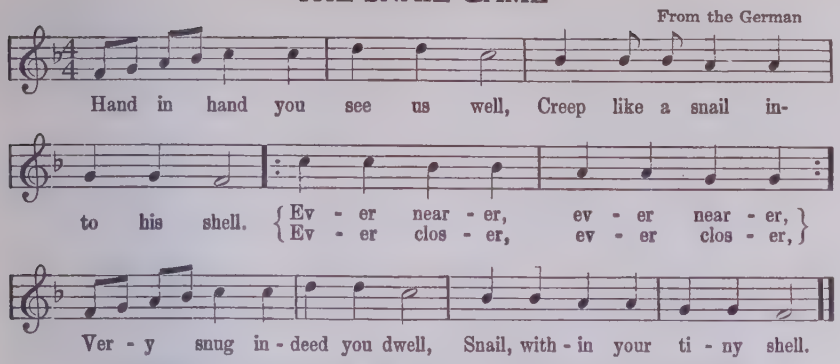
3.

Fly, oh, fly far away,
Out of your nest to-day,
Wee birdies, too.
Follow the mother-bird,
"Peep, peep," her song is heard,
"I'll fly for you."

Directions—Choose a child for the father-bird who flies around looking for a mate. When the mother-bird has been chosen they select a place to build their nest then fly around finding imaginary straws and place in the nest. 2—When the nest is built, mother-bird finds two children to represent eggs and cuddles them by holding arms out straight from the shoulder and kneeling down to get close to the children who are curled up like eggs. While the mother-bird stays at home, the father-bird finds food for her. Soon the birds raise their heads calling "Peep, peep," and mother-bird assists in the search for food. 3—Finally the little ones are ready to fly, and follow the lead of the mother and father who show them how.

HUMPTY DUMPTY

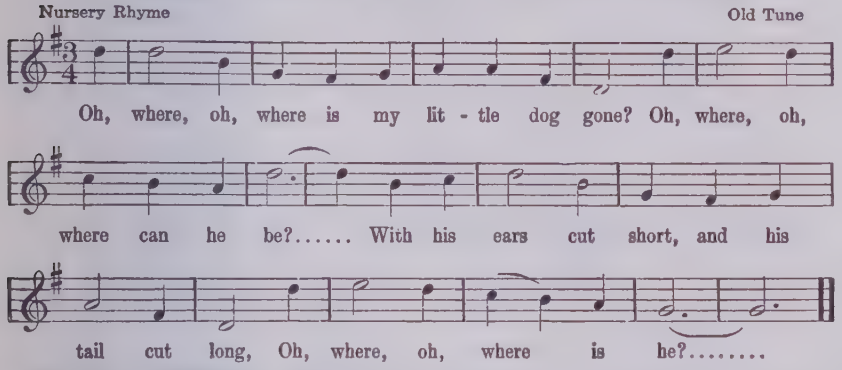
By permission, from *"Mother Goose Songs for Little Ones,"* by Ethel Crowninshield, published by Milton Bradley & Co., Springfield, Mass.



Lillian M. Goetz

Directions—Choose the King, his horses and two men beside Humpty Dumpty. Have Humpty sitting on a table or chair for the wall. When he has fallen off the wall, have the King drive his horses and with the assistance of his men try to put Humpty back again. After they find that is not possible, let the King drive his horses about the room while the following verse is sung to the same tune as the above verse:

Galloping, galloping, gayly they come,
All the King's horses are galloping home,
All the King's horses and all the King's men
Who couldn't put Humpty back again.

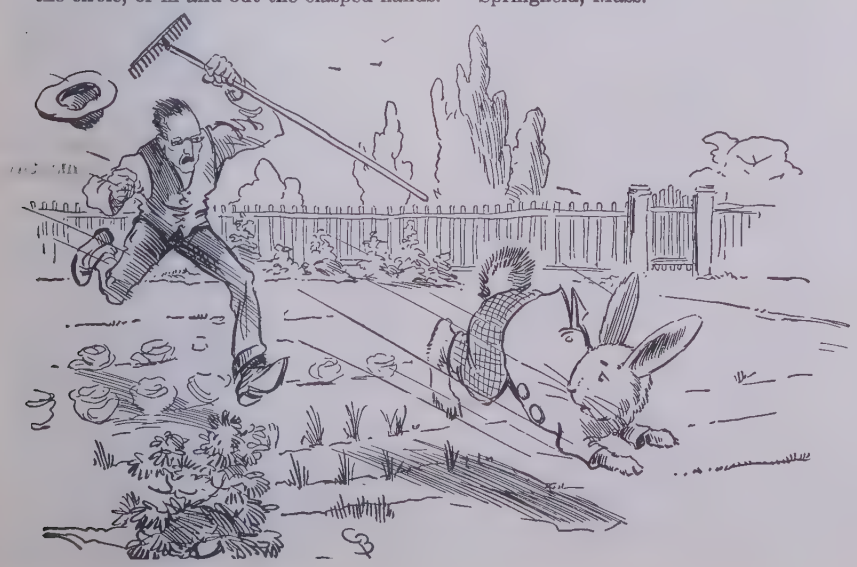


THE SNAIL GAME

From the German

WHERE, O WHERE IS MY LITTLE DOG GONE?

Nursery Rhyme — Old Tune



WHERE, OH WHERE IS MY LITTLE DOG GONE?

Directions—A single circle is formed facing inward, with the hands clasped. One of the players, the master, is in the center of the circle. The circle moves around in line of direction, that is, the players slide sideways right. The master skips around the circle in the opposite direction, holding his hand to his forehead and looking from side to side as if to find his dog. At the end of the verse, the circle halts on the last "be" and raises clasped hands high. The master also halts at the same moment and the one before whom he stops is the little dog. The little dog immediately turns and runs away around the circle, or in and out the clasped hands. Wherever the dog goes the master must follow the same path in his efforts to catch him. After he has caught the dog the master may join the circle and the dog becomes the master, when the game begins anew. Should the master fail to catch the dog, after a reasonable chance, the dog resumes his former place in the circle and the game may begin as before with the same master.

This game helps to encourage the children to slide quickly and lightly and not to drag, as they are likely to do at first, for all the children desire to hurry past the master so that he will not stop in front of them.

By permission, from *Rhythmic Action Plays and Dances*, by Irene E. Phillips Moses, publishers, Milton Bradley & Co., Springfield, Mass.

THE SNAIL GAME

From the German

Directions—The children form a line and join hands. The leader then leads them toward the center making a spiral while all the children march and sing with him. When he is in the center and the line is wound about him, he turns to go back the same way he came and all the children sing the second verse. The children do not let go of hands during the progress of the game.

2.

Hand in hand you see us well,
Creep like a snail out of his shell;
Ever farther, ever farther,
Ever wider, ever wider.
Who'd have thot this tiny shell
Would have held us all so well.

THE TALE OF PETER RABBIT

Once upon a time there were four little Rabbits, and their names were: Flopsy, Mopsy, Cotton-Tail and Peter Rabbit.

They lived with their mother in a sand-bank, underneath the root of a very big fir-tree.

"Now, my dears," said old Mrs. Rabbit one morning, "you may go into the fields or down the lane, but don't go into Mr. McGregor's garden, your father had an accident there—he was put in a pie by Mrs. McGregor."

Then old Mrs. Rabbit took a basket and her umbrella, and went through the wood to the baker's. She bought a loaf of brown bread and five currant buns.

Flopsy, Mopsy and Cotton-Tail, who were good little bunnies, went down the lane to gather blackberries; but Peter, who was very naughty, ran straight away to Mr. McGregor's garden.

First he ate some lettuces and some French beans; and then he ate some radishes; and then, feeling rather sick, he went to look for some parsley.

But round the end of a cucumber frame, whom should he meet but Mr. McGregor! Mr. McGregor was on his hands and knees planting out young cabbages, but he jumped up and ran after Peter, waving a rake and calling out, "Stop thief!"

Peter was most dreadfully frightened; he rushed all over the garden, for he had forgotten the way back to the gate. He lost one of his shoes among the cabbages and the other shoe amongst the potatoes.

After losing them he ran on four legs and went faster, so that I think he might have got away altogether if he had not unfortunately run into a gooseberry net, and got caught by the large buttons on his jacket. It was a blue jacket with brass buttons, quite new.

Peter gave himself up for lost, and shed big tears; but his sobs were overheard by some friendly sparrows who flew to him in great excitement and implored him to exert himself. Mr. McGregor came up with a sieve which he intended to pop upon the top of Peter; but Peter wriggled out just in time, leaving his jacket behind him, and rushed into the tool-shed, and jumped into a can. It would have been a beautiful thing to hide in, if it had not had so much water in it.

Mr. McGregor was quite sure that Peter was somewhere in the tool-shed, perhaps hidden underneath a flower pot. He began to turn them over carefully, looking under each.

Presently Peter sneezed—"Kertyshoo!" Mr. McGregor was after him in no time, and tried to put his foot upon Peter who

jumped out of a window, upsetting three plants. The window was too small for Mr. McGregor, and he was tired of running after Peter. He went back to his work.

Peter sat down to rest; he was out of breath and trembling with fright, and he had not the least idea which way to go. Also he was very damp with sitting in that can. After a time he began to wander about, going lippity—lippity—not very fast, and looking all around.

He found a door in a wall; but it was locked, and there was no room for a fat little rabbit to squeeze underneath..

An old mouse was running in and out over the stone doorstep, carrying peas and beans to her family in the wood. Peter asked her the way to the gate, but she had such a large pea in her mouth that she could not answer. She only shook her head at him. Peter began to cry.

Then he tried to find his way straight across the garden, but he became more and more puzzled. Presently he came to a pond where Mr. McGregor filled his watering cans. A white cat was staring at some goldfish; she sat very, very still, but now and then the end of her tail twitched as if it were alive. Peter thought it best to go away without speaking to her. He had heard about cats from his cousin, Little Benjamin Bunny.

He went back towards the tool-shed but suddenly, quite close to him, he heard the noise of a hoe—scr-r-ritch, scratch, scratch, scratch. Peter scuttered underneath the bushes. But presently, as nothing happened, he came out, and climbed upon a wheel-barrow, and peeped over. The first thing he saw was Mr. McGregor hoeing onions. His back was turned towards Peter, and beyond him was the gate!

Peter got down very quietly off the wheel-barrow, and started running as fast as he could go, along a straight walk behind some black currant bushes. Mr. McGregor caught sight of him at the corner, but Peter did not care. He slipped underneath the gate and was safe at last in the wood outside the garden.

Mr. McGregor hung up the little jacket and the shoes for a scare-crow to frighten the blackbirds.

Peter never stopped running or looked behind him till he got home to the big fir-tree. He was so tired that he flopped down upon the nice soft sand on the floor of the rabbit-hole and shut his eyes.

His mother was busy cooking; she wondered what he had done with his clothes. It was the second little jacket and pair of shoes that Peter had lost in a fortnight!

I am sorry to say that Peter was not very well during the evening. His mother put him to bed, and made some camomile tea, and she gave a dose of it to Peter. "One tablespoonful taken at bed-time!" But Flopsy, Mopsy and Cotton-Tail had bread and milk and blackberries for supper.

THE THREE BEARS

There lived once a little girl with her mother and father in a little house near a great, dark forest. She had such fine golden hair which hung in curls about her forehead that they called her Goldilocks. She was a very dear little girl, but liked to roam in the open, and often forgot that the time flies away from us just as a bird flies, and that you may lose your way, and much besides, if you do not think of going back home before it is too late.

She loved the dark green forest with all the lights of the sun playing in its depths, just as if there were fairies dancing all about. And the birds in the trees would sing to her and call her, she thought, and the squirrels would run up the tree trunks, playing hide and seek with her, and the little lizards would run across her path and then quickly glide away under the rocks. She loved to follow them as far as she dared, for her mother had warned her not to go too far into the woods as there might be wild beasts living there that would hurt her before she could run off home.

One day, when the sun was shining particularly bright, and the air was so balmy, and the birds sang so sweetly, and the green shadows of the forest looked so inviting, she strolled away, far, far into

the woods, running now after a playful squirrel, and then picking a pretty blue, or red, or white flower she saw in the distance. At last, when she began to look around she found herself in a place quite unknown to her. And she was tired and hungry, too. Oh! wasn't she frightened! She remembered all her mother had told her, and cried, but it was too late. There she was, alone in the woods, lost and forlorn.

When she looked further she saw a little house in front of her. It looked queer, not like her own dear little home; but she went forward thinking somebody must live in there who could show her the way. But when she entered she found the house quite still and empty. No one seemed to be around. But in the middle of the room stood a table, and on the table there stood three bowls filled with porridge, and around the table there stood three chairs. The bowls and the chairs were of different sizes, one was large, the next one was middle-sized, and the third one was very small. Being tired, she first sat down in the big chair; but that was too high and uncomfortable for her. So she tried to sit in the tiny, wee chair; but that was too small for her, and, oh! when she tried to sit down in it, it broke right in two, and the pieces fell on the ground. Then she sat down in the middle-size chair, and it was just right.

Being hungry, she thought she would try the porridge. So she took a spoonful out of the great, big bowl; but that was too hot for her. Then she took a spoonful out of the tiny, wee bowl; but that was too cold for her. Then she tried a spoonful from the middle-sized bowl, and that was just right. So she ate it all up.

After she had eaten, she went around the house to find what else there was. She found a stairway that led up to a bedroom on the next floor. There stood three beds, all nice and white and clean, with soft pillows and covers. One was a great, big bed; another was a middle-sized bed, and the third was a tiny, wee bed.

Being sleepy, she tried first to lie down in the great, big bed. But that was too big for her so that she could hardly find herself when she wanted to get up again. Then she tried the tiny, wee bed, but that was much too small for her. And then she tried the middle-sized bed which was just right. So she lay down and fell asleep.

Meanwhile, three bears—the father bear, the mother bear, and the baby bear, who lived in the house, came back from their walk to have their supper. The father was a great, big bear; the mother was a middle-sized bear, and the baby was a tiny, wee bear.

When they came into the house, they saw at once that somebody had been there. The great big bear, in his great big voice, said, "WHO HAS BEEN SITTING IN MY CHAIR?" The middle-sized bear, in her middle-sized voice, said, *"Who has been sitting in my chair."* And the tiny, wee bear, in his tiny, wee voice, said, "Who has been sitting in my chair, and oh! who has broken it."

Then when they wanted to eat their porridge, the great big bear said, in his great big voice, "WHO HAS EATEN OF MY PORRIDGE?" And the tiny, wee bear, in his tiny, wee voice, said, "Who has eaten of *my* porridge?" And the middle-sized bear, in her middle-sized voice, said, *"Who has eaten of my porridge, and has eaten it all up?"*

So they went hunting through the house to find who had been sitting in their chairs and had eaten of their porridge. When

they came to the bedroom, the great big bear said, in his great big voice, "WHO HAS BEEN LYING IN MY BED?" And the tiny, wee bear, in his tiny, wee voice, said, "Who has been lying in *my* bed?" And the middle-sized bear, in her middle-sized voice, called out, "*Who IS lying in my bed, fast asleep?*"

At that moment, Goldilocks woke up, and when she saw the three bears standing by her side, she jumped so quickly out of bed and ran to the window, opening it and leaping out, that the bears were taken by surprise. They ran quickly to the window to look after the fleeing girl, but she had already reached the trees which hid her from sight.

While the three bears were still wondering what it was all about, Goldilocks ran home where she shortly arrived out of breath, and badly frightened. After she had told her mother the story of her wanderings in the woods, and of the little house, and of the three bears, she promised never again to run so far away from home.

HÄNSEL AND GRETEL

Once upon a time there was a poor woodcutter living with his wife and two children in a little hut near the woods. One of the children was a little boy, named Hänsel and the other a little girl, named Gretel. They were very good children, but very small, indeed. Father and mother were working very hard, but could not earn much money. The father cut wood in the forest and sold it to the people in the village, and the mother had her hands full keeping her children and the house in good order.

After a very hard winter, when spring came again, the poor man was poorer than ever. The snow had been so deep that he could not go far into the forest, and the cold so great that they had to huddle up in the hut, burning up much of the wood the man had cut. So he could not sell much and when he counted over his money he found he would not have enough to buy food for his family.

Sorrowfully he talked with his wife, and she said, "The poor children will starve if we cannot buy them good food. We old people have been used to living on small rations, but the children need the best. What can we do?" Then the father said, "Good Father in heaven may take pity on them if I cannot feed their hungry mouths. Let us take them into the forest and leave them there, and the Good God may find food and shelter for them." With tears in her eyes the mother consented and they made up their minds to take their children to the forest in the morning and leave them there to the care of God.

The two children, however, had not gone to bed for very hunger, and so they overheard what father and mother were talking about. Gretel wept bitterly, and said to Hänsel, "What will become of us?" "Be quiet, Gretel," said he; "do not cry—I will soon help you." And as soon as their parents had fallen asleep he got up, put on his coat, and, opening the back door, slipped out. The moon shone brightly, and the white pebbles which lay before the door seemed like silver pieces, they glittered so brightly. Hänsel stooped down and put as many in his pockets as they would hold; then going back he said to Gretel, "Be comforted, dear sister, and sleep in peace; God will not forsake us." And so saying he went to bed again.

The next morning, before the sun rose, the mother went and awakened the two children. "Come," she said, "we are going into the forest to chop wood." But she could hardly speak for the tears which welled up in her eyes and nearly choked her. Yet, she smiled at the children and helped them dress. Then she gave them each a piece of bread, saying, "There is something to eat for your dinner; do not eat it before the time for there is nothing else." Gretel took the bread in her apron, for Hänsel's pockets were full of pebbles; and so they all four set out upon their way. When they had gone a little distance, Hänsel stood still and peeped back at the house; and this he repeated several times, till his father said, "Hänsel, what are you peeping at?" "Ah, father," said Hänsel "I am looking at my white cat sitting on the roof of the house, and trying to say good-bye." "You little fool," said the mother, "that is not the cat; it is only the sun shining on the white chimney." But in reality Hänsel was not looking at the cat; but every time he stopped he dropped a pebble out of his pockets upon the path.

When they came to the middle of the forest, the father told the children to collect dry wood, and he would make them a fire so that they would not be cold. So Hänsel and Gretel gathered together quite a little mountain of twigs. Then they set fire to them; and as the flame burnt up high, the mother said, "Now, children, lie down near the fire and rest yourselves, whilst we go into the forest and chop wood. When we are ready we shall come and call for you."

Hänsel and Gretel sat down by the fire, and when it was noon, each ate a piece of bread, and because they were tired they lay down to sleep. When they awoke it was quite dark, and Gretel began to cry. But Hänsel tried to comfort her by saying, "Wait a while till the moon rises, and then we shall quickly find the way home." The moon soon shone forth, and Hänsel, taking his sister by the hand, followed the pebbles which glittered like new coins of silver, and showed them the path. All night long they walked on, and as day broke they came to their parents' house, and knocked at the door. When mother opened it and saw the children, she broke out crying and hugged and kissed them, and the father came and hugged and kissed them, for both had been grieving about them.

But after a while, when hunger was again the daily guest in the man's house, and the children were fading away from lack of food, the children once more overheard their father saying to their mother, one evening, "Everything is again eaten up; we have only one half of a loaf of bread left, and then the children will starve. Shall we not try again to commit them to the grace of God, if he would feed them? We cannot keep them alive." And the mother said, with many sobs, "Yes, we shall take them deeper into the woods so that they may not find their way out."

Again the children had heard every word they said, as they lay awake from hunger. And as soon as the old people went to bed Hänsel slipped out thinking to find some more pebbles. But when he came out, there was no moon shining, and everything was dark, and he could not find any pebbles. So he went back, and comforting Gretel, he said, "Do not cry; sleep in quiet; the Good God will not forsake us."

Early in the morning the mother came as before, and took them out of bed, helping them to dress, and kissing them again and again, and gave them each a piece of bread, much smaller than the first time. On the way Hänsel broke his in his pocket, and, stopping every now and then, dropped a crumb upon his path. "Hänsel, why do you stop and look about?" asked his father, "keep in the path." "I am looking at my little dove," said Hänsel, "nodding a good-bye to me." "Nonsense," said the mother, "that is not a dove, but only the sun shining on the chimney." But Hänsel kept on dropping crumbs as he went along.

The father led the children deep into the woods, where they had never been before, and there making a big fire, he said to them, "Now sit down here and rest, and when you are tired you may sleep a while. When we have chopped down all the wood we need we shall come and fetch you."

When noon came Gretel shared her small piece of bread with Hänsel who had strewn his on the path. But they were very hungry, and they were so weak that they fell asleep. When they awoke in the dark night, and nobody had come to fetch them, Hänsel again comforted his sister, saying, "Only wait, Gretel, till the moon comes out, then we shall see the crumbs of bread I dropped, and they will show us the way home." At last, very late, the moon came out and shone brightly, but they could not see any crumbs. For the thousands of birds which had been flying about in the woods and fields had picked them all up. Hänsel kept saying to Gretel, "We will soon find the way;" but they did not, and they walked the whole night long and the next day, but still they did not come out of the forest; and they were so hungry, for they had had nothing to eat but the berries which they found upon the bushes. Soon they were so tired that they could not drag themselves along, so they lay down under a tree and went to sleep.

It was now the third morning since they had left their father's house and they still walked on; but they only got deeper and deeper into the forest, and Hänsel saw that if help did not come very soon they would die of hunger. All of a sudden they saw light gleaming through the dark forest, and when they went to follow its lead, they came to a clearing where the sun shone brightly. And the warmth of the sun's rays made them feel happier right away. And then they saw, right in the middle of the field, a little cottage, and when they went close up to it they saw that it was made of gingerbread and cookies, and the window-panes were made of clear sugar. Were the children not delighted! Think of what *you* would have felt if you would have come onto such a sweet kind of a cottage, all made up of cookies and candies! I don't think you would have to be very hungry to take a bite right away!

"Now," said Hänsel, "we shall have a glorious feast. I will eat a piece of the roof, and you can eat the window." So Hänsel reached up and broke a piece off the roof, in order to see how the gingerbread tasted, while Gretel stepped up to the window and began to break it. Then a voice called out of the cottage, "Tip-tap, tip-tap, mouse, who is eating off my house?" And the children answered, "The wind of the air, it does not care!" and they went on eating they were so hungry. Hänsel thought the roof tasted very nice, and so he tried a piece of the wall, and gave Gretel a piece of the roof to eat, and they sat down on the ground contentedly. Just

then the door opened, and an old woman, walking on crutches, came out. Hänsel and Gretel were so frightened they dropped the pieces of cake and gingerbread they had in their hands; but the old woman, nodding her head, said, "Ah, dear children, what has brought you here?" And when they had told her, she took them both by the hand and led them into her cottage. A good meal of milk and pancakes, with honey, apples and nuts, was spread on the table, and in the back room there were two nice little beds, covered with white, where Hänsel and Gretel lay down, and thought themselves in heaven. But the old woman was really a bad witch who wanted the children to serve her, and the woods around the cottage was an enchanted forest through which she lured children her way, and the little cottage was not really made of cakes and sugar, but changed back to wood and glass as soon as the children were asleep.

Early the next morning, the witch waked up the children with words as rough as they had been sweet the evening before. And she shook them, and said, "Get up, you lazy things, do you think you can sleep forever? Get up and into your clothes. Do you think that I will feed you and give you a bed to sleep in for nothing? I will show you! You will work for me for all you're worth!"

Now, the poor children, being so little, had never worked hard in their short lives. But before they had any breakfast, the old witch had Gretel make the fire, and sweep the rooms, and dust and do all kinds of things until she ached all over; and Hänsel had to chop and fetch the wood, and feed the chickens, and milk the cow, and gather the eggs, until he nearly dropped. Then, at last, she gave them something to eat, and it was not quite as good as the meal of bread and honey the evening before, believe me. But the children ate, and then had to go back to their work.

Well, indeed, the old witch made them work. Hänsel had to work in the garden, weeding the beds of flowers and vegetables, and hoeing the potatoes, and sifting the earth; and he had to take the cow out to the pasture, and drive her home, and feed her, and water her, carrying a big pail which was much too heavy for him. And poor Gretel had to keep the house clean, and scrub, and wash the dishes, and clean the vegetables, and peel the potatoes, and watch the fire in the stove, until she was so tired, just like Hänsel, that both just dropped into bed in the evening and fell asleep before they knew how to count one, two, three.

So this went on day after day, and week after week, and the children were very unhappy. They had plenty to eat, that was true, but they would rather be hungry, and home with their dear parents, than live here with the old witch, serving her like slaves. Yet, they did not know how to get out of the enchanted forest, and they thought they could not find the way home.

At last, they became so homesick that they resolved to try to get away, come what might. And so one morning, when the old witch was busy in the rear of the garden looking after her potatoes and berry-bushes, they slipped quietly out of the front door and began to run. They thought the witch, as she walked on crutches, would not catch them if they were running fast. But they had not run very far, when they looked back and saw the old witch coming after them, riding on one of her crutches as if it were a horse. And she came nearer and nearer and they became very much afraid. But they ran on, and soon came to a large piece of water. "We cannot get over," said Hänsel; "I can see no bridge at all." "And there is no boat either," said Gretel, "but there swims a white duck, I will ask her to take us over;" and she sang:

"Little Duck, good little Duck,
Gretel and Hänsel, here we stand;
There is neither boat nor bridge,
Take us on your back to land."

So the duck came to them, and Hänsel sat himself on, taking his sister in his lap, and both were happily carried over to the other side. But the witch had to stop when she came to the water, for this was the end of her enchanted forest, and she could not get across, and the duck would, of course, not carry her over; so she had to go back to her cottage and do her work alone.

But the children, when they had come to the other side, found that they were in a part of the forest which they knew. So they began to shout, "father, mother, we are here!" First there was no answer. But the parents had long been wishing they had not sent the children away; they were longing for them and could not be happy without them. And so they had gone every day into the woods, calling for them, and searching for them. But they could not find them, and they had to return home every night sadder than the night before.

But it so happened that they had just started out again to search for their dear children when they thought they heard someone call, "father, mother!" and they ran, but the sound was so faint and far away that they could not tell where it came from. But just then, Hänsel and Gretel called again, "father, mother, here we are!", and it sounded nearer. And then the father and mother began to shout, "Hänsel, Gretel, where are you?"—and the children answered, "Here we are!" And so, after much shouting and running, at last they came together, and you ought to have seen them rush into each other's arms, and the hugging and kissing and crying, and hugging and kissing and crying again, until they were too tired to do any more.

Then they went home in great happiness. And Hänsel and Gretel told them all about their stay with the old witch, and how they had learned to do so many things. And Hänsel, after this, was able to help his father, gathering up the wood father had chopped, and loading it on the wheelbarrow. So father could sell more in the village and earned more money; after a while, Hänsel even wheeled the barrow alone and sold the wood so that the father could stay in the forest chopping. And Gretel helped her mother in the house. By and by, they had some hens, and sold the eggs; and then they had a cow, and her milk, and sold butter and cheese. The children helped their parents in all this, and so they were not so poor any more, and their sorrows were ended. So they lived happily together for ever after.

THE FROG PRINCE

Once upon a time there lived a king and a queen who had a young daughter who was very beautiful. Near the castle of this king was a large garden, and in the midst of it stood an old, old oak tree, and beneath its branches splashed a little fountain. On a warm day, the young princess would like to run off to this garden and sit down in the shade of the old tree by the side of the fountain. With her she brought a golden ball which was her favorite plaything; and she would amuse herself by throwing the ball up in the air and catching it.

Now, one day it happened that this golden ball which the king's daughter threw up in the air, did not fall down into her hand but on the grass, and from there it rolled past the girl into the fountain. The water was so deep that no one could see the bottom, and when the princess saw that her ball had disappeared in the deep water she began to cry, and cried louder and louder. All of a sudden, a voice called to her, "Why do you weep, O king's daughter? What has happened to you?" She looked around to the spot whence the voice came and saw a big Frog stretching his ugly head out of the water. "Ah! you old water-paddler," said she, "was it you that spoke? I am weeping for my golden ball which has slipped away from me into the water."

"Be quiet, and do not cry," answered the Frog; "I can help you. But what will you give me if I fetch your plaything up again?"

"What will you have, dear Frog?" said she. "My dresses, my pearls and jewels, or the golden crown which I wear?"

The Frog answered, "Dresses, or jewels, or golden crowns are not for me. But if you will love me, and let me be your companion and playfellow, and sit at your table, and eat from your little golden plate, and drink out of your cup, and sleep in your little bed—if you will promise me all this, then I will dive down and fetch up your golden ball."

"Oh, I will promise you all," said she, rashly, "if you will only get me my golden ball." But she said to herself, "What is the silly Frog chattering about? How can he play and eat and sleep with me? Let him stay in the water where he belongs." But the Frog had dived under the water, and presently he swam up again with the ball in his mouth, and threw it on the grass. The king's daughter was full of joy when she again saw her beautiful plaything, and, taking it up, she ran off immediately. "Stop! stop!" cried the Frog, "take me with you! I cannot run as fast as you can." But all his croaking was useless; although he called loud enough, the princess did not hear it, she soon forgot the poor Frog and ran home to the palace.

The next day, when the king's daughter was sitting at the table with her father and mother and all his courtiers, and was eating from her own little golden plate, something was heard coming up the marble stairs, splish-splash, splish-splash; and when it arrived at the top, it knocked at the door, and a voice said, "Open the door, you daughter of the king!" So she rose and went to see who it was that called her; but when she opened the door and caught sight of the Frog, she shut it again quickly, and sat down at the table, looking quite pale. But the king saw that her heart was beating violently, and asked her whether it were a giant who had come to fetch her away who stood at the door. "Oh, no!" answered she; "it is no giant, but an ugly Frog."

"What does the Frog want with you?" asked the king.

"Oh, dear father, when I was sitting yesterday playing by the fountain, my golden ball fell into the water, and this Frog fetched it up again because I cried so much; but first, I must tell you, he pressed

me so much that I promised him he should be my companion. I never thought that he could come out of the water, but somehow he has jumped out, and now he wants to come in here."

At that moment, there was another knock, and a voice said:

"King's daughter, fairest,
Open the door!
Hast thou forgotten
Thy promises made
At the fountain so clear
'Neath the oak-tree's shade?
King's daughter, fairest,
Open the door!"

Then the king said, "What you have promised, that you must do; go and let him in." So the princess went and opened the door, and the Frog hopped in after her right up to her chair; and as soon as she was seated, the Frog said, "Take me up" —but she hesitated so long that at last the king ordered her to obey. And as soon as the Frog sat on the chair he jumped onto the table and said, "Now push your plate near me, that we may eat together." And she did so, but as everyone saw, very unwillingly. The Frog seemed to relish his dinner very much, but every bit the king's daughter ate nearly choked her. At last the Frog said, "I have satisfied my hunger and feel very tired from my long trip from the fountain; will you carry me upstairs now into your chamber, and make your bed ready that we may sleep together?" At this speech the king's daughter began to cry, for she was afraid of the cold Frog, and dared not touch him; and besides, he really wanted to sleep in her own beautiful clean bed.

But her tears only made the king angry, and he said, "He who helped you in the time of your trouble must not now be despised and cheated!" So she took the Frog up with two fingers, and put him in a corner of her chamber. But as she lay in her bed, he crept up to it and said, "I am so very tired that I shall sleep well; do take me up or I will tell your father." This speech made the princess only more afraid, and she became very angry and she picked up the Frog, and threw him with all her strength against the wall, saying, "Now, will you be quiet, you ugly Frog!"

But as he fell he was changed from a Frog into a handsome Prince with beautiful eyes. He told her how he had been changed into a Frog by an evil witch, and how he could only be saved by her alone when she took him into the palace and allowed him to come with her as her companion. On the morrow, they would go together into his own kingdom. So they were married and lived happily ever after.

THUMBLING

Once upon a time there lived a peasant who used to sit every evening by the hearth, poking the fire, while his wife spun. One night he said, "How sad it is that we have no children! Everything is so quiet here, while in other houses it is so noisy and merry."

"Ah!" sighed his wife, "if we had but only one, and were he no bigger than my thumb, I should be content and love him with all my heart."

After a time, a child was born to her who, although he was perfectly formed in all his limbs, was not bigger than a man's thumb. So they said to one another that it happened just as they had wished; and they called the child "Thumbling". Every day they gave him all the food he could eat; still he did not grow a bit, but remained exactly the height he was when he was first born. He looked about him, however, very knowingly, and showed himself to be a brave and clever fellow who would make the best of everything he did.

One morning the peasant was making ready to go into the forest to fell wood, and said, "Now I wish I had some one who could follow me with the cart."

"Oh, father," exclaimed Thumbling, "I will bring the cart. Don't you trouble yourself; it shall be there at the right time."

The father laughed at this speech, and said, "How shall that be? You are much too small to lead the horse by the bridle."

"That matters not, father. If mother will harness the horse, I can sit in his ear, and tell him which way to take."

"Well, we will try for once," said the father; and so, when the hour came, the mother harnessed the horse and placed Thumbling in his ear, and told him how to guide it. Then he set out quite like a man, with "Git up!", and "Hoah, boy!", and the cart went on the right road to the forest. Just as it turned a corner, and Thumbling called out, "Steady, steady!" two strange men met it; and one said to the other, "My goodness! what is this? Here comes a cart, and the driver keeps calling to the horse, but I can see no one." "That cannot be all right," said the other; "let us follow and see where the cart stops."

The cart went on safely deep into the forest and straight to the place where the wood was cut. As soon as Thumbling saw his father, he called to him, "Here, father; here I am, you see, with the cart; just take me down." The peasant caught the bridle of the horse with his left hand, and with his right took his little son out of its ear, and he set himself merrily on the straw. When the two strangers saw the little fellow, they knew not what to say for astonishment; and one of them took his companion aside and said, "This little fellow might make our fortune, if we could exhibit him in the towns. Let us steal him, for his father would never give him up."

So while Thumbling was asleep in the hay after his long ride, and his father was busy with his cart, the two strangers softly stole up to where the little fellow slept, and with a quick motion one of them slipped him into his pocket. Then they ran off. Thumbling woke up and shouted for his father; but his father could not hear him as the cart-wheels were squeaking and the boy's cries were muffled in the pocket. Towards evening, the two men sat down under a tree to rest. While they were sitting there, Thumbling quietly crawled out of the pocket and let himself down to the ground. Then quickly he ran off and crept into a mouse-hole where they could not see him. "Good evening, masters," said he, "you can go home without me;" and with a chuckle he crept into his hole still further. The two men poked their sticks into the hole, but all in vain, for Thumbling only went down further; and when it had grown quite dark, they were obliged to return home full of anger and disappointment.

As soon as Thumbling knew they were off, he crawled out of his hiding place, and said, "How dangerous it is to walk in this field in the dark; one might soon break one's head or legs!" So saying he looked around, and by great good luck he saw an empty snail-shell. "God be praised!" he exclaimed, "here I can sleep securely;" and in he went.

In the morning, when he woke up, he made up his mind to go back to his home. But for his little legs the way was very long, and he did not walk very far before he was quite tired again. He saw a haystack in a meadow near by, crept in and fell asleep quite readily. He had had so many adventures, had he not? that we may understand why he was such a sleepyhead. Indeed, the hay was so soft and warm, and smelled so sweet, that he slept quite soundly. The empty snail-shell had not been so soft and cozy as you may well believe, and had not smelled so good, either. He slept all night through.

Now, the maid of the farm to which the haystack belonged, got out of bed at dawn the next morning to feed the cow. Her first walk was to the haystack from which she took a bundle of hay, and just the bundle where poor Thumbling lay asleep. He still slept so soundly, however, that he knew nothing about it, and only awoke when he was in the cow's mouth. "Ah, goodness!" exclaimed he, "how came I into this mill!" But soon he saw where he really was. Then he took care not to come between the teeth, but presently slipped quite down the cow's throat. "There are no windows in this room," said he to himself, "and no sunshine, and I brought no light with me." Overhead his quarters still seemed worse, and, more than all, he felt his room growing narrower as the cow swallowed more hay. So he began to call out in terror, as loudly as he could, "Bring me no more food! I do not want any more food!" Just then the maid was milking the cow, and when she heard the voice without seeing anything, she was so frightened that she slipped off her stool and overturned the milk-pail. In great haste she ran to her master, the farmer, saying, "Oh, master, the cow has been speaking!"

"You are crazy," he replied, gruffly; but still he went himself to the stable to see what was the matter, and scarcely had he stepped in when Thumbling began to shout out again, "Bring me no more food, bring me no more food!" This terrified the farmer himself and he thought an evil spirit had entered into his cow, and so he ordered her to be killed. As soon as that was done and they were cutting up the carcass, a fresh accident befell poor Thumbling. For a wolf who had been attracted by the fresh meat sneaked near, made a snatch at the cow, and tore away the part where Thumbling was stuck fast. However, the little man did not lose courage, but as soon as the wolf had swallowed him he called out from inside, "Oh, Mr. Wolf, I know of a fine meal for you!" "Where is it to be found?" asked the wolf. "In the house by the meadow; you must creep through the gutter, and there you will find cakes, and bacon, and sausages, as many as you can eat," replied Thumbling, describing exactly his father's house.

The wolf did not wait to be told twice, but in the night crept in and ate away to his heart's content, much to the discomfort of Thumbling whose quarters inside the wolf became more and more crowded, just as they had been inside the cow. But Thumbling made the best of it as he well knew he would soon be saved. When the wolf had finished eating he tried to escape by the way he had entered, but as he was now fat and full you may know that the hole was no longer large enough for him. He could not squeeze himself through, try as much as he might. Thereupon Thumbling who had reckoned on this, began to

make a tremendous noise inside the poor wolf, screaming and shouting as loud as he could. "Will you be quiet," said the wolf; "you will awake the people." "Eh, what!" cried the little man, "since you have satisfied yourself, it is my turn now to make merry;" and he set up a louder howling than before. At last his father and mother awoke and came to the room and looked through the chinks of the door; and as soon as they saw the damage the wolf had committed and the wolf crouching in a corner, they ran and brought, the man his axe, and the woman the scythe. "You stop behind," said the man as they entered the room; "if my blow does not kill him, you must give him a cut with your weapon and chop off his head if you can."

When Thumbling heard his father's voice, he called out, "Father dear, I am here, in the wolf's body." "Heaven be praised!" said the man, full of joy, "our dear child is found again;" and he bade his wife take away the scythe, lest it should do any harm to his son. Then he raised his axe and gave the wolf such a blow on his head that he fell dead; and taking a knife, he cut him open and the little fellow, his son, jumped out. "Ah," said his father, "what worry we have had about you!" "Yes, father," replied Thumbling, "I have been travelling a great deal about the world. Heaven be praised! I breathe fresh air again."

"Where have you been, my son?" he inquired.

"Once I was in a mouse's hole, once inside a cow, and lastly inside that wolf; and now I will stop here with you," said Thumbling.

"Yes," said the old people, "we will not let you get away from us for all the riches in the world;" and they hugged and kissed him in their great joy. Then they gave him plenty to eat and to drink as he was very hungry, and had new clothes made for him, for his old ones, don't you think so?—were worn out with travelling.

GULLIVER AND THE LILIPUTIANS

Once there lived a lad in England who was very fond of the sea. He would watch the ships come in and out of the harbor, and at last he hired himself out to be a sailor on one of the ships. In those times they had not steamships with choo-choo engines, and smokestacks, oh no! but only vessels that were driven by the wind blowing against their sails; and they were so much smaller than the big steamers you know that the winds often played with them and drove them hither and thither, and sometimes threw them on the rocks and smashed them all to pieces.

Well, this young man, Gulliver was his name, was on one of these little sailships when a big storm came and hurled the ship hither and thither, and at last broke it up against the rocks of a strange land. All on board, the captain, and the sailors, and the boys, perished in the sea. Only Gulliver escaped. A big wave threw him upon the land, and the shock was so great that he knew nothing of himself He lay on the shore like one dead. Yes, he did.

At last he awoke. But what was his wonder and fright when he saw the sun shining in his eyes, and knew he was alive, and wanted to rise up, to find that he could not move. No, not even his hand, or his little finger. He could not turn his head from side to side. He just had to lie quite still. Then he heard a strange whispering all about him, and at last he felt something crawling up his side. And then, would you believe it: he saw something, or somebody, he did not know what it was, standing on his chin, looking straight into his eyes—and he did not know whether he, or the little man he saw there, must have looked more frightened. The little man was not more than six inches tall, about as long as daddy's hand, from the wrist to the tip of his long man finger. But the little man had a real head and real eyes, and was dressed like a fine gentleman, only his coat, and his trousers, and his hat, were, oh, so tiny and small. And he spoke to Gulliver in a strange language which Gulliver did not understand, and his voice was so faint that he could hardly hear him anyway

When Gulliver tried to say that he did not understand, and to ask what it all was about, and why he could not move, the little man looked so scared, oh, so scared, and held his tiny hands to his tiny ears—yes, he even fell back and nearly broke his little neck in his fall from Gulliver's chin. For you see, Gulliver's voice must have sounded like thunder to the little man, and the breath from Gulliver's mouth like a strong wind. And so Gulliver lay there, unable to move, and did not know what to make of it. He certainly had never seen such little people before.

Then, he heard a rip-rip-rip—and he felt that he could move his left arm. Then more of rip-rip-rip, and he could move his right arm. Then more and more of rip-rip-rip, and rip-rip-rip; and at last he could move his head, and raise his shoulders, and then his body, and finally he could rise up in his whole bigness The little people had thought they might find out what had come to them, in another way.

When Gulliver had stood up, he looked about him, but he could not see anybody or anything. Just the blue sky above him. Then he looked down on the ground; he saw bushes which looked like little trees, quite perfect. but oh, so much smaller than the trees he used to know. Of course, he could not see, at first, any of the little people one of whom had been scared off his chin by his words, for they had all hidden away when they saw that big giant of a man rise up like a huge mountain. In a little while, however, when they saw that Gulliver did not do anything wicked, or violent, but just stood there, they peeped out from behind the trees, and he could see little faces and little bodies which looked too funny for anything, just like little doll babies.

When he spied them, he sat down on the ground to see them better, and talked to them in the softest tone of his voice, and smiled at them. Of course, they did not understand what he said, but they thought he looked friendly and would do them no harm. So they ventured out and at last he saw so many of them, he could hardly count them: soldiers in gay uniforms, many on horseback, and fine ladies and gentlemen all dressed up in silks and gold, and women and children—oh, you ought to have seen those children! They were so very, very tiny, not larger, some of them, than your own little finger, and even smaller—those that had been brought there in their little go-carts. Gulliver wondered at them prodigiously, yes, prodigiously. For think of it, what tiny little heads they had, and such tiny little eyes, and such tiny little noses, and such tiny little mouths and lips, and such tiny little tongues, and such tiny, tiny, tiny little teeth! And their tiny little hands and tiny little fingers, and tiny little feet. And their clothes, such tiny little coats, and trousers, and skirts, and stockings and shoes!

And you ought to have seen the horsemen on their fiery steeds! Well, they were so small and tiny that it was quite a jump when one of them vaulted across Gulliver's left foot which he had moved too far over! A whole regiment of cavalry marched through between Gulliver's legs—as through a big, tall arch.

Then Gulliver saw what had bound him tight: millions and millions of little, fine threads, like silk, had been woven about him, and there was a little ladder on which the little man had climbed up to his chin, lying on the ground. And he saw that all the people of the land near by had come to see the big monster that had come to them from out of the sea, and he understood that they had been afraid, and had tied him while he did not know anything of himself, and was asleep, so that he might not hurt them. And he was thankful to them that they now trusted him for he knew he must look to them like a big, *big*, BIG giant. Well, he could pick up several of them in one hand, and put them into his pocket without feeling any weight, and if he was not careful he could walk over them with his big feet and crush a dozen of them at a time. Of course, they were afraid. But he was so careful that they soon knew he would not hurt them, and they showed him all around.

And what he saw was very wonderful. He saw their little houses, with the tiny little doors and windows; and their tiny little rooms smaller than those in your own doll's house, with tiny little beds, and tables and chairs, oh, so small! And think of the tiny little plates and cups and spoons and knives and forks. Well, the carpet in one of their biggest rooms was not any bigger than your little handkerchief!

And he saw their city which looked just like one made up of the toy houses you buy in the store. Their highest steeple was not any taller than the post of mamma's bed.

And then the tiny little cows they had! When the little milkmaid had milked one there was just enough milk to fill a fair-sized thimble. Now think, how many cows they had to milk to give Gulliver just one good glass full! And their tiny little dogs and cats! And the tiny little hens—oh! you will hardly believe how tiny their little eggs were. How big do you think they were? Well, just about like peas, and you may imagine how many Gulliver could eat for his breakfast.

Yes, they had a hard time, these little people, to feed their big giant guest, but they did their best. And they built him a house. Ten thousand workmen had to work at it for oh, so many days; and they had to cut down a hundred big forests with a thousand trees in each one of them, to make the walls, and the roof. And then the house was small for Gulliver. But he made the best of it.

And they thought that Gulliver might help them in their trouble. For by this time he had learned enough of their language to understand what they said to him. And they told him of their enemies, on an island across the sea, who were coming to attack them with their big fleet of ships. Gulliver laughed when he saw the great fear of these people who had told him that they were the Liliputians.

He made them describe to him where the enemy lived, that there was a big stretch of deep sea between their own land of Liliputia and the land of the enemy. Of course, the sea looked big and deep to them, but it was not much more than a pond to Gulliver.

So he asked them for a hundred pieces of their strongest rope. Their rope, indeed, was so thin that it looked more to Gulliver like cotton thread, such as mamma uses in sewing. But he twisted every two of the pieces together so that they made a stronger thread, and then started out.

He rolled up his trousers and waded into the sea. By the shore were collected all the men, women and children of Liliputia, watching their big friend on his trip across the deep sea. They were trembling after all for they had never seen anything like it, and they did not know whether the enemy would not kill him.

At first, the water only wetted his feet, then it came up to his knee, and finally it reached his waist. But it was not any deeper than that. After he had passed the deep stretch, and was out of sight of the Liliputians, he began to rise again out of the water, as it became more shallow towards the other shore. And so, his legs began to show above the water down to the knees, then his feet only were covered, and then he came quite close to the land on the other side.

And there he saw another crowd of little people assembled on the shore, shouting and screaming in terror. For they did not know what was happening to them, seeing such a big man mountain rising from the sea. And in the harbor of their city there lay fifty warships at anchor—big ships for them, but just like the toy boats you swim in the lake, to Gulliver. And everywhere were soldiers with bows and arrows, and spears. And when they saw Gulliver they shot their arrows at him and threw their spears at him. But their arrows were only as big as pins, and their spears as long as darning needles; and neither their arms nor their bows were strong enough to harm Gulliver. Whatever of their spears and arrows reached him felt only like little pin pricks, and he did not mind them.

Then he took out of his pocket the fifty pieces of twisted string and tied one end of each to one of the enemy's warships, holding the other end in his left hand. And when he had tied them all to the fifty pieces of string he started back again, dragging the fifty warships of the enemy with him. Now you ought to have seen the startled faces of the distressed enemy; and their cries and shouts and screams when they saw their big fleet of fine warships pulled away, and the soldiers with all their bows and spears could not stop Gulliver. But it served them right, for the Liliputians had done no harm to them, and the enemy just wanted to sail over and take all their goods away from them. The Liliputians only wanted to live in peace.

And so Gulliver, with the enemy's fleet in tow, waded back to Liliputia. First the water reached to his knees, then up to his waist, and then, coming up on the other side, he saw the Liliputians waiting for him on the other shore, on roofs of buildings, on the docks, and everywhere. And when they perceived Gulliver coming home to them with the mighty fleet of the enemy dragging behind him they gave a big shout of joy and welcomed him gratefully. They came to meet him, and took the arms away from the enemy soldiers, and fastened their ships to their own docks, and were happy that they could now be without fear.

They never forgot Gulliver's help but made him live in comfort while he stayed with them, and did all they could to show him how much they thought of the great help he had given them.

DAVID AND GOLIATH

A long, long time ago, when the Jews still lived in their home land of Palestine, far beyond the sea to the East, and many lands between here and there, they were sadly worried by the tribe of the Philistines who lived near by. The Jews were tilling their land in peace, and were tending their flocks; but the Philistines set upon them to drive them away or at least to take their acres and cattle and sheep.

And so the Philistines came with a mighty army of soldiers, and among them was a giant, by the name of Goliath, as tall as the tallest tree, and as strong as ten oxen. And he challenged the Jews to send one of their best men to fight with him, and whoever should win against the other should rule the land. If the Jew should win then the Philistines would go home and leave the land of the Jews in peace; but if Goliath should win, the Jews and their land should be the property of the Philistines to do with them as they pleased. And Goliath thought, of course, that no one man, or a dozen men, from among the Jews could conquer him.

The Jews were sorely tried, for they had no man to fight with the cruel, mighty giant. No matter what reward they offered, no one would come forward to stand up against Goliath. And Goliath came forth day after day from the camp of the Philistines and shouted his challenge. When nobody came to fight him he mocked the Jews and called them cowards, and the Philistines laughed and were sure that the Jews and their land would soon be theirs.

The tidings of the giant's challenge had gone through the land, and everybody trembled. But there was a brave shepherd's boy, by the name of David. When he heard of the bold threat of the Philistines, he set out to the camp of the Jews and offered to fight Goliath. The general of the Jews took pity on the young lad and warned him, and said, "The evil-minded foe will kill you." But David said, "I trust in the Lord, the God of our Fathers. He will not let me perish in the fight for His people against the wicked foe!"

And so, when Goliath stepped forth the next day to challenge the Jews, David came from their camp and placed himself in front of the boastful giant. When Goliath saw the little lad, he laughed and mocked him, saying "Am I a dog that you come to me with a stick?" For David had his shepherd's staff in his hand. He also had a sling-shot such as he would hurl stones with at the wild foxes that would disturb his sheep. And David said, "You come with a sword, and a spear and a shield. But I come in the name of the Lord, and you shall know that the Lord saveth not with sword and spear, and that he will give you today into my hand."

And when Goliath strode forth, David put his hand in his bag and took out a stone, and slang it, and smote the Philistine in his forehead. And Goliath fell upon his face to the earth. Then David rushed forward, and stood over the giant, and took Goliath's sword in his two hands and slew him, cutting off his head. And when the Philistines saw their champion was dead, they fled.

But the Jews rejoiced, and shouted, and David took the giant's head and brought it before Saul, the king of the Jews. And his praise was great.

THE LITTLE FIR TREE

In a meadow, right by a forest of many, many trees, and on the side of a path which led through the meadow and through the woods, stood a little fir tree. It was very little, indeed, and quite alone, as there was no other fir tree near. On its tiny branches, there were many, many needles—for you know, fir trees wear a prickly kind of leaves. I am sure you have often pricked your little hands when you tried to pick a nut, or an apple, or some candy sticks, or a present, from your Christmas tree—for the fir trees make the nicest, sweetest, best smelling, Christmas trees. The leaves are just like needles, and they are a dark green, and do not fall off in winter time when all the other leaves fly off, dressing themselves in all sorts of nice colors: brown, and orange, and yellow, and red, and dance about, and at last lie on the ground, covering the earth and keeping it warm throughout the time of ice and snow.

Well, this little fir tree was proud enough of its fine, green needles which looked so pretty when the other trees in the forest were bare, and the snow was white on the ground. But in summer time, when all the other trees were green also, and the wind played with their leaves, rustling and singing, it thought how pleasant it would be to look just like them. So he wished and wished, and thought and thought. And what do you think, happened? You know that was the time when wishes came true. And one morning, when the little fir tree woke up, he found himself covered with leaves just like the other trees, and and he was very happy. But in the afternoon, there came a goat along the path; and when he saw the little tree all decked out in green, juicy leaves, swip, swap, crunch—he just gobbled them all up, tearing at the little tree's branches so that he almost pulled them off, too, and left the poor little tree all bare. You know, the goat could not reach up to the other big trees, but the little tree was just his size.

So the little tree had no leaves at all, and it was very unhappy. "Oh!" it said, "I wish I had leaves of gold; the goat would not eat them, I am sure, and they would be so glorious and beautiful, and I would be quite a wonderful tree." So, when it woke up the next morning—well, you would have been astonished to see the little tree all covered with leaves of gold. They were so finely shaped, with little notches along the edges, and tiny veins branching out from stem to point, that they looked as if the most skillful goldsmith had fashioned them. And the little tree was very happy and proud.

But in the afternoon, there came a man along the path, travelling through the country. And when he came to the little tree and saw the beautiful golden leaves, he said, "Oh! what a great treasure." And he picked the leaves off the tree, one and all, and stored them in his pocket, and in a bag which he was carrying, running away as fast as he could—well, not very fast, to be sure, for the gold was quite heavy to carry. And there was the little tree, without leaves, all bare, again. And it was very much distressed, you can believe me, and it thought and thought, and then wished and wished—and what do you think it wished for now? It wished that

it had leaves of glass. They would look so pretty, it thought, and clink and clank and tinkle together, making wonderful music when the wind would blow.

The next morning, when the little tree woke up, behold! it was covered with leaves of clear glass! And the glass leaves clinked and clanked and tinkled and made wonderful music when the wind blew, and when the sun shone on them they looked like diamonds, and were so brilliant that you could not look at them, the light would blind you so.

But the wind which had been playing with the glass leaves, found the game so pleasant that it blew harder and harder to make more music. And at last, it blew a storm that rushed across the meadow, and bent the trees in the forest all over. And the poor glass leaves were swept off their branches, one by one, and altogether, until they lay broken and shattered in the grass. Then the little tree had no more leaves, and stood as bare as before. And it was very unhappy.

Then it thought of the pretty dark-green needles it had had before, and how sweet they smelled, and how fine they looked in winter when all the other trees stood bare and shivering in the cold, and it thought and it thought, and it wished and it wished, "Oh, if I could only have back my needles!"

And the next morning, when it awoke, the little tree laughed and laughed and laughed. And why did it laugh? It had back all its needles and looked just as it had looked before it had been wishing for other kinds of leaves. And it never grumbled again, and lived to be a big tree, with a tall straight trunk—and, who knows, some day Santa Claus may bring it to your house, all decked out in tinsel and goodies, and be your wonderful, lovely Christmas tree.

THE FROG AND THE OX

"Oh, father," said a little frog to a big frog, sitting by the side of a pool, "I have seen such a terrible monster! It was as big as a mountain, with horns on its head. It had a long tail, and hoofs divided in two."

"Tush, child, tush," said the old frog. "That was only Farmer White's ox. I can easily make myself as big; just you see." And he blew himself out. "Was he as big as that?" he asked.

"Oh, much bigger than that," said the young frog.

Again the old frog blew himself out, and asked the young frog if the ox was as big.

"Bigger, father," was the reply. "Much bigger."

Then the old frog took a very deep breath, and blew, and swelled, and swelled and blew—until he burst!

HORNS

One time a little boy went out on a farm with his mother. He had never been on a farm before, and everything seemed very strange to him. The sheep and the cows and the pigs were all very strange. He thought the cows were the strangest of all, because they had such queer things on their heads. He didn't know what they were, so one day he asked the old farmer about them. The farmer told him they were horns.

One evening soon after that the cows began to moo and bellow and set up an awful noise. The little boy was very much excited. He ran to the house as fast as he could and called to his mother, "Oh, mother, mother, come and see the cows. They are all blowing their horns."

THE FOX AND THE CROW

A crow had stolen a piece of meat. She flew to a tree and perched on a high branch. A fox saw her and wanted the piece of meat. So he sat down at the foot of the tree and spoke thus to the crow: "How handsome you are! What a glossy black your feathers show! And what a beautiful shape! The crow was very much flattered and listened with pleasure to the words of the wily fox. "I am sure," the fox went on, "you have as beautiful a voice as you have a body. Will you not sing a little song for me?" Anxious to please the fox the crow opened her mouth to sing—but, of course, she would only caw. But in opening her mouth she dropped the piece of meat which the fox quickly snapped up. He ran away laughing at the silly crow.

THE FOX AND THE GRAPES

A fox was very fond of grapes. One day he came to a garden where he saw bunches of beautiful, sweet, ripe grapes hanging from a vine which had climbed up a high trellis. His mouth began to water and he wanted those grapes. He tried to jump up to catch them with his mouth; but they were too high up. He tried to climb up the trellis, but he did not know how to climb. He simply could not reach them, trying whatever tricks he could think of. At last he turned away, disappointed, but comforted himself by saying: "Well, the grapes are sour, anyway."

THE SHEPHERD BOY AND THE WOLF

A shephered boy was watching a flock of sheep near the village where he lived. There lived some wolves in the forest near by, and he had been told to call for help as soon as he saw any wolves coming to steal a sheep. The boy thought he would try whether the men from the village would really come in answer to his call. So one day, he called out: "A wolf! a wolf!" And quickly the men came running with sticks and guns to drive the wolf away or kill him. Then the boy laughed and said, "Oh, I only called out for fun; there is no wolf here—I wanted to see whether you would really come when I called!" The men shook their heads and went home.

As he had such fun the first time, as he thought, the boy tried the trick another time. Again he cried, "A wolf! a wolf!" This time the men came again, but not so fast, and not so many; and those that came were quite angry at having been fooled again.

Then one day, a wolf did come. But when the boy cried out, in distress, "A wolf! a wolf!", nobody came. The wolf broke into the flock, and when the boy tried to drive him away with his stick he was badly bitten. It was with great trouble that he could get his frightened sheep back to the village.

THE FARMER AND HIS SONS

A farmer was about to die. His sons were not so ready to work as he had been, and so he was afraid they would not pay attention to the farm after his death, thinking they had money enough. He called his sons to his bedside and said: "My sons there is a treasure hidden in one of my vineyards. Find it!" The sons, after his death, took their spades and carefully dug over every part of their land. They found no treasure of gold, but the land, well turned over, gave them a wonderful and rich crop. They now understood what their father had meant; the treasure had come to them through their work.

THE LION AND THE MOUSE

A lion was asleep in his cave. A mouse, running over his face, awakened him. He was angry, and rising up was about to kill the mouse, when the mouse begged him to spare his life. "If you will let me go, I will surely be thankful for your kindness and help you when you are in danger," he said. The lion laughed and let him go. But he did not believe that the small mouse could ever help him, the big lion.

But shortly after this it happened that the lion was caught in a net by the hunters who bound him with strong ropes to the ground. He roared in rage and anguish, and the mouse, recognizing his voice, ran toward him. When he saw the lion's plight, he gnawed the rope with his sharp teeth and set the lion free. The lion was very grateful. The little mouse had been able to repay the big lion's kindness.

The Dog and the Shadow.—It happened that a Dog had got a piece of meat and was carrying it home in his mouth to eat it in peace. Now on his way home he had to cross a plank lying across a running brook. As he crossed, he looked down and saw his own shadow reflected in the water beneath. Thinking it was another dog with another piece of meat, he made up his mind to have that also. So he made a snap at the shadow in the water, but as he opened his mouth the piece of meat fell out, dropped into the water and was never seen more.—*Beware lest you lose the substance by grasping at the shadow.*

The Town Mouse and the Country Mouse.—Now you must know that a Town Mouse once upon a time went on a visit to his cousin in the country. He was rough and ready, this cousin, but he loved his town friend and made him heartily welcome. Beans and bacon, cheese and bread, were all he had to offer, but he offered them freely. The Town Mouse rather turned up his long nose at this country fare, and said: "I cannot understand, Cousin, how you can put up with such poor food as this, but of course you cannot expect anything better in the country; come you with me and I will show you how to live. When you have been in town a week you will wonder how you could ever have stood a country life." No sooner said than done: the two mice set off for the town and arrived at the Town Mouse's residence late at night. "You will want some refreshment after our long journey," said the polite Town Mouse, and took his friend into the grand dining-room. There they found the remains of a fine feast, and soon the two mice were eating up jellies and cakes and all that was nice. Suddenly they heard growling and barking. "What is that," said the Country Mouse. "It is only the dogs of the house," answered the other. "Only!" said the Country Mouse. "I do not like that music at my dinner." Just at that moment the door flew open, in came two huge mastiffs, and the two mice had to scamper down and run off. "Good-bye, Cousin," said the Country Mouse. "What! going so soon?" said the other. "Yes," he replied;—"*Better beans and bacon in peace than cakes and ale in fear.*"

The Wind and the Sun.—The Wind and the Sun were disputing which was the stronger. Suddenly they saw a traveller coming down the road, and the Sun said: "I see a way to decide our dispute. Whichever of us can cause that traveller to take off his cloak shall be regarded as the stronger. You begin." So the Sun retired behind a cloud, and the Wind began to blow as hard as it could upon the traveller. But the harder he blew the more closely did the traveller wrap his cloak round him, till at last the Wind had to give up in despair. Then the sun came out and shone in all his glory upon the traveller, who soon found it too hot to walk with his cloak on.—*Kindness effects more than Severity.*

The Swallow and the Other Birds.—It happened that a Countryman was sowing some hemp seeds in a field where a Swallow and some other birds were hopping about picking up their food. "Beware of the man," quoth the Swallow. "Why, what is he doing?" said the others. "That is hemp seed he is sowing; be careful to pick up every one of the seeds, or else you will repent it." The birds paid no heed to the Swallow's words, and by and by the hemp grew up and was made into cords, and of the cords nets were made, and many a bird that had despised the Swallow's advice was caught in nets made out of that very hemp. "What did I tell you?" said the Swallow.—"*Destroy the seed of evil, or it will grow up to your ruin.*"

The Hares and the Frogs.—The Hares were so persecuted by the other beasts, they did not know where to go. As soon as they saw a single animal approach them, off they used to run. One day they saw a troop of wild Horses stampeding about, and in quite a panic all the Hares scuttled off to a lake hard by, determined to drown themselves rather than live in such a continual state of fear. But just as they got near the bank of the lake, a troop of Frogs, frightened in their turn by the approach of the Hares, scuttled off, and jumped into the water. "Truly," said one of the Hares, "things are not so bad as they seem:—*There is always some one worse off than yourself.*"

The Fox and the Mask.—A Fox had by some means got into the store-room of a theatre. Suddenly he observed a face glaring down on him, and began to be very frightened; but looking more closely he found it was only a Mask, such as actors use to put over their face. "Ah," said the Fox, "you look very fine; it is a pity you have not got any brains."—*Outside show is a poor substitute for inner worth.*

The Jay and the Peacock.—A Jay venturing into a yard where Peacocks used to walk, found there a number of feathers which had fallen from the Peacocks when they were moulting. He tied them all to his tail and strutted down towards the Peacocks. When he came near them they soon discovered the cheat, and striding up to him pecked at him and plucked away his borrowed plumes. So the Jay could do no better than go back to the other Jays, who had watched his behaviour from a distance; but they were equally annoyed with him, and told him—"*It is not only fine feathers that make fine birds.*"

Androcles.—A slave named Androcles once escaped from his master and fled to the forest. As he was wandering about there he came upon a Lion lying down moaning and groaning. At first he turned to flee, but finding that the Lion did not pursue him, he turned back and went up to him. As he came near, the Lion put out his paw, which was all swollen and bleeding, and Androcles found that a huge thorn had got into it, and was causing all the pain. He pulled out the thorn and bound up the paw of the Lion, who was soon able to rise and lick the hand of Androcles like a dog. Then the Lion took Androcles to his cave, and every day used to bring him meat from which to live. But shortly afterwards both Androcles and the Lion were captured, and the slave was sentenced to be thrown to the Lion, after the latter had been kept without food for several days. The Emperor and all his Court came to see the spectacle, and Androcles was led out into the middle of the arena. Soon the Lion was let loose from his den, and rushed bounding and roaring towards his victim. But as soon as he came near to Androcles he recognized his friend, and fawned upon him, and licked his hands like a friendly dog. The Emperor, surprised at this, summoned Androcles to him, who told him the whole story. Whereupon the slave was pardoned and freed, and the Lion let loose to his native forest.—*Gratitude is the sign of noble souls.*

The Bat, the Birds and the Beasts.—A great conflict was about to come off between the Birds and the Beasts. When the two armies were collected together the Bat hesitated which to join. The Birds that passed his perch said: "Come with us"; but he said: "I am a Beast." Later on, some Beasts who were passing underneath him looked up and said: "Come with us"; but he said: "I am a Bird." Luckily at the last moment peace was made, and no battle took place, so the Bat came to the Birds and wished to join in the rejoicings, but they all turned against him and he had to fly away. He then went to the Beasts, but had soon to beat a retreat, or else they would have torn him to pieces. "Ah," said the Bat, "I see now—*He that is neither one thing nor the other has no friends.*"

The Hart in the Ox-Stall.—A Hart hotly pursued by the hounds fled for refuge into an ox-stall, and buried itself in a truss of hay, leaving nothing to be seen but the tips of his horns. Soon after the Hunters came up and asked if any one had seen the Hart. The stable boys, who had been resting after their dinner, looked round, but could see nothing, and the Hunters went away. Shortly afterwards the master came in, and, looking round, saw that something unusual had taken place. He pointed to the truss of hay and said: "What are those two curious things sticking out of the hay?" And when the stable boys came to look they discovered the Hart, and soon made an end of him. He thus learnt that—*Nothing escapes the master's eye.*

The Peacock and Juno.—A Peacock once placed a petition before Juno desiring to have the voice of a nightingale in addition to his other attractions; but Juno refused his request. When he persisted, and pointed out that he was her favorite bird, she said:—"*Be content with your lot; one cannot be first in everything.*"

The Ant and the Grasshopper.—In a field one summer's day a Grasshopper was hopping about, chirping and singing to its heart's content. An Ant passed by, bearing along with great toil an ear of corn he was taking to the nest.

"Why not come and chat with me," said the Grasshopper, "instead of toiling and moiling in that way?"

"I am helping to lay up food for the winter," said the Ant, "and recommend you to do the same."

"Why bother about winter?" said the Grasshopper; "we have got plenty of food at present." But the Ant went on its way and continued its toil. When the winter came the Grasshopper had no food, and found itself dying of hunger, while it saw the ants distributing every day corn and grain from the stores they had collected in the summer. Then the Grasshopper knew—*It is best to prepare for the days of necessity.*

A LITTLE BOY'S WALK

A little boy went walking
  One lovely summer's day:
He saw a little rabbit
  That quickly ran away.

He saw a shining river
  Go winding in and out,
And little fishes in it
  Were swimming all about.

And slowly, slowly turning,
  The great wheel of the mill;
And then the tall church steeple,
  The little church so still.

The bridge above the water;
  And when he stopped to rest
He saw among the bushes
  A wee ground-sparrow's nest.

And as he watched the birdies
  Above the tree-tops fly,
He saw the clouds a-sailing
  Across the sunny sky.

He saw the insects playing;
  The flowers that summer brings;
He said, "I'll go tell mamma!
  I've seen so many things!"

(From "*Finger Plays*," by Emilie Poulsson. Music by Cornelia C. Roeslee. Lothrop, Lee & Shepard Co., Boston.)

******

Little Boy Blue, come blow your horn,
The sheep's in the meadow, the cow's in the corn.

Where's the little boy that tends the sheep?
He's under the haystack, fast asleep.

Go wake him, go wake him. Oh! no, not I;
For if I wake him, he'll certainly cry.

******

Once I saw a little bird
  Come hop, hop, hop;
So I cried, "Little bird,
  Will you stop, stop, stop?"
And was going to the window
  To say, "How do you do?"
But he shook his little tail
  And far away he flew.

******

Peter, Peter, pumpkin-eater,
Had a wife and couldn't keep her;
He put her in a pumpkin-shell,
And there he kept her very well.

THE BUNNY

See the pretty Bunny
  With his big long ears!
He doesn't seem to see us—
  But don't you think he hears?
I should think he must,
  With his ears so long!
But I guess the reason he's so still
  Is 'cause he likes my song.

THE KITTEN AND THE BOW-WOW

The little kitten goes, "Me-yow;"
The little dog goes, "Bow-wow-wow!"
  If they should both together sing,
  Wouldn't it be a funny thing!
Me-yow!
Bow-wow-wow!
  What a funny, funny thing!

MR. ROOSTER AND MRS. HEN

Mister Rooster does nothing but crow,
He never lays an egg.
  But Mistress Hen lays an egg ev'ry day,
  And feels so glad because she can lay
  That she sings, "Cut, cut, ca-da-cut!"
And Mister Rooster joins the song
With "Cock-a-doodle doo!"

Little Jack Horner
Sat in a corner,
  Eating his Christmas pie;
He put in his thumb
And he took out a plum,
  And said, "What a good boy am I!"

THE FALLING LEAVES

Old Mother Earth has good children, the trees,
Who cover her up so she will not freeze;
  Steadily, steadily, day by day,
  They wrap her up in the warmest way,
By dropping their leaves for a thick, warm spread,
To cover her close in her winter bed;
  With brown ones, and red ones, and silver and gold:
  Surely this spread will keep out the cold.

******

"Jack Spratt could eat no fat,
  His wife could eat no lean,
And so betwixt the two
  They made the platter clean."

Old Mother Hubbard
Went to the cupboard,
  To get her poor dog a bone;
But when she came there,
The cupboard was bare,
  And so the poor dog had none.

******

What does little birdie say,
In her nest at peep of day?
  "Let me fly," says little birdie,
"Mother, let me fly away."

Birdie, rest a little longer,
Till the little wings are stronger.
So she rests a little longer,
  Then she flies away.

What does little baby say,
In her bed at peep of day?
  Baby says, like little birdie,
"Let me rise and fly away."

Baby, sleep a little longer,
Till the little limbs are stronger.
If she sleeps a little longer,
  Baby, too, shall fly away.
—Alfred Tennyson

******

There was a little girl
Who had a little curl
  Right in the middle of her forehead.
When she was good,
She was very, very good,
  But when she was bad—
  She was horrid.

THE ROBIN'S SONG

In a nest up in a tree,
  Heigh-o!
    Blow, wind, blow!
I have babies three,
Blow, wind, blow!
Blow, blow!
  Rock my babies for me;
Blow, blow!
  Swing the nest for me. * *

******

Mary had a little lamb,
  Its fleece was white as snow;
And everywhere that Mary went
  The lamb was sure to go.

WHEN I GROW TO BE A MAN

When I grow to be a man,
  I want to be six feet tall;
So that when the circus parades along
  I can see over the heads of all. * *

THE MOON

The moon is playing hide-and-seek,
  But if you'll only watch,
You'll see that the clouds will run away
  And out the moon will peep.
And the little star that's playing, too,
  Will quickly cry, "I spy!"
And run away and hide all day
  Behind the deep blue sky. * *

Three little kittens
Lost their mittens,
  And they began to cry:
"Oh, mother dear,
We very much fear
  That we have lost our mittens!"
"Lost your mittens,
You naughty kittens!
Then you shall have no pie."
"Mee-ow, mee-ow, mee-ow,
And we can have no pie!
Mee-ow, mee-ow, mee-ow!"

THE EVENING STAR

Out of my window at night
  I see a bright little star;
He's waiting to see me go to sleep:
His bright little eye a watch will keep,
  While a dear little bird
  On a tree close by
  Will sing me a beautiful lullaby. * *

FOOTPRINTS

I found little footprints in the snow,
And follow'd them up to see where they'd
    go:
They led to the foot of an old oak tree,
And near, a little brown rabbit I could see.
  The little brown rabbit wouldn't play
    with me,
  But ran away quickly right to the tree.
I followed his footprints, and what do you
    think I saw?
  A little rabbit's house with a small front
    door. * *

MR. FROG

Mister Frog came out of the pond one day
  And found himself in the rain.
Said he: "I'll get wet,
  And I may catch cold!"
So he jumped in the pond again. * *

TICK—TOCK

The big, tall clock in the hall,
The grandfather clock of all,
  Goes tick—tock; tick—tock;
    Tick—tock; tick.

But mamma's little clock on the shelf
Goes dancing like a merry little elf:
  Tick, tock; tick, tock;
  Tick, tock; tick, tock;
  Tick, tock; tick, tock;
  Tick, tock, tick.

But the one I like more than all the rest
Is my papa's watch, it's very much the best:
  Tick, tick, tick, tick,
  Tick, tick, tick, tick,
  Tick, tick, tick, tick,
  Tick, tick, tick, tick,
  Tick, tick, tick, tick,
  Tick, tick, tick. **

**Selections from *"Small Songs for Small Singers"*, by W. H. Neidlinger (New York, G. Schirmer).

THE BEES

The bees are flying and humming,
Why are they all coming?
  Honey to seek,
  Honey to seek.
    Bz, bz, bzzzzzzzzz.

******

Wee Willie Winkie runs through the town,
Upstairs and downstairs in his nightgown,
Rapping at the window, crying through the
    lock,
"Are the children in their beds, for now it's
    eight o'clock?"
—William Miller

There was a crooked man, and he went a
  crooked mile,
He found a crooked sixpence against a
  crooked stile;
He bought a crooked cat, which caught
  a crooked mouse,
And they all lived together in a little
  crooked house.

******

Little Bo-peep has lost her sheep,
  And can't tell where to find them;
"Leave them alone, and they'll come home,
  And bring their tails behind them!"

Little Bo-peep fell fast asleep
  And dreamt she heard them bleating.
But when she awoke, she found it a joke,
  For they were still a-fleeting.

Then up she took her little crook,
  Determin'd for to find them;
She found them indeed, but it made her
    heart bleed,
  For they'd left their tails behind them

******

I have just to shut my eyes
To go sailing through the skies—
To go sailing far away
To the pleasant land of play.
—Robert Louis Stevenson

******

As Tommy Snooks and Bessy Brooks
  Were walking out one Sunday,
Says Tommy Snooks to Bessy Brooks,
  "Tomorrow will be Monday."

SWEET AND LOW

Sweet and low, sweet and low,
Wind of the western sea;
Low, low, breathe and blow,
Wind of the western sea!
  Over the rolling waters go,
  Come from the dying moon and blow,
Blow him again to me,
  While my little one,
  While my pretty one
    Sleeps.

Sleep and rest, sleep and rest,
Father will come to thee soon;
Rest, rest, on mother's breast,
Father will come to thee soon.
  Father will come to his babe in the nest,
  Silver sails all out of the west,
Under the silver moon.
  Sleep, my little one,
  Sleep, my pretty one,
    Sleep!
—Tennyson

CRADLE SONG

Lullaby and good night!
With roses bedight;
Creep into thy bed,
There pillow thy head!
  If God will thou shalt wake
  When the morning doth break.

Lullaby and good night!
Those blue eyes close tight!
Bright angels are near,
So sleep without fear.
  They will guard you from harm,
  With fair dreamland's sweet charm.
(Music by Brahms, text from the German by Simrock.)

FIVE LITTLE CHICKADEES

Five little chickadees,
Peeping at the door;
One flew away,
And then there were four.
Chickadee, chickadee,
Happy and gay;
Chickadee, chickadee,
Fly away!

Four little chickadees,
Sitting on a tree;
One flew away,
And then there were three.
Chickadee, chickadee, etc.

Three little chickadees,
Looking at you;
One flew away,
And then there were two.
Chickadee, chickadee, etc.

Two little chickadees,
Sitting in the sun;
One flew away,
And then there was one.
Chickadee, chickadee, etc.

One little chickadee
Left all alone;
He flew away,
And then there was none.
Chickadee, chickadee, etc.

******

Politeness is to do and say
The kindest thing in the kindest way.

******

Kind hearts are the gardens,
Kind thoughts are the roots,
Kind words are the blossoms,
Kind deeds are the fruits.

******

Bow, wow, wow,
Whose dog art thou?
Little Tom Tinker's dog,
Bow, wow, wow!

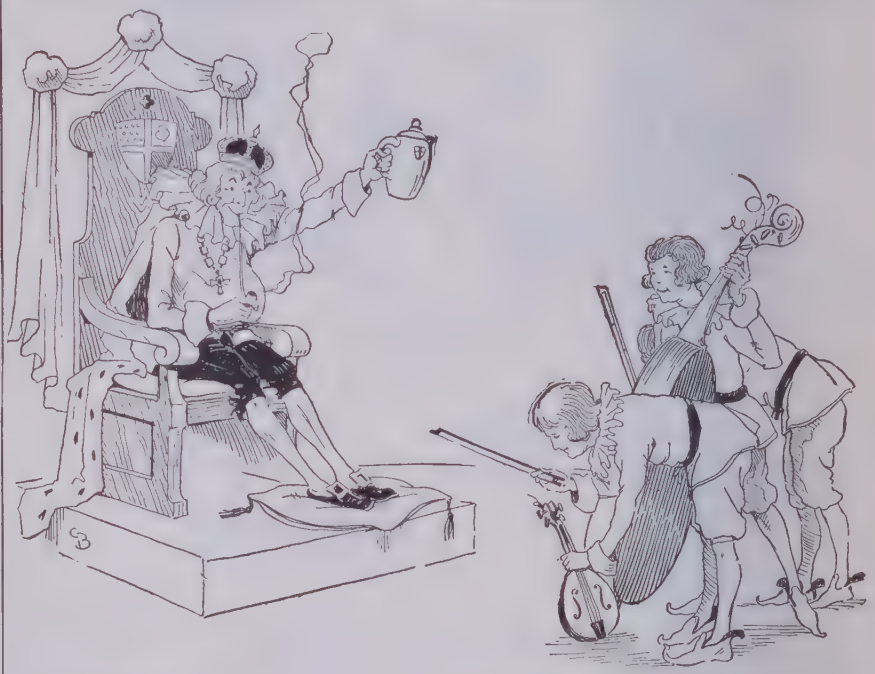
Star light, star bright,
First star I see to-night;
I wish I may, I wish I might,
Have the wish I wish to-night.



THE EGG IN THE NEST

There was a tree that stood in the ground,
The prettiest tree you ever did see;
The tree in the wood, and the wood in the ground,
And the green grass growing all around.

And on this tree there was a limb,
The prettiest limb you ever did see;
The limb on the tree, and the tree in the wood,
The tree in the wood, and the wood in the ground,
And the green grass growing all around.

And on this limb there was a bough,
The prettiest bough you ever did see;
The bough on the limb, and the limb on the tree,
The limb on the tree, and the tree in the wood,
The tree in the wood, and the wood in the ground,
And the green grass growing all around.

Now on this bough there was a nest,
And in this nest there were some eggs,
The prettiest eggs you ever did see;
Eggs in the nest, and the nest on the bough,
The bough on the limb, and the limb on the tree,
The limb on the tree, and the tree in the wood,
The tree in the wood, and the wood in the ground,
And the green grass growing all around,
And the green grass growing all around.

Old King Cole
Was a merry old soul,
And a merry old soul was he;

He called for his pipe,
And he called for his bowl,
And he called for his fiddlers three.

Every fiddler, he had a fiddle,
And a very fine fiddle had he;
Twee tweedle dee, tweedle dee, went the fiddlers.

THE HOUSE THAT JACK BUILT

This is the house that Jack built.
This is the malt,
That lay in the house that Jack built.
This is the rat,
That ate the malt that lay in the house that Jack built.
This is the cat,
That killed the rat that ate the malt that lay in the house that Jack built.
This is the dog,
That worried the cat, that killed the rat, that ate the malt that lay in the house that Jack built.
This is the cow, with the crumpled horn,
That tossed the dog, that worried the cat, that killed the rat, that ate the malt that lay in the house that Jack built.
This is the maiden all forlorn,
That milked the cow with the crumpled horn, that tossed the dog, that worried the cat, that killed the rat, that ate the malt that lay in the house that Jack built.
This is the man, all tattered and torn,
That kissed the maiden all forlorn, that milked the cow with the crumpled horn, that tossed the dog, that worried the cat, that killed the rat, that ate the malt that lay in the house that Jack built.
This is the priest all shaven and shorn,
That married the man all tattered and torn, that kissed the maiden all forlorn, that milked the cow with the crumpled horn, that tossed the dog, that worried the cat, that killed the rat, that ate the malt that lay in the house that Jack built.
This is the cock that crowed in the morn,
That waked the priest all shaven and shorn, that married the man all tattered and torn, that kissed the maiden all forlorn, that milked the cow with the crumpled horn, that tossed the dog, that worried the cat, that killed the rat, that ate the malt that lay in the house that Jack built.
This is the farmer sowing his corn,
That kept the cock that crowed in the morn, that waked the priest all shaven and shorn, that married the man all tattered and torn, that kissed the maiden all forlorn, that milked the cow with the crumpled horn, that tossed the dog, that worried the cat, that killed the rat, that ate the malt that lay in the house that Jack built.

WHO STOLE THE BIRD'S NEST

"To-whit! to-whit! to-whee!
Will you listen to me?
Who stole four eggs I laid
And the nice nest I made?"

"Not I," said the cow, "Moo-oo!
Such a thing I'd never do.
I gave you a wisp of hay,
But didn't take your nest away.
Not I," said the cow, "Moo-oo!
Such a thing I'd never do!"

"To-whit! to-whit! to-whee!
Will you listen to me?
Who stole four eggs I laid
And the nice nest I made?"

"Bobolink! Bobolink!
Now, what do you think?
Who stole a nest away
From the plum-tree, today?"

"Not I," said the dog, "Bow-wow!
I wouldn't be so mean, anyhow!
I gave the hairs the nest to make,
But the nest I didn't take.
Not I," said the dog, "Bow-wow!
I'm not so mean, anyhow!"

"To-whit! to-whit! to-whee!
Will you listen to me?
Who stole four eggs I laid
And the nice nest I made?"

"Bobolink! Bobolink!
Now, what do you think?
Who stole a nest away
From the plum-tree, today?"

"Coo-coo! Coo-coo! Coo-coo!
Let me speak a word, too!
Who stole that pretty nest
From little yellow-breast?"

"Not I," said the sheep, "oh, no!
I wouldn't treat a poor bird so.
I gave wool the nest to line,
But the nest was none of mine.
Baa-baa!" said the sheep, "oh, no,
I wouldn't treat a poor bird so!"

"Caw! Caw!" cried the crow;
"I should like to know
What thief took away
A bird's nest to-day?"

"Cluck! Cluck!" said the hen;
"Don't ask me again.
Why, I haven't a chick
Would do such a trick.
We all gave her a feather,
And she wove them together.
I'd scorn to intrude
On her and her brood.
Cluck! Cluck!" said the hen,
"Don't ask me again."

"Chirr-a-whirr! Chirr-a-whirr!"
All the birds make a stir!
"Let us find out his name,
And all cry, 'For shame!'"

"I would not rob a bird,'
Said little Mary Green;
"I think I never heard
Of anything so mean."

"It is very cruel, too,"
Said little Alice Neal;
"I wonder if he knew
How sad the bird would feel?"

A little boy hung down his head,
And went and hid behind the bed;
For he stole that pretty nest
From poor little yellow-breast—
And he felt so full of shame,
He didn't like to tell his name.
—Lydia Maria Child

"To-whit! to-whit! to-whee!
Will you listen to me?
Who stole four eggs I laid
And the nice nest I made?"

"Bobolink! Bobolink!
Now, what do you think?
Who stole a nest away
From the plum-tree, today?"

"Coo-coo! Coo-coo! Coo-coo!
Let me speak a word, too!
Who stole that pretty nest
From little yellow-breast?"

Hey! diddle, diddle,
The cat and the fiddle,
The cow jumped over the moon.
The little dog laughed
To see such sport,
And the dish ran away with the spoon.

LEAVES AND NUTS

The leaves are green, the nuts are brown;
They hang so high, they will not come down;
Leave them alone till frosty weather;
Then they will all come down together.

THE LAND OF NOD

From breakfast on through all the day
At home among my friends I stay,
But every night I go abroad
Afar into the land of Nod.

All by myself I have to go,
With none to tell me what to do—
All along beside the streams
And up the mountain sides of dreams.
—Robert Louis Stevenson

THE ROCK-A-BY LADY FROM HUSHABY STREET

The Rock-a-By Lady from Hushaby Street
Comes stealing; comes creeping;
The poppies, they hang from her head to her feet,
And each hath a dream that is tiny and fleet—
She bringeth her poppies to you, my sweet,
When she findeth you sleeping!

There is one little dream of a beautiful drum—
"Rub-a-dub!" it goeth;
There is one little dream of a big sugar plum,
And lo! thick and fast the other dreams come
Of popguns that bang, and tin-tops that hum,
And a trumpet that bloweth!

And dollies peep out of those wee little dreams
With laughter and singing;
And boats go a-floating on silvery streams,
And the stars peek-a-boo with their own misty gleams,
And up, up, and up, where the Mother Moon beams,
The fairies go winging!

Would you dream all these dreams that are tiny and fleet?
They'll come to you sleeping;
So shut the two eyes that are weary, my sweet,
For the Rock-a-By Lady from Hushaby Street,
With poppies that hang from her head to her feet,
Comes stealing; comes creeping.
—Eugene Field

THE BIRTHDAY

I am six years old. It's my birthday.
When I stand by the knob of the door
You can see I'm a little bit taller
Than when I was measured before.
I shall have a cake with thick frosting;
Seven candles on top I shall see;
And because I am taller and older
A happier child I should be. ††

(Poems marked †† are from *"Songs of Happiness."* Words by Carolyn S. Bailey. Music by Mary B. Ehrmann, Milton Bradley & Co.)

*****

Two ears and only one mouth have you;
The reason, I think, is clear:
It teaches my child that it will not do
To talk about all you hear.

Two hands and only one mouth have you,
And it is worth while repeating:
The two are for work that you must do,
The one is enough for eating.

Two eyes and only one mouth have you;
The reason of this must be:
That you should see a good many things,
But not talk about all you see.

THE DUCK DANCE

I saw a ship a-sailing, a-sailing on the sea;
And oh! it was laden with pretty things for me.
There were comfits in the cabin, and apples in the hold;
The sails were made of silk, and the masts were made of gold.

Four and twenty sailors that sat upon the deck
Were four and twenty white mice with chains about their neck.
The captain was a duck with a packet on his back,
And when the ship began to move the captain cried, "quack! quack!"

THE UMBRELLA MAN

Umbrellas to mend! Umbrellas to mend!
A little old tinker, our rainy day friend,
With patches and wire, and needle and glue,
Will make our umbrella as useful as new.

Umbrellas to sell! Umbrellas to sell!
He carries a number of new ones as well,
That he himself made, and he has some fine canes,
Tucked under his arms ev'ry day when it rains. ††

THE POLICEMAN

The giants in the fairy books
Are daring as you please;
But Kelly is as big and brave
As any one of these.
He's six feet tall
He wears a tidy uniform of blue.
He's Kelly, our policeman:
Have you a Kelly, too?

He gives the tired horses drinks.
He clears the crowded way
When little children go to school
And hurry home each day
I wonder when he goes to bed,
For all the dark night through
We hear the beat of Kelly's feet.
Have you a Kelly, too? ††

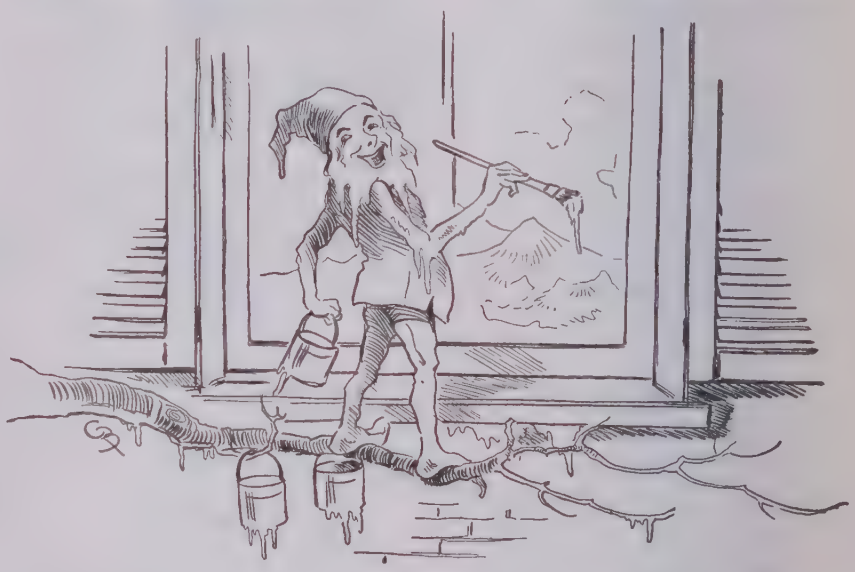
THE SHOEMAKER

Rap-a-tap-tap, rap-a-tap-tap,
Rap-a-tap-tap, rap-a-tap-tap,
Here's the good cobbler
Who works in his lap,
With hammer, and needle,
And waxed ends and glue,
Making our old shoes
As pretty as new.

Rap-a-tap-tap, rap-a-tap-tap,
Tic-a-tac, tic-a-tac, tic-a-tac-tee.
Who could cut patches
As neatly as he?
And who could so quickly
Put patches together,
Making our leaky shoes
Tight for wet weather? ††

THE LITTLE LAND

Deep down among the grasses,
As small as small can be,
There lies a Land of Little Things
That any child may see
Where Katydids and fireflies
And snails so queer and slow,
And spider folks and friendly worms
Go softly to and fro.



No child should cross its borders,
Nor touch it with his hand,
But only kneel down in the grass
And watch this Little Land
Where Katydids and fireflies
And snails so queer and slow,
And spider folks and friendly worms
Go softly to and fro. ††

THE CARPENTER

See the cheery carpenter,
Peep inside the door!
Pretty blocks and shaving curls
Lie upon his floor.

Hear his cheery hammer's song,
Hammer, hammer away!
Hear his cheery hammer's song,
Hammer all the day.

With his saw and shining plane
Boards are made to fit;
Many holes for screws he bores
With his shining bit.
Hear his cheery hammer's song, etc.

See the cheery carpenter,
Busy as can be!
He it is who builds the house
Strong and high for me.
Hear his cheery hammer's song, etc. ††

JACK FROST

Oh, Jack Frost is a merry little elf,
And a merry little elf is he!
He calls for his coat, and he calls for his brush,
And he calls for his paint pots, one, two, three,
And he calls for his paint pots three.

He paints with glee on ev'ry window-pane
Things very, very fine to see:
A mountain high, and a lake close by,
And a mighty forest tree, tree, tree.
And a mighty forest tree.

Oh, Jack Frost plays so many, many tricks,
He is so very pert and bold:
He pinches the cheeks and he tweaks the nose,
And he turns us blue with cold, cold, cold,
And he turns us blue with cold.

—Riley and Gaynor, "*Songs of the Child World*," *I.* The John Church Co., Cincinnati

THE BUSY ANTS

The ants are very, very small,
Almost too wee to work at all;
And yet they carry sand—until
Each ant has helped to build a hill.

The ants are very, very wee,
Almost too small for us to see;
But as they hurry through the grass
We will be kind and let them pass. ††

LITTLE THINGS

Little drops of water,
Little grains of sand,
Make the mighty ocean
And the pleasant land.

Thus the little minutes,
Humble though they be,
Make the mighty ages
Of eternity.

—Ebenezer Cobham Brewer

THE BLACKSMITH

Cling, clang, cling!
Cling, clang, cling!
Hammer and anvil so merrily ring.
Faithful old Dobbin must have a new shoe,
So, Master Blacksmith, we've brought him to you.
Light the forge fire,
The big bellows blow.
Dobbin will stand,
You needn't say, Whoa! ††

BUTTERCUPS AND DAISIES

Buttercups and daisies,
Oh, the pretty flowers;
Coming ere the spring time
To tell of sunny hours.
While the trees are leafless
While the fields are bare.
Buttercups and daisies
Spring up here and there.

Ere the snowdrop peepeth,
Ere the crocus bold,
Ere the early primrose
Opes its paly gold,
Somewhere on the sunny bank
Buttercups are bright;
Somewhere 'mong the frozen grass
Peeps the daisy white.

—Mary Howitt

THE BLUE-BIRD

Blue-Bird, dear Blue-Bird,
We saw you to-day!
Just for a flash—
Then you floated away.
Hands could not hold you,
Our cage was too small.
Hark! from the sky comes
Your far-away call.

Blue-Bird, dear Blue-Bird,
We know what you say.
Happy the children
Who see you to-day.
Brighter the sunshine,
More blue is the sky,
Happiness follows
Wherever you fly. ††

THE BROWNIES

Hist! Hist! Be still!
On tiptoe now advance!
We've come to have a merry Brownies' dance.
We will form our circle here,
Stepping lightly, for we fear
We may waken all the sleeping world perchance.

Oh, we're as light
As thistledown or dew.
We're Brownies of the Brownie band so true.
And we dance the live-long night,
Vanish with the morning light,
Hiding safe from mortal vision and from you.

THE SEE-SAW

We made a see-saw yesterday,
The board was good and long;
And all the while we were at play
We sang this pretty song:
"See-saw, see-saw,
So we go up and down,
See-saw, see-saw,
Going to the town."

A SPRING PROMISE

A little bit of blowing,
A little bit of snow,
A little bit of growing,
And crocuses will show!
On every twig that's lonely
A new green leaf will swing,
On ev'ry patient tree-top
A thrush will stop and sing.
A little bit of sleeting,
A little bit of rain,
The blue, blue sky for greeting,
The violets again!
And ev'ry frozen hillside
Its gift of grass will bring,
And ev'ry day of winter
Another day of spring. ††

THE FIREMAN

Hark! The siren! Clear the street!
See the horses, big and fleet!
Hook and ladder, truck and hose,
Following fast the engine goes.
Holding on as best he can
Rides the daring fireman.
Wasting not a bit of time
Up the burning house he'll climb,
Till we see his helmet red
At some window overhead.
Oh, how wonderful to be
Such a hero man as he! ††

OLD MOTHER WIND

Old Mother Wind is out to-day,
She has her magic broom.
She sweeps the garden very clean
That daffodils may bloom.
Old Mother Wind we cannot see,
But by her broom we know it's she.

Old Mother Wind is out to-day,
We feel her magic hands.
They pull our kites and push the ships
To strange and diff'rent lands.
Old Mother Wind we cannot see,
But by her broom we know it's she.

Old Mother Wind was out last night,
Upon the chimney red.
She sat and sang a sleepy song
As we were put to bed.
Old Mother Wind we cannot see,
But by her broom we know it's she. ††

MASTER ROBIN

If I could change places with you, Master Robin,
And live in your nest in the tree,
So snug and so high
With no roof but the sky,
Oh, Robin, what fun that would be!
Cheer-ee! Cheer-ee!

I'd swing and I'd sing and I'd carefully bring
Some food to your babies so wee,
And then, by and by,
I would teach them to fly,
Oh, Robin, what fun that would be!
Cheer-ee! Cheer-ee!

The beautiful world and the clouds softly curled
I'd reach with my wings, strong and free;
And I would be dressed
In a bright orange vest,
Oh, Robin, what fun that would be!
Cheer-ee! Cheer-ee! ††

TRACKS IN THE SNOW

Do you see these tiny tracks in the snow?
Don't you wonder what they are, where they go?
I think a Bunny Rabbit white
Has hopped across the snow last night.
Oh! What funny little tracks in the snow!

THE GIANTS

We'll play we're giants tall,
As tall as tall can be.
And when we reach clear up to the sky,
The moon and stars we'll see.

We'll bump our heads against the clouds;
Our hands we'll stretch so high
That we'll feel the points of the tiny stars
That hang up in the sky.

(All three from Riley and Gaynor's "*Songs of the Child World,*" I. Pub. by The John Church Co., Cincinnati.)

IMITATION SONG

This is the way we clap our hands,
We clap our hands, we clap our hands;
This is the way we clap our hands,
As merrily we play.

This is the way we show our hands, etc.
In beautiful array.

This is the way the clock does tick, etc.
And tells how time does fly.

This is the noise the guns do make, etc.
On celebration day.
(With appropriate motions, etc., can be continued.)

******

When I was a shoemaker,
And a shoemaker was I,
This way, and this way,
And this way went I.

When I was a gentleman,
And a gentleman was I,
This way, and this way,
And this way went I.

When I was a lady,
And a lady was I,
This way, and this way,
And this way went I.

(To be continued indefinitely. Old game.)

HAND-EXERCISE SONG

Roll your hands, roll your hands,
As slowly, as slowly, as slow can be.
Then fold your arms like me!

Roll your hands, roll your hands,
As swiftly, as swiftly, as swift can be.
Then fold your arms like me!

Clap your hands, clap your hands,
As softly, as softly, as soft can be.
Then fold your arms like me!

Clap your hands, clap your hands,
As loudly, as loudly, as loud can be.
Then fold your arms like me!

HOP, HOP, HOP

Hop, hop, hop!
Nimble as a top,
  Where 'tis smooth and where 'tis stony
  Trudge along, my little pony!
Hop, hop, hop, hop, hop,
Nimble as a top!

Whoa, whoa, whoa!
How like fun you go!
  Very well, my little pony,
  Safe's our jaunt though rough and stony.
Spare, spare, spare, spare, spare,
Sure enough we're there!

Here, here, here!
Yes, my pony dear;
  Now with oats and hay I'll treat you,
  And with smiles will ever greet you,
Pony, pony dear!
Yes, my pony dear!

RING GAME

It snows and it blows, and it cuts off my nose,
  So, pray, children, let me in;
I'll light my pipe, and warm my toes,
  And then I'll be gone again.

ROUND

Ring a ring a rosie,
A bottle full of posie,
All the girls in our town
Ring for little Josie.

(First published in *"Games and Songs of American Children,"* collected by Wm. Wells Newell, Harper & Bros.)

******

Oats, peas, beans, and barley grows,
Oats, peas, beans, and barley grows,
How, you, nor I, nor nobody knows,
Oats, peas, beans, and barley grows.

Thus the farmer sows his seed,
Stands erect and takes his ease,
Stamps his foot and clasps his hands,
And turns about to view his lands.

(Old Ring Game)

BLOCK CITY

What are you able to build with your blocks?
Castles and palaces, temples and docks.
Rain may keep raining, and others go roam,
But I can be happy and building at home.

Let the sofa be mountains, the carpet be sea,
There I'll establish a city for me:
A kirk and a mill and a palace beside,
And a harbor as well where my vessels may ride.

Great is the palace with pillar and wall,
A sort of a tower on the top of it all,
And steps coming down in an orderly way
To where my toy vessels lie safe in the bay.

This one is sailing and that one is moored:
Hark to the song of the sailors on board!
And see on the steps of my palace, the kings
Coming and going with presents and things!

Now I have done with it, down let it go!
All in a moment the town is laid low.
Block upon block lying scattered and free,
What is there left of my town by the sea?
Yet, as I saw it, I see it again,
The kirk and the palace, the ships and the men,
And as long as I live and where'er I may be,
I'll always remember my town by the sea.
—Robert Louis Stevenson

BED IN SUMMER

In winter I get up at night
And dress by yellow candle-light.
In summer, quite the other way,
I have to go to bed by day.

I have to go to bed and see
The birds still hopping on the tree,
Or hear the grown-up people's feet
Still going past me in the street.

And does it not seem hard to you,
When all the sky is clear and blue,
And I should like so much to play,
To have to go to bed by day?
—Robert Louis Stevenson

THE WIND

I saw you toss the kites on high
And blow the birds about the sky;
And all around I heard you pass,
Like ladies' skirts across the grass—
  O wind, a-blowing all day long,
  O wind, that sings so loud a song!

I saw the different things you did,
But always you yourself you hid.
I felt you push, I heard you call,
I could not see yourself at all—
  O wind, a-blowing all day long,
  O wind, that sings so loud a song!

O you that are so strong and cold,
O blower, are you young or old?
Are you a beast of field and tree,
Or just a stronger child than me?
  O wind, a-blowing all day long,
  O wind, that sings so loud a song!
—Robert Louis Stevenson

Little Miss Muffet
  Sat on a tuffet,
  Eating her curds and whey;
There came a spider
  And sat down beside her,
  And frightened Miss Muffet away.

TWINKLE, TWINKLE, LITTLE STAR

Twinkle, twinkle, little star—
How I wonder what you are!
Up above the world so high,
Like a diamond in the sky.

When the glorious sun is set,
When the grass with dew is wet,
Then you show your little light,
Twinkle, twinkle all the night.

In the dark blue sky you keep
And often through my curtains peep;
For you never shut your eye
Till the sun is in the sky.

As your bright and tiny spark
Lights the traveller in the dark:
Though I know not what you are,
Twinkle, twinkle, little star.

MY SHADOW

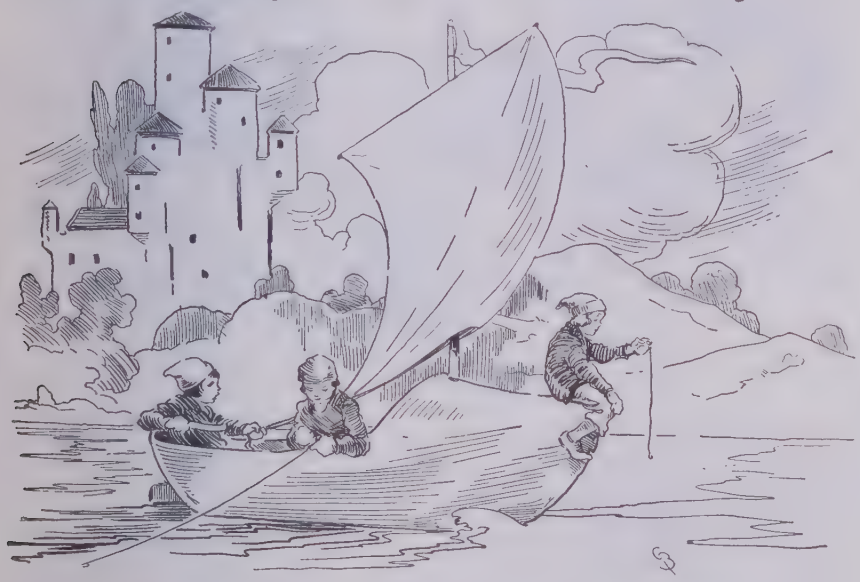
I have a little shadow that goes in and out with me,
And what can be the use of him is more than I can see.
He is very, very like me from the heels up to the head;
And I see him jump before me, when I jump into my bed.

The funniest thing about him is the way he likes to grow—
Not at all like proper children, which is always very slow;
For he sometimes shoots up taller like an india-rubber ball,
And he sometimes gets so little that there's none of him at all.

He hasn't got a notion of how children ought to play,
And can only make a fool of me in every sort of way.
He stays so close beside me, he's a coward you can see;
I'd think shame to stick to nursie as that shadow sticks to me!

One morning, very early, before the sun
was up,
I rose and found the shining dew on every
buttercup;
But my lazy little shadow, like an arrant
sleepy-head,
Had stayed at home behind me and was
fast asleep in bed.
—Robert Louis Stevenson

DAISIES



At evening when I go to bed
I see the stars shine overhead;
They are the little daisies white
That dot the meadow of the night.

And often while I'm dreaming so,
Across the sky the Moon will go;
It is a lady, sweet and fair,
Who comes to gather daisies there.

For, when at morning I arise,
There's not a star left in the skies;
She's picked them all and dropped them
down
Into the meadows of the town.
–Frank Dempster Sherman

All night long their nets they threw
To the stars in the twinkling foam—
Then down from the skies came the wooden
shoe,
Bringing the fishermen home;
'Twas all so pretty a sail, it seemed
As if it could not be;
And some folk thought 'twas a dream
they'd dreamed
Of sailing that beautiful sea.
But I shall name you the fishermen three:
Wynken,
Blynken,
And Nod.

Wynken and Blynken are two little eyes,
And Nod is a little head,
And the wooden shoe that sailed the skies
Is a wee one's trundle-bed;
So shut your eyes while mother sings
Of wonderful sights that be,
And you shall see the beautiful things
As you rock on the misty sea
Where the old shoe rocked the fishermen
three—
Wynken,
Blynken,
And Nod
—Eugene Field

WYNKEN, BLYNKEN, AND NOD

Wynken, Blynken, and Nod one night
Sailed off in a wooden shoe—
Sailed on a river of crystal light
Into a sea of dew.
"Where are you going, and what do you
wish?"
The old moon asked the three.
"We have come to fish for the herring fish
That live in this beautiful sea;
Nets of silver and gold have we,"
Said Wynken,
Blynken,
And Nod.

The old moon laughed and sang a song,
As they rocked in the wooden shoe;
And the wind that sped them all night long
Ruffled the waves of dew;
The little stars were the herring fish
That lived in the beautiful sea.
"Now cast your nets wherever you wish—
Never afeard are we!"
So cried the stars to the fishermen three,
Wynken,
Blynken,
And Nod.

THE SWING

How do you like to go up in a swing,
Up in the air so blue?
"Oh, I do think it the pleasantest thing
Ever a child can do!"

"Up in the air and over the wall,
Till I can see so wide,
Rivers and trees and cattle and all
Over the countryside—

"Till I look down on the garden green
Down on the roof so brown—
Up in the air I go flying again,
Up in the air and down!"
—Robert Louis Stevenson

NONSENSE ALPHABET

A was an ant,
Who seldom stood still,
And who made a nice house
In the side of a hill.
Nice little ant!

B was a bat,
Who slept all the day,
And fluttered about
When the sun went away.
Brown little bat!

C was a camel;
You rode on his hump;
And if you fell off,
You came down such a bump!
What a high camel!

D was a duck
With spots on his back,
Who lived in the water
And always said, "Quack!"
Dear little duck!

E was an elephant,
Stately and wise:
He had tusks and a trunk,
And two queer little eyes.
Oh, what funny small eyes!

F was a fish
Who was caught in a net;
But he got out again,
And is quite alive yet.
Lively young fish!

G was a goat
Who was spotted with brown:
When he did not lie still
He walked up and down.
Good little goat!

H was a hat
Which was all on one side;
Its crown was too high,
And its brim was too wide
Oh, what a hat!

I was some ice,
So white and so nice,
But which nobody tasted;
And so it was wasted.
All that good ice!

J was a jug,
So pretty and white,
With fresh water in it
At morning and night.
Nice little jug!

K was a kite
Which flew out of sight,
Above houses so high,
Quite into the sky.
Fly away, kite!

L was a lily,
So white and so sweet!
To see it and smell it
Was quite a nice treat.
Beautiful lily!

M was a man,
Who walked round and round;
And he wore a long coat
That came down to the ground
Funny old man!

N was a net
Which was thrown in the sea
To catch fish for dinner
For you and for me.
Nice little net!

O was an orange
So yellow and round:
When it fell off the tree
It fell down to the ground.
Down to the ground!

P was a polly,
All red, blue and green—
The most beautiful polly
That ever was seen.
Poor little polly!

Q was a quail
With a very short tail;
And he fed upon corn
In the evening and morn.
Quaint little quail!

R was a rabbit,
Who had a bad habit
Of eating the flowers
In gardens and bowers.
Naughty fat rabbit!

S was the sugar-tongs,
Nippity-nee,
To take up the sugar
To put in our tea.
Nippity-nee!

T was a tortoise
All yellow and black;
He walked slowly away
And he never came back.
Torty never came back!

U was an urn
All polished and bright,
And full of hot water
At noon and at night.
Useful old urn!

V was a veil
With a border upon it,
And a ribbon to tie it
All round a pink bonnet.
Pretty green veil!

W was a watch,
Where, in letters of gold,
The hour of the day
You might always behold.
Beautiful watch!

Y was a yew,
Which flourished and grew
By a quiet abode
Near the side of a road.
Dark little yew!

Z was a zebra,
All striped white and black;
And if he were tame,
You might ride on his back.
Pretty striped zebra!

FROM HIAWATHA

Then the little Hiawatha
Learned of every bird its language,
Learned their names and all their secrets:
How they built their nests in summer,
Where they hid themselves in winter;
Talked with them whene'er he met them,
Called them "Hiawatha's Chickens."

Thus the birch canoe was builded
In the bosom of the forest.
All the forest life was in it,
All its mystery and its magic,
All the lightness of the birch-tree,
All the toughness of the cedar,
All the larch's supple sinews—
And it floated on the river
Like a yellow leaf in autumn,
Like a yellow water lily.
—Henry Wadsworth Longfellow.

LET THE BUMBLE BE

One day I saw a bumblebee, bumbling on a rose,
And as I stood admiring him he stung me on the nose.
My nose, in pain, it swelled so large it looked like a potato,
So daddy said, though mother thought 'twas more like a tomato.
And now, dear children, this advice I hope you'll take from me,
And when you see a bumblebee just let that bumble be.
—Winifred Sackville Stoner, Jr. "*Facts in Jingles*," Bobbs, Merrill Co.

Over the river and through the wood,
To have first-rate play:
Hear the bells ring,
"Ting-a-ling-ding!"
Hurrah for Thanksgiving Day!

Over the river and through the wood,
Trot fast, my dapple-gray!
Spring over the ground
Like a hunting hound!
For this is Thanksgiving Day.

Over the river and through the wood,
And straight through the barn-yard gate
We seem to go
Extremely slow—
It is so hard to wait!

SLEIGHING SONG

Jingle, jingle, ring the bells,
Snow is on the ground,
The horses prance, the sleigh-bells ring,
Hark the merry sound!
Jingle, jingle, jingle, on the frosty air,
Jingle, jingle, jingle, sleigh-bells ev'ry-where,
Jingle, jingle, jingle, hear the merry cry,
Jingle, jingle, jingle, see the sleighs dash by!

Jingle, jingle, ring the bells,
Happy throngs dash by,
The air is full of noisy shouts,
See the cutters fly!
Jingle, jingle, etc.
—From Riley and Gaynor, "*Songs of the Child World*," *I*. The John Church Co., Cincinnati.

THANKSGIVING DAY

Over the river and through the wood
To grandfather's house we go;
The horse knows the way
To carry the sleigh
Through the white and drifted snow.

Over the river and through the wood—
Oh, how the wind does blow!
It stings the toes
And bites the nose
As over the ground we go.

Over the river and through the wood—
Now grandmother's cap I spy!
Hurrah for the fun!
Is the pudding done?
Hurrah for the pumpkin pie!

******

See a pin and pick it up,
All the day you'll have good luck!
See a pin and let it lay:
Bad luck you'll have all the day!

******

Peter Piper picked a peck of pickled peppers;
A peck of pickled peppers Peter Piper picked;
If Peter Piper picked a peck of pickled peppers,
Where's the peck of pickled peppers Peter Piper picked?

******

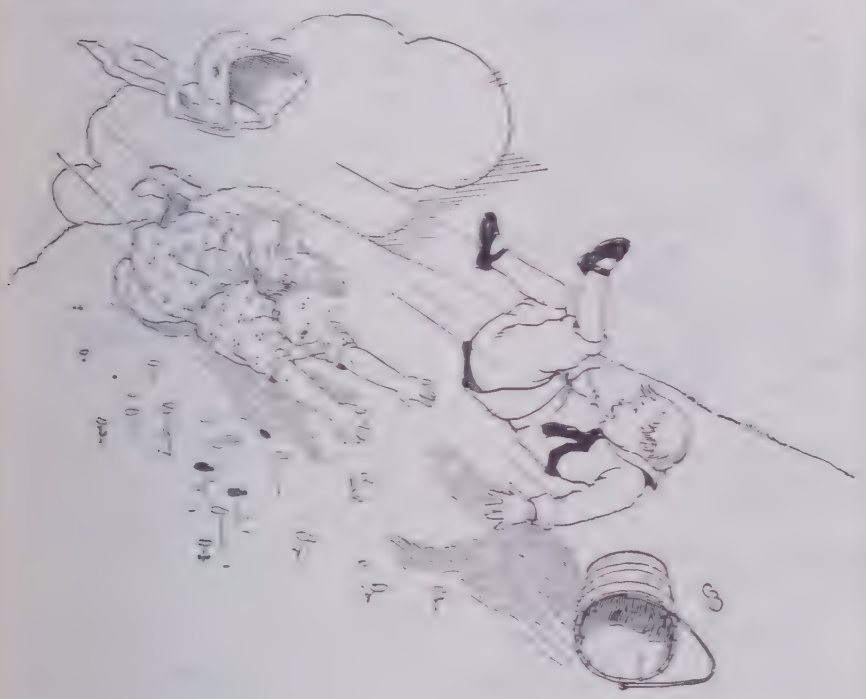
Elizabeth, Lizzy, Betty and Bess,
They all went together to seek a hen's nest.
They found a hen's nest with five eggs in,
They all took one and left four in.

THE HARE AND THE TORTOISE

The hare was very proud of his swift feet. When he met the tortoise, he made fun of her short legs and slow walk. But the tortoise said to him, "Even if you were as swift as the wind, I can beat you in a race." The hare laughed at this talk and agreed he would run a race with her. The fox was chosen to lay out the course and to fix the goal.

Both started together. The tortoise did not stop but ran forward, but went on her way, slowly but steadily. But the hare, who thought that the race was a foolish thing anyway, did not care to make an effort. After he had run a little way he lay down to sleep, meaning to wake up long before the tortoise had gone half the course. But he slept too long, and when he woke up and ran to the goal he found that the tortoise was already there, comfortably resting after her long and hard walk.

THE WIND



Whichever way the wind doth blow,
Some heart is glad to have it so;
Then blow it East or blow it West,
The wind that blows, that wind is best.

******

One, two, buckle my shoe!
Three, four, shut the door!
Five, six, pick up sticks!
Seven, eight, lay them straight!
Nine, ten, a good, fat hen;
Eleven, twelve, on the shelf.
One, two, three, four, five, six, seven, eight, nine, ten, eleven, twelve.

CHILD RIDING ON MOTHER'S KNEE

This is the way the ladies ride:
Tri, tre, tre, tree,
Tri, tre, tre, tree!
This is the way the ladies ride,
Tri, tre, tre, tree;
Tri, tre, tre, tree!
(Swinging leg gently)

Jack and Jill went up the hill
To fetch a pail of water;
Jack fell down and broke his crown,
And Jill came tumbling after.

AROUND THE WORLD

In go-cart so gay
My sister I drew;
And I've promised to show her
The wide world through.
We have not yet started—
I own it with sorrow—
Because our trip's always
Put off till tomorrow.
—Kate Greenaway.

PLAY WITH THE FINGERS

This is the thumb:
He picks a plum;
He carries it in:
He puts it in the bin;
And the little fellow
Eats it all up.

This is the way the gentlemen ride:
Gallop-a-trot,
Gallop-a-trot!
This is the way the gentlemen ride,
Gallop-a-gallop-a-trot!
(Moving leg up and down with more rapid motion)

This is the way the farmers ride:
Hobbledy-hoy,
Hobbledy-hoy!
This is the way the farmers ride,
Hobbledy-hobbledy-hoy!
(Jerking leg up and down)

******

There was an old woman who lived in a shoe,
She had so many children she didn't know what to do;
She gave them some broth without any bread.
She whipped them all soundly, and sent them to bed.

Hush-a-bye, baby, on the tree-top,
When the wind blows the cradle will rock;
When the bough breaks, the cradle will fall,
And down comes cradle and baby and all.

THE WEATHER VANE

This way, that way,
Turns the weather vane;
This way, that way,
Turns and turns again.
Turning, pointing, ever showing
How the merry wind is blowing.
—*Emilie Poulsson, after Friedrich Froebel.*

IMITATION GAME

When I was a lady, a lady, a lady,
When I was a lady, a lady was I;
'Twas this way, and that way,
And this way, and that way,
And this way, and that way,
And this way went I.

(For lady, substitute other words, with corresponding gestures, like gentleman, fairy, blacksmith, baker, postman, cook, laundress, etc.)

THE PIGEON HOUSE

My pigeon house I open wide
And set the pigeons free;
They fly o'er the fields on every side
And light on the tallest tree;
But when they return from their merry flight
We close the door and say, "Good night!":
Coo-roo, coo-roo, coo-roo, coo-roo,
Coo-roo, coo-roo, coo-roo.

(From *"Songs and Games for Little Ones,"* Gertrude Walker and Harriet S. Jenks; Curwen & Sons.)

THE LITTLE PLANT

In the heart of a seed,
Buried deep, so deep,
A dear little plant,
Lay fast asleep.

"Wake!" said the sunshine,
"And creep to the light!"
"Wake!" said the voice
Of the raindrops bright.

The little plant heard,
And it rose to see
What the wonderful
Outside world might be.
—Kate L. Brown

THE RAIN

Pitter-patter goes the rain,
Oh! so many hours;
But though it keeps me in the house
It's very good for flowers.

******

Do all the good you can,
By all the means you can,
In all the ways you can,
In all the places you can,
At all the times you can,
To all the people you can,
As long as ever you can.
—John Wesley

******

Baa, baa, black sheep,
Have you any wool?
Yes, marry, have I,
Three bags full:
One for my master,
And one for my dame,
And one for the little boy
Who lives in the lane.

THE BOBOLINK

The bobolink is a jolly bird,
And a jolly bird is he;
A mother-olink has this bobolink,
And his chicky-olinks are three.

The bobolink, he wears a knob,
All black and white is he;
The mother-olink has a gown of brown,
And gray the babies three.

The bobolink has a merry song,
A merry song has he;
But when his babies try to sing
They just say, "Chee! Chee! Chee!"

—Riley and Gaynor, "*Songs of the Child World*," *II*. The John Church Co., Cincinnati.

Bye, baby bunting,
Daddy's gone a-hunting,
To get a little rabbit skin
To wrap the baby bunting in.

CHRISTMAS SECRETS

The air is full of mystery,
And secrets are a-wing;
And if you happen on one:
Don't you tell a single thing!
  And perhaps we've something hiding
  For each loved one dear,
  For Christmas day is coming
  And will soon be here.

Then Santa Claus will fly around
With heavy laden sleigh,
And down the chimney hasten
In his usual happy way.
  Oh, he brings such loads of presents
  To the children dear,
  And Christmas day is coming
  And will soon be here.

—Riley and Gaynor, "*Songs of the Child World*," *II*. The John Church Co., Cincinnati.

MULBERRY BUSH

As we go 'round the mulberry bush,
The mulberry bush, the mulberry bush,
As we go 'round the mulberry bush,
  So early in the morning.

This is the way we wash our clothes,
Wash our clothes, wash our clothes,
This is the way we wash our clothes,
  All of a Monday morning.

This is the way we iron our clothes, etc.,
  All of a Tuesday morning.

This is the way we scrub our floor, etc.,
  All of a Wednesday morning.

This is the way we mend our clothes, etc.,
  All of a Thursday morning.

This is the way we sweep the house, etc.,
  All of a Friday morning.

This is the way we bake our bread, etc.,
  All of a Saturday morning.

This is the way we go to church, etc.,
  All of a Sunday morning.
    (Old Game)

Tread, tread the green grass,
  Dust, dust, dust,
Come all ye pretty fair maids
  And walk along with us.

If you be a fair maid,
  As I suppose you be,
I'll take you by the lily-white hand
  And lead you across the sea.
    (Old Dancing Game Rhyme)

******

"Will you have a paper of pins?
For that's the way my love begins—
  And will you marry me, me, me,
  And will you marry me?"

"No, I'll not have a paper of pins,
If that's the way your love begins."

"Will you have a little lap-dog
Who may follow you abroad?
  And will you marry me, me, me,
  And will you marry me?"

"No, I will not have a little lap-dog
Who may follow me abroad!"

"Will you have a coach and four,
Footman behind and footman before?
  And will you," etc.

"No, I will not have," etc.

"Will you have a dress of red,
All trimmed 'round with golden thread?" etc.

"Will you have a satin gown,
All set off with a golden crown?" etc.

"Will you have the key to my chest,
To draw out gold at your request?" etc.

"Will you have the key to my heart,
That we may love and never part?" etc.

"Yes, I will have the key to your heart,
That we may love and never part,
  And I will marry you, you, you,
  And I will marry you."
    (Children's old Love Game)

THE FARMER IN THE DELL

The farmer in the dell,
The farmer in the dell,
  Heigh ho! for Rowley O!
The farmer in the dell.

The farmer takes a wife, etc.

The wife takes a child, etc.

The child takes a nurse, etc.

The nurse takes the dog, etc.

The dog takes the cat, etc.

The cat takes the rat, etc.

The rat takes the cheese, etc.

The cheese stands alone, etc.
    (Old Game)

COUNTING APPLE SEEDS

One, I love,
Two, I love,
Three, I love, I say,
Four, I love with all my heart,
And five, I cast away.
Six, he loves,
Seven, she loves,
Eight, they both love;
Nine, he comes,
Ten, he tarries,
Eleven, he courts,
Twelve, he marries;
Thirteen wishes,
Fourteen kisses,
All the rest little witches.

THREADING THE NEEDLE

  The needle's eye
  You can't pass by,
The thread it runs so true;
  It has caught many a smiling lass,
But now it has caught you.
    (Old Game)

******

It rains, it hails, it's cold, stormy weather;
In comes the farmer, drinking all his cider,
I'll be the reaper, who'll be the binder?
I've lost my true love, where shall I find her?
    (Another old Circle Game)

HAND-SLAPPING GAME

Pease porridge hot,
  Pease porridge cold,
Pease porridge in the pot,
  Nine days old.

RIDDLE

Two legs sat upon three legs
With one leg in his lap;
In comes four legs
And runs away with one leg;
Up jumps two legs,
Catches up three legs,
Throws it after four legs,
And makes him bring back one leg.
(Man, stool, leg of lamb, dog)

THE BULLDOG

Oh! the bulldog on the bank,
And the bullfrog in the pool!
The bulldog called the bullfrog
A green old water fool!

Oh! the bulldog stooped to catch him,
And the snapper caught his paw,
The pollywog died a-laughing
To see him wag his jaw.

Says the monkey to the owl:
"Oh! what'll you have to drink?
"Why, since you are so very kind,
I'll take a bottle of ink."
(College Song)

JOLLY OLD ST. NICHOLAS

Jolly old St. Nicholas,
Lean your ear this way!
Don't you tell a single soul
What I'm going to say!
Christmas Eve is coming soon,
Now, you dear old man,
Whisper what you'll bring to me,
Tell me if you can.

When the clock is striking twelve,
When I'm fast asleep,
Down the chimney, broad and black,
With your cap you'll creep.
All the stockings you will find
Hanging in a row;
Mine will be the shortest one,
You'll be sure to know.

Johnny wants a pair of skates,
Susy wants a dolly,
Nellie wants a story book,
She thinks dolls are folly!
As for me, my little brain
Isn't very bright;
Choose for me, Old Santa Claus,
What you think is right.

THE NIGHT BEFORE CHRISTMAS

'Twas the night before Christmas,
When all thru the house
Not a creature was stirring,
Not even a mouse.

The stockings were hung
By the chimney with care,
In hopes that St. Nicholas
Soon would be there.

The children were nestled
All snug in their beds,
While visions of sugar-plums
Danced through their heads.

Mamma in her 'kerchief,
And I in my cap
Had just settled our brains
For a long winter's nap.

When out on the lawn
There arose such a clatter:
I sprang from my bed
To see what was the matter

Away to the window
I flew like a flash,
Tore open the shutters
And threw up the sash.

The moon on the breast
Of the new fallen snow
Gave a lustre of mid-day
To objects below:

When what to my wondering eyes
Should appear—
But a miniature sleigh
And eight tiny reindeer!

With a little old driver,
So lively and quick:
I knew in a moment
It must be St. Nick

More rapid than eagles
His coursers they came,
And he whistled and shouted
And called each by name:

"Now, Dasher, now, Dancer,
Now, Prancer, now, Vixen!
On, Comet! On, Cupid!
On, Donner and Blitzen!

To the top of the porch,
To the top of the wall,
Now, dash away, dash away,
Dash away, all!"

He was dressed all in fur
From his head to his foot,
And his clothes were all tarnished
With ashes and soot;

A bundle of toys
He had flung on his back,
And he looked like a peddler
Just opening his pack.

His eyes, how they twinkled!
His dimples, how merry!
His cheeks were like roses,
His nose like a cherry.

His droll little mouth
Was drawn up like a bow,
And the beard on his chin
Was as white as the snow.

The stump of a pipe
He held tight in his teeth,
And the smoke, it encircled
His head like a wreath.

He had a broad face,
And a little round belly
That shook when he laughed
Like a bowl-full of jelly.

He was chubby and plump—
A right jolly old elf,
And I laughed when I saw him
In spite of myself.

A wink of his eye,
And a twist of his head
Soon gave me to know
I had nothing to dread.

As dry leaves before the wild hurricane fly,
When they meet with an obstacle, mount to the sky:
So up to the house-top the coursers they flew,
With the sleigh full of toys, and St. Nicholas, too.

And then, in a twinkling,
I heard on the roof
The prancing and pawing
Of each little hoof.

As I drew in my head,
And was turning around,
Down the chimney St. Nicholas came
With a bound!

He spoke not a word
But went straight to his work,
And filled all the stockings,
Then turned with a jerk—

And, laying his finger
Aside of his nose,
And giving a nod,
Up the chimney he rose.

He sprang to his sleigh,
To his team gave a whistle,
And away they all flew
Like the down on a thistle.

And I heard him exclaim
Ere he drove out of sight:
"MERRY CHRISTMAS TO ALL,
AND TO ALL A GOOD NIGHT!"

THE PUZZLED CENTIPEDE

A centipede was happy quite,
Until a frog in fun
Said, "Pray, which leg comes after which?"
This roused her mind to such a pitch,
She lay distracted in the ditch
Considering how to run.

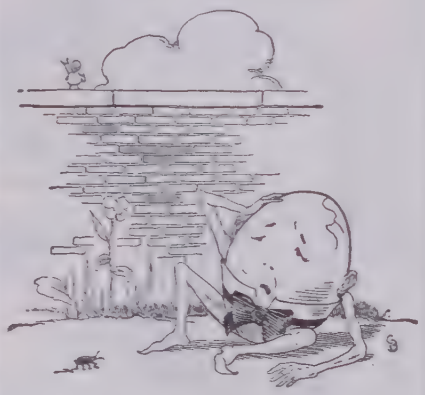
THIS LITTLE PIG

This little pig went to market;
This little pig stayed home;
This little pig had roast beef;
This little pig had none;
This little pig said, "Wee, wee, wee,"
All the way home.

ONE, TWO

One, two,
Buckle my shoe;
Three, four,
Shut the door;
Five, six,
Pick up sticks;
Seven, eight,
Lay them straight;
Nine, ten,
A good fat hen;
Eleven, twelve,
Who will delve?
Thirteen, fourteen,
Maids a'courting;
Fifteen, sixteen,
Maids a'kissing;
Seventeen, eighteen,
Maids a'waiting;
Nineteen, twenty,
My platter's empty.

THE OWL AND THE PUSSY-CAT



The Owl and the Pussy-Cat went to sea
In a beautiful pea-green boat,
They took some honey, and plenty of money,
Wrapped up in a five-pound note.
The owl looked up at the stars above,
And sang to a small guitar,
"O lovely Pussy! O Pussy, my love,
What a beautiful Pussy you are,
You are!
What a beautiful Pussy you are!"

Pussy said to the Owl, "You elegant fowl!
How charmingly sweet you sing!
O let us be married! Too long we have tarried:
But what shall we do for a ring?"
They sailed away for a year and a day,
To the land where the Bong-tree grows,
And there in a wood a Piggy-wig stood,
With a ring at the end of his nose,
His nose,
With a ring at the end of his nose.

"Dear Pig, are you willing to sell for one shilling
Your ring?" Said the Piggy, "I will."
So they took it away, and were married next day
By the Turkey who lives on the hill.
They dined on mince, and slices of quince,
Which they ate with a runcible spoon;
And hand in hand, on the edge of the sand,
They danced by the light of the moon,
The moon,
They danced by the light of the moon.
—Edward Lear

BOW WOW, SAYS THE DOG

"Bow wow,"
Says the dog;
"Meow,"
Says the cat;
"Grunt,"
Goes the hog;
And "squeak,"
Goes the rat.
"Two-who,"
Says the owl;
"Caw, caw,"
Says the crow;
"Quack, quack,"
Says the duck,
And what sparrows
Say, you know.
So, with sparrows and owls,
With rats and with dogs,
With ducks and with crows,
With cats and with hogs,
A fine song I have made
To please you, my dear;
And if it's well sung
'Twill be charming to hear.

HUMPTY DUMPTY

Humpty Dumpty sat on a wall,
Humpty Dumpty had a great fall,
All the King's horses and all the King's men,
Couldn't put Humpty back again.

AMERICA THE BEAUTIFUL

O beautiful for spacious skies,
For amber waves of grain,
For purple mountain majesties
Above the fruited plain!
America! America!
God shed his grace on thee
And crown thy good with brotherhood
From sea to shining sea!

O beautiful for pilgrim feet,
Whose stern, impassioned stress
A thoroughfare for freedom beat
Across the wilderness!
America! America!
God mend thine every flaw,
Confirm thy soul in self-control,
Thy liberty in law!

O beautiful for heroes proved
In liberating strife,
Who more than self their country loved,
And mercy more than life!
America! America!
May God thy gold refine
Till all success be nobleness
And every gain divine!

O beautiful for patriot dream
That sees beyond the years
Thine alabaster cities gleam
Undimmed by human tears!
America! America!
God shed his grace on thee
And crown thy good with brotherhood
From sea to shining sea!
—Katharine Lee Bates

LANGUAGE AND GRAMMAR

CORRECT SPEECH

Easy Ways of Learning How to Speak Correctly

If all mothers realized the truth of Herbert Spencer's words: "Teach a child good English in the cradle and he will speak good English to the grave" I am sure that baby talk and slovenly speech would become obsolete. Well-meaning mothers are eager to give their children the right start in life but some of them do not realize that the so-called "Baby Talk" that is often used in talking to babies, puts a stumbling block in the way of children's progress. If grown people were taught two words for each object when they were trying to study a new tongue they would find themselves unable to know which word to use when trying to call an object by its name. The Baby comes into this world with impressions of millions of ancestors back of him but without any language medium to express thoughts that may come to him concerning the new world in which he lives. He is the most wonderful piece of machinery that has ever been created but he is the most helpless of young living things. The kitten, the little pup, the young colt all learn to walk and to express themselves long before the baby can perform these natural acts. Mother Cat has taught her young kitten how to converse in cat language and how to make its own living long before a baby can hold a rattle or say one word.

However, the baby is not an animated vegetable. It has more thoughts in its first days of babyhood than the kitten has in its entire life time. The baby is God's most wonderful creation. It has come not only into this world to live but it must live in a life to come and every parent should realize the great responsibility of parenthood and should strive in every way to give BABY a strong foundation upon which to build his life's character that leads him to Success or to Failure. Early impressions are lasting. The baby is but clay in the hands of the potters—his father and mother. Upon them depend his health, his happiness, his efficiency when he grows to maturity.

It is my belief that people in this world are judged by the way they dress, the way they talk, and the way they eat. I am sorry to call attention first to the manner of dress but I am sure that I am right in believing that when people first meet an individual they judge that one by the clothes he or she wears. The dress worn by anyone seems to indicate whether that person is rich or poor, slovenly or orderly, possessed of good or bad taste, thoughful or careless, stingy or generous. In fact a thousand thoughts come into the mind when we look at a person and the frame surrounding that person, which we call dress. In the same way we judge people by the way they eat, standing for a knowledge of good manners. If people know how to eat correctly they generally know how to act in good company. "Having passed the eating ordeal, I judge a man a gentlemen", said Chesterfield, who believed that manners would take a man where knowledge could not lead him in ways of success.

And correct SPEECH is the dress in which we clothe our thoughts. If we use coarse or slovenly speech we indicate that we have coarse or slovenly minds. If we "murder English", the term applied to using incorrect forms of speech, we are adjudged by those who know the English language, either as careless beings who do not make use of the knowledge we possess or as poor ignorants who have not had the opportunity of learning how to speak correctly. Incorrect speech very often makes us distasteful to high-class people just as ragged clothes bar us from going to beautiful receptions. A person with a cultivated ear for correct English actually suffers when hearing the beautiful English tongue mutilated just as one who loves a beautiful picture or object does not like to see it marred in any way. Using "I SEEN" and "I HAVE SAW" "I DONE IT", "AINT IT SO?", "BETWEEN YOU AND I", "THAT'S HIM", "I FEEL BADLY", "I LAID DOWN", "T'VE GOT A BOOK", "I was TALKIN' TO HER", "SEZ I", and similar expressions cause pain to the lover and user of CORRECT ENGLISH.

The foundation of a house is the most important part of that structure but there are many people who begin at the chimney to mend or to improve the house. The foundation stone, which should be laid through parental training even before the baby is born, is the most important part of the body house. Parents should try to make themselves well-informed parents upon all matters that lead to success before the baby comes. If the young husband and wife strive to help each other to speak good English and read good books that give them this help, the baby's first acquaintance with the English language will be that which is correct and with this impression he will go through life. But there are some mothers and a few fathers who think that it is necessary to talk ITSIE OOTSIE LANGUAGE when addressing a baby. In this respect they give the baby a worse reputation as a creature of understanding than they give to a pet. The man does not say to his dog: "Dear Ittle Bow wow Buster, do ooh lub me a ittle?" Instead he uses sensible language in talking to his dog and says "Buster, old boy, I know you're my friend and you will always love me."

When my little daughter was seven years of age she listened to a mother talking baby talk to her child and then she said "Dear mother, is it any wonder that the poor baby cannot talk English? Suppose you told me that the name of our milk giving animal was 'MOO MOO' and my father said "That is a cow", how would I know which was the correct name for the milk giver? In the same way, if you told me that the name of the machine that pulls cars is a 'Choo Choo' and my father called it "Locomotive" wouldn't I be puzzled as to the name that was proper for this piece of machinery?"

I agree with Winifred that nothing is more harmful as regards teaching a child how to talk than this baby talk.

The following jingle written by Winifred after our discussion expresses my sentiments:

Him is his muvver's Ootsie OOh
And muvver lub him yes she do.
Does him see de big moo moo
And the great big choo, choo, choo?
Hear him talk and say "Goo Goo!"
Watch him tiss his muvver, do,
Is him fraid ob big BOO BOO
Dat will catch him OOH! OOH! OOH!"
Thus some mothers talk each day
When with little ones they play
Then wonder WHY the babes don't say
English words in the proper way.

I have been accused by some mothers of taking the very joy out of their lives through ridiculing Baby Talk. It is their contention that the greatest happiness a mother has is in talking the ITSIE OOH Tongue. Nevertheless, even if I am depriving mothers of pleasure, I am pleading with parents to speak the best English that they know when they are in the presence of HIS MAJESTY, THE BABY.

In the first place they should cultivate gentle voices, for babies are very sensitive to harsh sounds and besides real language is intended to be spoken in a musical way. The Road to success is led, as someone has said, by musical tongues. We cannot all be Jenny Linds or Adelina Pattis but we can have pleasing voices which attract people to us rather than harsh, ear-splitting voices that drive folks away. If our parents give us, through hearing modulated voices, the proper foundation, it will be easy for us to speak gently and kindly. But even if we have not had this foundation it is the duty of every parent to train himself and herself for the benefit of the next generation.

Parents should be careful not to make contractions in speech. They should listen to themselves and hear if trying to be speedy has given them the tendency to say "Walkin", "Talkin", "Eatin", etc. When speaking to the baby it is wise to accentuate the ING. When Baby is learning to walk, hold out your arms and say; "Come walkING to me." When baby says something, the parent says "Baby is talkING to me." When the child is taking his food, say "Baby is eatING his dinner." In order to keep this in mind it might be well to put up a little motto BE CAREFUL OF THE INGS. Mottoes in times past were hung in every home but unfortunately most of them suggested death or punishment. I remember seeing in one home "BE SURE YOUR SINS WILL FIND YOU OUT." Naturally the children were haunted by these words. But cheerful mottoes that help us to speak better English, remind us of our duties, or suggest a smile are most helpful in every home.

In the Literary Digest published by Funk and Wagnalls, New York City, there is a lexicographer each week giving helpful suggestions in speech and answering questions that are asked by readers of

The Digest. This column has been helpful to many parents in knowing what is correct and what is not correct. Josephine Turck of Evanston, Illinois publishes a number of up-do-date books on "Your Every Day Vocabulary", "Correct English", "The Art of Conversation", and also a magazine called "Correct English; How To Use It". Her publications are most helpful and keep one up to date in the forms of speech since we must remember that language, just as dress, changes its style. Chaucer wrote beautiful English in his day but we no longer say "When that April with its showers swootie." Men like Huxley, Wooster, Webster, Roosevelt, etc., give us new words through explosions of speech and also through putting into books new word-forms that have been made in moments of excitement or through new inventions. At least 2,500 words, it is said, were coined during the last war and some of them are already in the new dictionaries.

THE DICTIONARY is our best friend in teaching us to speak correct English and in giving us an understanding of the words in this language. People may laugh at the old lady who said that "she read the dictionary from A to Z while her husband read the Bible from The World's creations to its end," but there is no better way to acquire flowing and rich robes in which to dress our thoughts than through seeking the dictionary's aid each day. When we read and find a new word or when we hear a new word spoken, to the dictionary we should go. And we should give the dictionary habit to our children. I believe in putting the dictionary on a low window seat so that it will be handy for every one in the house to seek for information. And I would suggest also that The Volume Library be placed next to the dictionary, making it easy of access. In the home equipped with these two good books in addition to the book that has always been called "The Good Book" there will be no need of a "cramped vocabulary" or of ignorance concerning the world's doings.

Some of us may suffer because we do not have many dollars but there are few people who need to suffer for lack of words in which to clothe their thoughts if they will only seek for new words each day to express thoughts. Instead of saying "AINT IT GRAND?" for everything that looks beautiful, husband and wife might amuse themselves by seeing who can find the greater number of adjectives to express the thought of beauty. Children can join in this game and thus expand their stock of words so that they will not get into the habit of depending upon a few very much overworked words to express their ideas. A little girl who played this game with me gave me the following list of words expressing grand:

Beautiful, handsome, pretty, lovely, graceful, elegant, delicate, dainty, refined, brilliant, splendid, rich, gorgeous, superb, magnificent, fine, sublime, enchanting, becoming, glorious, remarkable, radiant, great, noble, imposing, majestic, good, superior, choice, select, rare, priceless, exquisite, and precious.

I know of one mother who plays a game with her children called FAIRY WORDS. Each day she gives the children in the morning one or two new words, words that they have never heard before and asks them to see how often they can use the words during the day. These young children have started the very sensible plan of keeping diaries and each day they attempt to bring the NEW FAIRY WORDS into the diary. The mother reads what the children have written and corrects the sentences if Fairy Words have not been used correctly. We have all heard the story of the man who was told by a joking friend " He fell notwithstanding". The man went home and said to his wife "Oh I have such a funny joke—(Ha Ha). He fell nevertheless." People who do not have a thorough understanding of words are constantly making what the old lady who tried to talk French called FOX PAWS (Faux pas) or mistakes. Parents who correct their children not only for using blasphemy but also for making mistakes in English are giving the little ones a right start in life. There is a certain store in New York where I go to do all my shopping because the salespeople in that store speak good English. It is so much more pleasant to hear people use good English than to hear vulgarisms and lame constructions that I would walk ten blocks out of my way to buy from salespeople who are polite and well spoken. In the educational room of this store a short time ago I saw the following:

TEN DO NOTS

Do not say—Aren't they nice? SAY; Are they not nice?

Do not say—What did you come for? SAY; For what did you come?

Do not say—Tomorrow is Wednesday. SAY; Tomorrow will be Wednesday.

Do not say—Can I show you? SAY; May I show you.

Do not say—To who shall I send this? SAY; To whom shall I send this?

Do not say—These kind of lace. SAY; This kind of lace.

Do not say—If I had of known. SAY; If I had known.

Do not say—We haven't got any lace. SAY; We have not any lace.

Do not say—I only have these. SAY; I have only these.

Do not say—She don't like it. SAY; She doesn't like it.

DONT'S like these might be used on A HOME SLATE EACH DAY, pointing out to the children the CORRECT and INCORRECT FORM of words. It is always better to use the positive than the negative, teaching the child that he should say "May I show you" and saying nothing about "Can I show you." But when the child hears other children using CAN for MAY then it is necessary to tell him why he should use the polite MAY that suggests asking permission rather than the determined CAN that denotes he can do what he chooses. Sometimes in my own home I have used Winifred's Chautauqua Desk for one word each day. In the morning we would select one word such as DON'T or DOESN'T and during the day we listened attentively to hear if anyone in our house used don't for doesn't. Winifred kept score and at night we had a great deal of fun seeing if Daddy, Mother, or Winifred had been guilty. By being particular about the use of this word for only a single day it is surprising how we trained ourselves to be on the qui vive in keeping DON'T for DOESN'T out of our conversation on other days.

TEACHING CHILDREN TO READ AND TO SPELL AT AN EARLY AGE HELPS TO GIVE A GOOD COMMAND OF THE ENGLISH LANGUAGE

There are some educators who warn parents not to teach their children how to read at an early age, but from an extensive study of children both, from the physical and mental viewpoint, I am convinced that the muscles of the eyes are not injured by early reading and that the sooner a child finds the companionship of book friends, the sooner he will gain practical knowledge along all lines. I am not, however, advocating the old-fashioned or some of the modern methods of teaching reading. I use FAIRY TYPEWRITER to give children the open sesame to knowledge through the reading art. The typewriter, in my opinion, is the most helpful tool in teaching correct English and in helping the child to teach himself to read. My method of giving him this instruction is through showing three-year-old John or Mary the word CAT accompanied by a picture of the cat. I point to the letter C and ask the child if she can find this letter on the typewriter. The observing child soon discovers C and with one finger she strikes C and sings to the air of Twinkle, Twinkle, Little Star. "CCCCCCCCCCC CCC". The song helps her to strike rhythmically and not to jar herself or the machine. Then I show her the letter A and she makes a row of A's in the same way. A row of T's follows. Her eye is being trained and at the same time her sense of rhythm. By the time that she has made several rows of C's and A's and T's she is familiar with these letters. Then, to the air of an old Folksong which is now used in the United States to sing "We Won't Get Home 'Till Morning", the child sings and writes C-A-T cat, C-A-T cat, C-A-T cat, C-A-T cat. As she says "cat" she strikes the space bar, and after singing C-A-T cat for twelve times she has a picture of cat on Memory's walls that will remain through life. In the same way large words make impressions and the visual memory is developed while the child learns when to use the different punctuation marks, and gains some knowledge of what is good English through copying classics. Dr. M. V. O'Shea's Six Nursery Classics is an ideal book to use in giving children their first reading lessons. Through copying The House that Jack Built, the child recognizes the words that are used repeatedly and keeps these words for his own. As a mimic he copies punctuation marks and with a little help from his parents he learns when to use commas and when to use semicolons. Little Billy Walsh of Pittsburgh when but four years of age had a knowledge of all punctuation marks and rarely made a mistake in their use. He gained this knowledge through copying the classics on the typewriter and at the same time he gained a wonderful vocabulary and memorized beautiful thoughts of the masters. Carlyle has told us that we should make for ourselves "nests of pleasant and restful thoughts that cannot disturb, nor pain make gloomy nor poverty take away from us. Houses not built with hands for our souls to dwell in." And these nests of beautiful thoughts cannot be given to children too early nor through a more helpful instrument than the good Fairy Typewriter. The child who writes upon the typewriter, copying rhythmically good English, will not say CHUNE for TUNE, INDIAN and ENGINE, INJUN, TER for TO, DULLICATE for delicate, CONSTITOOTION for constitution, CORNFEDENSHALL for confidential, TELLAPHONE, and he will learn to spell correctly. The modern child does not spell correctly. Fairy Typewriter helps him to spell words as they should be spelled and to speak good English by learning to have a mental picture of what is good English.

A wise man once said: "Your morals are your own but your manners belong to the public," and when manners are mentioned "manner of speech" comes first. Few people are consciously vulgar or unkind, but so often an impression of crudity and rudeness is given simply because one is in ignorance of the right thing to do or to say. There are certain expressions and words which mark a man or woman as an uncultivated person. The woman who says: "Yeh" for "Yes" or shakes her head in the savage way of saying the positive, betrays lack of culture. In the same way when she says: "I am through" for I have finished, "Where is he at?" for "Where is he?", "I done it" for "I did it," "I ast her" for "I asked her," etc., she shows that either she did not receive the proper training in her youth or she has associated in her adult life with people who lack refinement. It is best to give our children good educational foundations in the way of providing them with words that will help them through life so that they may not suffer from Word Poverty. Man is literally what he thinks, and words express his thoughts. If he alters his words he changes his character. When he is very young teach the baby through setting him a good example, through allowing him to teach himself by writing good English on the typewriter that the English language is one of the most precious possessions of a liberty loving people. This composite language which embodies the history of the race should be cherished in its purity by everyone who uses it; and it should be each American's duty to guard it by precept and example from misuse.

GAMES TO TEACH CHILDREN CORRECT ENGLISH

It may seem ridiculous to some parents and teachers but I believe in teaching very young children something of the science of ETYMOLOGY and of PHILOLOGY. I tell the little ones that WORDS have mothers just as children have parents and that they have also cousins. Etymology, I tell them, is the name of a very interesting study that tells us about the words' mothers. Philology tells about the relatives. The simple international language, Esperanto, is perhaps the best medium through which to give this information because it is founded upon many Latin roots. I have used the following jingle written by my little daughter when she was five years of age, as a first lesson in etymology and philology:

HUNDIDO krias bow! wow! wow!
KATIDO krias meow! meow!
BOVIDO krias moo! moo! moo!
KOLOMBO krias coo! coo! coo!
SHAFIDO krias baa! baa! baa!
INFANO krias ma! ma! ma!

I tell the child that Hundido has a German mother Hund. Katido has also a German mother Katze, and Shafido has the same kind of a mother named Shaf. Bovido has a Latin parent named Bovus, Kolombo, a Latin parent named Columba, and Infano has a Latin mother Infans.

By using pictures with this chart and also representing the sounds of the animals children have little difficulty in learning that Hundido stands for dog in Esperanto. A knowledge of the origin of words is most helpful to anyone. In fact I believe that parents should teach very young children the names of various foods and objects in the home in Latin. This knowledge will be very helpful in years to come. The pre-school age is the most active of all ages and little three-year-old Mary will be interested in learning that long ago the little Roman children called Language LINGUA, or tongue, and that is how we got the word language.

The mother who has some knowledge of Latin can help to give her child a firm foundation upon which to build his English by teaching him the names of Latin mother-words and she can play tea party or various games to give him this knowledge. In the little Esperanto jingle that I have just given you, she can ask the children how many Latin mothers and how many German mothers they can find. After playing the game a few times the little ones will never forget that INFANO' or Infant, has a Latin mother word. The word mensa for table, sella (chair), pila (ball), rosa (rose), simia (monkey), puella (girl), puer (boy), mater (mother), pater (father), ursa (bear), luna (moon), animal (animal), sol (sun), domus (house), manus (hand), are easy to be remembered and help the child in his studies as he grows older.

The following Latin and English jingle may be used as a game and helps to give the child his proper language foundation:

Leo for lion the great king of beasts,
Tigris for tiger, on bones he feasts;
Simia, monkey; ursus a bear
Elephas, elephant; lepus, a hare.

Give each child the name of one of these animals, leo, tigris, simia, ursus (masculine bear), elephas, lepus. After each child tells what animal is represented call out suddenly: "Elephas chase simia!" "Ursus catch lepus!" "Leo chase tigris!" Each one must be on the qui vive for his or her name and this game trains the observation as well as the language memory. It also gives amusement to the children. Little two-year-old children have learned to know that elephas is the Latin for elephant and that simia stands for monkey.

ANAGRAMS

Anagrams are useful in teaching children their letters, in showing how words are spelled and in building Language Houses with correct English. Very little children may not know how to construct sentences but they can play with little boxes pretending that the boxes are cars in which they can load all the A's, B's, C's, etc., and let these cars travel to Language house which we may call AT, IT, OG, EN, AM, etc. Children can make bat, cat, fat, gat, hat, mat, nat, rat, sat, tat, vat, with AT. Using IT they can form bit, fit, hit, It, kit, lit, mit, pit, sit, wit, With EN they can make Ben, den, fen, hen, men, pen, ten. With AM dam, ham, ram, Sam, tam. With OG bog, cog, dog, fog, hog, jog, log.

Very often new words may be learned through playing this game. The word GAT is not well known but it is a word in the dictionary standing for a break in the river's bank. Spelling may be made a delight to children through the use of the typewriter, spelling with blocks and anagrams, and through having old-fashioned spelling BEES, giving the young folks only the simplest words to spell and singing songs to them before they spell.

To air of Farmer in The Dell, sing:

G-O-O-D good, G-O-O-D good
We are always happy when we're
G-O-O-D good.

F-L-A-G flag, F-L-A-G flag
Three cheers for the U. S. A. F-L-A-G
flag.

To air of Go Tell Aunt Betsy three children can play CAT and RAT. With cards C, A, T—one hung from each child's neck—the kiddies hold hands and dance around asthey sing:

C-A-T cat, C-A-T cat, C-A-T cat
C-A-T spells CAT.

Three other children with letters R-A-T, one letter hung around the neck of each child, join hands and sing to same air:

R-A-T rat, R-A-T rat, RAT- rat,
R-A-T spells rat.

Then the C-A-T, still holding hands, tries to chase the R-A-T, also still holding hands, so as to form a circle. The children think that this game is great fun. The Cat may be chased to Pat or any other word in the AT family.

WHAT DOES THE CAT DO?

Another game to teach spelling and to impress upon the child what a cat can do, while adding new words to said child's vocabulary and helping in flow of speech, is the following:

Mother begins by telling one thing that C-A-T can do. C-A-T laps M-I-L-K milk. Then the baby tries to tell something that C-A-T can do. The C-A-T meows! The C-A-T catches rats. The C-A-T purrs. The C-A-T plays with a ball.

When the child knows his friend from every angle the mother can introduce new animal friends into the nursery through pictures or she can take the child for a walk and show him these animals. So many of us go through the world with "Buttons for eyes" that we know very little about our animal friends. Recently I met a well educated man who would not believe me when I said that a cow did not have teeth in her upper jaw. The well trained baby can be taught all of these interesting facts in babyhood days, the days that make the greatest impression upon him. He can learn to spell about the Cow and make simple but correct sentences: The C-O-W cow gives milk. The cow eats grass. The cow says "Moo!" The cow is red.

By putting large red letters of the alphabet as a frieze around the nursery wall and talking about these letters or singing this little song to air of Twinkle Twinkle Little Star, the child is helped towards a knowledge of the signs that the Phoenicians gave us to express language or thought in written form:

A, B, C, D, E, F. G—H—I. J—K—L, M, N, O, P.—Q—R—S—T—U—V—W—X, Y, Z

I'm as happy as can be because I know my A. B. C.

By talking about LETTER A and comparing it with other letters A, the baby soon learns to know A for all time. Then teach him about B—and so through the alphabet.

PLAYING PUZZLES

Let the mother draw some letters and then ask the child to make these letters. Use the following jingle:

Make a letter which looks like a tent——A
Make a letter with its back bent——B
Make a letter with a round nose——P
Make a letter with tail and not toes——Q
Make a letter with humps on its back——B
Make a letter like a snake's track——S
Make a letter that's round as a ring——O
Make a letter that's straight as a string——I.

Reading from the classics to children and telling them stories help in giving good language foundations. After telling the

story ask the children to tell you the tale. The Peter Rabbit Tales, Jatakas Stories of India, are excellent stories that always interest little folks. The Jatakas Tales have been told in India to children for many generations in order to teach the young folks morals. They have been recently translated into English by Ellen C. Babbitt, and Felix Adler says: "'The Jatakas Tales' contain deep truths, and are calculated to impress lessons of great moral beauty," and best of all, as Miss Babbitt gives them, they are expressed in excellent English.

Long ago John Locke in his book "How to Bring Up Children" tells mothers "To instill sentiments of Humanity, and to keep them lively in young folks, will be to accustom them to Civility in their Language and Deportment towards their inferiors. He suggests also in teaching children how to command the English language that parents should begin with the home and talk with their young students about everything in the home. In the same way go to the forest and get acquainted with the forest. This plan has been adopted in our times by the A. S. Barnes Company in some of their spelling books that give the child big and little words concerning parts of houses, stores, etc. The words portico, arcade, porch, balcony, piazza, vestibule, veranda, mantelpiece, chandelier, baseboard, threshold, transom, skylight, eaves, shingles, rafters, chambers, dining room, sitting room, corridor, library, reception room are given in a HOUSE GAME. Children have been known to live in up-to-date houses until six years of age and to be ignorant of the meaning of transom, baseboard, etc. No wonder that they go through life without seeing ears and tongues that express thoughts readily.

WORDS TO BE USED FOR EXPRESSING THOUGHTS ABOUT THE STORE

Merchant, buyer, cashier, clerk, show case, show window, counter, shelf scoop, scale, barrel, bin, piece, dozen, quart, pint, gallon, ounce, bushel, peck, pound, piece, cheap, cord, wrap, loss, gain, package, parcel.

WORDS USED IN DESCRIBING THE FOREST

Trees, tall, low, briars, brambles, leaves, flowers, green, red, brown, colors, root, trunk, bark, twigs, limbs, branches, boughs, cedar, oak, chestnut, bamboo, cocoanut, elm, maple, pine, sycamore, earth, birds, animals, spring, summer, autumn, fall, winter.

In the same way parents can make lists of the things to eat, the objects in various rooms, the animals, birds, insects, etc. Each week select one subject and talk about that subject for an entire week, giving the child information about said subject, encouraging him to increase his vocabulary through spelling, writing, and recognition, both by eye and ear, of new words. In this way a parent can at least give his child a rich vocabulary if he cannot give him wealth in money, houses, and lands.

When foreigners study English they are often greatly confused because so many English words are pronounced the same but have different meanings. The young child is also confused by such words as pain, meaning an ache, and pane, standing for a glass window pane. A game played by a mother who has the dramatic instinct to show her children the meaning of words pronounced alike will be very helpful in giving new words to the gold mine of language and will assist in spelling.

Let us take the words bell and belle. She can ring the B-E-L-L and then show the picture of a fine lady called BELLE by name and acting as a belle in society. The following list of words may be used by parents in trying to show the meaning of similar sounding words:

Be, Bee; stile, style; hole, whole; blew, blue; bad, bade; him, hymn; knot, not; but, butt; made, maid; hear, here; time, thyme; wrote, rote; knew, new; rap, wrap; cent, sent, scent; in, inn; plum, plumb; ate, eight; jam, jamb; hart, heart; all, awl; stare, stair; read, reed; read, red; die, dye; knit, nit; fore, four; forth, fourth; to, too, two; threw, through; hew, hue; sun, son; wood, would; fir, fur; earn, urn; gait, gate; grate, great; hail, hale; mail, male; bare, bear; fair, fare; hair, hare; pair, pare, pear; their, there; meat, meet; berry, bury, etc.

A long list of these words will be found in Word Lessons by Alonzo Reed. I have found them very useful in helping children to understand the meaning of words with similar pronounciations and also to teach spelling. Professor Reed believes also in teaching quotations that are worth while and in using the words that we wish the children to understand. Note the following examples:

BE just and fear not—Shakespeare.

The BEE hive's hum shall soothe my ear.—Shakespeare.

Thine own true KNIGHT by day or NIGHT.—Shakespeare.

FOUL deeds will rise.—Shakespeare.

Behold the FOWLS of the air.—Bible.

Quotations may also be given with the words omitted that are to be featured. The mother may either write these quotations for the larger children or repeat them for the little folks. These language lessons are being written to help both little and big children. We must remember that there are one hundred and sixty eight hours in each week and the children are in school not over thirty hours, leaving one hundred and thirty eight hours for the education of home, church, and street. The church plays a very unimportant part as regards number of hours devoted to the child's education but the home and the street play a most important part. If the child hears his parents use bad English or the children in the street using slang and incorrect forms of speech he will use incorrect English despite all the rules that he learns at school. I met a little girl in Pittsburgh, a few years ago, who made ninety eight per cent in her language work at school. She could diagram, parse, and repeat like a polly-parrot every rule in her text book but when she came to one of my play classes she would call out "I seen Johnnie", "I've got ter git you", etc. It was apparent that she heard this language in her home and when she played in the public play grounds and in the streets. How to speak good English should be taught in the playgrounds as well as in the schools and parents should do everything to make children proud of English, the noble tongue, and glad to protect it by speaking correct English.

Some of the sentences that may be used to teach meanings of words that are pronounced:

They never fail who ( ) in a great cause.—Byron.

A beautiful red ( ) is made from the body of insects.

The shoemaker uses an ( ).

( ) the world's a stage—Shakespeare.

Bend under any ( )—Shakespeare.

Learn to labor and to ( ).—Longfellow.

The glorious ( ).

Go ( ) under the open sky.—Bryant.

It ( )a gale.

The ( ) sky bends over all.—Carlyle.

Sweet is pleasure after ( ).—Dryden.

The face against the ( ).

MAKING PICTURE WORDS

The English language must be taught, as far as spelling is concerned, chiefly through the eye. I encourage children to look at a word and to be sure that they know what that word looks like and then to shut their eyes and describe the word. In words like receive, relieve, separate, etc., words that I call THE TROUBLESOME words, I attempt to make pictures that children will never forget. When writing separate I use sepArate showing the A in the middle. As we know E is often used incorrectly in spelling this word. In the same way I write the words reEive, relIeve, nIece, pIece, sIege, thIef, concEive, percEive, recEipt, hEight, nEighbor, wEigh. Writing words in this way trains the visual memory. If children are taught that i follows L and e follows C as in the not very elegent word LICE they will remember how to spell the words through life. Sometimes when it is difficult to remember whether there should be one or two letters l at the end of a word I spell the word incorrectly and cut off one L leaving the picture of this cancellation in the child's mind. Example: UntilL.

A game may be played by all members of the family with TROUBLESOME WORDS. Typewrite a number of words that bother any one in the family and put them into a box. In the evening let each member of the family draw one by one from the box and see if the others can spell these words. If not any one makes a mistake the so-called TROUBLESOME WORD may be transferred to a box called WORD FRIENDS. Some of the words that I have used in this game are:

Achieve, aggrieve, belief, believe, brier, brief, brevier, chief, field, fiends, fierce, frieze, frontier, grief, lief, liege, lien, mien, niece, pier, pierce, piece, priest, relief, relieve, reprieve, retrieve, series, shield, shriek, siege, sortie, thief, thieve, tierce, tier, wield, yield, die, lie, tie, vie, kerchief, mischief, sieve, friend, deign, eight, feign, feint, freight, heinous, heir, inveigh, neigh, neighbor, obeisance, reign, rein, reindeer, skein, sleigh, their, veil, vein, weigh, conceit, conceive, ceil, ceiling, deceit, deceive, perceive, receipt, receive, either, neither, leisure, inveigle, seine, seize, weird, heifer, nonpareil, sleight, height, kaleidoscope, counterfeit, forfeit, surfeit, foreign, soverign, mullein, center, meager, meter, scepter, sepulcher, somber, theatre, acre, lucre, massacre, mediocre, phthisic, carouse, espouse, nasturtium, propel, ecstasy, plausible, assuage, naive, naivete, negligee, moralize, supervise, paralyze, idolize, chastise, magnetize, harmonize, celibacy, hypocrisy, privacy, spicy, tipsy, heresy, courtesy, decency, ruffian, precede.

The troublesome terminations are ar, er, or, cy, sy, ise, ize, yze, able, ible, eous, ious, ant, entcious, tious, ance, ence. And the only way to be sure of one's spelling is to have a picture of the word in mind. It is wise also to pronounce each word distinctly. Particularly is this necessary if we use words derived from foreign languages. Some of these words express a thought that no English word

can express and they are helpful in making word pictures but unless we are sure of ourselves it is wise not to use the foreign words in talking with our children. Among words that are in constant use we find: Ap-ro-pos, at-ta-che, bou-quet, chauf-feur, cor-tege, co-te-rie, cui-sine, de-bris, de-but, e-clat, e-lite, en-nui, ga-rage, ma-de-moiselle, mes-dames, mon-sieur, messieurs, mirage, mo-rale, neg-li-gee, qui-vive, re-gime, ren-dez-vous, re-su-me, so-bri-quet, soi-ree, trous-seau.

In the same way that we play with TROUBLESOME WORDS we may use HOMONYMS or words having the same sound as other words but differing in meaning, and also MISUSED WORDS.

The word LOVE is misused by most people. We hear educated parents say: "O how I love fried chicken!" "Oh how I love ice cream" when the thought to be conveyed is: "I like fried chicken and I like ice cream but I love my father and I love my mother." The word AWFULLY is used very often for VERY. Enthusiastic young girls say: "I had an AWFULLY good time". In the same way the word ELEGANT TIME is used instead of delightful. Everything is LOVELY to the enthusiastic young flapper. She has a lovely hat, a lovely time, and finds the weather as well as the people lovely. She might call her hat pretty and say that she had a pleasant time and call the weather "pleasant" instead of "lovely." The word "funny" is often used for strange. We hear girls say: "Isn't that the funniest thing! Isn't it funny that I cannot remember."

OTHER MISUSED WORDS

I propose (PURPOSE) to write a story.

He is a contemptible (CONTEMPTUOUS) being.

I would recommend (ADVISE) you to try this remedy.

I have spent most (ALMOST) all my money.

I am most (ALMOST) ready.

Her death is hourly anticipated (EXPECTED).

I expect (SUPPOSE) you went to the theater last evening.

He intends to locate (SETTLE) in Canada.

I calculate (INTEND) to go to NEW York.

I reckon (BELIEVE) she will come.

The gentlemen (MEN) and ladies (WOMEN) came.

She is perpetually (CONTINUALLY) annoying me.

This teacher keeps herself well posted (INFORMED).

We shall reside (LIVE) in New York.

Weeks have transpired (PASSED) and nothing has been done.

I guess (THINK) you can come.

I am stopping (STAYING) at The Ritz.

He learned (TAUGHT) me to play golf.

Can (MAY) I come to see you?

Tom is very ill but not dangerous (IN DANGER).

Do like (AS) your friend.

Prizes are often offered by advertising companies for the greatest number of words that can be made out of a single word, standing perhaps for the name of the company. Children will work diligently, looking through the dictionary for words to add to their collection, when such a prize is offered. Mothers will help their children by offering some reward for the largest number of words made out of any word either with anagrams or by writing the words on the typewriter. In the same way HOW MANY HOMONYMS and HOW MANY SYNONYMS may be goals for children who like to compete in games that mean something?

One of my little natural education kiddies showed me two boxes a few days ago. In one she had her HOMONYMS and in the other her SYNONYMS and she used these large words in the same way that a child would talk about a doll or a ball. In the HOMONYM collection I found words like (ho-hoe), (lo-low), (hail, hale), (beat-beet), (cellar-seller), (been-bin), (dew-due), (beach-beech), (piece-peace), (seam-seem), (tale-tail) (so-sow-sew).

Although this little girl was but seven years of age she understood the meaning of both HOMONYM and SYNONYM and had put together in her SYNONYM box such words as (Ache, pain, suffering, smart, pang, anguish, agony, to grieve, to suffer), (Banquet, feast, party, entertainment, festival,) (Cold, chill, frigid, wintry, frosty, raw, biting, nipping, chilly, unsympathetic) (Toy, plaything, gewgaw, trifle, bauble, trinket, gimcrack, club).

The same plan of teaching parts of speech has been tried by another friend. In one box her little boy keeps pictures of different objects that are marked with their names and sometimes with little jingles. "Let us play NOUNS" says little Tommy, with as much interest as some children say: "Lets play catchers."

He calls his Box of Interjections—NOISY WORDS. Some of the words in his box are: Ah! Aha! Ahoy! Alas! Alack! Bah! Bravo! Fie! Ha! Ho! Hulloa! Hurrah! Lo! O! Oh! Pshaw! Ugh! Ouch! Whew! Whist!

BUILDING LANGUAGE HOUSE out of correct phrases and sentences is another helpful way of teaching children to be on the qui vive for incorrect forms of speech. The correct sentences are written on straight pieces of cardboard resembling perfect bricks. The incorrect sentences are written upon crooked cards with corners missing, cards that cannot help to build a nice, straight house. Both crooked and straight cards are put into one box and all the children playing this game draw cards from the box. The child who draws a straight card reads his sentence and places the card as a foundation of his house. The child who draws a crooked card reads the sentence and tells why the building block of Language House is crooked.

The following are some of my CROOKED BRICKS:

I done it. I haven't did it. I seen it. I have saw it. Lay down and sleep. The cat laid down. The hen sets on eggs. I brung you somethin. I drawed a picture. Baby et a apple. You was naughty. Ten times two is twenty. If I was you I would be good. I feel good. Say, did you hear the news. Say, listen! I just hatter laff. I gotto go. I am pleased to meet you. Gimme a piece. Lemme see. Leave it lay. Leave me do it. I haven't got a dog. There's five dogs. I'm most ready. My heart is broke. My pants is tore. I kin ketch you. Will you come to dinner? I sure will. The baby looks like I do. Do you want off? I must of lost it. Its him. Its them. Give ot to him and me. Us girls want it. The plums are yourn. The flowers are ourn. You hadn't oughter do it. Where is he at? That's all the farthern I can go. I'm goan to do it. I can't wait on you any longer. John and Mary, they're comin. These kind are lovely. I only have two oranges. Do like your friend does. He extends kindness to me. I love a good breakfast. John laid down to rest I disremember the date. We have a mutual friend. She is a nice talker. I grow vegetables. Here is a house to let. All over the land. Her work is poor at best. I shall fall down. Do you mean to come? Is Mr. Jones in? Will I do this for you? What will I do? I don't choose to. We called at William's. By this means. All that was wanting. I am going over the bridge. I saw him not long since. My father has improved since. A couple of boys went to school. Directly as he came to town. The streets are nicely decorated. Her dress was perfectly awful. No one was there. No gold or silver. There were three persons present. He partook of refreshments. He settled the account. Yesterday's Times has come. He got onto the roof. They only sent me. The river has overflown its banks. You will not succeed without you study. The house cost more than you think for. An accident transpired yesterday. From whence did she come? Have you got money?

Parents may play a game with their children pretending that Queen Minerva rules over one realm and King Stultus (standing for the fool) rules over another. Sentences correct and incorrect should be placed in a large box and the children allowed to draw one at a time. When a correct sentence is drawn the child who draws it presents the sentence to wise Queen Minerva. When an incorrect sentence is drawn the card is presented to King Stultus, who inquires of Wise Minerva what is the matter with this sentence? Queen Minerva tells him and suggests how he can change the sentence.

Another way to show the children WHAT TO SAY and WHAT NOT TO SAY is to place the NEVER SAYS (or incorrect sentences) in one box and BETTER SAYS in another. Some of the incorrect sentences that I have already given will be helpful for the NEVER SAY box. Here are a few as I sometimes arrange them. First, notice the NEVER SAY, the expression NOT to use. Immediately following is the BETTER SAY, marked SAY:

NOT—Anyways, anywheres.
SAY—Anyway, anywhere.

NOT—Authoritive.
SAY—Authoritative.

NOT—Anyhow, anyway.
SAY—In any event, at any rate.

NOT—He is apt to fall.
SAY—He is likely to fall.

NOT—Any manner of means.
SAY—Any means.

NOT—Aren't you.
SAY—Are you not?

NOT—Ast.
SAY—Asked.

NOT—Talked among one another.
SAY—Talked with one another.

NOT—Swim any.
SAY—Swim at all.

NOT—The truth is apparent.
SAY—The truth is obvious.

NOT—I have all of them.
SAY—I have them all.

NOT—I have loaned.
SAY—I have lent.

NOT—I know that party.
SAY—I know that person.

NOT—I have proven it.
SAY—I have proved it.

NOT—At auction.
SAY—By auction.

NOT—It is me.
SAY—It is I.

NOT—Between you and I.
SAY—Between you and me.

NOT—Who is the letter for?
SAY—For whom is the letter?

NOT—Is it about done.
SAY—Is it almost done.

NOT—I love potatoes.
SAY—I like potatoes.

NOT—I am mad.
SAY—I am angry.

NOT—It is most interesting.
SAY—It is very interesting.

NOT—An historian.
SAY—A historian.

NOT—Both are alike.
SAY—They are alike.

NOT—I am afraid it will rain.
SAY—I fear it will rain.

NOT—He went around the world.
SAY—He traveled around the world.

NOT—He was beaten.
SAY—He was defeated.

NOT—He is bound to go.
SAY—He is determined to go.

NOT—I differ with you upon that point.
SAY—I differ from you upon that point.

NOT—I have every confidence in him.
SAY—I have the greatest confidence in him.

NOT—I have no other purpose than this.
SAY—I have no purpose other than this.

NOT—He acted like the rest.
SAY—He acted as the rest.

NOT—I'll hold the lines.
SAY—I'll hold the reins.

NOT—He loaned me money.
SAY—He lent me money.

NOT—Keep off of the grass.
SAY—Keep off the grass.

NOT—A child of two years old.
SAY—A child of two years.

NOT—Not a one was hurt.
SAY—Not one was hurt.

NOT—Neither the one or the other.
SAY—Neither the one nor the other.

NOT—The play is over with.
SAY—The play is over.

NOT—I'm not overly anxious.
SAY—I'm not over anxious.

NOT—I am anxious to see you.
SAY—I am eager to see you.

NOT—Wheat is plenty.
SAY—Wheat is plentiful.

NOT—It is plenty good enough.
SAY—It is quite good enough.

NOT—Did you take in the show?
SAY—Did you attend the show?

NOT—I shall try and go.
SAY—I shall try to go.

NOT—Wait on me.
SAY—Wait for me.

NOT—Do you want in?
SAY—Do you want to come in?

NOT—I'm a new beginner.
SAY—I'm a beginner.

NOT—Providing he has.
SAY—Provided he has.

NOT—Will you please repeat that word again?
SAY—Will you please repeat that word?

NOT—A large enough house.
SAY—A house large enough.

NOT—The box fell on the floor.
SAY—The box fell to the floor.

NOT—We conversed together on the subject.
SAY—We conversed on the subject.

NOT—I am coming to your house.
SAY—I am going to your house.

NOT—I expect so.
SAY—I believe so.

NOT—Equally as well.
SAY—Equally well.

NOT—He called upon me.
SAY—He called on me.

NOT—He died with fever.
SAY—He died of fever.

NOT—I donate ten dollars.
SAY—I give ten dollars.

NOT—I have a date.
SAY—I have an engagement.

NOT—Different than me.
SAY—Different from me.

NOT—Do away with.
SAY—Abolish.

NOT—He don't know.
SAY—He doesn't know.

NOT—He is home.
SAY—He is at home.

NOT—He was hung.
SAY—He was hanged.

NOT—I don't know if I can.
SAY—I don't know whether I can.

NOT—He is back of me.
SAY—He is behind me.

NOT—It will change inside of a week.
SAY—It will change within a week.

NOT—Keep me posted.
SAY—Keep me informed.

NOT—I raised my children.
SAY—I reared my children.

NOT—I sized him up.
SAY—I judged him.

NOT—He started to cry.
SAY—He began to cry.

NOT—I took French.
SAY—I studied French.

NOT—I saw him not long since.
SAY—I saw him not long ago.

NOT—Peaches are a healthy fruit.
SAY—Peaches are a wholesome fruit.

NOT—If I am not mistaken.
SAY—If I mistake not.

NOT—Because I don't choose to.
SAY—Because I would rather not.

Alice E. Ball has written a very clever book called "The Child's Own English Book" which described a number of games that mothers and teachers can play with children in order to impress upon the childish mind that which is correct and that which is incorrect. This book is published by Lippincott Publishing Co. Names of the parts of the body, of different animals, of toys, names of places, and of people are used in games. MY GRANDMOTHER'S CAT is suggested as a fine game to teach adjectives. One child begins: "My grandmother's cat is a good cat." The next child says: "My grandmother's cat is a white cat." Such words as ugly, beautiful, black, yellow, cross, etc., may be used.

In teaching children about verbs the game of LET US PRETEND will be very helpful. One child pretends to be Santa Claus and tells what he can do. Another child is an Indian, a third represents a sailor, etc. Each action expresses a VERB. "March," says the teacher, and the child marches, expressing action, and therefore march is a verb. Go! Stop! Look! Listen! Speak! Halt! Walk!

I have suggested the teaching of SYNONYMS and HOMONYMS to very young children. There is no reason why ANTONYMNS should not be taught. As we know words with opposite or nearly opposite meanings are called ANTONYMS. The mother may use a word conveying one idea, and the child follow with a word that expresses the opposite idea. If the mother says: "I shall free you." The child may reply: "I shall bind you." Mother says: "The water is deep." Child says: "The water is shallow." Mother says: "The sky is clear." Child says: "The sky is cloudy." Mother says: "The boy is rough." Child says: "The boy is gentle." Mother says: "The boy is polite." Child says: "The boy is rude."

If big people as well as little people could be taught to remember the meanings of various Latin stems used in English words they would have little trouble in understanding the meaning of words. Whenever we see ACT we know that something to do is implied. ACT or FER means to carry. Ferry is a carrying boat. MOV. and MOT. means to move, movement, movable, motor, locomotive. RUPT means to break. Bankrupt, Interrupt. SPIR means to breathe. Inspire, expire, (spirit). VOLV and VOLT mean to turn. Revolve, revolt, revolving, revolution.

ABBREVIATIONS

Abbreviations bother grown people as well as little folks. I have written many games to teach children these abbreviations but perhaps the quickest way that they can be learned is through writing the abbreviaton and its meaning on the typewriter. Another game with the same purpose is to have a box containing abbreviations that stand for various degrees, months of the year, people, and general terms used in business. Give each child one or two of these names, draw the abbreviation from its box and the child who is supposed to represent the abbreviation should stop forward and claim his title. The M. D. is taken by the doctor. The COL. by the COLONEL, the Pres. by the President. The Gov. by the Governor.

HOW MANY PERSONS AM I?

This is a game that may be played with such abbreviations as Mlle., Mme., LL.D., Esq., Ph.D., A.B., B.S.

OTHER ABBREVIATIONS THAT ALL CHILDREN SHOULD KNOW

A. D. (anno Domini, in the year of our Lord). A. M. (before noon). P. M. (after noon). ANON. (anonymous). Ans. (answer). AV. or Ave. (Avenue). B. C. (before Christ). Co. (company). Etc. (et cetera) and so forth. Ex. (example). Id (idem) the same. i. e. (id est) that is. Jr. (junior). N. B. (nota bene) note well. Pro tem (for the time being). P. S. (postscript). R. R. (railroad). Vs. versus (against). C. O. D. (Collect on delivery). Yd. (yard). $ (dollar). Qt. (quart). % (per cent). Doz. (dozen). Mr. (Mister) Mrs. (Mistress). Prof. (Professor). Hon. (Honorable). @ (at). Jan. (January), Feb. (February). Mar., Apr., Aug., Sept., Oct., Nov., Dec., represent other months of the year, while Sun., Mon., Tues., Wed., Thurs., Fri., Sat., stand for the days of the week. Names of the states are also abbreviated. Ala., Ark., Cal., Colo., Conn., Del., Fla., Ga., Ill., Ind., Kans., Ky., La., Md., Mass., Mich., Minn., Miss., Mo., Mont., Nebr., Nev.,

N. H., N. J., N. Y., N. C., N. Dak., Okla., Pa., R. I., S. C., S. Dak., Tenn., Tex., Vt., Va., Wash., W. Va., Wis., Wyo.

It is difficult to teach young children the correct use of punctuation marks but the typewriter and multiscope are very helpful. Through coyping words on the typewriter the child recognizes the little mark . ; : ? ! " - —, and gradually learns when to use them. I have printed these marks upon small cards which I put into the multiscope. They make beautiful designs and one may hear little four-year-old Alice say to her playmate: "Please give me another quotation mark to put into my multiscope." "Please lend me one of your semicolons." All children love to make designs, and punctuation marks make wonderful designs. Some of my children love to make flags, boats, houses, etc., on the typewriter through use of these marks. These games do not teach the correct use of punctuation but it familiarizes the child with marks that are used to give expression to sentences and phrases and after writing for a short time on the typwriter little Tom discovers that a period always comes at the end of a sentence that tells something, while a question mark comes when he asks a question. It is easy to know when to use exclamation points and quotation marks but it takes study and practice to know when to use commas, semicolons, and colons. The sooner we begin to gain this knowledge the better for us, as children are very observing and will take more interest in punctuating correctly when they are very young than when they grow older.

There is no better way to teach correct English, both spoken and written, than through encouraging children to write letters to their friends. My daughter Winifred began keeping a diary when she was three years of age and at this age she wrote a number of letters to various friends. Every time she wrote a letter it was for a purpose. She did not feel (as some children must feel) that she was writing exercises. She knew that what she wrote would reach some one. This gave her intense interest in her writing. She tried to spell correctly, to tell something worth while, and to express herself in her best style.

Keeping a diary each day is very helpful to children who are learning to write and to express thoughts. These diaries should be kept and pride taken in them so as to encourage the young folks to continue writing diaries through life. But books, our best friends, "that fill us with sunshine and gladness," giving us the best thoughts of all ages, are the best helpers in providing children with knowledge clothed in best language. A house may be provided with every other comfort and luxury. There may be elegant furniture, luxuriant baths, wonderful draperies, etc., but unless the house contains BOOK FRIENDS, it remains a house and not a home and it is a calamity in anyone's life if that one has no appreciation of books that prove a boon to their lovers, cheering them in sadness and giving them thoughts that inspire to the accomplishment of great deeds.

Making beautiful thoughts their own through help of parents singing beautiful songs and repeating classical sayings and poems give children real storehouses of worth-while thoughts to help them in every trouble. Children should also be encouraged to try to write jingles and short stories. Through attempting to put their thoughts into either poetic or good prose form they gain a wonderful knowledge of the technique of the English language.

There are a great many so-called children's books which are wholesome, entertaining, and educative; books that are genuine, vital and human. These books should be where children can read them. But many of the books called Children's books are innocuous, sentimental, cheap and silly in sentiment. It is a waste of time for children to read them. And the child who hears the talk of a cultivated father and mother, who explores with them the book friend's pages, has the finest opportunity to gain the larger aspects of life and to be well grounded not only in general information but in the forms of good language that express good thoughts.

Activity is a constant factor in mental growth. Children all want to do something and before reaching the adolescent period, they are rarely lazy and always eager to discover the wherefore of every why. And that is the time to interest them in correct English—not through learning rules of speech but through making word paintings for the child, and connecting these word pictures with his own experiences.

Habit is achievement—given the habit of speaking correctly, and of being particular about the words one uses—the child has an asset that will help him through life.

Probably there is no one time during the school day to which young pupils look forward with the same eagerness as Story Hour. Story Hour in the home can be made just as attractive. In this hour the parents as well as the children can tell stories. Story telling gives the child a good command of English and accustoms him to expressing his thoughts. THE OPEN FORUM both for home and school in which a subject is selected each day and one child leads the discussion, while the others take part, is ideal for thought expression. The Open Forum was used by the Romans years ago and it is the best means of giving information, getting people together, and of aiding in public speaking that has been invented by man.

At the present time I have sixty-two of these forums in the City of New York. New York has been accused of being a cold city. I know that there is no kindlier city in the world. All that is needed is the getting together of people. For that reason I started Open Forums, called "Neighborhood Forums" in every section of the city and they are doing good. Such forums started in rural districts or in small towns would be very helpful for readers of The Volume Library. This volume of useful information might be taken as a text book or a guide and the various subjects treated in this book used for topics of discussion by both big and little people.

Some of the subjects that ought to be discussed (in addition to general topics and current events) are ambition, bad company, beauty of character, chivalry and courtesy, conceit and vanity, cowardice and cruelty, discontent, bad temper, dishonesty, deceit, envy, love, frankness, friendship, generosity, honesty, honor, humanity, inhumanity, humility, modesty, justice, injustice, kindness to animals, laziness, observation, patriotism, perseverance, philanthropy, self control, self reliance, truth, thrift, fairy tales, nature stories of all countries and stories of famous people.

Some of the books that seem to be enjoyed by all children and that I have found most helpful in giving material for story telling in "Story Hour" or for discussion in "The Home Forum" are: In the Days of Giants by Abbie Farwell Brown; Heroes of Asgard, Annie and Eliza Keary; Stories from Wagner's Operas, A. A. Wagner; Old Greek Folk Stories, Josephine Peabody; Heroes, or Greek Fairy Tales, Charles Kingsley; Heroes and Kings, A. A. Church; Famous Legends, Emmeline G. Crommelin; A Child's Own Book of Verse (one-two-three), Ada Skinner; A Child's Book of Verses, Robert Louis Stevenson; Stories the Iroquois Tell their Children, Mabel Powers; Flower Fables, Louisa May Alcott; Child Stories from the Masters, Maud Menefee; Old Ballads in Prose, Eva March Tappan; Stories from the Fairy Queene, Mary Macleod; Book of Nature Myths, Florence Holbrook; The Bird Kindgom, Educators' Association; The Animal Kingdom, Educators' Association; Stories of Little Fishes, Leonore Mulets; Stories of Trees, Leonore Mulets; English Fairy Tales, Joseph Jacobs; Wonder Stories for Children, Hans Christian Andersen; Historical Girls, E. S. Brooks; Child Life in Many Lands, D. A. and M. Blaisdell; Showland Folks, Robert Peary; My Dark Companions and Strange Stories, Henry M. Stanley; Just So Stories, Rudyard Kipling; The Story Hour, Kate Douglas Wiggin and N. A. Smith; Dream Children, Horace E. Scudder; Christmas Every Day, William Dean Howells; Bimbi and Other Stories, Mary E. Wilkins; The Golden Windows, Laura E. Richards; The Book of Knight and Barbara, David Starr Jordan; A Book of Saints and Friendly Beasts, Abbie Farwell Brown; Nursery Rhymes and Tales of England, J. O. Halliwell.

Children not only love to hear stories and to tell them, but with the use of the typewriter or a box of anagrams they can make stories by copying from story books. Copying words trains the power of observation and helps in spelling and in English construction. My daughter Winifred knew many classics when she was but five years of age through copying short poems on the typewriter. At the present day rapid pronounciation of words is called "reading" but real reading as I see it, means a knowledge of spelling and even of etymology and a comprehension of the word's meaning.

When my daughter was in the preschool age she found great enjoyment in seeking for Baby Words as she called the words derived from various stems. In her BABY WORD BOOK Number One, which is on my desk at this moment, I find the first Mother Word as MAGNUS and beneath Mother Magnus, I find fifteen baby words and each defined. When Winifred Stoner was fifteen years of age, she was able to appear on the platform with such men as Sir Oliver Lodge, John Drinkwater, Gilbert K. Chesterton, Vilhjalmur Steffanson and other noted speakers and she found no trouble, not only in lecturing but in entering into discussion with other speakers and I attribute her ability to express herself so readily, not only in speaking but in writing, to her study of words when she was a baby. I would give her a certain Latin word and she sought for the words derived from the Latin root in the dictionary. This was her writing and her spelling lesson. Looking through her first book on Etymology, I find the following words: Magnus (large), Bellum (war), Donum (gift), Memoria (memory), Regina (queen), Parva (small), Virtus (virtue), Liber (liberty), Post (after), Amo (love), Servus (servant), Ardere (to burn), Putare (to clean),

Circulare (to make round), Bonus (good), Dominus (master), Aqua (water), Epistula (letter), Cara (dear), Pecunia (money), Vocat (he calls), Hortus (garden), Amicus (friend), Diligentia (diligence), Nauta (sailor), Femina (woman), Narrare (to narrate), Albus (white), Malus (bad), Latus (broad), Puer (boy), Verbum (word), Longus (long), Superus (superior), Simia (monkey), Timeo (I am afraid), Lateo (I hide), Multus (much), Herba (herb), Pupa (doll), Tabula (tablet), Cauda (tail), Silva (forest) Sanus (healthy), Liber, Libri (book), Extra (outside of), Preter (beyond), Audire (to hear), Semi (half), Corona (crown), Corpus (body), Credere (to believe), Forta (strong), Felix (happy), Grossus (fat), Hora (hour), Phonos (sound), Plenus (full), Quadra (square), Quietus (quiet), Radiare (to emit rays), Sal (salt), Stella (star), Ars (art), Tempus (time.)

This list of words has been very helpful to many mothers in giving their children an insight into the meaning of words and in encouraging them to study the dictionary. In Winifred's book I find 102 babies belong to MOTHER MULTUS and 225 belonging to Super. It was through playing games of this kind that Winifred became interested in seeking for all the ologies she could find in the dictionary, and later finding their meanings, to put them into jingle form. The following jingle, written when she was twelve years of age, has been used by teachers in a number of schools to give simple definitions for the various sciences:

SONG OF THE OLOGIES

By Winifred Sackville Stoner, Jr.

If we little kiddie kids would be wise and great,
Let us all begin right now, why should we all wait
Until we are quite grown up ere we learn so well
What is meant by OLOGIES so we all can tell?
ASTROL'OGY is known by men who tell our horoscopes,
ZOOL'OGY all children love, it tells about the goats.
And every sort of animal which we see in the ZOO,
The elephant and tiger cat and jumping kangaroo.
BIOL'OGY the students say is science of all life,
Concerning every living thing within this world of strife.
While AETIOL'OGY explains the cause of everything
And IDEAL'OGY to us so many thoughts will bring.
Old GEN-E-AL'-O-GY is great to tell our pedigree
AND SO-CI-OL'-OGY attempts to show what we should be.
CHRO-NOL'-O-GY will gladly tell of happenings long ago.
COS-MOL'-O-GY tells of the laws which cause our world to go,
PSY-CHOL'-O-GY is wisely called the science of the soul
And PHYS'-I-OL'-O-GY shows how to keep our bodies whole.
GE'-OL-O-GY most wisely tells about our good earth mother.
PHI'-LOL-O-GY relations shows 'twixt one tongue and another.
Good ET-Y-MOL'-O-GY explains the origin of words,
While OR'-NI-THOL-O-GY expounds much knowledge of the birds.
ETH'-NOL-O-GY some wise folks love, it tells of every race.
MES'-OL-O-GY explains to us effects of every place.
PHRE-NOL'-O-GY tells character from bumps upon the head.
NE-CROL'-O-GY, a science drear, treats about the dead.
And O-DON-TOL'-O-GY will tell just how our teeth to use,
MI-CROL'-O-GY of tiny things, will tell us all the news.
PA-THOL'-O-GY the doctors say is study of disease.
Explaining almost everything from cancer to a sneeze.
While OS-TE-OL'-O-GY will tell about our body's bones
And MIN-ER-AL'-O-GY explains about the rocks and stones.
If we would learn about the ape who was our grandpapa
Then AN-THRO-POL'-O-GY will tell exactly what we are.
CA-COL'-O-GY tells how to use our voices when we talk.
MY'-OL-O-GY to muscles points which help us chew, see, walk.
Strange OPH'-I-OL'-O-GY will tell about the hated snakes,
SEIS-MOL'-O-GY explains to us just why there are earthquakes.
TO-POL'-O-GY shows how to keep the facts we all should know,
And TOX-I-COL'-O-GY will tell of POISON, man's dread foe.
Wise PNEU-MA-TOL'-O-GY explains the science of the air
And HER'-PE-TOL'-O-GY will tell of reptiles everywhere.
ICH'-THY-OL-O-GY of fish gives information wise
And OP'-THAL-MOL'-O-GY explains all about the eyes.
CY'-TOL-O-GY tells us of cells which cause us all to live.
THE-OL-O-GY religious truths to erring mortals give.
HY-DROL'-O-GY of water tells if it be good and pure,
O-ROL'-O-GY of mountains great, the monarchs which endure.
Of insects EN-TO-MOL'-O-GY tells us so many things
And HA'-GI-OL-O'-GY of saints wearing snowy wings.
Queer HEL'-MIN-THOL'-O-GY explains about the wiggling worms,
BAC-TER-I-OL'-O-GY assists in learning about germs.
MUS-COL'-O-GY'S the science wise which tells about the mosses.
ME-TROL'-O-GY of measure shows our gains and losses.
TAU-TOL'-O-GY is what we kids are often prone to do
In using words which mean the same as if they were quite new.
Big E'-LEC-TROL-O-GY'S about the great electric sea.
PE-NOL'-O-GY of punishments — not meant for you and me.
PA'-LE-ON-TOL'-O-GY will tell of fossils in the earth
And AR'-CHAE-OL'-O-GY of things so long before our birth.
PAN-TOL'-O-GY is something great that none of us can gain
E'en though forever we should work with all our might and main,
'Tis universal knowledge wealth—we cannot get that lore.
But we can add from day to day rich treasures to our store.
And now with one more OLOGY we'll end this tale so long.
Singing the DOX-OL'-O-GY, that glorious Christian song.

Let the child sing to the air of Auld Lang Syne or Old Grimes Is Dead, one of those definitions each day and he will soon acquire a knowledge of the well known sciences in so far, at least, as knowing what each science teaches. The jingle will not be forgotten whereas a definition in prose is hard to be remembered.

Games played with words may be made most interesting if parents know how to dissect words and give the children ideas of the word's meaning. The parent who knows that the prefix A stands for WITHOUT can help the child to understand the meaning of many words. When he sees the word ABYSS he knows that A means without and byss is bottom. Therefore ABYSS means without bottom. The ATHEIST, means without God. "Ad" means to and "vance" stands for go. Therefore advance means to go to. "Gymn" means naked and "asium" place. Gymnasium (a place to be naked), HEPTA (seven), GON (angle), HEPTAGON (seven angles).

Other prefixes to help children in word building: AFTER (following), CON (together, with), DE (down, from), DIS (not, apart, separate), IN (in, into, on, upon, not), UNDER (below, beneath), UP (above), AUD (hear), BAT (beat), ATE (shaped), ANIM (breath), ALB (white), DORM (sleep), DENT (tooth), FLOR (flower), RE (back, again), PRE (before, forward, forth), POLY (many),

Useful suffixes: IST (one who practices an art), such as dentist, (tooth artist), oculist (eye artist), florist (flower artist), OR means one who—the agent: actor, doctor, instructor, author, director, tutor, conductor.

Giving children lists of words that rhyme and encouraging them to compose jingles helps them to gain a knowledge of words and their spelling while aiding them in expressing thoughts in the best form of speech, since poetry or even jingle seeks to place words in the position that makes them most pleasing to the ear. With words already given in the AT, IT, ET, AN, EM families the child can make rhymes about familiar objects Some of our greatest poets made their first rhymes with simple subjects as the cat, the dog, the turnip, etc Once given the love of speaking rhythmically, that love will continue through life. Spelling words and making jingles with letters may be also done while playing on the piano. I knew one little girl who was able to spell over a hundred words with the letters of the keys on the piano—c-d-e-f-g-a-b. Even long words such as baggage, cabbage may be spelled on this musical instrument. Words that rhyme with bay, cap, caw, bug, had, lag,nap,mug, dip, big, bid, fly, bow, cot, bun, bob, bog, fop, cod, bet, den, dew, bar, am, cub, up, ax, bed, beg, boy, gum, bud, ox, fix, dim, ate, are useful in giving a rhyming vocabulary.

If a child writes all the words of the BOY family on small cards and places them in a box, he can have these words handy when he is inclined to make a rhyme or he can add to his vocabulary when he hears a new word that rhymes with boy.

A game that my children have always enjoyed is that of FAIRY E. I give the children a box full of anagram E's and also simple words. It is the object of the game to see how often Fairy E can be used to change words. Given the word CAN

and Fairy E, changes it to CANE. The word TAP changes to TAPE, hat to hate, mad to made, cap to cape, pan to pane, pin to pine, hid to hide, dim to dime, fin to fine, rid to ride. Take the following words and see what E will do for them: Din, hop, rod, not, mop, rob, pop, slop, tub, cut, cub, ton, us, plum.

Children who are taught to play with letters and to analyze words never have trouble in spelling when they reach high school. The memory period (that is the keenest memory period of life), closes at the age of twelve years when the adolescent period of life begins—the sluggish time of life. Children should be made good spellers, good readers and good commanders of correct English, before the age of twelve years and it is only through much practice with speaking, singing, and playing with words as friends, that they will acquire this knowledge. Some mothers fear to teach their children how to spell before going to school as they think that they may interfere with the mechanical way of teaching spelling in the schools but it is my advice to every mother: Encourage your child to spell any word he sees, on the street car, in books, on sign posts, on bottles and cans. Teach him to use his eyes as eyes and to discover the meaning of words and combination of words that he sees. He must be taught also how to pronounce, to enunciate, and to hear words as they are pronounced. I agree with Ella Frances Lynch, who in her book "Educating The Child At Home," says: "The child who is not a good speller for his age at ten years of age is not likely to be a good speller for his age at twenty," and I would add at forty. I would plead with mothers also not to listen to so-called educators who believe in keeping children away from books until the tenth year. A child who has not learned to love books, our best friends, before the age of ten years, will never love books. Eyes will not be injured if children are given books with large print and the method of teaching reading through the use of the typewriter cannot injure any child. When once the doors of knowledge are opened to the child through his ability to read, that child will be a better and a happier child. He will find true book friends that will teach him the big lessons of life just as he finds friends in the living world. He will not have to grope in ignorance when he is eager to know the wherefore and the why of this and that. He can go to his book friends and gain the information he seeks.

Real education fits a child for life and the earlier we begin to give him the tools with which he is to make himself an active part of the great cosmic system, the better for that child and the better for his teacher. He should not be forced to study for so many hours each day. He should not be told "You must spell so many words this morning. You must read so many pages this afternoon." But he must be initiated into the mysteries of words and their meaning and shown how words put into various groups express different ideas. The younger the child, the more eager to learn he is and with a tactful teacher, the more readily he learns

I know one mother who tells me that she does not want her child to learn how to spell because she and her husband spell words when they wish to conceal certain things from this child. The little girl is aware that her parents are not open and above board with her and recently she told me: "Oh, they are spelling words on me all of the time. Goodness knows what they are going to do to me." This three-year-old child is suspicious of her parents, and she has a right to suspect that they are not what parents should be to her. Such parents are selfish and not worthy the name of father and mother. In the home where there is love and trust, the grown people do not use language that children cannot understand and they do not keep knowledge from their children in order to retain a medium of communication for grown folks only.

It is not necessary to say to a child, "Now we must have twenty minutes of language study, twenty minutes of reading, and twenty minutes of spelling." A knowledge of correct English and of literature may be given to the child while he takes walks, goes to the woods, learns about plants, different countries or people. I think that many teachers make a mistake in teaching children by presenting facts to the child as Geography, History, Spelling, etc. In every game that a child plays he should be taught to express himself in correct English and it is just as important to know how to spell Japan, as it is to know where Japan is located. Correct English as it is written and spoken, should be studied with every lesson and in the home each parent should have this big aim—to give the child a command of the English tongue.

All children love to ask questions. Little folks are human interrogation points and the questions should be answered—if possible. Of course there are questions asked by very small children that sometimes cannot be answered by very wise parents but parents should attempt to answer questions when they are asked. The game of CYCLOPAEDIA may be helpful to both parents and children. The little folks can put questions into a box and the parents may do likewise. In the evening, after dinner, each member of the family draws a question from the box, mounts the rostrum (which may be a real platform or a covered box), and tries to answer the question either by a short or long speech.

Parents may enclose in the box questions that will lead to interesting stories about birds, animals, etc. They may have to answer these questions themselves but the children will remember facts worth knowing about birds, animals, etc. Some questions that Winifred used in one of her games were:

What bird is called King of Birds? What bird sings "Cheerily Cheer Up." What bird is as black as night? What bird can turn its head all around? What bird is so powerful that he can hold two men on his back and can kick with greater force than a mule? What bird has the most beautiful suit of feathers. What bird has fur instead of feathers? What bird sings beautifully at night? Answers to all of these questions may be found in THE BIRD KINGDOM, published by The Educators' Association. Many interesting questions about animals may be made from THE ANIMAL KINGDOM books published by these same publishers. If children are trained to talk intelligently about their brothers, the birds and animals, they will feel more kindly to the bird and animal kingdoms and they will express themselves in correct English.

A knowledge of etiquette may be taught also in giving a knowledge of correct English. Mothers may pretend that they are going to a ball with their children. Each child will select a certain color for her dress and she must know how to spell that color. If the color happens to be pink then that child sticks to the color p-i-n-k during the game. All of the colors are brought into the game so that each child becomes familiar with the names of all colors. Next; each one selects a certain material to wear to the ball and the name of that material must be spelled correctly. Thus silk, woolen, velvet, chiffon, serge, linen, cotton, lace, organdie, etc., are mentioned and not only spelled but comments made concerning these materials. When convenient, samples are shown. Then each one selects some kind of trimming for the ball dress, such as embroidery, stitching, lace, gold braid, beads, ribbon, etc. Names of the jewels that will be worn such as diamonds, rubies, pearls, can be added with comment concerning the countries from whence the jewels have come. Footwear adds more words to the game and there may be comment concerning the music that will be heard. In a game of this kind, the child is constantly using his imagination and adding to his store of words and their meanings.

A home NEWSPAPER is another help in teaching and in inspiring children to seek for knowledge. When the little folks are pre-school age the newspaper will have to be very small but when there are larger children and a number of members in the family, a good sized budget can be typewritten each day. I know one family in which the youthful members publish a newspaper each week, setting the type and printing it without assistance from their parents. But in our home, Winifred and I used the typewriter and the "paste pot." We had a society column, a home making department, news items, general information, etc. When we first began our newspaper Winifred wrote only a few sentences each day on the typewriter but after a time she did most of the writing. This newspaper was read in the evening by Winifred and after she became the editor, her father and I found great amusement in listening to the descriptions of our various doings. Sometimes they were not exactly complimentary to us, but they made us see ourselves as others saw us and through editing this little sheet my young daughter gained useful information and learned how to express herself in correct English.

In taking walks, at the table, and even in the bath tub, mothers may give information that the child needs through play to a purpose. Children will not object to being bathed if the bathing process is not painful. Sometimes mothers and nurses are careless and fill the tub with too hot or too cold water but usually the reason that a bath is not looked upon as something pleasant is because the child is made to bathe and nothing more. I tried teaching my little daughter to recite Hiawatha when she was having her evening warm bath. I used a little birch bark canoe and a tiny celluloid doll for Hiawatha and by reciting the poem to her she made the words of Longfellow's classic her own and found enjoyment in taking a bath.

Question and Answer games help children to gain information and to learn to express themselves easily and clearly. Sometimes I sing jingles to children and then let them sing with me. After singing the jingle and dramatizing it, I ask the children questions and give them an opportunity to tell me how much they know about the jingle we have sung.

At other times I arrange games along the lines of old-fashioned Authors and with the addition of First Chance to tell certain stories marked on different cards. I play with the children, letting them ask questions which I answer, but I always give them an opportunity to express themselves. This game process of teaching children how to speak English and at the same time gaining practical information, I believe is one of the best ways to teach language. In these games I try to select the most interesting facts and I tell stories while playing the game. For children who go to school, questions like the following may be used on cards for a language game:

What is language?

Language is spoken and written signs to express thought.

From what word is language derived?

From Latin LINGUA, meaning tongue.

What signs were first used to express written thoughts?

Hi-e-ro-glyph-ics.

Who invented letters?

The Phoenicians.

What is grammar?

Grammar is the science which teaches the correct use of spoken and written speech.

How many parts of speech are there?

There are eight—noun, pronoun, adjective, verb, adverb, preposition, conjunction, interjection.

Both children and mothers can make questions and answers for the language game, adding to it each day and by playing the game frequently children will know all the parts of speech and the principal rules of English grammar.

FISH POND GAME

Cut out a number of pieces of paper of various colors in the shape of different fishes. Print on the back of each fish a correct or incorrect sentence. Let the children fish for these paper fish with small hooks like those used in playing jackstraws. The object of the game is to see how many good fish can be caught. The fish marked with correct phrases or sentences are called "good" and the others "bad." If a child does not know if his fish be good or bad, he must throw it back into the pond and wait until his turn to catch another. I have used this game in various languages, for both big and little people and the players have found it amusing, exciting, and instructive.

SEEKING NOUNS, PRONOUNS, Etc.

Give the children each a card with a sentence or verse printed on it and a command such as FIND A NOUN, FIND A PRONOUN, etc. The child reads the sentence and mentions the NOUN or PRONOUN. If he names the Noun or Pronoun correctly he keeps the card. If not, his right hand neighbor has first chance to mention Noun or Pronoun.

CHILDREN MAKE OWN LANGUAGE GAME

Tell the children that a noun is the name of anything. Each one writes or prints the name of an object on a piece of paper and puts the paper into LANGUAGE BOX. Explain that whatever we do is action and all action is represented by verbs. Let the children walk, talk, eat, run, jump, skip, see, hear, dance, sink, etc., so as to realize that these actions are called verbs. Then each child writes the name of his action upon a piece of paper and puts the paper in Language Box.

Then show the qualities of objects in the room. The picture is pretty. The table is round. The rug is soft. The carpet is square. The paper is white. The book is red. The curtain is soft. Each child writes the name of a quality of anything which signifies an ADJECTIVE upon a piece of paper and puts it into LANGUAGE BOX. Then let each child draw out a slip of paper and try to tell the part of speech to which the written word belongs. Very young children soon learn the different parts of speech by playing this game. After the noun, verb, and adjective, are well understood conjunctions, interjections, prepositions, adverbs, pronouns and articles are introduced and become familiar words to young students.

LANGUAGE BEE instead of SPELLING BEE

Mother mentions words and child tells the part of speech rather than spelling the word. The game is a little more interesting if there are captains, just as in spelling bees, and if some one holds a box full of words. The box is presented first to one side and then to the other to let the players draw a word. As soon as the word is drawn the player must say which part of speech and if he makes a mistake, or is not speedy in giving the word its correct name, the other side has the chance and the slow or incorrect player must be seated.

SINGING BEES

Singing bees are even more interesting. Use airs like Farmer in The Dell, We Won't Get Home Till Morning, Twinkle, Twinkle, Little Star, Go Tell Aunt Betsy, Here Comes The Duke A Riding, Long Long Ago, Upidee, and other folk and college songs that are easily sung. Select words that rhyme and write them on the blackboard. The children sing the song while spelling the words. There is nothing like rhythm to help one in spelling. In the same way teach very young children to write. Ask them to make a row of straight dots or if you have a conductor's ticket punch let the child punch a row of these dots in white paper. Using the dot as the aiming point let him sing—E-E-E-E-E-E-E-E-E-E-E-E-while making the written letter around the dot. In this way he has something for which to aim. The singing helps him to write rhythmically and to gain co-ordination of mind and muscle. After writing a row of the letter "E", he can try the letter L, which is only a little taller than E and very easily made and soon he can write all the letters of the alphabet. The history of the use of music as an adjunct to the alleviation of human ills dates back for ages. But music as a teacher of all the sciences has only recently been appreciated. I am now using records made by Frances Clarke, of beautiful old-time airs while the children sing their spelling lessons. I have tried a spelling lesson with the ampico also and found that the Fairy Music made lessons seem as play. The secret of all successful teaching lies in keeping the Fairy Interest at hand through play that instructs. There is no need to make lessons seem like drudgery. With love and eagerness to interest the child, any parent can inspire the young student with a desire to gain knowledge.

THE JINGLE FAIRY HELPFUL IN TEACHING YOUNG CHILDREN TO SPEAK GOOD ENGLISH

Who is there who does not consider the jingle "Thirty days hath September" as most useful in helping one to remember the number of days in each month? If this simple jingle has been such a great help to many people for many years why should we not try other jingles as Memory Helpers? To forget is not to get. Anything that we have really made our own, particularly through rhythmic form, remains with us. The child who learns a rule of grammar or any fact worth remembering in a jingle will not forget the rule or the fact.

When Winifred Sackville Stoner, Jr. was six years of age she wrote the following jingle to help her remember the parts of speech. Teach this little jingle to your children, singing with them to the air of Auld Lang Syne:

GRAMMAR IN A NUTSHELL

THE ARTICLES are oh so wee,
These little words are A, AN, THE.
The NOUNS are names of anything
As BOOK or PLAYGROUND, BALL or RING.
PRONOUNS are used for nouns instead—
MY face, HER hand, YOUR feet, HIS head.
All adjectives just tell the kind
Of everything that we may find
As GOOD and BAD and SOFT and SWEET
RUDE and NAUGHTY, WISE, and NEAT.
While of manner ADVERBS tell
AS SWEETLY, NEATLY, ILL, or WELL.
THE PREPOSITIONS help each day
IN our work or AT our play.
When relationship is shown
They must do the work alone.
Good CONJUNCTIONS join together
Men AND women, plume OR feather.
INTERJECTIONS will exclaim—
OH! ALAS! AH! What a shame!
But we cannot get along
In conversation or in song
Without the VERB, the subject's fate
Expressing action, being, state.
You ARE good and I LOVE you
Without these VERBS what would we do?

Even young children who cannot read, may be helped to understand the different parts of speech if they are taught this little song. The song tells them that the NOUN is the name of anything. In order to impress this fact upon the children's minds it is well to play the game of

FINDING NOUNS.

Mother and children go on a NOUN HUNT and see how many nouns can be found in the nursery. This is a very easy game because the noun being the name of anything is the name of everything. The child soon learns that the carpet, chair, picture, window, book, cradle, toy, etc., is a NOUN. When the meaning of a NOUN is clear to the child it is not difficult to explain the difference between a common and a proper noun, showing him that the common noun is the name of anything but the proper noun is the name of a real person like himself, a big town or city in which he lives, his native land, other countries, and the name of God whom he worships. In other words, PROPER should sound big and important to him.

In teaching him the names of PRONOUNS and their meaning play a game of telling a short story full of PRONOUNS like the PLUM PUDDING of Jack Horner that was full of plums. Tell a very brief story full of the words I, thou, he, she, it, we, you, they, my, thy, his, her, our, your, their. Then pause and see if the children can tell you the names of the PRONOUNS you have used. If they have

memorized the jingle GRAMMAR IN A NUTSHELL they will remember that MY, HER, YOUR, HIS are pronouns and you can easily show them that I stands for the proper noun — YOURSELF. HE stands for a proper noun—BOY or MAN, and SHE for a proper noun GIRL or LADY. With children who can read, many other games may be played, particularly that of THE LANGUAGE HOUSE which I shall explain later on in this chapter.

The game of WHAT IS IT, I have always found helpful and amusing. This game is played with small words that any mother can print on bits of cardboard. Use white cardboard and the seven colors of the rainbow to represent eight parts of speech with black for the INTERJECTION. Print the little articles A, AN, THE on white cards with VIOLET colored crayon. Use Violet and Indigo for the NOUN, and the PRONOUN. BLUE for the ADJECTIVE, GREEN for the ADVERB, YELLOW for the PREPOSITION; ORANGE for the CONJUNCTION, RED for the VERB (the life of the sentence) and BLACK for the wild INTERJECTION.

In making this game use nouns, pronouns etc., that are familiar to the children. Throw the cards all around the room and let the children scramble for them. Then mother and children sit in a ring. First the children count the number of cards each one has and the one who has the most cards begins the game. He separates his nouns, pronouns, etc., and tells what each word is and how many parts of speech he has for his LANGUAGE STORE. If he makes a mistake in calling a noun a noun, an adjective an adjective, etc., the other children may correct him and take away the card containing a misnamed PART OF SPEECH. The winner in this game is the child who holds the largest number of cards standing for different parts of speech that have been correctly named.

Through using the different colors the child becomes accustomed to the VIBGYORS, or colors of the prism and he realizes that the strong colors stand for important parts of speech, the verb being the most important in giving life to a sentence.

To impress this further upon his mind try this game: Use

THE HUMAN SLATE

Use large white cards with red ribbons attached so that the cards may be hung around a child's neck. In one pile place a number of cards with red lettered nouns painted or pasted upon them. In other piles place verbs, adjectives, adverbs, etc. Begin the game by allowing three children to select one card each from the NOUN, VERB and ADJECTIVE piles. As Tommy selects a noun, he hangs the card around his neck and stands with toes out, stomach in, chest out, chin in—waiting for FRIEND VERB to join him. The child who draws a verb takes his place with card around neck standing next to Tommy. And the child drawing an adjective stands third in line displaying his adjective as suspended from his neck. The other children then read what they see. Let us suppose that the three figures in the human slate make this sentence: JOHN IS GOOD. The mother then takes JOHN out of line, leaving the two words IS GOOD and the children realize how important JOHN was to the GOOD SENSE LINE. So back comes Mr. PROPER NOUN to make the sense complete. Then Mother removes the verb IS, leaving JOHN and GOOD. The children realize at once that the little word IS—the VERB, is most important so back comes VERB IS to complete common sense line. Then she takes away GOOD and again the children see that the ADJECTIVE GOOD is needed to make good sense. GOOD tells what John is. And John would not be anything without IS, whereas nothing would be said if the NOUN JOHN did not appear. Articles and other parts of speech may be added in playing this game and much amusement given while showing clearly the meaning of various words in the English language. This same game I have also played in teaching Latin, using simple words to teach children the meaning of Latin words and their position. Sometimes playing the game in Latin helps the children to understand English. Use words that are familiar to children such as Pupa, (doll), mensa, (table), and adjectives that apply to these objects. Pupa est alba (Doll is white) Mensa est magna (table is big) Simia est mala (Monkey is bad).

In the same way one can teach English through the use of Esperanto (Pupo estas blanka), (Tablo estas granda), (Simio estas malbona), giving the child an insight into etymology and at the same time showing him how sentences are built.

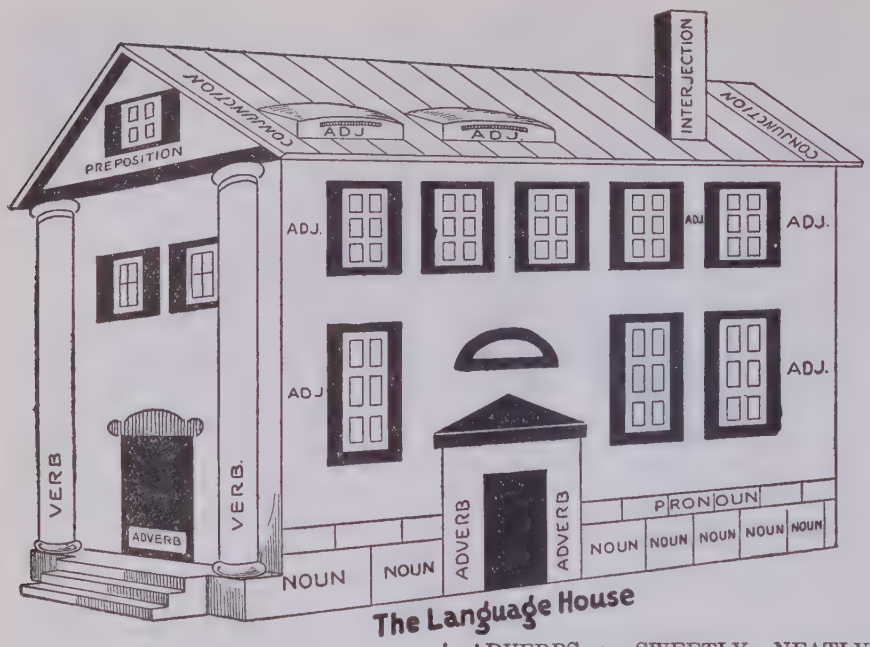
Many games may be played to teach the meaning of adjectives and to help children acquire a larger vocabulary. At the dinner table mother and children can play HOW MANY ADJECTIVES CAN WE SAY ABOUT THE DINNER. The meat is good or bad, tough or tender, thick or thin. The vegetables are hard or soft, green, yellow, white, red or orange. They are firm or mealy, delicious or unpleasant in taste. The same adjectives and many others may be applied to the fruits that have many colors and are sweet or sour, juicy or dry, ripe or unripe, etc. If parents could only find time to analyze speech while talking with little folks, children would have little trouble in understanding the rules of grammar when taught in school.

Children who can write on a typewriter (and little children three years of age have no difficulty in learning to use this fairy machine) gain a knowledge of the various parts of speech as well as how to spell words through writing these words on the typewriter. When Mother offers a reward to Johnnie if he can write a certain number of adjectives, nouns or pronouns on the typewriter, Johnnie gets busy and works with real interest and energy writing the words that he believes should be called nouns, pronouns, etc. I have in my possession a list of 25 adjectives written by little William Walsh, aged four years, a Pittsburgh boy whose mother encouraged him to gain a vocabulary through playing this game that develops the visual memory and that makes the child analyze sentences to see if a word is a noun, pronoun, etc.

The observing child notices that most prepositions are small words and that they are used to help other words. A child taught to see the real use of a conjunction will not make the mistake made by a poor school boy in one of the school rooms recently. He was asked to write a sentence with a conjunction in it and he wrote: "I hitched the horse with a halter to the fence. Halter is a conjunction because it joins the horse to the fence." The child who thoroughly understands WHAT IS A NOUN? will know that HALTER is the name of something and he will realize that a conjunction connects WORDS not tangible things.

It is very easy to make a child understand what is an interjection through making exclamations. I have often played games with the children representing various animals and each animal giving out a peculiar sound or exclamation. The little boy would go OH! The bear COOH! The cat MEOW! The dog BOW WOW! To kill two birds with one stone sometimes I give diaphramatical breathing exercises while teaching the child WHAT IS AN INTERJECTION. Standing erect and firmly on both feet we give

An Interjection Speech—with much gusto, expelling breath at each word:



HI! HI! HI! FI! FI! FI!

ALAS! ALAS! OH MY! OH MY!

Children who play these games that I have suggested frequently cannot fail to understand the meaning of the various parts of speech but all children like variety in games. OUR LANGUAGE HOUSE is a game that always interests. Draw the picture of a large house on a piece of Manila paper. Make an exact duplicate on another piece of paper. In the picture represent the foundation of the house with large stones standing for nouns and bricks for pronouns. The props of the house are verbs. The doors and windows are adjectives and adverbs because they let the light into the house just as adjectives and adverbs give light to the meaning of words in a sentence. The gables stand for prepositions as they show relation to each other. The shingles are conjunctions because they join together. Needless to add the CHIMNEYS are interjections, the places that let out explosives. On the foundation stones print the names of nouns, on the brick, put names of pronouns, on the house supports, verbs, etc. but make your markings only on the duplicate, leaving picture of house number one just as a house. Then cut out number two, putting all the parts into a box. First explain to the child that the noun is a foundation of Language house. It is big and powerful and that is why we represent it with a foundation stone. But if we have no nouns then we use pronouns instead, which are represented by bricks. Without the props of the house it would fall down and without the verbs the language house could not exist. Any house would be dark and dreary without doors and windows and so would a sentence without adjectives and adverbs. Little fairy tales about parts of speech make them interesting to children. Even three-year-old children can play this game and learn through observation to pick out the parts of the house that stand for nouns and those that are pronouns, etc. The game develops observation and concentration as well as teaches facts worth knowing about words.

The baby can put NOUN BLOCKS on the foundation part of the big language house NUMBER ONE. He can build the house putting the chimneys in place, etc. His bigger brothers and sisters soon see the thought behind language house and by playing with the paper stones, bricks, etc., each bearing the name of a part of speech, they have little difficulty in knowing nouns, pronouns, etc., at meeting. These words become friends easily recognized when they hear them or see them under other circumstances.

The following jingle was written by my daughter to help some of her young friends understand the meaning of various words as parts of speech. If mothers will teach this jingle to their children, singing it to the air of AULD LANG SYNE, I am sure that they will find it a help to the little folks:

The Language House

OUR LANGUAGE HOUSE

In our good English Language House
No troublesome bad Error Mouse
Will cause the house to tumble down
From the foundation—a good NOUN.

In case strong nouns we cannot find
Good PRONOUN bricks help us to bind
The language house so firm and well
So we can read, write, talk, and spell.

For props we use the good VERBS strong
So full of action and of song
And for our windows to give light
The ADJECTIVES so clear and bright.

As ADJECTIVES, the ADVERBS fair
Let in the light, let in the air,
Through LANGUAGE HOME'S great open doors
Where of good knowledge we find stores.

For shingles in our roof we use
CONJUNCTIONS which we ne'er abuse
And each good gable we may name
A PREPOSITION in this game.

When we would call to passers by
Up to the chimney let us fly
As INTERJECTIONS there to cry
ALAS! ALAS! OH MY! OH MY.

In a large room or on a sandy play ground this game may be played with the children to represent the various parts of speech, holding up the roof or flying to the chimney as they utter exclamations.

Another of Winifred's jingles written to the same favorite air of Auld Lang Syne speaks of the EIGHT PARTS OF SPEECH, not counting the ARTICLES.

This jingle may be sung while pointing to THE LANGUAGE HOUSE just described.

THE PARTS OF SPEECH WE KIDDIES NEED

Eight parts of speech we kiddies need
When we talk or write or read
These are the NOUNS as JOHN, HOUSE, TEA
The PRONOUNS—I, THOU, HE, SHE, ME.

The VERBS—as TALK, WALK, EAT, LOVE, TELL.
ADVERBS as SWEETLY, NEATLY, WELL.
THE PREPOSITIONS—FROM, TO, AT
CONJUNCTIONS—AND, BUT, NOR, OR, THAT.

The ADJECTIVES—SWEET, GOOD, HIGH, LOW.
The INTERJECTIONS—OH! Hey! Hoy!
These parts of speech we need each day
When we study, when we play.

A mother recently wrote to my daughter asking her to write a jingle that would be helpful in pointing out to children the use of

BAD, BADLY, NICE, NICELY.

This song may also be sung to the air of AULD LANG SYNE.

I know a naughty little lad,
Who never makes his mother glad
And all his work is BADLY DONE
And so we call him "A bad son."

I know a little maiden too
Who is so nice and good and true
And all her work is NICELY DONE
So she is loved by every one.

Unfortunately even grown people do not seem to understand the use of the word badly. How often do we hear those who have made an extensive study of the English language—or are supposed to have made this study, say "I feel badly." In order to impress the bad use of badly upon youthful minds Winifred has written a verse which may be sung to her favorite air or to the air of Forty Little Urchins. This verse is used with a number of other verses in a jingle called

BAD FORMS OF SPEECH

We cannot feel L-Y-LY in our work or play.
"Oh but I feel badly!" never, never say.
"I feel gladly, sadly, I feel illy too!"
Don't these words sound very, very queer to you?

This little verse is being used in a number of fashionable seminaries and in several colleges at the present time to impress upon the minds of students how ridiculous it is to say that they feel badly. Even young children smile when we say "I feel illy" and when they once have the right ear training as to the correct form of bad and badly they will not make the mistake of using an adverb when they should use an adjective.

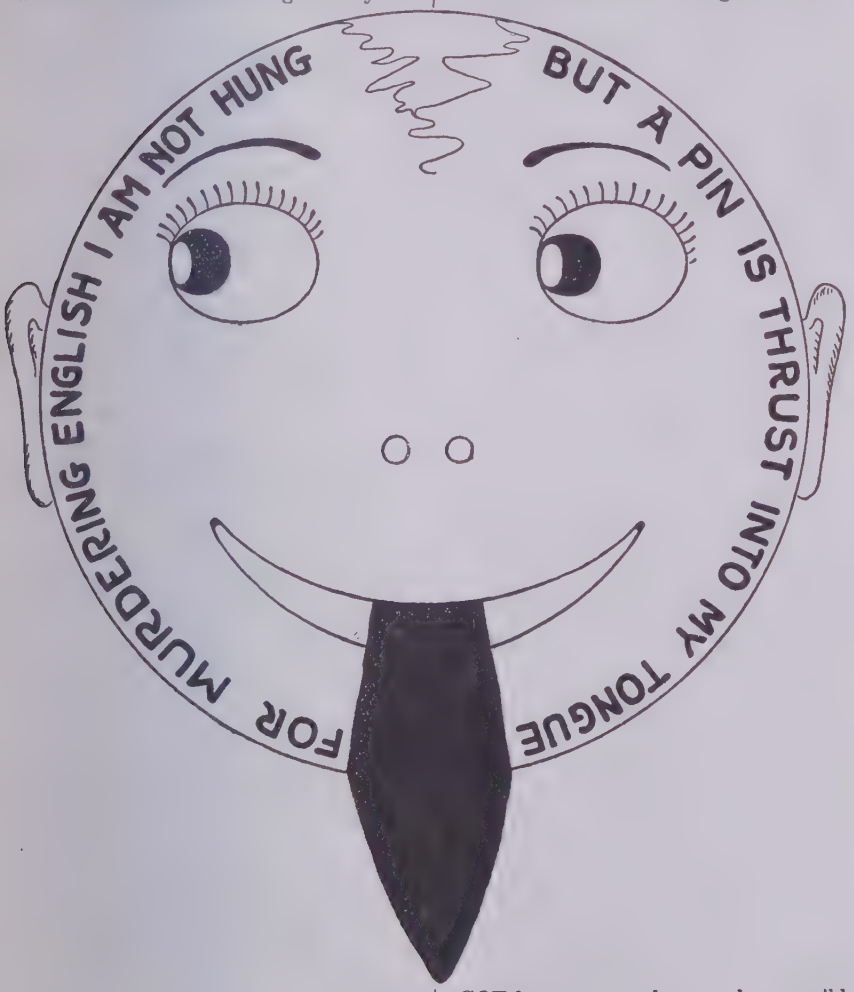
The other verses to this song will also prove helpful to parents in giving children reasons for using certain words.

"Susanna arrived safe" a telegram should read.
In this little sentence no L-Y we need.
Susan is quite safe, is what we want to say
And not how she traveled all along her way.

The mistake of using an adverb to describe safe arrivals is a very common error made by so called educated people, who do not seem to realize that they want to describe their condition, and not the manner in which they have traveled.

"Johnnie don't like lessons in the school each day."
If we speak quite plainly this is what we say;
"Johnnie do not like his lessons every day"
DOES NOT, I am sure, is what we mean to say.

Many people, big and little, are guilty of using DON'T for does not. If we train our children to avoid the use of DON'T, WON'T, CAN'T, SHAN'T etc., we shall be putting up a strong bulwark to prevent making this common "slip in speech."



We have always used in our home what I call a TONGUE SLIP CHART. The chart is made to look funny so that each one in the home is inclined to laugh rather than to feel hurt when corrections are made. I draw the chart to resemble a funny round face with big ears and a long tongue hanging over the lower lip. Around the face I print this nonsense rhyme:

For murdering English I am not hung
But a pin is thrust into my tongue.

Each menber of our family has a fresh TONGUE SLIP for each week. The charts hang on the back of a door in our den with the object of helping the members of Stoner family to be careful about words as to pronounciation and manner of use. When Daddy Stoner is heard to make a mistake in English his attention is called to the error supposed to have been made. If he thinks that he has not erred we consult some of the best authorities on English so as to prove whether he is right or wrong. If he is found to have broken the rule he is then punished by having a real pin put into the tongue of his FUNNY FACE Chart. The same punishment is meted out to each member of the family. It keeps us on the qui vive and we are rarely guilty of using what one might call "sloppy English." We cannot say, however, that we are never in the habit of using what some people call slang—forceful expressions that have been invented by such men as Huxley and Theodore Roosevelt. Personally I believe that the English language needs new words and new styles of speech just as we need new styles in dress. The word "KIDDIES" I hope has come to stay but I can remember when I was criticised for using this word and allowing my daughter to use it. I would not, however, recommend the use of what is termed as "slang". People who are lazy mentally generally use words that require the least thought. Such people are prone to swear. The word DAMN is used by many well educated people, as they say, "for emphasis". I have been guilty of this myself but I believe that there is no excuse for parents

indulging in the use of blasphemous language. The word DAMN may be an innocent word in some uses but it has been used for blasphemy and therefore we should avoid it. The Tongue slip chart is a great aid in curing people of swearing as well as in teaching them to be thoughtful in selection of words that convey thought.

As a believer in rewards for those who do well, I have adopted the plan in my own home of making the owner of TONGUE SLIP CHART with the largest number of pins, do the honors on Saturday evening to the theatre, to candy, or magazines. In this way the Stoners use Saturday night for a sort of holiday. Some one is certain to make at least one slip during the week and so we are sure of some treat. The one who has to treat does it gracefully but

avowing not to be "the goat" on the following week and I notice that in the years that have passed since we first began playing this game, the number of pins for each member of the family becomes fewer and fewer. Perfection has not yet been reached. We may never reach that stage. But we are gaining more and more knowledge of the English language.

Now let us return to the jingle BAD FORMS OF SPEECH and discover a few more mistakes that are commonly made in every day speech.

Once I heard a soldier who had joined the band,
Say "I've got an uniform oh so very grand."

HAS and GOT are just the same so throw GOT away
And with YOU sound of good U use the letter A.

Children as well as big folks often get confused in the use of A and AN. They know that AN is used before a word beginning with a vowel sound such as AN APPLE, AN HOUR, AN ACORN and A is used before a word beginning with a consonant sound such as A DAY, A BOAT, A TOY. But when using words like UNIT and UNIFORM that are spelled with a vowel but have the consonant sound of Y they sometimes make mistakes. We say A UNIFORM, A UNIT, A UNIVERSE.

There have been many controversies concerning the use of the word GOT but the best authorities now agree to banish GOT from our speech as much as possible. If we have anything, we have it and GOT is a word that I tell my kiddies can be thrown out of the window. Sometimes we hear parents say: "YOU'VE GOT TO GET YOUR LESSONS." This is not good English. Got is used properly only in the sense of "acquired" or procured," or "secured." It is correct to say "I went to get a book and I got it. Mary got a position." But it is not correct to say "I have got an apple. Have you got a book? Tommy has got blue eyes."

In order to impress the use of HAVE and got upon the minds of your children play games with them, telling stories in which you use the word GOT where it should not be used and asking the kiddies to catch all of the superfluous GOTS and throw them out of the window.

Johnnie has been naughty. To-day he told a lie
And confessing to me, he said: "TWEEN YOU AND I".
"BETWEEN YOU AND ME" is what he meant to say
For an object follows preposition's way.

So many children have been scolded for saying "Me" instead of I that some little folks go to the opposite extreme and use I when they should use me. We hear grown folks make this same mistake, especially when they are trying to put on airs. Between is a preposition and the object of a preposition is always in the OBJECTIVE CASE. It might be well to have the children write a number of sentences on the typewriter using between. Printing "Between you and me," or using it for a writing lesson, also impresses this correct form of speech upon the child's mind. Seeing the correct form trains the visual memory, which helps the oral. Some people say, "This sentence does not look right." Others say, "This sentence does not sound right." It is wise to train both the eye and the ear when one is attempting to gain a knowledge of correct English.

Let the child write these expressions a number of times and give him also the prepositions "From, by, with, in, at" to use in sentences but never at the close of these sentences.

Between you and me. For you and me. Unto you and me.
Between him and me. For him and me. Unto him and me. For her and me. Unto her and me. Among them. With him. From him.

Play the game of SOLDIERS IN CORRECT FORM

Write sentences using the preposition at the end of the sentence and see if the children discover PREPOSITION out of place. Perhaps it would be better to play the game as parts of LANGUAGE as the trend of modern times is to get away from soldiers and to talk more of the constructive genius. I suggest soldiers because most children are interested in playing games of marching. Whether soldiers or builders the game can be made interesting by writing the words on separate pieces of paper and arranging them in line. Suppose we have these words:

WHAT DID GEORGE WASHINGTON CUT THE CHERRY TREE WITH?

The clever child picks up the preposition WITH and carries it from the last part of the sentence to the first part so that the sentence reads "With what did George Washington cut the cherry tree?"

I knock on the door and Bess says: "Who is there?"
I reply: "Its only me, your little sister Claire."
Bess says: "Verbs intransitive an object cannot own."
"IT IS I" I should have said in a gentle tone.

It is easier for a very little child to say ME rather than I and perhaps that is the reason why so many young children use the objective rather than the nominative. Perhaps the blame may also be laid to mothers who are fond of using "ITsie Ootsie language with babies" such as "Him is his muvver's Ootsie Oooh, And Muvver lub him yes she do." When the baby says "Me is so good". The mother

smiles and thinks that this baby talk is oh so cunning. As a consequence he suffers from his first impressions of right and wrong in using the English language. How often do we hear not only "It is me" but "That is her, That is him. Yes, it's them." And still oftener are heard the contractions "It's me, That's her, That's him, That's them." And I may be mistaken but from my experience the louder people talk the more prone are they to use the ME, HER, HIM, and THEM in preference to I, she, he, and they. A big lesson that all mothers should teach to their children is that of voice modulation. "A low soft voice is an excellent thing" not only in a woman but in a man and it is particularly pleasing in a child. It helps to make music out of speech. And surely we need more music in our every day speech, more rhythm, which is the very synovial fluid of existence—that which makes the wheels of life run more smoothly. We all know that a soft answer will turn away wrath and we know also that we prefer to hear a sweet low voice to a loud rasping one. Loud voiced people are never very popular at home or abroad. Therefore, it behooves us to train our children to be male and female Cordelias with voices "ever gentle, soft, and low" showing that the owners of the voices have control of their body machines. And the best way to teach children "The lesson of proper speaking" is to give them the example in speaking as we would have them speak, in showing them that we "can keep an even temper no matter what happens" and that we will never lose our own self respect by yelling or talking in a loud rasping voice. The nagging mother with a rasping voice, who fills her home with "DON'TS and MUST NOTS" is the mother who drives her children from home.

"I SEEN PIGS!" cries Tommy in a loud, loud tone.
SEEN is such a weak verb it can't stand alone.
So he should say "HAVE SEEN" or use SAW so strong
Which without another verb always gets along.

When children have difficulty in knowing when to say "I SEEN" and when "I SAW" TELL THEM THAT SEEN is a weak little verb that can never stand alone without an auxiliary or helping verb. Then let them write ten times on a typewriter "I have seen a pig. I have seen a dog. I have seen a man, I have seen a bird. I have seen a fly." There is no better tool or toy by means of which a child can learn to speak good English and to spell correctly than the typewriter. At the present time I am using the little portable Underwood typewriter in all of my schools because it is cheap, durable and attractive to children. Through using the typewriter a child gains co-operation of mind and muscle, he develops the muscles of his fingers so he can more easily play on the piano or violin, he finds pleasure in gaining knowledge, he can teach himself to read and to spell, and he develops his visual memory so that he becomes a good speller. It is not necessary for parents to expend large sums of money on buying new typewriters for the home. Instead of selling the old typewriters used in offices, I would suggest that Father bring home the typewriter and give Mother a chance not only to save time,—which means "save life"—in typewriting letters and matters pertaining to the home, but also gives her an opportunity to help little Tom and Mary gain information in reading, spelling, punctuation and good English. A typewriter, as I said in some of my pleas for education fully twenty years ago, is a sine qua non in the home. It is more important than the piano and the sewing machine. We have good canned music supplied to us through inexpensive phonographs. We can buy wonderful garments such as the pidgie-panties for little money. Therefore the mother needs the typewriter more than she does these other tools.

The mother who is supplied with a typewriter will have no difficulty in one lesson, to teach little Tom the use of SEEN and SAW. After he has written ten sentences with the weak verb SEEN, using it each time with some helping verb, she will show him that SAW is a strong verb that always stands alone, and ten times he will write on the fairy machine I SAW A PIG. After writing this sentence ten times he will see the verb SAW at all times standing alone and he will not say "I have saw a pig." Both his eye and his ear will be trained to know that SAW stands alone.

Of course, if the mother is not so fortunate as to have a typewriter in the home she can teach her child by having him print or write sentences with SAW, using the word SAW in larger print than the other words.

"I thank you" said Betty to her good friend Paul
SHE meant she was welcome, but said, "NOT AT ALL."
"CAN I COME TO SEE YOU? Betty dear," said Pete
"Will we go to dinner? Don't you wanter eat?"

The expression "Not at all" in answer to "Thank you" is certainly silly but it is often used by grown people as well as young folks. The true answer to "I thank you" is "You are welcome." In the same way it is silly to say "The pleasure is all mine." This sounds as if the person for whom you did a kind deed, reaped no benefit from the deed.

The use of CAN for MAY is another way of murdering English and it has been the cause, to my knowledge, of keeping several people from securing good positions. I know of two business men who refused to employ young ladies that I sent to their offices because these young ladies said "Can I come in?" CAN implies power. It suggests "Of course I can come in" whereas MAY has the polite and humble spirit. It indicates request for permission. In asking any favor children should be taught at all times to say "May" and before requests are granted the children should be requested to use THE FAIRY MAY rather than the BOASTFUL—CAN.

Writing sentences on the typewriter with CAN and MAY or playing games with sentences, either written or spoken, using these words, helps the children to understand when to use CAN and when to use MAY. Let the child knock on the door and say "May I come in." Give him a box of candy. Let him bring it to you and say "Mother may I have a piece?" Pretend that he is going to different places and let him ask "Mother may I go to the store? Mother may I go to the circus?" etc. "Mother may I borrow your pencil? Mother may I go with Susan? Mother may I have a piece of pie?"

MIGHT is also a potential verb, which expresses possibility or privilege. It may also be used in asking permission. "Mother, might I have a glass of water? Mother, might I have another cookie?"

CAN and COULD express ability and power. Harry CAN ride a horse. I COULD work for you. COULD you go with me? Yes I COULD go with you.

"EACH ONE LIKES THEIR OWN WAY" Peter loved to say
When he made long speeches almost every day.
"And I love you truly with all of my heart,
From you, darling Betty, I hadn't oughter part."

At one time I was introduced by the President of a great university with these words: "Every one likes their own way." This man had written a book on the English Language but apparently he had not learned to put into practice what he could preach in books. Early impressions are lasting and I learned from inquiry that his parents were not educated people and as a child he did not learn to speak good English. Perhaps there is no commoner mistake than this use of singulars with plurals in the conversation of educated people and in lectures delivered from public platforms. If the child's ear be trained to use each, every, either, neither, some one, somebody, anyone, anybody, every one, everybody, no one, nobody, one, and a person with singular, not plural verbs and pronouns he will continue to use these correct forms through life and to say "Each one likes his or her way" rather than "Each one likes their own way."

When Peter says "I love you truly with all my heart" he is using unnecessary words. He is a tautologist or one who makes needless repetition. If Peter loves he must love with his whole heart, not with a part of it.

Again when Peter asks "Will you go to dinner?" he expresses determination. Instead, he should say "Shall we go to dinner?" to represent simple expectation.

Give the child sentences like the following to impress upon his mind simple futurity and determination.

FUTURITY: I shall go to London next summer. I shall see you on Tuesday. I hope you will go with me. He will see you next week.

DETERMINATION: I will never leave you. I will not go with you. You shall go with him. He shall be punished.

A simple rule that may be followed tells us that in general simple futurity is expressed by SHALL in the first person and WILL in the second and third, while determination is expressed by WILL in the first and shall in the second and third. I would suggest to all parents the use of a good grammar or dictionary for consultation when in doubt as to how to use shall or will.

Should and would are used very much as shall and will. The following sentences with the correct use of shall, will, should, and would may help parents in teaching their children the correct use of these words:

Shall I go tomorrow? Shall I come to your house? Shall I go to the store? Shall we go to the movies? Shall we have some candy? He said to me: "You shall go." I shall pass the house this afternoon. Shall I ring the bell? You shall not escape. He shall receive a reward. I shall go away tomorrow and no doubt you will have a pleasant time. I shall have a party on Wednesday and I hope that you will come. I shall go to church. Will you go with me? I should like to have a nice cake for

supper. Yes, dear, I am sure you would enjoy one. Mother, I should like to have a new blue dress. Yes, Mary I am sure you would enjoy a new blue dress. Shall I descend and will you give me leave?—Shakespeare. Hear me, for I will speak—Shakespeare. Will you be patient? Will you stay awhile?—Shakespeare. Take care of your spirit and conduct and your reputation will take care of itself—Hamilton.

It may seem ridiculous to call one's attention to the expression—"DONT YOU WANTER EAT?" but if we listen as we walk on the public streets or ride in public conveyences we will hear well-dressed people using just such expressions and little urchins seem to take delight in saying "DONCHER." Our children must encounter people who use such expressions and it is well to call their attention to these vulgarisms in this amusing way so that they will be careful not to be guilty of using DONCHER, WANTER, LIKTER, KINDER, HADN'T OUGHTER, etc.

Peter found some flowers in a lovely nook.
He brought them to Miss Betty sleeping by a brook
And said "I LIE my gifts here while you're laid out there
With the sunbeams shinin' on your golden hair."

Rules for using LAY and LAID and for LIE, LAY, LAIN,
Save so many mortals from inflicted pain;
For it is not pleasant to a well-trained ear
LIE for LAY and LAY for LIE anytime to hear.

I have found my best success in impressing the right use of these words upon the minds of young children by playing games with them. I would lie down and say "I lie down." Very young children cannot understand the difference between a transitive and intransitive but you can show them that lie means to recline. No object is required. We do not LIE anything. But we do lay the book on the table. We lay a pencil on the book. We lay an apple on the book. We lay the rugs on the floor. But in speaking of the rug we say "The rug lies on the floor." The book lies on the table. The pencil lies on the book. I lay the key on the desk. The key lies on the desk. The soldiers lie down at night. The cat lies by the fire. The soldiers lay their guns down. The cat lays her mouse at my feet.

The following sentences may help mothers in talking to their children and in making games to teach the little folks when to say LIE and when to say LAY:

Tommy, please lay this book on the table and then lie down and rest. Mary, will you please lay aside your work and lie down for a few minutes. Charlie was a good boy and laid the candy on the shelf. Where is the book lying? It is lying on the table where Johnnie laid it.

If the mother remembers that to recline is used as LIE in the present and LAY and LAIN in the past participle—while LAY to place, in the present, has LAID and laid for both past and past participle, she will not be likely to make mistakes with the use of LIE and LAY. He has LAID the candy on the table. But he has lain down to rest.

Contractions such as Peter uses in saying SHININ' for shining should never be used by any one. People in the United States, so say foreigners, are in such a hurry that they sometimes do not finish the ends of their words when they are speaking. They say "Commin, walkin, talkin, eatin" instead of coming, walking, talking, eating.

When Peter used the telephone, Mary heard him say:
"Who is it yer want? I'll call them right away,
But I believe there's two folks in this house named Bess
And you want the youngest of the two I guess."

Many people, who use good English in ordinary conversation are prone to make mistakes in speaking over the telephone. At one time when I was visiting a school for girls I heard these girls, who recited rules in English each day, use the same language that Peter used in the above jingle substituting WHO for whom, using plurals with singulars, and making contractions in speech the School style. Mothers should be very particular in talking over the telephone and use WHOM do you wish? rather than WHO do you wish. YER is not English. When it is heard in the home, the children should play the game of "Throwing it out of the window" and never letting it come in again because it is a naughty lazy GNOME that spoils Good English Speech.

In talking of any two objects we compare the two as BETTER not best. If there are but two apples we say: "This apple is the better of the two." But if there are many apples we say: "This apple is the best."

Sentences.—To help keep these rules in mind:
Who is he? Who gave you the book? To whom did you give the book? Who do you think he is? From whom is the book? The girl, whom I saw, was Mary. Longfellow is an author whom I enjoy. Whom did you see when you were in Paris? To whom do you refer? Of the two teachers I like Miss Jones the better. Of the two houses I like the green one much the better. This apple is the best of all the dozen. Of all these books this one is the best. Of my two children Mary is the elder.

The following verses of BAD FORMS OF SPEECH may be recited verse by verse to the children each day so that they may try to find the mistakes that poor Peter made when he talked English.

Now each little kiddie use your clever mind.
And in Peter's talking surely you will find
Rules of grammar broken and many bad mistakes
That a clever kiddie never, never makes.

This is what Poor Peter says:
Last night ter me Jane says: "Must go ter town
Fer I haven't even got a single decent gown"
And I sez, sez I to she "You oughter wait a while
Soze to git a cheaper price and some better style."

I see by the paper a auto has been bought
By young Smith, oh yes its him by which we'uns wuz tot.
Guess he's made a fortune by teachin' public school
But he learned me nothin'—I thot him a fool.

The rule wuz wot this teacher learned his pupils by
No wonder that we hated school and people heard us sigh
When he axed the question "Where is London at?"
Each of us wud tremble like old Tommy Cat.

Peter on a visit cried—"Quick open up that door
And I'll sit this basket here right upon the floor
While I'm settin restin' because I'm kinder weak
Different from usual when I'm fat and sleek.

No wonder I feel badly, I've tuk two spoon of oils
These kind mixed in a bottle prescribed by Dr. Hoyles
But I'm sure they'll cure me before I traveling go
Arrivin' in old Paris and livin' at Bordeaux.

There I'll raise some children and rear lovely dogs
Now I only have some cats and a couple hogs.
Life without some live stock 'taint no life we know
This is really gospel, good friend, haint it so?"

Peter sailed for France but ne'er fulfilled his dream,
He fell overboard and some one heard him scream
As he sank from out of sight "I will, I will, will drown
Not a soul shall help me put my feet on ground."

Using the nonsense verse about Poor Peter, repeat it for the kiddies and see how many BAD GNOMES or mistakes Peter made. Through this jingle the child learns not to say TER for to, fer for for, soze for so as, git for get, oughter for ought to, sez for said. Point out to him that the little lady or knight who tries to keep English pure never says "Says I." Neither does the good grammarian say "To she" because the preposition *to* is followed by an objective like him, her, them, etc. In a previous talk it has beer suggested never to use HAVE and GOT together.

If the children in any home are too young to appreciate, the foolishness of Peter's conversation, the parents may use this jingle just the same to keep them on the qui vive in not making the same errors that poor Peter made. In this jingle are nearly all of the mistakes that are made by people, both educated and uneducated, in every day conversation. There are some people who talk very quickly and do not realize that they make contractions of syllables ending in ING and neither do they realize that they say "Fer for for." Constructive criticism made by various members of the house and the tongue chart that I have suggested will help to drive away the FERS, TERS, etc. and keep the good clean English words always in the home.

In verse fifteen Peter makes mistakes which I am sure all of the readers of these pages have heard. We often hear people say "I see by the paper" when they intend to say "I have read in the paper" or "I saw in the paper." "I have a auto" said a well to do man to me just yesterday. To impress upon children the use of A and An give them certain words that begin with vowels and consonant sounds and ask them does A or An belong with apron. Does A or An belong to ant? Other useful words

are aster, elephant, oak, elm, olive, almond, apricot, alligator, eagle, hat, desk, tiger, lion, bear, monkey, etc. These little articles are very important and if the ear is trained properly in childhood to use A with consonant sounds and AN with vowels the child will not make mistakes in use of the articles when he grows to be a man.

"It's him" is not often used by people who have studied the principles of grammar, but children who go to public school may hear such expressions and it is well to guard them from using an objective with is. *Who* refers to persons, *which* to things, and *that* to both persons and things. I have always suggested to children that they will be on the safe side by using *that.* The dog that I had last summer is dead. This is the book that I love best of all. Mary is the girl who won a prize. The pen which I hold was given to me by a king.

WE UNS is not English. We cannot say, "we wuz tot." We should say "We were taught" pronouncing taught as it is spelled and not as so many people from different parts of the United States say —TOT.

GUESS , I believe, is used in the north just as RECKON or CALCULATE is used in the south. It is much better to say "I suppose" or "I think."

Peter in this verse made some more contractions—teachin' and nothin'. He used He's for he has, and spoke of his teacher learnin' him. LEARN means to acquire knowledge. I expect to learn how to swim. I shall learn my lesson. I am eager to learn how to cook. TEACH means to impart knowledge. Let me teach you how to swim. Please teach me how to darn my own stockings.

In the sixteenth verse Peter makes some of the mistakes made in other verses and he puts his prepositions at the end of his sentences. "Learned his pupils by" and "Where is London at?" It is sometimes difficult to avoid putting prepositions at the end of sentences as the little boy who wrote a rule in grammar: "You should not use a preposition to end the sentence with" but parents who want to teach their children to use the best English will avoid the use of prepositions at the end of sentences.

AXED for asked and sometimes AST are heard and so is wud for would. If we use the broad sound of a as the English use it we are not so prone to give people the impression that we have said "AST." In the same way if we try to talk slowly and distinctly we will not say WUD for would any more than we will say Ter or TUh for TO.

In verse seventeen Peter cries "Open up the door." If one opens the door it is not necessary to say OPEN UP. In the same way when we ask our visitors to be seated we need not say "Sit down." I am sure that they cannot Sit Up. The vulgar expression SHUT UP YOUR MOUTH, is as incorrect in English form as it is in good manners. The French say "Fermez la bouche," close the mouth—and that is what we mean to say when we use the vulgar "Shut up your mouth." We hear also "Shut up the window," "Shut up the door."

"LEMME" belongs in the same class with Doncher, Whatyer, Gonna, Gimme and we should never allow this lazy, vulgar gnome to enter our homes. It stands for "Let me" and when one is about to use these two words he should be a little careful in saying them—Let me give you some water. Let me help you with your work. The same care must be exercised when one is going to say "DON'T YOU," "Going to," "What do you," and "Give me."

The next verb that seems to trouble poor Peter and sometimes troubles many other people is the verb set. He gets it mixed with sit. He should say "Set the basket" because set is a transitive verb that means to place something. Sit is always intransitive. To sit means to seat one's self. But the hen sits to cover and warms her eggs. The verb set, however, is also an intransitive verb when it means to decline, to go down. That is why it is correct to say "The sun sets."

We often hear the expression used by Peter, "Different than" — this rose is different than that rose, this doll is different than that doll. We should say different from since we mean to say that one thing is different from the other.

We have already spoken of the use of BADLY for bad. Sometimes it is used to mean very, very much as we hear people say "The carpet needs beating badly. I shall miss you oh so badly." This word is certainly much abused both in the sense of feeling LY—ly and in these colloquialisms.

From the days of old Squeers down to the present day children have heard the expression "You must take two spoonsful." Surely we do not take two spoons, but rather one spoon that is filled twice.

THESE KIND we hear every day. This kind is what we mean to say. THESE SORT sometimes we hear but not so often, for this sort. Such expressions as "People who kind of chill you. The man who gets sort of dull. I kind of felt my way at first. What kind of a house is it? It is a sort of a castle" should be avoided. The more elegant expressions are: "People who somehow chill you. The man who gets rather dull. I felt my way at first. What kind of house is it? It is a sort of castle."

Peter tells us that he ARRIVED IN PARIS and will LIVE AT BORDEAUX. We arrive AT a place but live IN it.

He informs us also that he will RAISE some children and REAR some dogs. He is not the only person who has made such an erroneous statement. Almost every day we hear the expression "I was raised in this or that place." PIGS are RAISED but children are REARED. I ONLY HAVE is another bad mistake. If we analyze this phrase we see that it means I am the only one that has anything, whereas the speaker means to say I have ONLY some cats and a couple of hogs. TAINT and HAINT are not included in the English language but we hear them each day along with such words and expressions as:—"Them's my sentiments. He don't love me. I love taters. I am mad at him. Let me sit besides you. You look good. Loan me some money. He has lots of money. I shall be back. I kin tell you. I done it. If its convenient for you. I have heaps of friends. She thinks like I do. I don't believe in them no how. There are none. It was no use to argue with him. Why blame it on me? I love cake. Its awfully nice. I was only saying the other day. It is overly nice. Sure, I'll be there. Don't blame that on me. They are both alike. I expect it is. Firstly, I remark. I hope he arrived in time. In our midst. I am stopping in Washington," etc.

Perhaps few people come to such a bad end as Peter, who fell overboard and using bad English to the last cried: "I will drown, no one shall help me" but I am sure that many people have lost fortunes, prestige, friends, peace of mind, and countless pleasures because they have been guilty of murdering good English. It is very painful to those who have been reared in an atmosphere of pure English to hear this language roughly treated by those who are either ignorant or careless. A knowledge of good English is a veritable gold mine for anyone who has it and it is the duty of every parent to lay the foundation for this "bonanza" in the cradle. Herbert Spencer spoke truly when he said "Teach a child to speak good English in the cradle and he will speak good English to the grave." Early impressions are lasting and if parents use the English language in the way that the masters of English tell us it should be used, then the children who inherit the Simian trick of imitation, will do likewise. Equipped with this best foundation stone upon which to build their education they will climb far more quickly and more surely to The Tower of Success than the unfortunate children who hear bad English in the cradle and who despite struggles to reform, even when they know all the rules of the English Language, are often guilty of "bad slips in speech." From the foregoing examples, one may conclude that nowhere in the entire field of education is early training more important than in the mastery of our mother tongue.

GRAMMAR.—The chief values of English grammar come through analysis and syntax. The analysis of sentences shows how ideas hang together, and so quickens our understanding of what we read, even bringing out meanings we should otherwise miss altogether. Mastery of analysis, applied as a habit in reading things worth while, presently becomes clear thinking. Every sentence we read is found to be made up of parts which belong to each other in interesting ways. Even the finest lyric poetry must be *understood* before it can be *felt,* and readers, who have trained themselves to the quick grasp of thought relations, find analysis the servant of poetry; not its enemy. The objections to analysis of literature are due in the main to bad preparation; we analyze the right thing at the wrong time—before we are ready for it—and so our tool becomes our tyrant. The remedy is not less analysis, but more, and better planned.

Syntax teaches the correct form which a word should take in serving one or another purpose in the sentence. Syntax may go far toward curing the blunders which mark careless or uncultivated speakers. But like analysis, syntax must become second nature if it is to be of much use in practical English.

Sentence Analysis.—"We think in words, and when we lack fit words, we lack fit thoughts." But thoughts are not higgledy-piggledy words. *Bandit, skid, stenographer, Ford, turtle, chauffeur, policeman, Packard* are promising high spots, but they tell no tale. One guess is as good as another, until we find *why, who, did, what, when, which, was, where.*

The *subject* of a sentence points out what we are talking about.

The *predicate* says what we have to say about the subject.

Modifiers narrow, enlarge, explain, or otherwise change the meaning of the notions they tie to.

The little tin brute skidded on the slippery corner, and in spite of all the pretty stenographer could do, turned turtle under the wheels of the Packard carrying the bandit on his get-a-way.

The simple subject is brute.

The simple predicate or predicate verb is *skidded and turned turtle.*

Everything else in the sentence is *modifier*.

Complements.—The assertion made by the sentence verb is often incomplete. The expressions:

John was
Velvet feels
Old age seems
Locomotives burn

are without meaning until the idea of the verb is finished by some complement. If we say *John was president*, or *John was tall*, the words *president* and *tall* are *attribute complements* (*or subjective complements*) since they complete the verb and describe the subject. The first is also commonly named *predicate noun*, the second *predicate adjective*.

Again, in *Bring me a chair*; *The tailor made John a coat*; the words *me* and *John* seem to receive action, and yet they are also the principal words in phrases from which the prepositions *to*, and *for* have been left out. Bring *to me*, Made *for John*. Such complements in phrases without *to* or *for* are called *indirect objects* (or dative objects.)

A few of the verbs most frequently using indirect objects are: *bring, build, do, get, hand, make, offer, pay, play, promise, read, sell, send, show, teach, tell, throw, wish*.

The principal sentence elements are those which have been named: subject, predicate, complement, and modifiers. In addition, there are independent, parenthetical, and connective elements.

If we say:

Locomotives burn coal,
We heard a thrush,
Strikes cause suffering,

the words *coal, thrush, suffering* are *object complements*. Each completes its verb, by naming the receiver or result of action, without modifying the subject.

A third type of complement is shown in: The President appointed Bryan *Secretary of State*.
Training made our soldiers efficient.
Here the terms *efficient* and *Secretary of State* are *objective complements*, having the double use of completing the action and modifying the object complement.

Subjects, Predicates, Complements, Modifiers are so named because of their parts in telling the thought. Sentences may be analyzed from another viewpoint, their *structure*. Sentences, of course, are made of words, but there are combinations of words which hang together and act as one. The sentences

Come *now*, (word modifier)
Come *at this moment*, (phrase modifier)
Come *before any grass grows under your feet* (clause modifier)

are all alike in meaning. Phrases and clauses may do the work of subjects, complements, modifiers, parentheses, or independent elements.

A *phrase* is a group of related words making no assertion.

A *clause* is a statement forming part of a sentence.

Sentences may be analyzed from a third viewpoint. *Each word* may be examined and classified.

At Smithville yesterday, with two men out and the bases full, Lefty White swung hard for another four-bagger; but Great Scott! he couldn't find what was on that ball for a decent foul strike!

Noun.—*Smithville* is the name of a place. *Lefty White* is the name of a person. In this sentence, *bases, bagger, breaks, strike* are names of things. (Names like these are called nouns.)

Pronoun.—*He* is used in place of the noun Lefty White

What stands for the speed, the break, the deceptive curve of the pitching. (Words which stand for nouns are pronouns.)

Verb.—*Swung, find, was* make the assertions, actually tell the story of the sentence. (Verbs are words which tell the story, make the assertion of the sentence.)

Adjective.—*Decent, two, that, another* are words which point out, show quantity or quality. (Adjectives limit or describe nouns and pronouns.)

Adverb.—*Hard* tells how something was done. (Adverbs modify verbs, adjectives, or other adverbs, to tell *how, when, where, why, how much*, and the *like*.)

Conjunction.—*And, but*, are connecting words. (Conjunctions connect words, phrases or clauses.)

Preposition.—*At, with, on, for* show the relation of Smithville, men, ball, four-bagger to swung, was, find.

In the hat is *on* the table
The cat is *under* the table
The lamp hangs *over* the table

the idea of relationship may be clearer. (A preposition introduces a phrase, and shows the relation between two ideas.)

Interjection.—Great Scott! does not really belong to the sentence; is used to let off steam. (An interjection is a word thrown in to show feeling.)

The eight terms foregoing—noun, verb, adjective, adverb, pronoun, preposition, conjunction, interjection—are called *the parts of speech*. In the examples above, single words are named. But phrases and clauses also serve as parts of speech.

I will go *home*,
I will go *to my house*,
I will go to the place *where* I *live*,

are respectively adverb, adverbial phrase, adverbial clause.

Phrases and clauses may thus take the place of nouns, adjectives, or adverbs.

Nouns — Subdivisions. — Most parts of speech may be sub-divided. For example, it is easy to see that such nouns as *Detroit, Patrick Henry*, are unlike the names *river, man*. 'A *common noun* is a general or class name. A *proper noun* is a specific or individual name. The common noun names a whole group of things, the proper noun names an individual thing.

Some grammarians use a third class of nouns, called *abstract*, a term easier to illustrate than to define. *Ice* is a substantial, material thing. It can be seen, handled, weighed, broken into parts. But *iciness*, though clearly enough a noun, has none of these concrete qualities of *ice*. The concreteness has been abstracted (taken away). Temperance, ugliness, beauty, blackness, are *abstract nouns*. It is better to regard them as special forms of the common or class name.

Another form of common noun is the collective noun, so called because it gives one name to a group of persons or objects taken together. *Committee, congress, congregation*, are collective nouns.

Nouns—Uses in the Sentence.—As Subject of Verb—*Airplanes* fly.

Object Complement—Automobiles multiply *accidents*.

Predicate Noun—Senators are *representatives*.

Objective Complement—The Americans elected Harding *president*.

Objective Adverbial—We walked a *mile*.

Object of Preposition—Three Men in a *Boat*.

Indirect Object—Give *Jim* the ball.

Appositive—Sheridan, the *Commander*, was at Winchester.

Independent by address—*Fred*, will you shut the door?

Independent with Participle—The *captain* being wounded, the lieutenant took command.

Independent with following adjective, adverb, or phrase—*Hat* in hand, he stood waiting. *Face* dirty, *clothing* ragged, *feet* bare, he played in the streets all day.

Possessive—The *alligator's* hide is tough.

(Mixed and doubtful cases will be found in the Section of *Puzzling Constructions*).

Verbs—Subdivisions.—General viewpoints are possible in subdividing verbs. Consider the following sentences:

(1) Radium exists (is).
(2) Gunpowder explodes.
(3) Gold is a metal.
(4) Rifle balls kill game.

With regard to the completeness of the assertion: Exists and explodes are verbs requiring no complement (*Complete predication*).
Is and kill are verbs requiring complements (*Incomplete predication*).

With regard to the nature of the thing asserted:
Exists and *is* are verbs of being (Static).
Explodes and *kill* are verbs of action (*Kinetic*).

With regard to the presence of a recipient or result:
Kill names an action which reaches an objective (Transitive).
Exists, explodes, is have no such recipient or result of action (Intransitive).

The third of these sets, transitive-intransitive, is the standard division, always difficult to defend, and now giving place to the first set. The terms static—kinetic are more useful in logic than in grammar.

Verbals.—A verbal is a hybrid of verb and some other part of speech. In *Skating on one foot is difficult*, skating resembles a verb—there is action in it, and it has a phrasal modifier; but its action is *implied*, not *asserted;* the word skating is also the name of something, actually used as subject in the sentence. So, here, skating is plainly a composite of verb and noun. Such a composite is called a verbal.

If the foregoing type-sentence had read *To skate on one foot is difficult*, precisely the same discussion might have been applied to the words *to skate*. That expression is also a verbal noun; or verbal. In

The brook came tumbling,
He fell whirling,

the words *tumbling, whirling* are pretty clearly adverbial—verbal combinations. There can be no objection to admitting a possible modification of the subject, in each case, but it seems that the words tumbling and whirling tell us how the brook came and how the man fell. So if we say

Fools came to scoff.

to scoff is also a verbal adverb, answering *why*.

Subdivision of Verbals.—All old grammars, and most modern ones, define an Infinitive as a verbal noun, and a participle as a verbal adjective. The foregoing examples would seem to overthrow these standard definitions. The old treatment of verbals leaves us "all in the foggy dew."

If we must divide verbals into classes, the only distinctions easy to maintain will be formal. Such expressions as *to see, to have known, to be heard*, may be called *infinitives;* they are verbal combinations with *to* (expressed or understood). Such expressions as *seeing, knowing, seen, known, being heard, having been heard*, may commonly be called *participles*. They are

verbals without the infinitive sign *to*.

It is well enough to know that standard practice still gives the name *Gerund* to a verbal noun having the form of a participle, as in the sentence.

I am surprised at your *knowing* that.

Some day, we may drop this troublesome word gerund from our English grammar and admit that participles may be used as nouns.

Verbals—Uses of Infinitives.

1. Noun, Subject.
   To compute the age of the earth is difficult.
   It is pleasant *to have* spending money. (Logical Subject).
2. Noun, Object Complement.
   Hounds like *to track* game.
3. Subjective Complement.
   To profiteer is *to overcharge*.
4. Following a Preposition.
   We can do nothing but *wait*. (Infinitive without to).
   It will be impossible for him *to get* back. (Infinitive phrase).
5. In Apposition.
   To define, *to classify accurately*, is often difficult. (The second infinitive is here a definite equivalent of the first.)
   A tough undertaking, this, *to reach* the South Pole!
6. In the Adjective Relation.
   A time *to speak* and a time *to hold* your peace.
7. As an Adverb.
   Fools came *to scoff* and remained *to pray*.
   He so far forgot himself as *to resist* an officer. (Phrase of Degree.)
8. In an Independent Phrase.
   To tell you the truth, it is too late.

Verbals—Uses of Gerunds.—(Verbal nouns without *to*).

1. Subject.
   The *finding* of America required heroism.
   There's no *telling* how it will end.
2. Object.
   When does he intend *going* to Boston?
3. Subjective Complement.
   The most difficult part of detection is *finding* sufficient clues.
4. Objective Complement.
   Do you call that *playing* the game?
5. Object of Preposition.
   I never heard of *making* it in that way.
6. Appositive.
   We found it good fun, *rounding* up the jack rabbits.
7. Adverbial.
   That fact is worth *finding* out. (Adverbial only in the sense of degree or measure of value.)

Verbals—Uses of Participles.—

1. Adjective.
   In Boston, stands a monument *built* to commemorate the battle of Bunker Hill.
2. Adverb.
   We went slowly, *looking* ahead for danger.
3. Subjective Complement.
   He seemed *spoiling* for a fight.
   The thread of his life seemed *broken*.
4. Objective Complement
   He kept the wheels *moving*.
5. After a preposition.
   They captured the city without a man *being* lost. Such cases as this argue for the nounal use of participles. Without a man being lost—without losing a man,—without loss of a man. Whether we say
   without *a man being lost*, or
   without *a man's being lost*, the verbal phrase is a nounal object of a preposition.
6. In a Grammatically Independent Phrase or Clause.
   The governor *being* what he is, reform is to be expected.

Adjectives—Subdivisions.—All adjectives limit the words they modify.

That one clever swordsman held the bridge.

The word *that* seems to point a finger, is demonstrative; pointing a finger at one man limits the number of men. The numeral *one* obviously limits. The word *clever* also limits or selects among swordsmen, since not all are clever. Even the word *all* in the expression *all adjectives limit*, tells us the number or quantity of the subject, and so fixes its limits. But two of these three adjectives merely limit or point out, while the third, "*clever*," also describes, shows quality. *Limiting adjectives merely point out or limit. Descriptive adjectives limit and qualify.*

Special Types of Limiting Adjectives.—Demonstratives and numerals have been mentioned above. *Cardinal numerals* tell how many, as *ten* men; ordinal numerals name a place in a series, as the *tenth* man. *The, a, an, are articles.*

In

Some gossip causes *much* trouble,

Some and *much* are indefinite limiting adjectives.

In

What book have you?

What is an *interrogative* limiting adjective.

Adjectives — Uses Of. — Direct Modifier, commonly preceding its noun.

Ripe melons, *low-hung* speedsters.

Detached Modifier, parenthetical.

Our beagle, *eager* enough to hunt for himself, was gun-shy.

Subject Complement.

The proof is *difficult*.

Adverbial Predicate Adjective.

The sun shines *warm*. In this case, *warm* is an adjective, or an adverb, or both, as you please to think it.

Objective Complement.

They found him *teachable*.

Substantive (Nounal).

"Only the *brave* deserve the *fair*."

Adverbs — Kinds Of. — Simple adverbs merely modify. Come *here*.

Conjunctive adverbs modify and connect.

Go *where* glory waits thee.

The terms simple and conjunctive have regard to the part which the adverb plays in the structure or framework of the sentence.

If we think of the ideas conveyed by the words themselves, that is, if we think of adverbs for their content, rather than for their part in sentence structure, we find several types. For instance, there are

1. Adverbs of *time*, and *time-order*.
   Do it *to-day*. Let John go *first*.
2. *Place*, and *place-order*, answering the question where.
   Put it *there*. Look *beyond*.
3. *Manner*, answering the question how.
   Booth acted *superbly*.
4. *Cause* or *Purpose*, answering why.
   He resigned for a woman's reason, *because*.
5. *Quantity*, answering how much.
   He is *little* better to-day.
   Our provisions were *almost* gone.
   The audience became *greatly* excited.
6. Mode of assertion, including assurance, doubt, affirmation, denial, contingency, concession, possibility, probability, logical source, and other like ideas.
   Assurance: There will *certainly* be another war.
   Doubt: *Perhaps* there may be, I admit it, *provisionally*.
   Negation: *No*, I think it will *not* be soon.
   Affirmation: *Yes, indeed*!
   Comtingency: I will go *if* you will.
   Concession: That part is *admittedly* an error.
   Possibility: *Possibly* the plan will succeed.
   Probability: But *probably* not.
   Connection with Reasoning: *Therefore, hence, since, because, consequently, accordingly, however.*

Prepositional Adverb.—

In

Think it *over;* worth attending *to;* that is the horse he was riding *on;* I saw the tree he was standing *by*, the words *over, to, on, by* have prepositional sense of relationship, but also a pretty clearly adverbial sense of place or manner. Historically, there is defense for such a construction, since words of this sort were originally adverbs.

Adverb, Uses of—

To modify a Verb, an Adjective, or another Adverb.

Drive SLOWLY.

A *very* weak case.

He came *somewhat* reluctantly.

Complement.

The manager is *out*. The curtain is *up*. The sun hangs *low*. The words *out, up, low* are adverbs of place or position. But it is hardly satisfactory to call them mere modifiers of the verb. They seem to complete the assertion of the verb and qualify the subject, as well.

Substantive after a Preposition.

Since *when;* from *thence;* till *now*.

Adjective.

The *then* Mrs. Brown; the *upward* motion; a *one-time* hero.

Conjunctive.

We will come *when* we can.

Interrogative.

Why do you do that?

Expletive, or Introductory.

There is no need for haste.

There comes a day of reckoning.

The term *expletive* means not necessary to the thought, but thrown in for the sake of smoothness, emphasis, and the like.

Responsive.

Yes, no, yea, nay.

Pronouns, Kinds Of—

A personal pronoun, even when standing by itself, shows whether it refers to the speaker, the person spoken to, or the person or thing spoken of. e. g. in

I think so, *we* will be there, *I* and *we* are words indicating the speakers.

You see, don't *you?* Here you are addressed.

They came, *It* is mine, Let me see *them*. *They, it, them*, are neither speaking nor spoken to, but are spoken of.

Only personal pronouns have this quality of distinguishing the speaker, the person addressed, the person or thing spoken of.

Demonstrative Pronouns point out or direct attention to some person or some thing.

This is my book. *These* are good actors. *That* was his last act. I will take *those*, please.

Herewith, Therewith are equivalent to the prepositional phrases *with this, with that*, in which demonstrative pronouns are objects of the preposition.

The **Interrogative Pronouns** are *who, which*, and *what*, used in asking questions.

What is your name? *Who's* your friend?

In general, *who* refers to persons, *what* to animals, plants or inanimate things, *which* to either persons or things.

Which and *what* may lose their pronominal quality, and become interrogative adjectives, e. g. in *Which* hat is mine? *What* book are you reading?

Relative Pronouns stand for nouns or pronouns, and connect or relate a modifier to the expression it modifies. e. g. in This is the cat *that* caught the rat, *that* is a relative pronoun, standing for the noun *cat*, and connecting the adjective clause *that caught the rat* with the noun cat. So, in What is he *who* speaks to me? Who is a relative pronoun, representing the pronoun he, and introducing the clause *who speaks to me*.

The word for which a pronoun stands is its *antecedent*.

Relative pronouns always connect, and in addition have various other uses. e. g.

(1) *Subject of verb in a clause.* There is the man *who* sold me the gold brick.

(2) *Object of verb in a clause.* The stone *which* the builders despised is become the head of the corner.

(3) *Object of Preposition.* Here comes a man on *whom* we can lay the blame.

The entire clause introduced by a relative pronoun is called a *Relative Clause*. When the clause does the work of an adjective it is a Relative Adjective Clause, as in the three examples just given. If its value is substantive, it is a Relative Noun Clause, as in I know *whom I have believed*.

Distributive Pronouns indicate that the object or objects for which they stand are to be considered *one at a time*, for instance, Each (man) may have three shots. The distributives are *each*, *either*, *neither*.

Indefinite Pronouns.—Standard text-books in grammar apply the term *Indefinite Pronoun* to such words as *some*, *any*, *few*, *all*, *many*, when used for nouns. It is easy to see that these words do indicate indefinite numbers or quantities. But when grammarians speak of *Distinctives* and *Reciprocals* as Indefinite Pronouns, the present writer is unwilling to follow them.

Reciprocal Pronouns are rather idiomatic phrases than pronouns. In the expressions *each other*, *one another*, whatever is declared about one of two things is true of the other also, hence the terms are reciprocal.

The gingham dog and the calico cat ate *each other*.

They did not love *one another*.

Compound Pronouns are, as their name shows, built up of several words.

Compound Personal Pronouns, *Myself*, *themselves*—also called *Reflexives*, since in them the action often turns back toward the subject—I hurt *myself;* and called *Intensives* because of their emphasis, myself, e. g., being a stronger word than *me*.

Compound Relative Pronouns.—Whosoever, whomsoever, whatever, whatsoever, are compound relatives, emphatic in meaning.

Prepositions, Kinds of—In form, prepositions are simple, compound, phrasal.

Simple: *at*, *by*, *for*, *from*, *in*, *of*, *off*, *on*, *through*, *till*, *to*, *up*, *with*, etc.

Compound: *alongside*, *athwart*, *notwithstanding*, *throughout*, *underneath*, etc.

Phrasal: *on this side*, *out of*, *away from*, *according to*, *on account of*, etc. He lives *on the other side of* the river equals *beyond* the river. So these phrasal prepositions, though they may be broken up into parts, yet seem to hang together with single meanings.

With regard to the source from which they have come, prepositions may be traced to *adverbs*, *nouns*, *verbs*, or *other prepositions*.

From *adverbs and other prepositions*: *into*, *until*, *upon*, *underneath*, *behind*, *before*, *above*, *toward*, *within*, *without*, *throughout*.

From *nouns and adjectives*: *athwart*, *aslant*, *around*, *below*, *despite*.

From *verbs*: *concerning*, *during*, *except*, *excepting*, *notwithstanding*, *past*, *save*.

Prepositions, Uses of—Technically, prepositions always introduce phrases, though the object of the preposition may itself be a phrase or a clause. Prepositional phrases may serve as

Nouns: *To the fort!* is our next order.
What he really said was *"over there."*

Adjectives: Ribs *of steel*, puss *in boots*.

Adverbs: Look *in your pocket*.
Come *in the morning*.

The *Object* of a Preposition may be any word, phrase, or clause having a nounal sense:

On the *hill;*
"Geordie Hoo" is a character in *"Beside the Bonnie Briar Bush."*
We are looking for *whatever is wrong here*.

Conjunctions, Kind of—In discussing conjunctions, it will be necessary to distinguish between the customary treatment and the logical one. Text-books of grammar invariably divide conjunctions into two classes, Co-ordinate and Sub-ordinate. They hold that co-ordinate conjunctions connect words of equal rank, phrases of equal rank, clauses of equal rank.

as:

William *or* his brother may go.
Look in the cupboard *and* under the dish pan.

Whether we go *or* whether we stay, the same difficulty awaits us.

The meaning of the term Co-ordinate is clear. We have no quarrel with it.

But Sub-ordinating Conjunctions are not so readily approved. The following list is taken from one of the most popular high school text-books of grammar:

(a) *Place:* where, whither, whence, etc.
(b) *Time:* while, when, as soon as, etc.
(c) *Manner:* as.
(d) *Cause:* as, because, for, since, etc.
(e) *Condition:* if, unless.
(f) *Concession:* though.
(g) *Result:* that, so that.
(h) *Purpose:* that, in order that.
(i) *Degree and Comparison:* as, than.

It would seem that nearly all these terms answer one of the tests for adverbs: *where, when, how, why, how much, in what mode* or *under what conditions?* Wherever the adverbial function is so clearly felt as to indicate that the connective is also a modifier, we should call the term a conjunctive adverb, rather than a sub-ordinating conjunction. For example, *in order that* is classed above as a sub-ordinating conjunction. But in the sentence

We disguised ourselves *in order that* we might escape, *in order that* is an adverbial modifier of the verb disguised, as well as a sub-ordinating connective.

The distinctions among prepositions, relative pronouns, sub-ordinative conjunctions, and conjunctive adverbs are not easy to make. In any case, to discover all the parts a word is playing in the sentence should be more important than to provide a conventional name for it.

Types of Co-ordinating Conjunctions are—

Copulatives: and, also, besides, likewise, too; so called because they do little more than join together like elements—they are nearly pure connectives.

Alternatives: Else, neither, not, or.

It is advisable to go carefully here, *else* there may be a mishap.

We cannot go ahead, *neither* can we turn back.

There seems little hope of averting world war, *or* of achieving desirable ends by war.

The alternative conjunctions imply a choice between two things.

Adversatives: *But*, *however*, *nevertheless*, *notwithstanding*, *only*, *still*, *yet*.

"Wilson Democrats sought to bring the United States into the League of Nations, but a certain group of Republican senators defeated the project." Here the second clause is in opposition to the first; it names an adverse fact. Hence the name adversative for all such conjunctions.

Causal: For, *hence*, *so*, *then*, *therefore*. Such conjunctions join two ideas related as cause and effect, or data and inference; that is, they are used in reasoning.

There can be no permanent political prosperity without economic prosperity: *hence* the great nations must be helped back to financial soundness.

Correlatives: When a pair or pairs of words are used as connectives, such pairs are called correlatives.

Either—or, *neither—nor* are correlative co-ordinating conjunctions.

Copulative as well as alternative conjunctions may go in correlated pairs: *alike—and*, *as well—as*, *at once—and*, *both—and*, *not only—but also*, *whether—or*. *Not only* bad intention works havoc, *but* bad judgment *also*. Here, the two ideas are taken one at a time, hence the connective is *disjunctive:* the ideas are of equal rank—the connection is co-ordinating: the function of the connecting words is little other than to connect—they are therefore copulatives.

Inflection.—Inflection is a change in form of a word which goes with a change in meaning or use in the sentence.

Nouns, for instance, commonly make some change in the form of a word to show whether one thing or more than one is meant.

Mouse, mice; box, boxes; loaf, loaves, etc.
This inflection is called *Number*.

The commonest indication of number is made by the addition of the letter s to the singular to form the plural:

boy, boys; girl, girls; boat, boats; train, trains.

Nouns ending in *s*, *sh*, *z*, *x*, *ch*, *soft*, and *o* preceded by a consonant, add *es* to the singular to form the plural:

lens, lenses; rush, rushes; waltz, waltzes; hoax, hoaxes; church, churches; hero, heroes.

Common nouns ending in y preceded by a consonant change the *y* to *i* and add *es* for their plural:

lady, ladies; city, cities, shanty, shanties.

Some nouns ending in *f* or *fe* form their plural by changing the *f* or *fe* to *v* and adding *es*.

wolf, wolves; loaf, loaves; sheaf, sheaves.

There are nouns which have no inflection for number, in which cases the form of some other word in the sentence will show the number of the noun. The word *were*, in the sentence *Deer were feeding* in the orchard, shows that there was more than one deer. Such words are *cod*, *grouse*, *sheep*, *salmon*, *swine*, *trout*.

Other nouns have either no singular or no plural number: scissors, shears, news, athletics, eaves, trousers, tongs, victuals, suds, tweezers, pliers, e. g., have no singular.

Pride, flax, show that some nouns have no plural. Other nouns have *two* plurals usually unlike in meaning.

brother, brothers (in a family), brethren (in a society).
fish, fishes (one by one), fish (all together).
shots, (discharges), shot (the balls discharged).

Nouns like measles, mumps, mathematics, politics, seem plural, but are singular.

Tidings, alms, means, are examples of nouns used as either singular or plural, without change of form.

The words foot, tooth, goose, ox, mouse, man, woman, child, furnish examples of irregular plurals, survivals of old endings in *en*, or of plurals by internal change.

The plural of Mr. Brown is Messrs. Brown. (Pronounce Messrs. mes yerz.)

Miss Black has for plural the Misses Black, or the Miss Blacks. Best usage seems to prefer the first of these for members of one family, the second for less closely related holders of the name Black.

Mrs. Browning—plural the Mrs. Brownings.

Compound nouns in *ful* generally add *s* to the last syllable:

pailful, pailfuls; spoonful, spoonfuls.

Other compound nouns make their principal words plural:

man-at-arms, men-at-arms.
mother-in-law, mothers-in-law.

Letters, Figures, and other Symbols form their plurals by adding the regular possessive sign: You skate your letter *s's* better than your figure 8's.

Foreign Plurals.—English has taken over the plurals of many foreign words, along with the singular. Both in spelling and pronunciation, the English fashion is to be preferred, where a choice is given.

Singular	Plural
alumnus, (mas.)	alumni
alumna, (fem.)	alumnae
analysis,	analyses
animalculum,	animalcula
antithesis,	antitheses
appendix,	appendixes, appendices
automaton,	automatons, automata
axis,	axes
bacillus,	bacilli
bacterium,	bacteria
bandit,	bandits, banditti
basis,	bases
beau,	beaus, beaux
cactus,	cactuses, cacti
cherub,	cherubs, cherubim
crisis,	crises
curriculum,	curriculums, curricula
datum,	data
dilettante,	dilettanti
erratum,	errata
focus,	foci
formula,	formulas, formulae
fungus,	fungi
genius,	geniuses, genii
genus,	genera
gymnasium,	gymnasiums, gymnasia
hippopotamus,	hippopotamuses, hippopotami
hypothesis,	hypotheses
index,	indexes, indices
larva,	larvae
madame,	mesdames
medium,	mediums, media
memorandum,	memorandums, memoranda
monsieur,	messieurs
nebula,	nebulae
oasis,	oases
phenomenon,	phenomena
radius,	radii
seraph,	seraphs, seraphim
stimulus,	stimuli
tableau,	tableaus, tableaux
terminus,	termini
thesis,	theses
vortex,	vortexes, vortices

Number in *personal pronouns* is commonly shown by a complete change of the singular form: the plural of *I* is *we;* the plural of *she* is *they*, etc. The inflections of pronouns will appear presently in a summary.

Gender.—Nouns and pronouns indicate sex (gender) in various ways.

By word endings:

abbot, abbess	baron, baroness
actor, actress	gentleman, gentlewoman
administrator,	administratrix

By changing a word in a compound name:

father-in-law,	mother-in-law
man-servant,	maid-servant

By substituting another word altogether:

son, daughter; monk, nun; boy, girl.

He, she, it—it being of unknown or neuter gender; he, masculine gender; she, feminine gender.

Personal pronouns change their form to show whether they stand for the speaker, the person addressed, or the person or thing spoken of. They are, therefore said to be *inflected* for *first, second,* and *third persons.*

In English grammar, nouns are also said to be in first, second, or third person, but since the noun itself does not change its form to name the person talking, talked to, or talked about, it is rather absurd to lumber up the place with *person in nouns.* The shell is empty.

Case of Nouns, Pronouns.—*Case* is always defined as a modification of nouns and pronouns to show their use in the sentence. For instance, a noun used as subject of a verb is said to be in the nominative case; a noun object of a verb is in the objective case, and so on. Latin grammar recognizes *seven* cases. English keeps three of the seven—nominative, possessive, and objective. But again, there is little excuse for the word *Case* in our grammar, for only one of all the uses of nouns has a form to match. Note this series:

1. The President is in town.
2. I saw the President.
3. I helped elect him President.
4. Give the President three cheers!
5. And three more for the President's wife!
6. America's chief, the President, will speak.
7. Mr. Harding is President.
8. The President having finished, we arose.
9. The President actually before his eyes, the visitor was satisfied.
10. We believed the President to be in error.
11. Mr. President, I arise to object!

Only in No. 5 does the noun show any change in form to mark its use in the sentence. What more need be said about the absurdity of teaching *Case* of nouns in English grammar?

But while our teachers and textbooks are so docile in accepting the notions handed down to them, we shall need to know the conventional cases of nouns.

In sentences 1, 6, 7, 8, 9, 11 the noun President is said to be in the *Nominative Case.*

Sentence 5 shows the *Possessive Case.*

Nos. 2, 3, 4, 10 use the word President in the *Objective Case.*—Since these notions are not reasonable, yet must be memorized for policy's sake, it is well to state them clearly.

A noun used as the subject of a verb is in the nominative case.

A noun in apposition with another noun or pronoun takes the case of the noun it is joined to.

A noun used as attribute complement is in the nominative case.

A noun used independently with a participle or prepositional phrase is in the nominative case.

A noun used as a term of address is in the nominative case.

Nouns used to show possession or ownership are in the possessive case.

The object of a transitive verb is in the objective case.

An objective complement is in the objective case.

An indirect object is in the objective case.

The subject of an infinitive is in the objective case.

To these we may add:

The attribute complement of an infinitive is in the objective case. I believed it to be *him.*

A noun used adverbially is in the objective case. We followed him a *mile.*

The Case of Pronouns agrees with that of nouns, but pronouns have a fairly complete set of forms to indicate their case.

Declension of Nouns.—*Declension* is an orderly arrangement of the inflections which show *person, number, gender,* and *case of substantives,* that is, of all words used as nouns.

The only changes of form in nouns are to show number and case. Sample Declensions:

Case	Singular	Plural	Singular	Plural
Nominative	man	men	lady	ladies
Possessive	man's	men's	lady's	ladies'
Objective	man	men	lady	ladies

DECLENSION OF PERSONAL PRONOUNS

First Person

Singular		Plural
Nom.	I	we
Poss.	my *or* mine	our *or* ours
Obj.	me	us

Second Person

Singular		Plural
Nom.	you	you
Poss.	you *or* yours	your *or* yours
Obj.	you	you

Third Person

Singular		Plural
Masculine, Feminine, Neuter		**All Genders**
Nom.	he, she, it	they
Poss.	his, her *or* hers, its	their *or* theirs
Obj.	him, her, it	them

Old Style

Singular		Plural
Nom.	thou	ye *or* you
Poss.	they *or* thine	your *or* yours
Obj.	thee	you

Relative and Interrogative Pronouns have a very simple declension:

	Sing. and Plural	Sing. and Plural
Nom.	who	which
Poss.	whose	whose
Obj.	whom	which

Possessive Forms.—The *possessive singular of nouns* is commonly formed by adding the apostrophe and letter *s* ('s).

Examples: lady's, girl's, James's

An optional form when too many *s* sounds come together uses the *apostrophe only* for the possessive singular:

For *conscience'* sake! *Ulysses'* boat.

Usage favors a *possessive phrase* for inanimate things, though the regular sign of possessive can seldom be called incorrect.

Leaves of the book, legs of the tripod, color of the apple, bottom of the boat

Joint ownership is indicated by using the possessive sign with only the last noun in the series; if Brown and Stratton own a

camp together, the possessive form will be *Brown and Stratton's* camp.

Separate ownership requires the sign of possession with each noun of the series; if White, Gray, and Green each furnished a picture for the photographic contest, the story will read: *White's, Gray's,* and *Green's* pictures were all approved.

Compound nouns and *groups of nouns in apposition* with each other add the possessive sign to the last word only:

Richard the Third's deformity
my brother-in-law's house
the King of England's power
Peter the Fisherman's loyalty

Double possessives are not uncommon:

that beau of Mabel's
that horse of Fred's

Modifications of Verbs.—*Voice* shows by a change in the form of the verb whether the action is coming toward the subject or going away from it. Not all verbs have voice.

An Indian shot a deer

Action *going out* from subject to object. Active voice *shot*

Deer was shot by Indian

Action coming in toward subject. Passive voice *was shot*

(With acknowledgments to Buehler's Modern English Grammar)

Verbs in the active voice take an *object.* In the passive voice, the former object becomes *subject.* Hence *only transitive verbs* have voice.

In the sentence *They called him a fool,* the verb called is in the active voice. The passive form will read *He was called a fool by them.* Here the word *fool* is a Predicate Noun, (Attribute Complement), since it completes the verb and refers to the subject.

(a) *His friends gave him an automobile,* becomes in the passive form.

(b) *He was given an automobile by his friends,* or

(c) *An automobile was given him by his friends.*

When the direct object from a sentence of the active form is also an object in the passive form, as in Sentence (b), it is called a *retained object.* In sentence (c) *him* is still an indirect object, as it was in sentence (b).

Mood or Mode.—The word mode means *manner.* As a modification of verbs, the word mode is interchangeable with *mood*—a term for state of mind, mental attitude, condition of the speaker's feelings. We speak of moods of certainty, uncertainty, doubt, command, and the like. In one way or another, our language shows these moods or modes of assertion. Verbs have forms for several moods. Observe the different moods in which the word *know* is here used:

I *know* it is true. (Assurance.)

If it *were* true, we couldn't be sure of it. (Doubt, unfavorable bias.)

Know your lesson to-morrow, I command you. (Command.)

He *may know* more than he admits. (Possibility.)

In grammar, the word *Mood* is used to point out states of feeling which are shown by the form of the verb. Mood is therefore a modification of verbs, marked by inflection.

Indicative Mood.—The *Indicative* is the mood of fact, or matter regarded as fact.

Your brother *has been* here. (Simple fact.)

If he was here, it is strange I did not meet him. (Not a denial of his being here; we think of him as here, but wonder about it.)

Subjunctive Mood.—*If my brother were here now,* we could play hockey.

In this sentence it is clearly understood that my brother is *not* here now. The verb *were* shows that the speaker does not regard the idea as fact.

May he come soon! expresses a wish, and of course implies that he is not here now.

The Subjunctive Mood expresses a wish, or a condition contrary to fact.

Come out of that! is an order, imperative. You are not yet "out of that". My mood is commanding something to be which is not.

The *Imperative Mood* expresses a command.

Verbals are sometimes spoken of as in the *Infinitive Mood,* since they do not go so far as to really declare anything; they indefinitely (in-finite-ly) imply, assume something.

We *go* fishing in Maine every summer.

It is fun *to go* fishing in Maine.

The first word *go* really *declares* the action of going; the second *implies* the action.

Many *verb phrases* show mood, or *manner of assertion.*

I *may go* indicates possibility;

You *may go* shows permission;

We *must go* shows necessity, and so on.

Not many years ago, all grammarians spoke of a *potential* mood, whose "auxiliaries" were *may, can, must, might, could, would,* and *should.* The word potential was well chosen, since it means something not yet fact, but which has the possibility of becoming fact. Nowadays, the potential mood has gone out of fashion, probably because the statement of potentiality is in itself a fact. It is true that *I may go,* etc. So we speak now of *Potential Verb Phrases,* not *Potential Mood.*

An *auxiliary verb* helps another verb to make an assertion.

Auxiliaries in present time are *do, be, have, shall, will, may, can, must.* The first three of these have many forms; all but the last have forms for past time.

Present	Past	Present	Past
do	did	shall	should
be (am)	was	will	would
(are)	were	may	might
have	had	can	could

Tense is a modification of verbs to indicate *time.*

The *Present Tense* indicates action or being *now.*

Here we *are.*

Westward the course of empire *takes* its way.

The *Past Tense* of verbs indicates action or being in past time.

Milton *became* blind.

I *shot* the albatross.

The *Future Tense* places action or being in the future.

There are two forms of future tense in English—one the simple assertion of what is to be, the other the strong assertion of the speaker's will that something shall be. The latter takes the form of a promise or the statement of determination.

Simple Futurity

I shall go	We shall go
You will go	You will go
He will go	They will go

Determination

I will go	We will go
You shall go	You shall go
He shall go	They shall go

The *Present Perfect Tense* or simply the Perfect Tense, regards an action or state as finished at the present time.

We *have made* a discovery implies that the discovery is now finished.

If this sentence were "Before you left, we *had found* the trouble in the battery circuit," the verb *had found* would point out an action finished some time ago, in past time.

The *Past Perfect Tense* relates to action or being wholly finished in past time.

Again, in the sentence "The president *will have been* out of office before then," action is thought of as finished at a date still in the future.

The *Future Perfect Tense* expresses action or being completed at a time still in the future.

The *Perfect* and *Past Perfect Tenses* do not use the past tense of the verb, but the past participle. We do not properly say I *have saw,* or I *have went,* but I *have seen,* I *had gone.* It is important that we should know thoroughly the forms of all verbs commonly used. Three of these forms furnish material for nearly all changes among verbs, and are therefore called *Principal Parts.*

The *Principal Parts* of a verb are the *First Person Singular of the Present Indicative* and of the *Past Indicative,* and the *Past Participle.*

Regular verbs form their past tense and past participle by adding *ed* to the *root,* that is, to the First Person Singular of the present indicative.

But irregular verbs blow whithersoever the winds of the past have listed; there is no way to a correct English speech without learning their principal parts.

Principal Parts of Common Irregular Verbs,—As supported by good usage. Good dictionaries contain other forms for many of these words. Only verbs commonly misused appear here.

Present	*Past*	*Past Participle*
arise	arose	arisen
am	was	been
awake	awoke	awakened
beat	beat	beaten
begin	began	begun
bite	bit	bitten
blow	blew	blown
break	broke	broken
bring	brought	brought
catch	caught	caught
choose	chose	chosen
come	came	come
creep	crept	crept
do	did	done
draw	drew	drawn
drink	drank	drunk
drive	drove	driven
eat	ate	eaten
fall	fell	fallen
fight	fought	fought
fly	flew	flown
forget	forgot	forgotten
freeze	froze	frozen
get	got	got or gotten
give	gave	given
go	went	gone
grow	grew	grown
hew	hewed	hewn
hide	hid	hidden
lay	laid	laid
lie	lay	lain
ride	rode	ridden
ring	rang	rung
rise	rose	risen
run	ran	run
see	saw	seen
sing	sang	sung
speak	spoke	spoken
spin	spun	spun
spring	sprang	sprung
steal	stole	stolen
stink	stunk	stunk
swim	swam	swum
swing	swung	swung

take	took	taken
tear	tore	torn
throw	threw	thrown
write	wrote	written

Verbs—Person and Number,—Like nouns, verbs make certain changes in form to show *how many* things are spoken of; and like pronouns, verbs have a few changes of form which go with the first, second, or third person of their subject.

The bird *flies;* the birds *fly.*

Leaves *fall;* the leaf *falls.*

These sentences illustrate what we might call *regular plurals* of verbs. Rather oddly, they reverse the way in which nouns show plural number, taking away an *s* where nouns would add *s.*

There are also bothersome irregularities in forming the plurals of verbs.

He is; they are.

I go; they go; he goes.

Again, there is no way to be surely right about these things but to learn the forms so well that they come naturally to mind when we need them.

In general, verbs give no sure indication of person. The verbs *walked, ran, saw, had been,* for example, will fit equally well the subject *I, you, he, we, they.* But English grammar declares that *verbs agree with their subjects in person and number.* A study of the following conjugations will show where this theoretical agreement has inflected forms to match. Again, it is useless to seek for reasons—*What is, is, because what has been, has been.*

Conjugation of the Verb "Be"

Principal Parts

Present Infinitive: to be
Past Tense: was
Past Participle: been

INDICATIVE MOOD

Present Tense

Singular	Plural
1st Person, I am	We are
2nd Person, You are	You are
3rd Person, He is	They are

Past Perfect Tense	He had been seen
Future Perfect Tense	He will have been seen

SUBJUNCTIVE MOOD

Present Tense	He be seen
Past Tense	He were seen
Present Perfect Tense	He have been seen
Past Perfect Tense	He had been seen

Comparison.—Many adjectives and ad verbs are modified to show *degree;* as, tall, taller, tallest; rapidly, more rapidly, most rapidly. This change of form is called *Comparison,* and its three degrees illustrated above are called *positive, comparative, superlative.*

Few limiting adjectives can be compared, nor do all descriptive adjectives admit of degrees. For example, perfect is a superlative without weaker forms; unanimous has no comparison; so the words, round, square, equi-angular, vertical, and a multitude more admit no change of degree. There is a kind of substitute for comparison in such cases. A thing which is round cannot of course be rounder, but some second object may be *nearly round;* and some third may be *more nearly* round than the second. In this sense nearly all adjectives and adverbs may be modified in degree by adverbial addition or subtraction.

The two standard means of comparison are (1) the use of the inflection *er* for comparative, *est* for superlative; (2) the prefixing of *more* for the comparative and *most* for the superlative. The *more—most* form is used in comparing long words, and words which do not sound well with the addition of *er—est.*

The following are examples of irregular comparison:

Positive	Comparative	Superlative
Ill, badly	worse	worst
well	better	best
little	less	least
much	more	most
far	farther	farthest

Prepositions, Conjunctions, and Interjections have no inflected forms.

SUMMARY OF SYNTAX

Definitions, Uses, Formal Rules, Examples

(Rules are numbered for Reference.)

A *noun* is the name of a person, place, object, or idea.

A *pronoun* is a word used in place of a noun.

Nouns and pronouns are called *substantives.*

1. The *subject* of a verb is in the *nominative case.*

Transitive verbs express action upon an object or product.

2. The direct *object* of a transitive verb is in the *objective* (accusative) case.

Whom shall I fear?

Intransitive verbs are often followed by substantives which rename their subject. Such complements are called *predicate nominatives, predicate nouns,* or *attribute complements.*

3. A substantive used as *attribute complement* agrees in case with the subject to which it refers.

It is *I. Whom* do you take me to be?

A substantive which helps to complete a verb but renames the object of the verb is called an *objective complement.*

4 An *objective complement* is in the *objective case*

The class elected him president.

5. The *object of a preposition* is in the *objective case.*

Give it to *me.* The cat is under the *stove.*

The receiver of an action may sometimes be thought of as the principal word in an adverbial phrase from which the preposition *to* or *for* is omitted. Such a complement is called an *indirect object.*

6. An indirect object is in the *objective case.* (Dative object.)

Bring *me* a chair.

Infinitives and participles do not really assert action or being, but they imply it, and in this sense may have subjects

Verbs of wishing, desiring, commanding, believing, declaring, perceiving, etc., are likely to be followed by objects which are at the same time *subjects of verbals.* It is this objective relation which justifies Rule 7, as commonly given:

7. The subject of a verbal is in the *objective case,* (Except in independent phrases)

She has *me* to protect her.

We thought *him* to be honest.

8. Substantives used with verbals in independent phrases are in the *nominative case.* ("Absolute".)

His *friends* advising it, he resigned

An appositive is a noun or pronoun used as explanatory of or equivalent to another noun or pronoun.

9. An appositive takes the case of the substantive to which it is attached.

The book was his, *Peter's.* (Possessive)

'Tis I, *Hamlet,* the *Dane* (Nominative.)

Give it to me, your *brother* (Objective.)

10. A noun or pronoun *independent by address* is in the *nominative case.* ("Vocative".)

"*Men of Athens,*————Him declare I unto you."

Mr. President, I rise to a point of order.

11. A noun or pronoun used *independently with a following adjective, adverb, or phrase* may best be regarded as in the objective case, since it is virtually the object in a prepositional phrase from which the preposition is omitted.

Hat in hand, he stood waiting.

Beard unkempt, clothes threadbare, he looked down and out.

Fences down, weeds everywhere, the place was desolate.

12. Nouns or pronouns showing ownership are in the *possessive case.*

John's farm, *your* shoes.

13. When an inanimate thing is personified, the *gender* of its noun or pronoun is *determined by custom.*

She's a good old boat! (Feminine.)

The *sun* is hiding *his* head. (Masculine.)

14. *Collective nouns* are *plural* when their units act separately as individuals; *singular* when the units act together as one. *Plural titles* are in this sense *singular nouns.*

The class has had its picture taken. (All together.)

The class have had their pictures taken. (Each person by himself.)

"The Newcomes" is by Thackeray.

15. *Nouns used adverbially* to measure time or distance are in the *objective case.* (*Adverbial objective.*)

We walked an *hour,* travelled four *miles*

16. A *substantive* used as an exclamation is commonly held to be *nominative.* But if the exclamation repeats an idea already used, it will take the case of the term repeated.

We shall be rich We! think of that!

"We'll make you do it!" *Me!* I guess not!

17 A *pronoun* must agree with its antecedent in *number, gender,* and *person.* Collective nouns take singular pronouns when the units act separately.

The Ship of State has refused to obey *her* rudder.

That is *he whom* you seek. (All three are in 3d Person, Masculine Gender, Singular Number.)

The *case* of a pronoun does not depend upon its antecedent, but upon its use in the sentence

A *verb* is a word which *asserts.* (Tells something of its subject)

18. A verb agrees with its subject in person and number.

I *am*	She *goes*
You *are*	They *go*
He *is*	

19. A compound subject with *and* takes a singular verb if the idea of the combined subject is of *one* thing; if the compound subject is made of parts acting separately, the verb is *plural.*

Roosevelt and Wilson *were* of opposing parties.

The sum and substance of the matter *is* this.

20. A *distributive* subject with *each, every, everyone, either, neither,* etc. requires a verb in the *singular:* a *disjunctive* subject with *either-or, neither-nor* takes a verb in the *singular* if the substantives are singular

Either the book *or* the teacher *is* wrong.

Each of us must use *his* own judgment.

21. *Nouns plural in form* but singular in meaning commonly take a verb in the *singular.*

Hydraulics *is* a practical study nowadays.

Mumps *is* contagious.

The news *is* discouraging.

22. When the subject acts upon an object, the verb is in the *active voice.* when the subject is a receiver or product of action, the verb is *passive.*

The hunter *shot* the deer. (Active.)

The deer *was shot* by the hunter. (Passive)

23. The *indicative mood* is used in questions and in simple assertions of facts or matter thought of as possible fact.

Were you there?

You *were* there.

If you *were* there, I did not see you. (See subjunctive mood, rule 24.)

24. The *subjunctive mood* expresses a *wish,* or a *condition contrary to fact.*

Would he *were* here!

If he *were* here, we would know about it.

(Implying denial. He has not been here.)

25. The *imperative* mood states a *command* or request.

Please *go* at once.

The subject of an imperative verb is *you* understood; the you is seldom expressed, unless the mood is emphatic.

26. *Infinitives* may be used as *subject, object* of verb, *attribute complement, object of preposition, appositive, adjective modifier, adverbial modifier,* or in an *independent phrase*

For examples, see discussion of *Verbals* in this article

27. Gerunds (Verbal nouns in *ing*) have the *uses of nouns* together with the power of implying action, being, or condition.

Examples have been given under *uses of Verbals*

28. *Participles* may be used as *adjectives, adverbs, subjective complements, objective complements, following a preposition,* or in *absolute phrases.*

See example under Verbals.

29. The comparative degree of adjectives and adverbs, not the superlative degree, is used in comparing two persons or things.

He is the *taller* of the two; in fact, the tallest of the three.

30. A *co-ordinating conjunction* connects words, phrases, or clauses of like rank, grammatically independent of each other.

I will come if I can *and* if the weather is good.

31. A sub-ordinating conjunction joins a dependent clause to a principal one.

Make hay *while* the sun shines

32. Interjections commonly have no grammatical relations in the sentence. In certain constructions, however, the interjection seems to have a phrasal modifier.

"Ah! for the pirate's dream of fight!"

33. Verbs *become, feel, look, seem, smell, taste, sound, grow* may take an *attribute complement* to describe the subject, or an adverb to modify the assertion of the verb.

He grew *tall:* poisonous mushrooms taste *good.*

He looks *well* may describe his own condition, and so the word *well* may be a predicate adjective relating to the subject; or the sentence may mean that he *searches thoroughly,* in which sense *well* is an *adverb* modifying looks.

34 Assertions of Simple Futurity take the form.

I, we	shall
You	will
He, they	will

Assertions of Strong Purpose, Promise, Threat, Consent

I, we	will
You	shall
He, they	shall

35 Adjectives should not take the place of adverbs, nor adverbs the place of adjectives.

36. The six tenses of English verbs in the Active Voice, Indicative Mood, are built up from the "principal parts" as follows:

Present Tense, Past Tense as in *Principal Parts. Future Tense, shall* or *will* (Rule 34) with *Present Infinitive* (less "to").

Present Perfect, have or *has* with *Past Participle Past Perfect, had* with *Past Participle*

Future Perfect, shall or *will* (Rule 34) with *Present* Perfect, the "have" form.

See Tables of Conjugation for Examples, and Table of Principal Parts.

37. The six tenses of English verbs in the Passive Voice, Indicative Mood, invariably use the past participle of the given verb, preceded by an appropriate form of the verb *"be".*

See Table of Principal Parts, and of Conjugations.

38. *Gerunds,* being verbal nouns, are modified by *adjectives* and *possessive pronouns.*

Now do it without *my* watching you.

Parsing.—To parse a word is to name its *class, subdivision, modification,* and *use in the sentence,* according to the following general scheme:

Nouns,—Common or Proper; Pronouns, Personal, Relative, Interrogative, Demonstrative.
1st, 2d, or 3d Person.
Masculine, Feminine, or Neuter Gender.
Singular or Plural Number.
Nominative, Possessive or Objective Case.
Use in Sentence (as indicated in rules above).

Verbs,—Transitive or Intransitive.
Active or Passive Voice (if transitive).
Indicative, Subjunctive, or Imperative.
Mood—Present, Past, Future, Present Perfect, Past Perfect, Future Perfect Tense.
1st, 2d, 3d Person.
Singular or Plural Number.
Subject, if a finite verb.
Use in the sentence, if a verbal.

Adjective,—Limiting, Descriptive, Positive, Comparative, Superlative Degree (if any).
Use, as Modifier or Complement.

Adverbs,—Simple, Conjunctive, Positive Comparative, or Superlative Degree (if any).
Use, as Modifier, or Connective, or Both.

Prepositions—Class Name, Use in introducing phrase.

Conjunctions—Co-ordinate or subordinate.
Use

Interjection—Class name.

Table of Parsing, Using Various Rules of Syntax.

1. Strikes bring trouble to three parties.
2. Consuls are representatives.
3. The Mexicans elected Gonzales president.
4. We drove twenty miles before we stopped.
5. John, throw me Fred's hat.
6. Shakespeare, the actor, was inconspicuous, but Shakespeare, the dramatist, was supreme.
7. Sheridan being at Winchester, the troops fought badly.
8. Swords drawn, they rushed up the hill—Hurrah!
9. We watched the bakers making bread.

WORD	CLASS	SUB-CLASS	MODIFICATIONS	USE
1. Strikes	Noun	Common	3d Person, Plural, Neuter, Nominative	Subject of "bring"
1. Trouble	Noun	Common	3d Person, Singular, Neuter, Objective	Object of "bring"
1. To	Preposition	.....	.....	Introducing phrase "to parties"
1. Three	Adjective	Numeral	.....	Modifies "parties"
2. Representatives	Noun	Common	3d Person, Plural, Masculine, Nominative	Agreeing with "Consuls"
3. President	Noun	Common	3d Person, Singular, Masculine, Objective	Objective Complement
4. Miles	Noun	Common	3d Person, Plural Neuter, Objective	Objective Adverbial
5. John	Noun	Proper	2d Person, Singular, Masculine, Nominative	By address
5. Fred's	Noun	Proper	3d Person, Singular, Masculine, Possessive	Ownership
6. Actor	Noun	Common	3d Person, Singular, Masculine, Nominative	apposition
7. Sheridan	Noun	Proper	3d Person, Singular, Masculine, Nominative	absolute
7. Badly	Adverb	Simple	Positive degree	modifies "fought"
8. Swords	Noun	Common	3d Person, Plural Neuter, Objective	phrase understood
9. Bakers	Noun	Common	3d Person, Plural, Masculine, Objective	subject of Verbal
8. Hurrah	Interjection	.....	.....	.....
1. Bring	Verb	Transitive	Active, Indicative, Present, 3d Person Plural	subject is "Strikes"
4. Before	Adverb	Conjunctive	.....	introduces clause
6. But	Conjunction	Co-ordinate	.....	connects clause

Common Errors in Syntax.—(Numbers refer to rules in the preceding summary. Correct forms are given first.)

This is the *better* of the two—not this is the *best* of the two. (29)

You and *I* did it—not *you* and *me* did it, nor *me* and *you*. (1)

We boys will be there—not *us* boys will be there. (1)

It was *I, she, he, they*—not *me, her, him, them*. (3)

We believed it to be *her, him, them*—not *she, he, they*. (3)

Between you and *me*—not between you and *I*. (5)

She is taller than *I* (am)—not she is taller than *me*. (1)

It was known to be *he*—not *him*. (3) He agrees with "It".

We were sure of its being *him*—(usage divided) (3) (5).

Let *everybody bring his* own lunch—not *their* own. (14) (24) (17).

We should all bring *our* lunches. (Action concerted.) (17)

Every boy and girl should do *his* best. (17) *Their* would be incorrect. *His* or *her* is correct, for formal.

Each of us *has his* problems—not *have their*.

The actor *whom* you saw was Otis Skinner—not *who*. (2)

Whom did you call for?—not *who*. (5)

Whom did you select?—not *who*. (2)

Who do you suppose it is? (3) Who agrees with it.

Who do you think I am? (3) not *whom*. Agrees with *I*.

Whom did you take me to be? (3) *whom* agrees with *me*.

The tree looks *beautiful*—not *beautifully*. (33)

The apple tastes *good*—not *well*. (33)

The tune sounds *harsh*. (33)

Roses smell *sweet*—not *sweetly*. (33)

She looks *charming*—not *charmingly*. (33)

We *shall* be drowned if we go there—not *we will be*. (34)

I *shall* be pleased to help you—not *will* be. (34)

The senate *has* adjourned—not *have* adjourned. (14)

There *are* all sorts of graft in town—not there *is* all sorts. (18)

Here *are* wealth and beauty—not here *is*. (Unless taken separately.) (18)

Neither of the men *shows* signs of giving in—not neither *show*. (18)

In both cases, there *are* bad birth and misfortune—not there *is*. (Unless taken separately.) (18)

One class of poets *believes* in symbolism—not *believe*. (18)

He is one of the best *actors that have* ever been here—not *has*. (17) (18)

Let *him* who will, come—not let *he*. (2)

The congregation *were* free to *express their opinions*, or *was* free to express *its* opinion. (14).

I *saw*—not I *seen*. (36)

I *did*—not I *done*. (36)

We *have gone*—not *have went*. (36)

We *were*—not we *was*. (18)

You *began* it—not you *begun* it. (36)

The wind *blew*—not the wind *blowed*. (36)

The glass is *broken*—not *broke*. (37)

I *caught, have caught*—not *catched, have catched*. (36)

Have been *chosen*—not have been chose. (37)

We *came* along,—not we *come*. (36)

We *have come*,—not *have came*. (36)

The baby *crept*,—not *creeped*. (36)

You've *done* it,—not you've *did* it. (36)

We *drew*,—not we *drawed*. (36)

He *has drunk* a glassful,—not *has drank*. (36)

Have driven,—not *have drove*. (36)

Have *eaten*,—not have *ate*. (36)

I *ate* my dinner,—not *eat*. (36)

Has *fallen*,—not has *fell*. (36)

The boys *fought*,—not *fit*. (36)

Has *flown*,—not has *flew*. (36)

I've *forgotten*,—not *forgot*. (36)

It *grew*,—not it *growed*. (36)

You *lie* low,—not *lay* low. (Lie, to recline; lay, to put down.)

Have *ridden*,—not have *rode*. (36)

We *rang* the bell,—not we *rung* it. (36)

Had *risen*,—not had *rose*. (36)

And then I *ran* away,—not then I *run* away. (36)

We *sang* a song,—not we *sung* it. (36)

Have *spoken*,—not have *spoke*. (36)

Troubles *sprang* up,—not troubles *sprung* up. (36)

Somebody *has stolen* my hat,—not has *stole*. (36)

The place *stunk*,—not *stank*. (36)

We *swam* a mile,—not we *swum*. (36)

Who's *taken* my bat?—not who's *took*? (36)

Have *torn*,—not have *tore*. (36)

Have *written*,—not have *wrote*. (36)

Say it *slowly*,—not *slow*. (35)

We can do that as *easily* as you please,—not as *easy*. (35)

The horse threw my brother and *me* out,—not my brother and *I*. (2)

We chose the foreman *who* we thought could handle the men,—not *whom*. (1)

I never saw a taller man than *he*,—not *him*. (1)

There isn't another girl in town so handsome as *she*,—not *her*. (1)

Mosses from an old Manse is a collection of essays and stories,—not *are* a collection. (14)

Now skate without *my* helping you,—not *me* helping. (38)

We ought to keep still about *his* being here,—not *him* being. (38)

PUZZLING CONSTRUCTIONS

A as Numeral.—

The article *a* often has the force of **one** (*1*).

A hundred men; a pound of cheese.

A, The as Distributives.—

Ten dollars *a pair*.

Fifty cents *an ounce.*
Fourteen dollars *the ton.*
"A", "an", and "the", above, all imply separation, singleness. *Each* pair, *each* ounce, *each* ton is priced by itself.

A With Plural Groups.—
A few more years will end it.
The group is plural in form, but singular in sense.

About.—
Come over *about* six o'clock.
Come *at* six.
About and *at* are much alike in function, though *about* is more strongly adverbial than *at.*
See heading "Prepositions", in this section.

"About" in Future Tense.—
(1) We are *about* to start for Saratoga.
(2) They are *about* leaving for the coast.
(3) He was *about* to pull the trigger.
The first two of these forms indicate action in the very near future, from a present viewpoint; the third sentence shows action which was in the very near future from a past view point.
Is the "about" in these phrases an adverb or a preposition?
(1) He is *about* six feet tall,—adverb of measure.
(2) He is *about* the house somewhere,—preposition.
(3) We are *about* ready,—adverb of measure or degree.
(4) They are *about* giving up,—equals almost (?).
(5) I must be *about* my Father's business,—preposition.
(6) I am *about* to show you.
In the six sentences above, there is doubt about (4) and (6). *About giving up* may mean almost giving up, in which case about is an adverb. But it may mean, like (5) that the thing which I am about is *giving up,* or *to show you.* If this is the meaning, *about* is a *preposition.*

Above, Below—Adjective or Adverb.—
(1) "Nor in the heavens *above* nor in the earth *beneath* shall exist thy image."
(2) In the examples *above.*
(3) Go *below* now.
(4) That book *above,* on the top shelf, is the one.
The idea of place is in each of these italicized terms, though all but one of them modify nouns. Yet place is not the only notion in these words. They also select or limit, like adjectives. We seem to need for them the term, adverbial adjective.

Adherent Appositive.—
Cousin Mary
Brother Edward
furnish examples of nouns very closely adherent, so closely that the expression *Cousin Mary* seems one title. The nouns *Mary, Edward* have a selective quality like adjectives; "Mary" picks out the cousin, as well as repeats the nounal idea.
We men must attend to it.
You fellows go.
In these expressions the selective quality of *"we", "you"* is very evident. Not *all* men, *all* fellows, but *we* men, *you* fellows.

Adjectives from Adverbs.—
Out-of-the-way nooks and corners.
Far-off times and places.
Our *erstwhile* neighbor.
Roosevelt, the *then* President, set the machinery going.
These are adjectives in their limiting and descriptive function, though the ideas of place and time are still present. In fact they describe by locating in place and time.
"A *very* fiend!" is an example of an adverb equivalent to an adjective.

Adjective Pronouns, Pronominal Adjectives.—An adjective pronoun is a word which is commonly an adjective but is in a given case used instead of a noun, e.g.
Enough has been said.
A *pronominal adjective* is a word which is commonly a pronoun, but is used as an adjective in the given case.
Tell me *which* color you prefer.
Say *what* horse I shall drive.

Adjectives Used as Nouns.—
Ten of the men.
The *tenth* was the lucky one.
He gave us *double* what we asked for.
See also *"For granted,"* in this Series.

Adverbial Nouns.—
A *great deal* better. (Degree, how much)
Potatoes worth *50c a peck last week.* (How much value, how much quantity, when.)
One twin was *half a head* taller than the other. (How much distance)
Encored *nine times.* (How much, numerically)
Somewhat dissatisfied. (How much, indefinite)
Nothing daunted.
It is five years since. (How much time)

Adverbs as Nouns.—
Come out of *there.* (—that place)
From *then* (—that time) till *now* (—this time)
This *once* } — This time)
At *once.* }
"Their Yesterdays."

Adverbs, Conjunctive, Introducing Adjective Clauses.—
"I remember, I remember
The house where I was born." (—in which)
This is the hill *where* the old tree stood. (—on which)
There came a day *when* he did not leave his couch. (—on which)
He told us the reasons *why* he did it. (—on account of which)
The casket *wherein* lay Portia's picture. (old form for *in which*)
The book *whereof* I speak. (old form for of which)

Adverb or Adjective.—
(1) The concert is *over.*
(2) Is he *through* with his speech?
(3) The enemy's flag is *down*; ours is *up.*
(4) The tide is *out.*
Apparently we may take our choice between calling these *adjective complements* describing their subjects, and adverbs modifying the verb *is.* To test the latter, compare:
"He is in the back room," which appears to furnish a purely adverbial phrase. There seems to be little beside the adverbial idea of place, in (3), (4); but the words *over* and *through* seem more descriptive of their subjects.

Adverb or Independent Phrase.—
(1) You will be there, *of course.*
(2) I am *surely* going.
(3) *To be sure* I will be there.
(4) The Shipping Board, *in fact,* did a great work.
It is hard to tell whether these italicized expressions are adverbs, or absolute phrases. If the feeling of a separate pulse of assertion is strong, the idea of independence will win; if the phrase seems to condition the verb in some way, it is adverbial. On these grounds, it may be well to call "surely" in (2) an adverb, and the other three independent phrases.

Adverbs Modifying Prepositions.—
We were *miles above* the clouds. (Adverbial noun.)
Come on! We're *almost through* the woods now.
His success was *far beyond* expectations.

Adverbs Which Modify Whole Clauses.—
Hardly, indeed not, perhaps, possibly scarcely, surely.
Perhaps we may be there.

Adverbs Without — *ly*, or Objective Complement.—
(1) The machine is set to cut *fine.*
(2) "Though the mills of God grind slowly,
Yet they grind exceeding *small.*"
(3) Grind my meal *coarse.*
Does "coarse" in (3) serve the same use as "fine" in (1)?
We think the absence of an object makes a difference. The word "fine" really tells how the machine cuts; the word "coarse" in (3) has this adverbial sense, if you choose to think it in that way, but it also *describes the meal.* It appears that some adjectives are thus *strongly adverbial.*
She cried her eyes *out* is clear case of an adverb used as objective complement in place of an adjective.
Ago, Years Ago.
He died *years ago.*
Ago is an adverb of time. *Years* is an adverbial noun measuring the degree of *ago.*
A Great Many; A Few. Best treated as single limiting adjectives.
All But—
Our ship was *all but* lost. (—*nearly* lost)
All but means *all except;* our ship was lost all except the margin that saved her. Idiomatic, of course, and the explanation of an idiom is seldom wholly satisfying. An appeal to the ancient history of the English language is quite likely to be more misleading than a careful analysis of present meanings in such cases.
All three, etc.
All six were caught.
All is here a limiting adjective.
None of the six got away.

"Appositive" Adjectives.—
A chasm, *sheer and impassable,* lay before them.
Adjectives may precede their nouns, follow immediately after their nouns, or follow intransitive verbs as complements. In each case the adjective really modifies the thought of the noun it relates to. The second of these three positions illustrated above, is sometimes called the appositive position.
Two cars, *John's and mine,* were stolen.
Socialism, so *rich* in many desirable ways, is poor in practicability.
Friendless and alone, he waited a better day.
In the last two sentences, it would be difficult to choose between calling the italicized words appositive adjectives, or grammatically independent.

Appositives and Compounds.—As commonly used, the terms *Peter the Hermit, Paul the Apostle,* are compound names. But if we say Paul the Apostle was aggressive, while Paul the Roman citizen stood on the defensive, the words apostle and citizen are appositives. The difference is in this case is properly indicated by the capitalization.

Appositives of Limitation.—His trouble was *much of it* imaginary, especially the *slights* of his friends.
"Much of it" may be called a deferred appositive limiting trouble, or the phrase "much of it" may be considered equal to "largely", and thus an adverbial noun with the adjective "imaginary." "Slights" is another selective appositive with trouble.
Our apples are *many* (*most*) of them Baldwins;
They *all* believed in him;

We *three* will come—are further examples of limiting appositives.

As.—Often very puzzling.

A noise *as* of thunder rolled in. Possible equivalents *are*

(1) A noise *like that* of thunder rolled in.

(2) (Such) a noise as (is that) of thunder, etc.

(3) A noise (apparently) of thunder, rolled in.

(4) A noise (seeming) of thunder, rolled in.

There are really several possible shades of meaning. One who speaks the original sentence may have in mind that the noise *resembles* thunder, and may be thunder; that it resembles thunder, but probably isn't; or that it pretty surely *is* thunder. The force of the word *as* varies accordingly, from a mere particle introducing the phrase *of thunder*, to a strong adjectival force with an adverbial phrase as modifier. It depends on what is in the speaker's mind when he uses the original sentence.

As, Almost a Preposition.—

They built a club-house *as* a headquarters.

This *as* is about equal to *for*, a true relation word.

A second, less acceptable disposition is to call headquarters an objective complement, introduced by as.

As, introductory.—They were regarded *as* friends. Friends is really an attribute complement. For consider:

They were friends.

They were considered friends.

In each case, the word friends refers to the subject, means the same thing as the subject. The word *as* is therefore a merely introductory term.

As.—Simple adverb: *As* tall.

Conjunctive adverb: As tall *as* you are.

Preposition: We like the Maine coast *as* a summering ground. (*As* nearly equal to *for*.)

Pronoun: Such *as* keep my commandments.

As, Adverb, Preposition or Introductory Particle.—

"I held you *as* a thing enshrined," equals, I considered you something sacred.

As in "I took you *for* a friend," there are three possible constructions, and a fourth which admits all three:

1. *As* is a mere introductory term bringing in the objective complement.

2. *As* is a preposition, equal to *for*.

3. As is a conjunction adverb, introducing the elliptical clause *as a thing enshrined* (would be held).

As—As.—

The matter is *as* long *as* it is short.

The first "as" is an adverb; simple; the second an adverb conjunction.

As, in clause.—

"God, I thank Thee that I am not *as other men are*, extortioners, unjust," etc.

As other men are is either an adverb or an adjective. Adverb, if it answers how, or the like; adjective, if, like unjust, it serves as attribute complement to describe the subject. In either case, it is here a connective.

As Phrases, Appositive.—

Mantell *as Hamlet* is perhaps a bit heavy; Mantell *as Lear* is marvelous.

It seems that the idea here is not so much to make an adverbial limitation as to characterize Mantell; Mantell is now Hamlet, now Lear. We call Hamlet and Lear appositives introduced by *as*.

As Phrases, Adverbial or Complementary.—

(1) He doesn't amount to much *as a citizen*.

(2) *As fiction*, his novels are poor; they are good *as psychology*.

(3) He left home a poor day *laborer*, and came back a rich *employer*.

Laborer and *employer* are best treated as attribute complements. He really was laborer, and when he came back he was employer.

In sentence (1) "as a citizen" is *almost if not* quite an adverbial phrase. If we substitute *"in the capacity of citizen"*, the adverbial function is clear.

In sentence (2) *"as fiction"* and *"as psychology"* are similarly adverbial. The Standard Dictionary is authority for calling *"as"* "almost a preposition" in such cases.

As Phrases After a Verb.—

(1) Magna was considered *as friendly*.

(2) The Hurons were regarded *as dependable*.

(3) The Delawares were thought of *as just*.

"Friendly" may well enough be called a predicate adjective introduced by "as". But the other two verbs of exactly the same meaning as "considered" do not seem to require or admit complements; they take adverbial modifiers. If we supply the word being in each case—*as being friendly*, etc. all three phrases are pretty clearly adverbial, of manner.

As Phrases, Independent.—

As for the matter you suggest, it doesn't interest me.

Of course there is a thought relation between the opening phrase and the sentence proper, but it would be hard to find a close grammatical relation. The "as" phrase is here introductory and "absolute".

As Well As, Either Collective or Distributive.

The poor man *as well as* the rich are benefited.

The poor man *as well as* the rich is benefited.

Both forms above are correct. The first takes the poor man and the rich together to make a plural idea, the second takes each man by himself.

As Well As.—

Equivalent to *also*, *like*, *besides*, etc.

Artists must know how to mix paints, *as well as* admire sunsets.

As Yet.—

He hasn't been here, *as yet*.

As yet equals *up to now*. But so does the word *yet* mean *up to* or *until now*. *As* is here of little value. It may be called a mere introductory term.

At All, In the least.—

It is not *at all* necessary. *At all* is adverbial, exactly equivalent to *in the least*, in the given sentence. It will be well enough to call each an idiomatic adverbial phrase, with an adjective pronoun as object of the preposition.

Bad, Badly.—

I feel *bad*, or I feel *badly*?

It depends on whether you wish to describe the state you are in, or the way in which you feel, the manner of your action in feeling. If this is a fair way of putting the case, it carries its own answer—The predicate adjective is required rather than the adverb. I feel *bad* equals I feel *sick*, or *uncomfortable*, or *chagrined*, or *hurt*—all adjectives.

Because—Therefore.—

Therefore because the weather was bad, we stayed in.

Because all my friends are gone, I would *therefore* go too.

Therefore—because are correlatives and when used together, they introduce subordinate clause. If *therefore* were used alone, the clauses would probably be grammatically co-ordinate and independent though still logically one would depend upon the other.

Between—Preposition or Adverb (?)—

"The hills,
Rock-ribbed and ancient as the sun,
—the vales
Stretching in quiet pensiveness between."

Between may be called a *preposition*, its object hills, understood; or may be called an *adverb*, answering the question *where*. In this case, the adverbial construction seems rather simpler.

But as a *Preposition.*—When but means except, it is a true preposition, to be followed by the objective case.

He spoke to every one *but* me.

"All of them wrong *but* I"—(Newman) is saved from incorrectness, if saved at all, only by the imperial prerogative—the king can do no wrong.

Yet see *"none but,"* in this series.

But as a *Substantive.*—

There are none here *but* will believe you.

But here equals *who not*. There are none here who will not believe you. An idiomatic pronoun, with three uses: substantive, connective, negative adverb.

But — That not, or *When not* (*In which not*).—

Never a day came but she watched on the hill.

By the side of.—

Equals "beside".

By the side of the brook. There is however no objection to regarding the phrase as a tandem series:

(1) By the side	(2) of the brook.
(1) Because	(2) of the accident
(1) On account	(2) of the strike
(1) By reason	(2) of his mistake, etc.

Can, May.—

See *May* in this series.

But.—

Preposition: There is no one here *but* me.

Conjunction: It would be a good thing, *but* we can't manage it.

Pronoun: Not a man *but* felt chagrined

Adverb: "Give her *but* the least excuse to love me."

We have *but* six.

Certainly.—

"Pardon me!"—"Certainly!"

It is well enough to call this *certainly* an adverb, but the verb it modifies must be supplied. Such condensations are very common, e. g. *of course, to be sure, quite the contrary, by no means*, etc.

Clause, Adverbial or Substantive.—

(1) We are glad *that you could come*.

(2) Your friends are anxious *that you accept the nomination*.

To say that these clauses are substantive with the omission of an introductory preposition, is of course a possible construction, but we call it rather far-fetched. If I say Give me the book, there is no change or forcing of meaning by adding the "omitted" preposition; *Give the book to me*. But try supplying the omitted, preposition "of" in sentences (1), (2), above. *We are glad of that you could* come is not quite the original idea. We prefer to call the clause *adverbial*.

(3) There is no evidence *that he did the deed*.

(4) I warn you *that it must not be*.

In (3) we are describing evidence.

In (4) there appears to be a genuine nounal function, object of the verb warn.

Clausal Antecedents.—

We must swim across without wetting our ammunition, which is no easy matter.

The antecedent of *which* is the entire clause preceding.

Clauses Modifying Adverbs.—

She lies *there where* the myrtle blooms.

Where the myrtle blooms is an adverbial clause modifying *there*. *Where* is really correlative with *there*, expressing the same idea.

Compound Connectives.—

As long as, as far as, as soon as, inasmuch as, in order that, in proportion as, no longer than, no sooner than are all adverbial in some sense,—time, space, cause, degree, etc.

Either—or, neither—nor, whether—or, are disjunctives, taking ideas one at a time.

Both—and, but—also, alike—and, at once —and are copulative conjunctions.

"Compound Reciprocals", Each Other, One Another Reciprocals.—

They love *each other*. *Each other* may be regarded as a compound word, one word, written in two parts. This is the idea of the "Compound Reciprocal." Or the relationship may be expressed as:

They (each) love (other).

The first treatment is probably clearer.

Conjunction Connecting Sentences.—

I will go, to be sure I will! *But* you must come too!

"Send them away, that they may go into the country and villages round about, and buy themselves somewhat to eat. *But* He answered and said unto them, Give ye them to eat. *And* they say unto Him, Shall we go and buy two hundred pennyworth of bread?

In literature and in common speech, sentences very often begin with a conjunction which connects the matter now coming with ideas expressed or understand before.

Conjunction or Adverb Introducing Clauses. The difficulty of deciding whether certain expressions are adverbial connectives or mere subordinating conjunctions has led a few grammarians to abolish one or the other of these terms. There appear to be three types of connectives introducing subordinate clauses: relative pronouns—this is the cat *that* caught the rat; conjunctive adverbs—I will come *when* you call; subordinate conjunctions—This is better *than* any other we have. If we test connectives for their possible use as nounals, and for the adverbial notions of time, place, manner, etc., it should become fairly clear that all three types of connectives exist, and that all three names should be mastered. The word *than*, for example, has no apparent nounal quality, nor has it in itself any adverbial force. Therefore, since it introduces a clause, we may call it a subordinating conjunction.

Co-ordinate Clauses With Subordinating Connectives.—

(1) He told me he did not recall, *which* was his way of saying he would not tell. (*—and this*)

(2) A parallel case is on page **00**, which see.

(3) "One Almighty is, *from whom* All things proceed, and up to Him return."

The three verbs of number (3) are equally important, though the form of the sentence does not show it. This is a case where thought relations overrule grammatical forms.

"My cargo was a great part of it lost, especially the iron, *which* I expected would be of great use to me."—Robinson Crusoe.

The relative *which* of the sentence pretty clearly equals *and this;* and the clause thus introduced is perhaps fully as important in thought as the "main" clause.

Correlatives.—Pairs of conjunctions are sometimes required for off-setting one idea against another:

Both Will *and* Tom fell in.

As well go *as* stay.

Neither black *nor* white.

Not only carelessness, *but also* criminal intent.

It is *at once* dubious *and* promising.

Most of these are pretty genuinely compound conjunctions. There may be doubt about the last one.

Do—, Uses.—

(1) For emphasis: *Do* come. I *do* say just that.

(2) Colloquial past tense: I *did* not see you.

(*I saw you not* would be very stiff.)

(3) In questions: *Do* you believe me? (*Believest thou* is of course out of form now.)

(4) To avoid repetition: He makes friends more easily than I *do*.

Double Attribute Complement.—

"Most men are *like* an egg, too *full* of themselves to hold anything else."—Josh Billings.

"Like" and "full" are both predicate adjectives, describing the subject men; but the second complement, "full" also explains how men are *like an egg*. In thought one of these complements modifies the other. Grammatically, they are independent of each other.

Ellipses in Complex Sentences.—

This is harder than it seems (hard).

The case is not so clear now as (it was) formerly.

There are more stars than (the stars are that) can be counted.

More came than (many) were asked.

He is as well as (is) usual (with him).

I like the Hamlet better than ever (I liked it before).

John was orphaned when (he was) a mere lad.

Will you come? I think (I will) not (come).

Pausing as if to consider, may read: Pausing as (he would pause) if (he were) to consider.

Else.—

Adjective in *Something else.*

Adverb in How *else* can we do it?

Exclamations and Exclamatory Sentences.—Interjections and exclamations are not commonly a part of the sentence with which they may occur. They are grammatically independent.

Exclamatory sentences are not ordinarily sentences at all. They may suppress a subject, a verb, or other sentence members. There are seldom many modifiers. Though of course the idea of a full rounded sentence may be so emphatic as to warrant classing the sentence as exclamatory.

"Alas! what a good outside falsehood hath!"

An interjection begins this remark, and a complete exclamatory sentence follows.

"Half a league! Half a league onward!"

Here is only an object complement, with two or three short modifiers.

For, a weakened Preposition in certain cases.

I took you *for* a friend is practically equivalent to I considered you a friend. If *for a friend* is an adverbial phrase. it is a very weak one, modifying *you* and *completing* the verb as surely as it tells the manner of taking. Here are three grammatical uses joined in one expression. Sound analysis will recognize *all three.*

"For Example", Introducing Appositive.—

Some "impractical" subjects are well worth studying; *for example, geometry.*

"Geometry" explains, illustrates, "Some difficult subject"; geometry *is* one of the difficult subjects. For example is an introductory expression, like *as, in other words, namely, that is, to wit.*

"For Granted", "For Sure", "For Certain."—

(1) We took that *for granted.*

(2) We considered that *self-evident.*

(3) We took that *for a waste* of effort.

(4) That was taken *for granted.*

(5) That was considered *a waste* of time.

(6) Let's try again, *for sure.*

(7) I can't tell *for certain.*

The adjectives *granted, sure, certain* appear to be used as nouns. Sentences (1) and (3) have "for" phrases as objective complements. Sentences (4), (5) show how the objective complement becomes an attribute complement in the passive construction. The "for" phrases of (6), (7) are adverbial.

Fractions.—

One-tenth of twenty is two.

"One-tenth" is a substantive in this case. If the statement were "one-tenth part of twenty is two", the fraction would be an adjective, numeral, indicating quantity or number, like *"two parts."*

Future Tense by a "Be" Phrase.—

(1) We *are* to go by the east road.

(2) They were *to be* here by this time.

(3) He *was* to have come to-day.

(1) Simple future.

(2) Future from a point of view in time past.

(3) In past time, we looked forward to an action which should have ended to-day.

Gerund, or mere noun.—

(1) They practised *piano-playing* and tennis. (A mere noun—no assertion implied.)

(2) The *finding* of the continent was credited to Vespucci. Probably *finding* is a noun, though it is possible to think action into it, in which case it becomes gerund, or near-gerund.)

(3) Dividing the proceeds justly was difficult. (Real gerund, as proved by the adverb justly.)

"Going" in Future Tenses.—

(1) I am *going* to be there.

(2) I am *going* to take back my promise.

(3) I was *going* to help you, but I can't do it.

(4) I have been *going* to call on you for a long time.

(1) and (2) are simple future tenses.

(3) Was future, from a past view point.

(4) Has been future up to the present time.

Groups Acting as Single Words.—

I shall be here *in case* you need me.

Save, *in order that* you may not want.

Yes, *on condition that* you come, too.

Well, *considering that* I have been so sick.

Inasmuch as you think so.

These are, in each case, equivalent to single connectives, adverbial, though it would often be difficult to supply a single word to act as substitute.

Had Rather—than.—

I *had rather* go *than* stay.

Idiomatic for *I prefer to go rather than* (*I prefer*) *to stay.* Here "had" really equals the present tense of prefer. *Than* is a subordinate conjunction introducing the clause (*I prefer*) *to stay*, through the adverb *rather.*

Hand in hand, Head over Heels.—

John is *head over heels* in debt.

Colloquial idiom, nouns used adverbially.

Similar expressions are: *day by day, word for word, three in a row, one behind the other.* Perhaps these expressions may be "absolute"; we think they seldom are so.

Hardly—When or *Scarcely—Before.*—

Hardly had the bell sounded *before* the hose-cart appeared.

Rearranged, this sentence reads: The bell had sounded *hardly before* the hose-cart appeared. This seems to indicate that *before* modifies *had sounded*, and *hardly* modifies *before*. *Before* introduces the time clause.

Himself, Appositive.—

The king *himself* was there. "Himself" is emphatic appositive.

Himself, Itself, as *Appositional Intensives.*—

It is the boss *himself.*

The bridge *itself* was strong enough.

Appositives, since they refer to the objects boss and bridge. *Intensives,* since they call special attention to the words they accompany. But not reflexives—there is no bending back of action upon the subject.

Infinitive Adverbs.—

Fools who came (why)? *to scoff,* remained *to pray.*

I'll be glad *to do* it; sorry *to disappoint* you.

That news is too good *to be* true.

An adverb commonly modifies a verb, an adjective, an another adverb. Here are all three sorts.

Infinitive as Objective Complement.—

(1) They chose him *to be* their president.

(2) They elected him *to represent* them.

(3) They chose him president.

(4) They elected him representative.

Sentence (1) clearly equals sentence (3). It doesn't much matter whether we call *to be* an introductory infinitive, or the verbal in an infinitive phrase used as objective complement.

But sentence (2) is not so clearly equivalent to (4). The option in this case recognizes the adverbial purpose of *to represent,* telling why they elected.

Infinitive in Apposition.—

To be or not *to be*: that is the question.

(*That*—to be or not to be.)

In order that.—

"Do evil *in order that* good may come."

In order that may be regarded as a compound conjunctive adverb, or may be broken into its parts.

In So Far As.—

In so far as that goes, the reasons are good.

I know nothing about it, except *in so far as* regards the original bargain.

Far is an adverb used as a noun, object of preposition *in. So* is a simple adverb modifying *far. As* is a subordinate conjunction, correlative with *so. In so far* modifies *are* (good); *as that goes* modifies *so far.*

In the Same Way In Which.—

You have done this *in the same way in which* I did it.

The expression *in the same way in which I did it* is adverbial, modifying the main verb *have done.* But the connecting phrases modify the verbs of both clauses alike.

It, Expletive or Anticipatory Subject.—

(a) *It* is fun coasting down a long, steep hill.

(b) *It* seems good to see you here.

(c) *It* is strange that here should be no footprints.

In (a), the real subject is the verbal phrase *coasting down a long, steep hill.*

The actual subject of (b) is *to see you here.*

(C) has a *clause* for subject.

In all three, the word "it" is a make shift of speech to delay naming the real subject.

It, Impersonal Object.—

Lord *it* over the nations;

"Come, and trip *it* as you go;"

Current slang: "Beat *it*!" "Whoop *it* up!"

All are examples of impersonal objects. So impersonal and idiomatic is this construction, that grammarians sometimes call these verbs intransitive. We prefer to call them transitive, with the object it.

It, Impersonal Subject.—

It happened so. *It* appears so. *It* thunders. *It* rains.

In all such cases, the word *it* has no clear antecedent, and hence cannot be called personal.

It Is—That, It Was—That.—

(1) *It is* money *that* makes the mare go.

(2) *It was* Wilson *who* brought to pass the League of Nations.

The idea is substantially unchanged if we omit the *It is—that, It was—who.* These phrases seem to call special attention to the subject of the sentence.

Kind Of, Sort Of.—

(1) "Dwarf Giant" is a *kind of* tomato.

(2) "Now by this hand, I gave it to a youth, a *kind of* boy, a little scrubbed boy."

(3) Just act *kind o'* natural like

(4) He *kind o'* mumbled in his teeth

In (1) Kind is a *bona fide* noun, modified by an adjective phrase. In (2) "*Kind of boy*" is not to be taken so literally; *kind of* has adjectival force. In (3) and (4), *kind o'* is adverbial.

Lest.—

(1) "Take heed *lest* ye fall."

(2) We feared *lest* the ship should sail without us.

(3) Be careful *lest* you go too far!

The clause in (2) is best called object complement. It certainly comes nearer telling *what* we feared than *how* we feared. Probably the first clause is adjective, and the third adverbial.

"Let" in Commands.—

Let the prisoner go free.

Let there be light!

Let the music play.

The old force of *let* as an active verb meaning *allow, cause,* and the like, is nearly gone. But grammatically, let, in the sentences above, is a present imperative addressed to *you.* The form is well enough described as a *weakened imperative.*

Like.—Adjective, Adverb, or Preposition?

(1) A book *like* its author, hard to understand.

(2) The boy ran *like* a deer.

(3) Thomas, *unlike* John, had doubts.

The standard objection to calling *like* a preposition is in the conventional ruling that prepositions can under no circumstances be compared. The word *like* may become *more* like, or *most* like. This objection seems rather arbitrary, when we remember that prepositions were once adverbs, and still have adverbial quality.

There are three possible dispositions of such "like" phrases:

(a) Like is an *adjective* in Nos. (1), (3), and an *adverb* in (2).

A book *like unto* its author; ran *like unto* a deer, etc.

(b) *Adjective or Adverb: like* its author (is); *like* a deer (runs).

(c) *Preposition,* indicating relationship of similarity.

Long.—

He slept all day *long.*

The word *long* makes here a sort of idiomatic repetition of the "all". The meaning is not that the day he slept was a long day, but rather that he slept through the day *from beginning to* end. "All day long" equals *the livelong day,* in which case the same intensification of *long* is secured.

Many A.—

A limiting adjective, of peculiar quality. The word *many* requires at least several individuals, but the word *a* takes these individuals one at a time. The verb with *many a* must be singular. *Many a* man *has* found that costly.

May, Can.—(The Potential Auxiliaries, with *Might, Could.*)

May has two meanings (1) permission and (2) possibility.

(1) I may go. (I have permission to go.)

You may go. (You have permission to go.)

(2) I may go. (Perhaps. It is possible, but rather doubtful.)

Can indicates power or ability.

He *can* do it. (He is able to do it.)

May and can are often improperly interchanged.

Me, Myself as Reflexives.—

I bought *me* a gun.

Now I lay *me.*

I will build *me* a nest.

Come here! I have hurt *myself.*

To reflex is to bend back. Reflexive pronouns indicate that the subject acts upon itself in some way.

Modifiers of an Entire Clause.—

(1) The Egyptians knew how to handle great blocks of stone—a secret which died with them.

(2) She failed to appear, which troubled us greatly.

In (1) the word secret is descriptive of the entire clause preceding it—a noun in apposition with a clause.

In (2) the antecedent of which is a clause; the second clause modifies the first.

Most—That.—

We found a garden the *most* beautiful *that* one could imagine. The adjective clause *that one could imagine* modifies *the most beautiful garden.*

Myself, doubtful in place of *I, Me.*—

"John, Mary, and *myself* were there" is not in best form.

"He handed the book to *myself*" is in still more doubtful taste.

Nearly.—

A giant *nearly* eight feet tall.

Feet is an adverbial noun modifying tall. *Eight* is a numeral adjective modifying feet.

Nearly is an adverb modifying eight.

Neck and *Crop.*—

He fell, *neck and crop.*

Colloquial idiom, nouns used adverbially.

Needs, as an Adverb.—

You must *needs* come just because I did!

"Needs" equals *of necessity.*

"Nice And".—

"Good And".—

Make my living room *nice and big.*

Pick out a car that's *good and* speedy.

Colloquial idiom, with the force of an adjective.

None But.—

(1) There is no one here *but* me.

(2) None but the brave deserve the fair.

(3) None but he can do it.

In (1), the word *but* is a preposition with the force of *except.* In (2) and (3), the expression *none but* seems to serve as one word, equivalent to *only.* This accounts for the nominative "he".

Objective Complement Transposed.—

He made *good* his threat.

Think best, See fit, Make good are similarly

used, with the objective complement before the object instead of after it.

Objects, Double.—

1. Strike *Robin*. Strike a *blow*. Little John struck *Robin* a *blow*.

2. Ask *him*. Ask a *question*. Ask *him* a *question*.

3. Tell *him*. Tell a *story*. Tell *him* a *story*.

Compare:

4. The pirates elected *Silver captain*.

5. I will build *me* a *house*.

The word *me* in sentence 5 is very unlike the other nine objects. It cannot stand alone with its verb. I do not build *me*. I build *for* me. The *me* is an indirect or dative object.

Again, the noun *captain*, though it does fill the test of a real object complement, also points to the object Silver: The action of electing captain fell upon Silver. Captain is an *objective complement*.

Of Phrases, Adjective or Adverbial.—

"Give me *of* your bark, O Birch-tree!" —H. W. L.

Of course it is possible to supply the word *some*, and so to call *of your bark* an adjective phrase.

But how of the following:

We are to share *of his riches*.

Come drink *of this spring*, John.

If these are parallel cases, the phrases in question are adverbial. This is at least a permissible alternative opinion.

One as Pronominal Adjective.—

One Jones is waiting to see you.

Here we do not imply that the number waiting is one rather than two or three; "one" here means *a person by the name*. It is a pronoun used as an adjective.

One by One.—

The petals dropped off *one by one*.

One by one the stars came out.

We think of *one by one* as a single term, and as such it is clearly adverbial of manner. If the expression itself is to be broken up, the first "one" is substantive adverbial followed by the phrase *by one*.

Opposite, in the phrase.—

Opposite me, preposition, relating *me* to something else, but *strongly adverbial;* but in *opposite to me*, adverb or adjective, depending on the context.

See *Preposition*, in this section.

An exact parallel: *Off the ice, off from the ice*.

Optative Phrases.—

Various forms expressing wish or desire are called optative, e.g.

Let's go now.

Let me never forget this day.

"*May there be* no moaning of the bar
When I put out to sea."

Would there were no winter!

Or, Introducing an Appositive.—

He is to speak on Pictorial Photography, *or* the Art of Making Real Pictures with the Aid of a Camera.

"Art", etc. is really an appositive phrase, explaining the meaning of Pictorial Photography.

The snow-apple, *or Famense*, is a fall variety.

"Famense" is an appositive, meaning the same as snow-apple, and introduced by "or".

Or Rather.—

(1) I direct, *or rather* request, you to be there.

(2) His work has this defect, *or rather* disadvantage.

(3) He has this fault, *or perhaps* one should say misfortune.

These three "or" groups are alike in several respects: Each is parenthetical, each is thrown in to qualify or displace a preceding term. We have to choose between calling them appositives, or coordinates;—e. g., in (1) the subject "I" may have two verbs, "direct" and "request", or the verb "request" may be thought of as an appositive with the verb "direct." Really there is nothing to hinder holding *both* opinions.

Out, Out of (See also Preposition, Double.—

(1) Careful! I am *out of* humor this morning!

(2) "For though from *out* our bourne of time and place."

(3) That bullet came from *in* this house.

The first *out* may mean empty, devoid, ill-conditioned—in which case *out* is an adjective.

The second *out* has a very different meaning, quite close to the meaning of *in* in sentence (3). The object of *from* appears to be the prepositional phrase *out our bourne*.

Over—Adverb or Preposition?—

(1) The operation cost *over* five hundred dollars.

(2) We travelled *over* a thousand miles.

(3) Throw the ball *over* the house.

(4) We roamed *over* a great area.

The first two sentences use *over* in the sense of more than, a measure, and therefore *adverbial*.

The second two cases, sentences (3), (4) use *over* to express physical relationship—prepositional.

Own.—

An adjective, with a peculiar suggestion of intensifying possession.

My *own* car.

Own may become pronominal—May not a man do what he will with his *own*?

Participle as Objective Complement.—

She kept the talk *going*.

Participles Become Adjectives or Adverbs.—Words participial in form often lose even the hint or assumption of action contained in a verbal, and become mere adjectives or adverbs. Note the difference between

A *stinging* cold day, and

The wind came *stinging* our faces and hands.

The first "stinging" is a pure adverb, giving the measure or degree of *cold*.

Participle, or Mere Adjective—Adverb?

His work makes him very *tired*.

The house stood in a *sheltered* nook.

The wind is *stinging* cold.

Two adjectives and an adverb, no participles. Even the implication of action is gone from the words *tired, sheltered*, stinging; though the last word has of course a very intense descriptive quality.

Phrasal Complement.—

His manners are *of the best*. (Attribute.)

He is *about my age*.

She worked herself *to death*. (Objective.)

Phrases in Apposition.—

There are two best places to live,—*in New York*, and *on the farm*, where I was born.

These two phrases are substantives, together equivalent to *two best places*.

Phrase Modifying an Adverb or Adjective.—

John is taller by *several inches*.

This gun shoots farther *by a mile*.

Phrasal Object.—

(1) "Give me *of your bark*, O Birch Tree!"

(2) He sang "*In the Gloaming*."

Of your bark is not a mere adverbial phrase describing the manner of giving. Something was actually given.

Phrasal Subjects.—

On the track is an unsafe position.

In my house is *in my castle*.

Phrases May Be Compared.—Hobble skirts are *little in fashion* among college girls, *less* among professional women, *least* among busy house wives. The phrase *in fashion* is really given three degrees of scope. The three might have been positive, was well as negative (much, more, most.)

Pleonasm.—(Repetition or "Padding", for effect.)

Thy rod and thy staff, they comfort me.

The smith, a mighty man is *he*.

The boy—Oh, where was *he?*

In a grammatical analysis, probably the opening term in each of the above sentences should be called *independent*. Alternatives: Give two subjects, or call one explanatory of the other.

Plurals, difficult, inconsistent, or exceptional.

Chief, chiefs; gulf, gulfs; thief, thieves; elf, elves; buffalo, buffaloes; canto, cantos; court-martial, courts-martial; major-general, major-generals; Knight - Templar, Knights-Templar; son-in-law, sons-inlaw; commander-in-chief, commanders-in- chief; roof, roofs; hoof, hoofs or hooves; proof, proofs; skiff, skiffs; muff, muffs; scarf, scarfs; man-of-war, men-of-war; attorney-at-law, attorneys-at-law; passer-by, passers by; woman-servant, women-servants;3 percent, 3 per cents.

Possessive Appositives.—

His brother John's hat fell over board.

The word John's modifies hat, yet at the same time also relates to brother. Really the expression "*His brother John's* acts as one word.

Predicate Adjective or Adverb.—

(1) The boy came *running* pell mell.

(2) The boy came *smiling*.

(3) The boy stood *defiant*.

We prefer to call "running pell mell" an adverbial phrase describing how the boy came. But "defiant" in (3) describes the *boy*, rather than the manner of his standing. "Smiling" in the second sentence, is either adverb or complement or both, as you please to direct your attention.

"Shadows dark and sunlight sheen
Alternate come and go."—H. W. Longfellow.

Either admit that Mr. Longfellow meant *alternately*, or call alternate a *predicate adjective*.

"They descended *fearless* into all gulfs and bedlams."

Fearless, like *alternate*, is either a Carlylian adverb, or a predicate adjective.

For this perplexing combination of adverb and predicate adjective, Whitney uses the name Adverbial Predicate.

Preposition, Double (See "Out", in this Series.)

(1) *Out of* may sometimes roughly equal *from*.

(2) *Instead of* may roughly equal *for*.

(3) *According to* may roughly equal *by*.

If *in consequence* should be common practice become one word, then such an expression as *in consequence of* would equal the single preposition through. See (2), (3) above.

Prepositions Following Their Objects.—

Whom is this *for?*

This is the book you called *for*.

"Pleasant it was when woods were green
And winds were soft and low
To lie amid some sylvan scene
Where, the long drooping boughs *between*", etc.

The deferred preposition is common in questions, and in poetry, (though 20th century poets take fewer licenses of this sort.)

Prepositions, formerly **Adverbs,** become **Conjunctions.—**

Pass *on*, pass *by*, shut the door *to*, go *to*, etc., are adverbial survivals. The adverbial quality is still present in all prepositions, along with the acquired function of connecting or *relating* ideas.

If the object of one of these relating words is a substantive word or phrase, the connective is called a *preposition*: as in *before my election;* but if the object is a clause, the same word is rather arbitrarily called a conjunction or a conjunctive adverb: *before I was elected.*

Preposition Of Omitted.—

Half the profits.

This side, inside, outside, beside the gate.

On board ship, worthy a better fate.

Preposition suppressed, or old genitive form which has omitted the sign "of".

Quoth.—

Equivalent to *said.* Past tense only.

Same as, Such as, So much as, As many as.—

(1) My car has not the *same* motor *as* yours. (has).

(2) We are not likely again to have *such* good times *as* those were.

(3) He does not care *so much* for fishing *as* for hunting.

(4) Give me *as many as* you take.

There is good reason for holding that *as* in such constructions was formerly a relative pronoun, but it is doubtful if much of this old pronominal force remains. If *as* were a relative pronoun, note that in sentence (1), it would be object of "has"; in (2), predicate nominative of "were"; in (3) object of "does care"; in (4) object of "take". Perhaps in the first sentence the substantive value of "as" may be optionally accepted. We prefer to call it a subordinating conjunction throughout.

So, as Adjective.—

You can hardly be surprised at his being boorish, for his parents were *so.*

So equals *boorish.*

So—That.—

We will manage *so that* you can stay over the week-end.

"So teach us to number our days *that* we may apply our hearts unto wisdom."

These clauses introduced by the subordinate conjunction that are both adverbial, modifying *so.*

Subject as Complements With Other Verbs Than Be.—

The prison doors *stood* wide *open.*

After the storm, the grain *lay flat.*

In that solemn place, the garrulous *stood silent.*

America promises that the poorest may *become rich.*

Milk *turns sour.*

Pigs *grow fat* on it.

Get busy.

I shall *go mad.*

My matches *have kept dry.*

Why should any man *remain ignorant?*

Do you *feel dizzy* up here?

"A rose by any other name would *smell as sweet.*"

"Such and Such," "So and So."—

He said he would see me at *such and such* a time.

In *such and such* a case, you will do *so and so.*

In these uses, we prefer to call *such and such* a compound demonstrative adjective, *so and so* a compound or phrasal adverb.

Than.—

A subordinating conjunction, used in comparison of a principal or preferred idea with a secondary or inferior idea.

This is better *than* that (is good).

Baldwins are sourer *than* russets (are sour).

Than.—

Conjunction: We can sooner make a new one *than* we can find the one we lost.

Preposition: *Than whom*—However the grammarians may object, good writers use the *than whom* phrase as freely as they use *of whom*, or *for whom.*

This rod is of vanadium steel, *than which* there is nothing better. *Than which* modifies better.

That for *When, Where, Why.—*

"On the instant *that* the clock struck twelve, light flashed in the room." (— when — in which) etc.

See Adverbs Introducing Adjective Clauses, in this series.

"That", "This" with plural noun.—

We have had no war with England *this hundred years.*

The "hundred years" is plural in form, but really singular in sense. It is thought of as a stretch of unbroken time.

That five dollars was soon gone.

Another illustration of a single idea in a plural form.

That—Subordinate Conjunction or Relative Pronoun?—

(1) I am not sure *that* you had better go.

(2) He said *that* he would be home for supper.

(3) "When the hours of day are numbered,
And the voices of the night
Wake the better soul, *that* slumbered,
To a holy, calm delight."

(4) "When *that* the poor have cried, Caesar hath wept."

(5) Now *that* spring has come.

The word *that* in No. 3 is clearly a *relative pronoun.*

In (4), (5) that has no discoverable nounal force; it is a subordinate conjunction.

The "that" of sentences (1), (2) appears to be intermediate. If you see marked nounal quality in it, call it relative pronoun, otherwise, say subordinate conjunction. We favor the latter.

You blundered in *that* you did not ask for help.

Here, *that* has pronominal meaning.

That With Three Functions.—

I fired on the instant *that* the latch clicked.

"That" equals *in which,* and this phrase here *modifies instant,* as an adjective; *modifies clicked,* as an adverb, and *connects,* as a sort of demonstrative relative pronoun.

That Is, To Wit, Namely.—

See "For Example" in this series.

The More, the Less, etc.—

The more he tries, *the less* he seems to accomplish.

The harder the task, *the greater* the triumph.

In both these sentences, the word "the" carries an idea of exact quantities in comparison. By so much as the task is more difficult, by that much is the conquest more to be gloried in. The word "the", since it *measures degree,* may well be called an adverb.

Then—When.—

Then, *when* we were almost defeated, help came.

The clause *when we were almost defeated* modifies *then. When* is correlative and identical in meaning with *then. Then* modifies the main verb came.

Other such pairs are *there—where, therefore—because.*

There, Expletive.—

There was no need of your being *there,*

The second *there* really serves as an adverb of place, but the first *there* merely starts the sentence going, delaying the appearance of the real subject. This expletive use is not confined to the subject position, however: Only in instant flight is *there* any hope for you. "Let *there* be light!"

"The which."—

The which task fell to me. An old compound pronominal adjective, now out of date.

This once.—

Just *this once!*—"Once" is here a substantive, equivalent to *one time.* "This" is a demonstrative adjective, pointing out which one time. There seems also to be some pronominal force in the word this,—something more than in *this apple.*

Though—Yet.—

Though he slay me, *yet* will I trust him.

Rearranged, I will trust him yet, though he slay me.

Though and *yet* do not appear to be associated like *so—that* or *then—when.* The clause *though he slay me* appears to set forth conditions under which I will trust him. We call yet a simple adverb, and though a subordinate conjunction.

Times.—

Three times one are three.

Times is an adverbial noun, showing the number or degree in which "one" is to be considered.

To be—Complement or Introductory Term?

1. He was thought to be a swindler.

2. He was thought to have secret resources.

If we call *to be,* in the first of these sentences, a merely introductory term, what shall we say of *to have* in the second? It seems much safer judgment to call both these infinitive phrases *attribute complements.*

'Used", with an Infinitive, to Show Repetition.—

(1) He used to come every day. (—He came)

(2) He was accustomed to come every day.

(3) He practiced coming every day.

What is the construction of to come? The expression is so idiomatic that we can hardly think of *to come* as either an adverb or an object complement, in the first sentence. The choice seems to favor the later idea. Such phrases are sometimes called *Frequentative.*

Verbal Absolute, or Subject of Sentence.—

(1) *To-day being* Sunday, we must be decorous.

(2) To-day being Sunday compels decorum.

(3) To-day's being Sunday, etc.

In (1) *To-day being Sunday* is an absolute participial phrase.

In (2), (3) the same phrase is a gerund. To-day is subject of the verbal in (2).

What a, What, in Exclamations.—

What a charmer she is!

What color! *What* grace!

What a pity!

All these italicized terms are descriptive; most of them imply both quality and degree. They are adjectives.

What, an adverb (?)

What a good time we had!

What delicious grapes!

There is sense of *degree* in these uses of what.

Which, what as Adjectives.—

Two red, three white, six brown, *which* last are mine.

A pronominal adjective; there is still in the word some *nounal* idea, but the main use is here selective.

The interrogative pronoun *what* may be similarly used.

What boat is that?

What as a Relative.

I will tell you *what* is the matter.

What—that which. Unquestionably used in place of a noun, and just as surely a connective. But these two functions make it a *relative pronoun.* Its antecedent is unexpressed. The word "thing" may be supplied as antecedent, if one is demanded.

What with.—

What with sickness and *what with* lack of work, they were in a bad way.

If *what with sickness* means *on account of, because of, through,* sickness, the phrases are adverbial, modifying *were.* No doubt this is pretty nearly the idea conveyed. But the *what with* phrases, while logically related, seem grammatically set apart. We prefer to call them absolute idioms.

Whether.—

A subordinating conjunction introducing a nounal idea. I don't know *whether* to go or stay. We haven't decided *whether* we shall buy or not.

Which, antecedent of—

The dentist said he must take an X-Ray picture, which operation seemed at first rather disquieting.

The antecedent of which is *must take an X-Ray picture;* or, if preferred, the noun operation, modified by the demonstrative which, is appositive with the whole predicate *must take,* etc.

Which may even refer to an adjective. He claimed to be *competent, which* he certainly was not.

Which an Adjective (?)

They have made up their minds to invest all they have in the venture, *which* decision will either make or break them.

Which is here a demonstrative term, pointing out the decision. It is also a connective, equal to *and this,* for the clause is rather of added information than of subordinate modifying quality. Little, if any, pronominal quality is found in the "which" of this sentence.

While—So.—

While you avoid slang in careful speech, you will not object to it in colloquial English, *so* the slang be effective. Here, the word *while* introduces a concession, the word *so* a *condition.* Each of the two has an adverbial sense, and a connective function. It is immaterial whether they be called conjunctive adverbs, or adverbial conjunctions, though we prefer the latter, since the connective idea seems the stronger.

With May Be Almost a Conjunction.—

Bring cups, saucers, and plates, *with* as many spoons as you can spare.

With, together with, in such constructions have rather the force of *and* than the relating force of prepositions.

Worth Doing.—

What is *worth doing* is *worth doing* well.

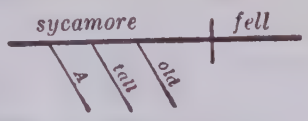
Worth is an adjective, doing is a verbal noun used adverbially to measure the degree of worth.

Yes, No, Really Elliptical.—

Commonly called adverbs, are not really so.

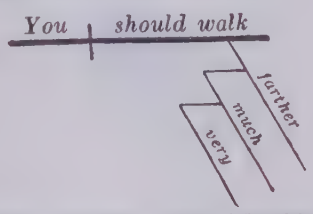
Will you be there? *Yes.* (I shall.)

Yes and *no* are rather abbreviated clauses than parts of speech.

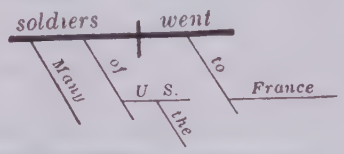


DIAGRAMS

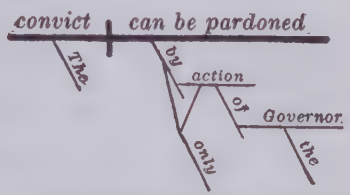
Copyrighted by and used by permission of the Charles E. Merrill Co., New York.



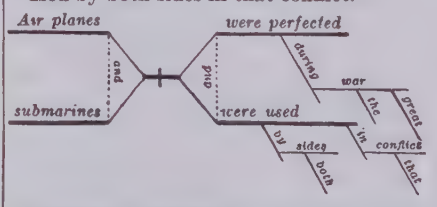
Subject, Predicate, and Sentence Line.



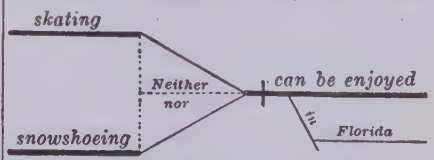
Adjectives.—A tall old sycamore fell.



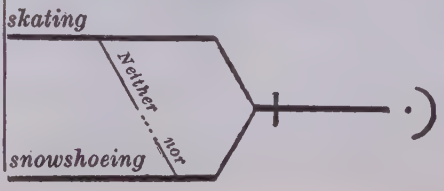
Adverbs.—You should walk very much farther.



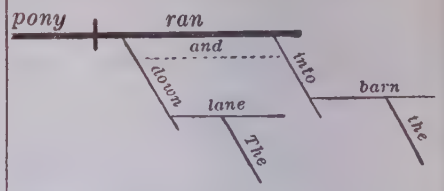
Phrases, Adjective and Adverbial. — Many soldiers of the United States went to France.



Adverb Modifying a Phrase.—The convict can be pardoned only by action of the governor.

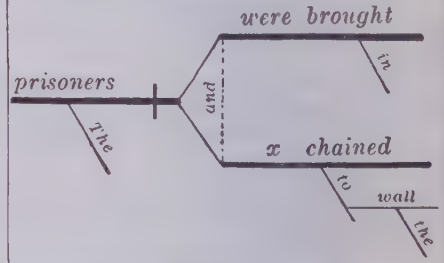


Compound Subject and Compound Predicate.—Airplanes and submarines were perfected during the great war, and were used by both sides in that conflict.

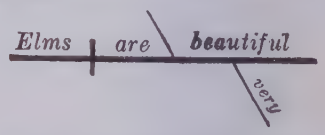


Compound Connective.—Neither skating nor snowshoeing can be enjoyed in Florida.

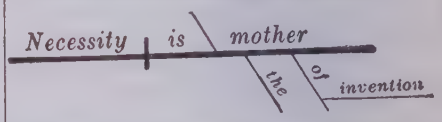
(Alternate diagram, in case neither and nor are held to modify, as well as to connect:



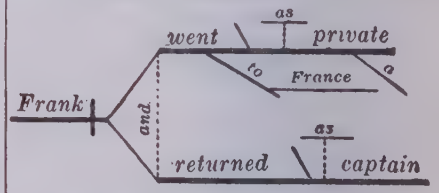
Phrases Connected.—The pony ran down the lane and into the barn.



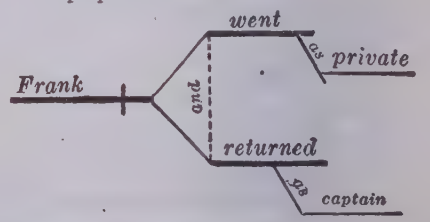
Object Complement.—Storms wreck many ships.



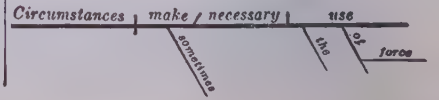
Words Omitted. — The prisoners were brought in and chained to the wall.



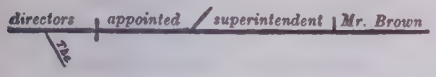
Attribute Complement.—Elms are very beautiful.



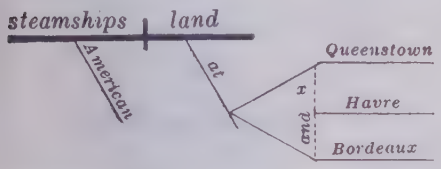
Necessity is the mother of invention.



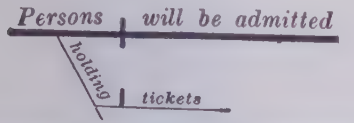
Particle.—Frank went to France as a private and returned as captain.



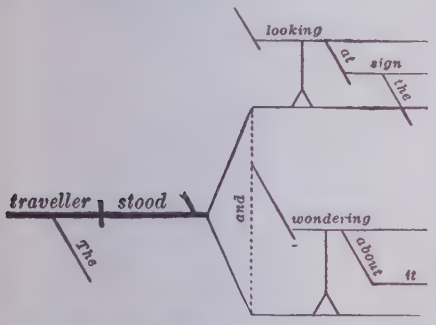
(Alternate diagram in case **as** is held to be a preposition:



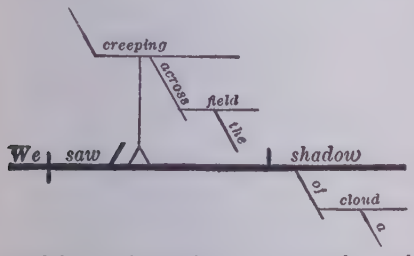
Objective Complement, (Adjective). — Circumstances sometimes make the use of force necessary.



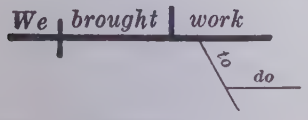
Objective Complement, (Noun). — The directors appointed Mr. Brown superintendent.



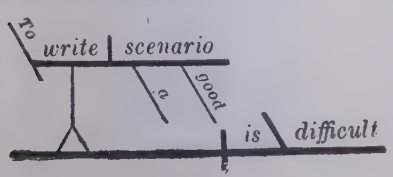
Several Objects of a Preposition.—American steamships land at Queenstown, Havre, and Bordeaux.



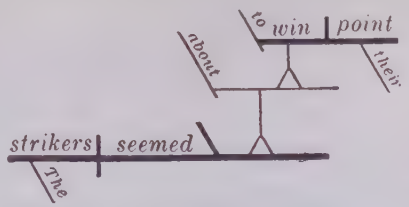
Participle, (As Adjective).—Persons holding tickets will be admitted.



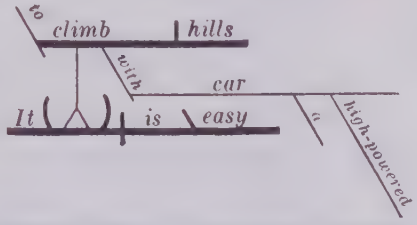
Compound Participial Complement, (Attribute).—The traveller stood looking at the sign and wondering about it.



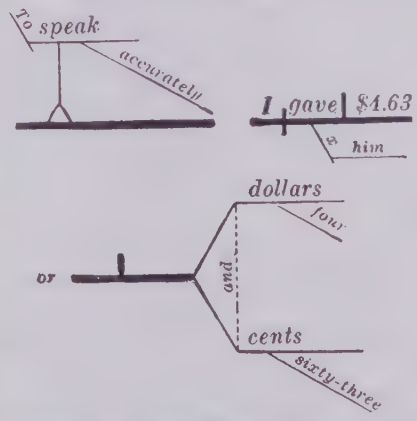
Participle as Objective Complement. — We saw the shadow of a cloud creeping across the field.



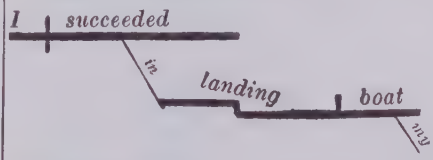
Infinitive as Adjective.—We brought work to do.



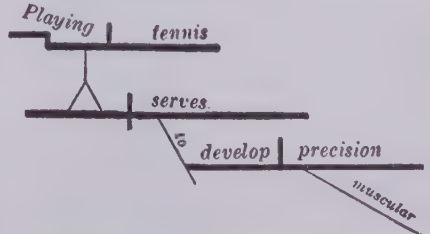
Infinitive as Subject.—To write a good scenario is difficult.



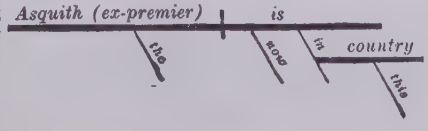
Infinitive in Phrasal Complement.—The strikers seemed about to win their point.



Infinitive as Appositive Subject.—It is easy to climb hills with a high-powered car.

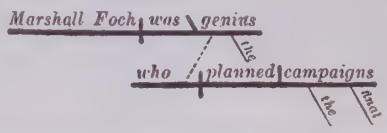


Indirect Object; Independent Infinitive. —To speak accurately, I gave him four dollars and sixty-three cents.

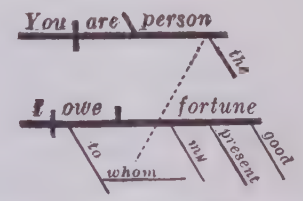


Gerund in Prepositional Phrase. — I succeeded in landing my boat.

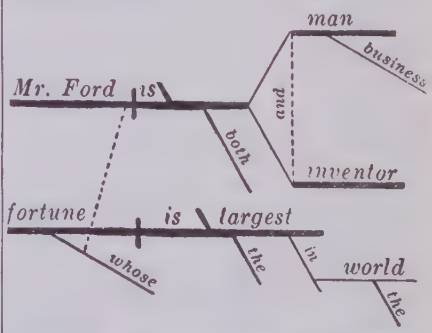
Gerund as Subject.—Playing tennis serves to develop muscular precision.



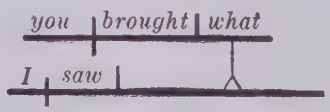
Noun in Apposition.—Asquith, the ex-premier, is now in this country.



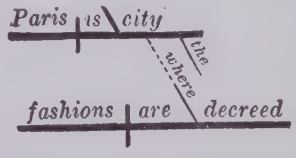
Adverbial Noun.—We had poor crops this year.



Adjective Clause.—Marshall Foch was the genius who planned the final campaigns.

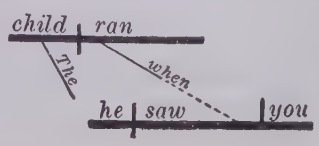


Connection Through Object of Preposition.—You are the person to whom I owe my present good fortune.

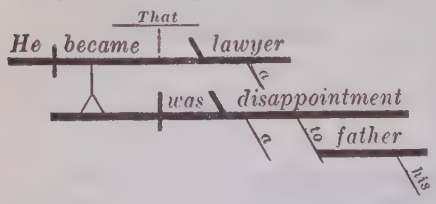


Connection Through Possessive Relative Pronoun.—Mr. Ford, whose fortune is the largest in the world, is both business man and inventor.

Connection Through Object in Clause.—I saw what you brought.

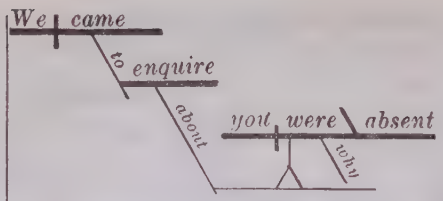


Connection Through Adverbial Relative. —Paris is the city where fashions are decreed.

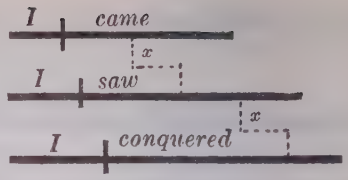


(The word **where** both connects and modifies.)

Connection Through Conjunctive Adverb.—The child ran when he saw you.

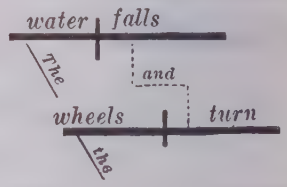


Clause as Subject.—That he became a lawyer was a disappointment to his father.



(That is an introductory word, or "particle.")

Clause as Object of Preposition.—We came to enquire about why you were absent.



(Absent seems to be both adjective and adverb.)

Compound Sentences.—I came, I saw, I conquered.

(No connectives expressed or understood.)

The water falls and the wheels turn.

DICTIONARY OF PREPOSITIONS

SHOWING THEIR USE IN CONNECTION WITH PARTICULAR WORDS, ESPECIALLY VERBS

Abandoned *to*
Abate *of, from*

CLASSIFICATION OF LANGUAGES.—Language is the whole spoken and written body of words and methods of combining words used by a nation, a people, a race.

The researches of philologists have resulted in the classification of the languages of the world into the following families and branches.

The Indo-European or Aryan Family.—This family is of greatest interest to us because our own tongue belongs to it, and the races speaking these languages are the foremost nations in the history of the world. They have produced the greatest and richest literatures; their languages have a great wealth of words; and because of these things philologists have made a more thorough study of these languages than of any other group, and a study of them is at the basis of our modern science of comparative philology. This family has eight branches.

The Indian or Sanskrit Branch has been used in India since 2000 B. C. or earlier. The oldest form is the Sanskrit, in which are written the Songs of the Veda. The Sanskrit, Prakrit, and Pali are now dead; the Hindi, Bengali, and Mahratti are the modern representatives, and are spoken by 225,000,000 people.

The Iranian Branch occupies the great plateau of Iran and the valleys of the Euphrates and the Tigris. The dead dialects of this branch are the Old Persian, handed down to us in a few cuneiform inscriptions, and Zend, or Old Bactrian. The chief modern representatives are New Persian (in part), Kurdisch, Baluchi, Afghan, and Ossetic.

The Armenian Branch consists of the living dialects of the Armenian, the written form of which has been changed little since the fifth century of our era. It is used by the people of the Caucasus and south of the Black Sea.

The Greek Branch comprises the ancient and modern Greek literary languages and dialects. Our own civilization owes much to the Greek language, since it was the means of transmitting to us the wonderful civilization of the ancient Greeks. Much that is best in the literature, philosophy and art of modern Europe is due to Greek influence. The modern Greek is used in Greece, the Balkan states, Constantinople, along the coast of Asia Minor, Crete and Cyprus. It is the commercial language of the east Mediterranean.

The Italic Branch includes the ancient Latin, Umbrian, Sabellian, and Oscan, the Latin having in time entirely absorbed the other three. The Latin was the language of the Roman republic and empire and was used in western Europe and in the Mediterranean basin. In spite of the break-up of the Roman empire, Latin continued to be the language of the literary and scholarly classes for many centuries. Even today the Catholic church uses Latin as its official language. With the coming of the barbarians the Latin was gradually modified and with it as a basis there were formed ultimately a number of new languages called Romance languages. They are Italian, French, Provencal, Spanish, Portuguese, Rumanian, and Rhaetian.

The Celtic Branch is more closely related to the Italic branch than to any of the other branches of the Indo-European family. At one time it was dominant in all of western Europe, but in the course of centuries it was gradually crowded toward the west and is now used only in the northwestern part of France and in the British Isles. There are two groups: (1) the Northern or Gaelic, including Irish, Gaelic or Scotch, and Manx, and (2) the Southern or Britannic, including Welsh or Cymric, Cornish (extinct since the eighteenth century), and Armorican or Bas Breton in Brittany.

The Slavonic or Slavo-Lettic Branch is found in eastern Europe and has two groups: (1) the Slavic, to which belong the Russian, Bulgarian, Serbian, Polish, and Bohemian; (2) the Lettic, comprising Lithuanian, Lettish, and Prussian (now extinct). This branch is spoken by about 150,000,000 people.

The Germanic or Teutonic Branch is divided into three groups: (1) the Gothic or East Germanic, (2) the Scandinavian or North Germanic, (3) the West Germanic.

The Italian Language in its literary form was the old Tuscan dialect, and was given its literary prëeminence through the writings of Dante, Petrarch and Boccaccio in the fourteenth century. Although the literary Italian is read and spoken by all the educated people of Italy there still remain numerous dialects throughout the peninsula, and it is impossible for a native of southern Italy to understand the dialect of northern Italy. Italian is spoken in the various dialects by at least 35,000,000 of people in Italy, Sicily, Corsica, Sardinia, Malta, southern Switzerland, southwestern Austria, a small region in southeastern France, in Argentina, Brazil, and the United States.

The French Language assumed something like definite form in the middle of the ninth century. There were various dialects in different parts of France, but soon two supplanted all others; the langue d'oil, which is the language of the north of France, and the langue d'oc, the language of the south of France, which became the modern Provençal. These are thus named because the word "yes" was oil and oc in northern and southern France respectively. The langue d'oil had its origin in the dialect of Paris and the surrounding country, the Ile de France of Capetian times. The term Old French should be applied to the French of the period from the ninth to thirteenth centuries. Since that time the language has absorbed words from the Italian, Spanish and English, and many words have been constructed from the Latin. Modern French was well formulated by the seventeenth century, and is known for its polish, clearness, conciseness and logicalness. It has a rich literature and has been the diplomatic language of the world since the sixteenth century and is still largely used for that purpose. Outside of France the language is spoken in Belgium, western Germany, Switzerland, and eastern Canada, being used by about 65,000,000 people.

The Provençal takes its name from the region of its origin, Provence, originally a Roman province. It forms a natural connection between French and Italian, perhaps more closely allied with Italian than with French. Provençal was a definite language as early as the ninth century. It was the language of the troubadours and the Albigenses and is still spoken by 8,000,000 people.

The Spanish Language arose in different dialects in the small states of the Iberian peninsula, but ultimately the Castilian dialect became the literary language. Spanish descended from the ancient Latin, but has become more unlike its parent stock than any other of the Romance languages. The Arabic-speaking Moors left a definite impress and modified both the pronunciation and the words of the Spanish. The Spanish of everyday discourse is markedly different from the literary and official Castilian; in eastern Spain Catalonian prevails, while in the west Galician is most common. Spanish is very important, inasmuch as it is spoken by the people of Mexico, Central America, all of South America excepting Brazil, many islands of the West Indies, and the Philippine islands. In

all about 50,000,000 use the Spanish tongue; of these 20,000,000 live in Europe.

The Portuguese Language resembles Spanish more than any other of the Romance languages. It is spoken in Portugal, the Spanish province of Galicia, the Cape Verde islands, Brazil, Portuguese Guinea, Angola, and Portuguese East Africa. In all between 15,000,000 and 20,000,000 people speak Portuguese.

The Roumanian Language is spoken by about 10,000,000 people in Roumania, southeastern Hungary, Bessarabia, Macedonia, Albania, Thessaly, Epirus, and Istria. The origin of the language dates back to the second century of our era, in which the Emperor Trajan conquered Dacia and colonized it with Romans.

The Rhaetian Language is spoken by about 100,000 people in the eastern part of Switzerland, especially in the canton Grisons.

The Gothic Group has long been extinct, and we know it largely through the work of Ulfilas, who in the fourth century of our era translated the bible for the Goths who lived in the Danube valley and north of the Black Sea. The language ceased to be used when the Gothic kingdoms fell, with one exception; a small remnant of the Goths found refuge in the Crimean peninsula and partially maintained their language until the eighteenth century.

The Scandinavian Group comprises four languages, Danish, Swedish, Norwegian and Icelandic. Until the eleventh century these languages differed very little from each other.

The West Germanic Group is the most widely spread of all the Teutonic languages and is divided into High German, Low German, and Anglo-Saxon or English. From earliest times there were several dialects of the German language, all having sprung originally from one common tongue. These dialects tended to increase in number and each had its own written form. From the configuration of Germany the various groups of languages take their name, High German from the upper, or higher, part of Germany and Low German from the coastal plain. The modern literary German originated in the fourteenth century. At that time the imperial chancery and many of the lesser courts in Germany adopted German for Latin as the official language. Naturally in the intercourse between the imperial and other courts the imperial dialect was adopted. The imperial dialect was, of course, that used by the local court of the emperors, who at that time were living at Prague. So a High German dialect (Franconian) became *the kanzlei-sprache* or official language of Germany. By the end of the fifteenth century this language was used not only for private correspondence but was used by some of the universities. Through the work of Luther this language was given its greatest impetus toward widespread usage. In his translation of the bible he used the language of the Saxon chancery because it was the most widely used dialect. The bible and Luther's numerous writings were read throughout Germany. Gradually one part of Germany after another adopted this as the written language. The German language is spoken by about 90,000,000 people in Germany, Switzerland, Austria, the United States, Brazil, Argentine republic, and in the German colonies. German is a very expressive and forceful language and its great writers and thinkers have produced literary, philosophical, historical and scientific works which are unexcelled.

In the Netherlands a Low German dialect is the literary and official language, and is known to us as Dutch. About 5,500,000 speak this language. The Flemish, a language closely resembling the Dutch, is used in Belgium by about 3,000,000 Flemish people.

The Anglo-Saxon, or English, Language was introduced into the British isles in the fifth century (A. D. 449) by Teutonic tribes—Angles, Saxons and Jutes—coming over from the Danish peninsula and northwest Germany. One of the most striking features of the English language is its composite nature; no other language is made up of such diverse elements. The English have been the greatest word-borrowers of all nations. When the Anglo-Saxons came to England they adopted some of the expressions of the Celts whom they conquered. In the sixth century, when England was opened up to the Roman Catholic church, various Latin words were introduced. During the ninth and tenth centuries, while the Danes controlled England, and afterward, many Scandinavian words were brought into the language. The Norman conquest (1066) caused the introduction of the great bulk of the French element, which of course was originally Latin. The era of the crusades brought in several Arabic words. The trade and maritime relations with Holland caused Dutch words to be introduced. The Renaissance added many Italian words. Many literary and scientific terms were borrowed from the Greek, especially since the sixteenth century. All the countries and peoples with whom the English had any political or commercial relations in modern times were made to contribute to the English vocabulary—French, Spanish, Portuguese, Germans, Persians, Chinese, Russians, Malays, Tartars, Hindus, American Indians, and Australian aborigines. Because of this cosmopolitan character of our language it contains more words than any other language, variously estimated at from 150,000 to 300,000. English is spoken by about 150,000,000 people in the British isles, the United States, Canada, Australia, New Zealand, South Africa, and extensively in all the dependencies of England, such as Egypt and India. English is the commercial language of a large part of the world to-day and its influence in this field is steadily growing.

The Semitic Family.—This is second in importance because some of the Semitic people (Hebrews, Phenicians, Carthaginians, Assyrians, and Arabs) have played very prominent parts in the world's religious and commercial history and have made great literary contributions. It has two groups: (1). The northern group comprises the Assyrian and Babylonian, known to us through cuneiform tablets, Hebrew, Samaritan, Phenician, Punic or Carthaginian, Chaldean, and Aramaic or Syriac. All of these are now practically extinct, Hebrew being used to a certain extent for religious purposes. The Old Testament of the Hebrews is of great importance to us because on it our religion is partly based. (2). The southern group comprises Arabic and numerous dialects of little importance. The Arabic was the language of Mohammed and is now used, for religious purposes at least, in all the Mohammedan countries—northern Africa. including Egypt, all of the Turkish empire, and by about 50,000,000 in India.

The Hamitic Family has been sometimes classed with the Semitic, but insufficient proof of its connection has been produced. It has three groups: (1) The Libyan or Berber in northern Africa; (2) the Ethiopian, spoken from the southern part of Egypt south to the equator, the most conspicuous members being the Galla and Somali; (3) the Egyptian, the hieroglyphic language found on the old Egyptian monuments and papyrus remains. It had a modern representative, the Coptic, which, however, was overpowered by the Mohammedan conquests.

The Ural-Altaic or Scythian Family, like the Indo-European, is found in Europe and Asia, and has five branches. (1) The Finno-Hungarian is spoken by the Finns, Lapps, and Hungarians or Magyars. (2) The Samoyed is spoken in the northern part of Russia and Siberia, there being five dialects. (3) The Turkish is spoken from Turkey in Europe with interruptions as far east as the Lena. (4) The Mongolian is spoken still farther east but does not reach to the Pacific. (5) The Tungusic is spoken by the Tunguses and Manchus in the northeastern part of Asia. The grammar of this family is very simple; each word has an unchangeable root and one or more suffixes are attached, making it an agglutinative language. The western branches have a resemblance to the Indo-European family.

The Monosyllabic Languages of Southeastern Asia (Indo-Chinese).—Here belong Chinese with all its dialects, Siamese, Burmese, Tibetan, and all the Himalayan dialects. These languages consist entirely of monosyllables which can undergo no change. Each word or root can have the properties of various parts of speech according to its position in a sentence. The most important of all of these languages is the Chinese, it being the greatest in the world. The number of people speaking it is variously estimated at from 270,000,000 to 433,000,000.

The Malay-Polynesian Family is found in the islands south and east of Asia in the Pacific and Indian Oceans. It has three divisions: (1) The Malayan division is spoken on the islands extending from Formosa south to Australia and west to Madagascar, including Sumatra, Java, Borneo, the Philippine islands, the Celebes, the Moluccas, Formosa and Madagascar. (2) The Melanesian division is spoken on the Solomon islands, the New Hebrides, and the Fiji Islands, and probably by the people of New Caledonia, the Marshall islands, and other small islands north and east of Australia. (3) The Polynesian division is spoken on New Zealand (Maoris), the Samoan islands, the Tonga islands, the Marquesas islands, the Society islands, the Hawaiian islands, and Easter island. These languages have a very simple structure, having many vowels and very few consonants. The Polynesian dialect is the simplest of the whole group.

The Dravidian Family of Southern India and Ceylon is spoken by 56,000,000 people and has no known relation to other languages. In the cultivated dialects the influence of the Sanskrit is very noticeable owing to geographical proximity.

The Bantu Family occupies the southern part of Africa from the equator south to Cape Colony, with the exception of a region almost coterminous with German Southwest Africa, which is occupied by Hottentots and Bushmen. This language has numerous dialects, and is characterized by its uses of prefixes instead of suffixes.

The Central African Languages.—Between the Bantu family and the Sahara desert is a large group of dialects, numbering hundreds. These vary in structure, but philologists have not studied them sufficiently to come to any definite and satisfactory conclusions about them.

The American Family comprises the languages of the nations of North and South America excepting the Eskimo language in the extreme north. There are over four hundred dialects altogether, the most important of which are the Athabaskan, the Algonquin, the Iroquois, the Shoshonean, the Siouan, and the Maya in North America; the Caribbean, the Tupi, the Aymaran, and the Patagonian of South America. Whether these languages are derived from one original language is at the present time very doubtful.

The Australian Family.—In Australia and in Tasmania there are a number of related dialects which are rapidly becoming extinct. These languages have no importance except to the philologist.

Isolated Languages.—Besides these families of languages there is a considerable number of isolated languages. Such are the Basque in the Pyrennes mountains, the Etruscan (now extinct for 2,500 years) in Tuscany, some of the dialects of the Caucasus region, the Japanese and the Korean, the Eskimo language in the arctic region, and finally the clicking languages of the Hottentots and Bushmen in southern Africa, so-called because of the clicking sounds made by placing the tongue against the roof of the mouth and withdrawing it with a sucking action.

Universal Languages.—There have been over forty attempts to create a universal language which might serve as a means of communication for all peoples of the earth. Most of these attempts were made in the last fifty years. Those of greatest importance are: *Volopuk*, published in 1879 by Schleyer of Baden. Of the vocabulary, about one-third is of English origin, while the Latin and Romance languages furnish a fourth. The grammar is simplified to the utmost. *Esperanto*, published in 1887, by Zamenhof of Warsaw, latterly taken up for practical purposes in many countries, its use being promoted by special societies and periodicals. Its structure is so simple that the whole grammar can be completely mastered in an hour. There are no exceptions to the rules, perfect regularity being a leading feature of the language. The essential roots number only some 900, including grammatical inflexions, prefixes, and suffixes, and these are chosen from the principal European languages in such a way as to make their mastery easy to any person of ordinary education. *Ido*, a modification of Esperanto, published in 1907; and *Universal*, a very recent attempt of Molenaar of Bavaria.

PRACTICAL ENGLISH.—The word *English* as used above does not refer merely to English words. It concerns more than such questions as to whether this word or that is good English. It means the whole art of writing English for practical purposes, so far as that art is itself a practicable subject of study. It means not merely English, but the art of writing.

The art of writing has been studied systematically for two thousand years, and the principles laid down by Aristotle, after a careful inductive scrutiny of Greek authors, hold good for any language. They are psychological principles. They concern the nature of different audiences and different situations, and the fundamental laws of appeal to all audiences and every situation.

Aristotle devotes a third of his rhetoric to a study of audiences. There is no more practical injunction to a writer than this: Know the man you are writing to. Adapt your discourse to him and to the situation he is now in. Books on rhetoric, if they mention this principle at all, are likely to defer it till they come to the subject of argument. We place it first. It will keep you from writing into the air.

Keeping this preliminary principle in mind, we may proceed to divide our subject into ten sections: (1) Structure of the composition as a whole; (2) Structure of the paragraph; (3) structure of the sentence; (4) diction, or the choice of words; (5) punctuation and capitals; (6) proofreading; (7) argument and debate; (8) the forms of public speech; (9) journalism and short stories; (10) business English, especially business and social letters.

It will be observed that half of these topics deal with a great variety of particular situations—debates, after-dinner speeches, addresses, lectures, sermons, newspaper writing, short stories, advertisements, sales-letters, etc. The other and earlier half deal with principles which are applicable to all forms of writing, all audiences, all situations.

Structure of the Composition as a Whole.—No matter what the audience or the situation, no piece of English is practically effective unless it has unity, coherence, emphasis, and proportion. These terms are formal and time-honored, but they are the summing up of centuries of practical experience.

Unity implies singleness of purpose. It rests on the fact that you can produce only one effect at a time. Don't scatter. Make your point. Stick to your subject. Learn to shut out half the things that occur to you. Don't divide the reader's attention. Don't let him wander away and forget you. It is now or never.

Conversely, don't omit the one thing that you really meant to say. It is not enough to avoid irrelevance; you must bring in all that is relevant. Every practical writer can remember the days when he used to fill paper with readable stuff, only to find—later on—that it was mostly not to the point, and that the thing which lay nearest to his heart didn't get written down at all.

The Title.—Choose your title and then narrow it to fit the situation. At this minute I am writing in my cabin in the woods, and the birds are filling the birches with melody. But can I write about "Birds"? No; nor about "North American Birds," nor "Michigan Birds," nor any other vast phase of a vaster subject. But just outside my window a Wilson thrush is repeating his liquid, mellow performance at intervals of exactly five seconds; and I might possibly manage an article on "Intervals of Song in the Thrushes of Northern Michigan."

Outlines.—If you would be certain of unity, make an outline. It may be a very simple affair, consisting of half a dozen items. But a careful scrutiny of it will tell you whether you are attempting too much, and whether all your items logically come under the title you have chosen. Unity consists in a vital relation between title and content. In the case of an argument the outline must be not a mere list of topics, but a list of statements. In those half-dozen sentences you can read the whole theme in brief.

Never allow yourself to believe that you can't work from an outline. It is what all poor writers plead. The people who can't think till they have the pen in hand, and who then wander along after their own pens instead of guiding them—these are the people whose articles and letters are ineffective. Their stuff has no skeleton, no bones, no structure, no organic life. Make your work—not like an angleworm, that will live if you cut it in two. Make it like a human being. Make it as vitally organized as you yourself are.

Coherence means more than mere cohesion; it means a living connection of parts. It implies such an arrangement as will enable the reader to follow the thought readily. It implies a normal order. For narration the normal order is that of time; events must be set down in the order in which they occur. For description it is that of the relative position of objects, grouping, contiguity, nearness and distance, etc. For exposition and argument it is the logical relation of fact and observation to conclusion. When the parts of a composition are thus set down in their normal order a sufficient degree of coherence is usually established for the simpler forms of writing.

In the more subtle forms, however, such as exposition, and especially argument, coherence will demand not only a normal order but also connecting links in the form of conjunctions, transition sentences, and sometimes transition paragraphs. Such terms as "moreover," "consequently," "however," "on the other hand," "in the next place," my "second contention is," etc., are of great value in articulating an explanation or an argument.

Emphasis.—There will be a gain in emphasis if, without violating the principle of coherence, the items of a composition can be so arranged as to bring the most important or most striking at the end. The reader is more likely to remember the theme as a whole if his final impression is a strong or vivid one.

But the opening words of a composition are as important as the closing. Get attention at the start. Strike out at once for some vivid interest of the reader—only let it be a legitimate and not a sensational interest.

Scale.—It is often necessary to bring what one has to say within a certain assigned limit of space. This will call into requisition the faculties of comprehensive view and judicious selection. Inexperienced writers usually say a great deal more than is necessary to an adequate presentation of the subject.

A good exercise for training in the matter of writing to scale is to reduce a paper of one thousand words to five or six hundred without sacrificing any essential point. A converse exercise is to treat a given topic in five hundred words, expand it to a thousand, and then to five thousand.

Writing to scale is one of the best exercises for the development of a logical and organized sense of composition.

Proportion.—A piece of writing that is well proportioned is one in which the various points are given space in accordance with their relative importance. Of course mere physical size or mere extent of theme has nothing to do with that importance. The valve gear of a locomotive will probably call for more space than the boiler. Similarly a certain half-hour of your outing

may call for more space than the entire week preceding.

Introductions and conclusions should, in general, be very brief. Your paper must not be top-heavy, nor must you keep on after you have really finished. For a theme of five hundred words, probably the first one or two sentences of the opening paragraph will constitute a sufficient introduction; for one of twelve hundred to two thousand words perhaps one or two paragraphs might be required; for a book of three or four hundred pages the opening chapter might be reserved for introduction.

As a practical method of securing a right proportion, the assigning of a numerical value to the various topics of the outline will be found helpful. It may prevent the young writer from expending too much energy and flow of speech upon the first few points, and then telescoping the rest as the task begins to wear upon him.

Structure of the Paragraph.—Definition.—The paragraph is a modern device for avoiding an interminable sentence. In Milton's time a man could write a sentence of five hundred words, a sentence that would cover two pages of print, and go scot-free. Scholars would read it, and nobody else read anything in those days. Nowadays people wouldn't. But those old Latin-trained scholars were aiming at a large unit of thought. Often they indented before and after such a sentence to show that it was a unit. Now we keep the indentions, but we break the long unit up into several.

We state the topic briefly in one sentence. We are content to state it merely. Then we go on to illustrate it or defend it or amplify it. It may take three or four sentences to do this, but they will all be closely related. The group of sentences is unified by a single topic. The indention is a halting-place that permits the reader to breathe, look back, and fix the paragraph in mind.

So remember that the paragraph is a device to give you time. Take your time. Don't be afraid of making a short sentence if the thought is really emphatic. Save your long sentence to mass details of illustration or proof.

Unity in the Paragraph.—Our definition indicates in general what we mean by *paragraph unity*. But a bit of caution must be added with respect to the word *topic*. The amateur is likely to think of every item or point as a topic, and to indent accordingly. The result is a rapid-fire series of pseudo-paragraphs of two or three lines each, disconcerting and often misleading to the reader. Paragraph unity involves the generalizing of points under a real topic of sufficient note to command a real paragraph, with bulk enough to constitute a real unit of thought, and not a mere fragment. Colonel Roosevelt, in a paragraph of about two hundred words, deals with the following points: Premiums on meritorious conduct of policemen, a new system of pistol practice, the Bertillon system for identifying criminals, a police bicycle squad, and a new municipal lodging house. These points are all generalized, however, under the topic "Minor ways in which we sought to reform the police force," thus producing a logically unified paragraph.

Paragraph Length.—What we have said above has its bearing on paragraph length. By our definition a paragraph is a group of sentences. It should contain, as a rule, therefore, not less than three sentences of average length—twenty-five to thirty words each. This is the minimum. Your shortest paragraph should contain ordinarily not less than seventy-five to a hundred words. The paragraph consisting of a single long involved sentence should be avoided. Break such a sentence up into three or four shorter ones.

As to its maximum, a paragraph, even when theoretically well unified, should not include much more than three or four hundred words. A paragraph running on through several pages of print has a discouraging look to most readers, and is likely to result in a hazy impression. The normal average should be about two hundred words.

In three exceptional cases the short single sentence paragraph is in place. The first is that of *dialogue*, in which, by more or less arbitrary usage, whatever is said by a single speaker at one time, together with identifying or brief explanatory remarks by the writer, is put into a paragraph by itself. The second case is that of *special emphasis*, wherein the moment or point is of such supreme importance as to be briefly paragraphed by itself, and thus visually emphasized in the printing by its contrast with the longer units before and after it. The writer should be very sparing, however, in such use of the short paragraph, as any approach to a frequent use will naturally defeat its own end—that of emphasis. The third case is that of the *transition paragraph*, which expresses a brief summary, or anticipation, or both.

The number of paragraphs in a composition bears no necessary relation to the number of topics or points in an outline. It is possible occasionally to develop a theme by assigning a paragraph to each point in the outline. It is more probable, however, that related points will have to be grouped into a single paragraph; and it may be that a single point will require two or three paragraphs for its development. This is in accordance with what we have said about paragraph length and unity.

Coherence in the Paragraph means simply that every sentence shall be in its normal place in the paragraph, and that whatever connectives may be necessary to a ready progress of one's thought through the paragraph shall be supplied. The reader resents being led astray, and being compelled to zigzag through a paragraph.

Proportion in the Paragraph.—This means precisely the same as proportion in the theme as a whole, except that the principle is applied on a smaller scale. The points or subtopics in a paragraph must be given space in accordance with their relative importance.

Connection Between Paragraphs.—In exposition and argument it is often desirable to indicate the relation of paragraph to paragraph. This may be done by the conjunction at the beginning of the following paragraph (*e. g.*, "Moreover," "Besides," "As a result," "Notwithstanding," "Of no less importance," etc.). Or it may be done by the transition sentence, which is usually the first sentence of the following paragraph, although it may be found preferable sometimes to make it the last sentence of the preceding one. Or it may be done by the short transition paragraph. This last, however, is usually reserved for connecting one group of paragraphs with another group, rather than for connecting paragraph with paragraph.

Structure of the Sentence.—Definition.—The sentence is the fundamental unit of discourse. Hence the "sentence-sense," as it is often called, the ability instantly to recognize a sentence when one sees it, is a fundamental necessity of accurate writing. A sentence is a statement, question, or command that is grammatically complete—one that contains a subject and a predicate expressed, and that is not introduced by a dependent or subordinating word. The only exception is the imperative form, in which the subject is usually implied.

The sentence may be very short. The following are complete sentences (the first three being in the imperative form): "Wait." "Don't." "Come here." "I can't." "You're quite right."

A mere phrase (prepositional, participial, infinitive, etc.), or a dependent clause, is not a sentence, and may not stand alone as such. The following are not sentences: "In a few minutes." "Frightened almost to death." "Being sure of my ground." "Now, to proceed with the argument." "At least not at present." "Although of course we can't be certain." "Not unless you are willing." "Which is quite a different story." It is a mark of slovenly style to leave such expressions as these straying about like lost dogs. They must be attached to something—to a main clause of some sort; *e. g.*, "I can't answer all these letters, at least not at present." Of course in conversation such expressions are common enough, but the only right use of them in written discourse is in dialogue, when they represent what was actually said.

The converse error is that generally referred to as the comma blunder. Complete separate statements, and those closely connected in thought, must accordingly be separated by the period, the colon or the semicolon, but less often by the comma, unless there is a real conjunction joining the statements. The greatest temptation to the comma blunder comes when the second statement begins with a personal pronoun (*he, they, it*, etc.) or a conjunctive adverb (*then, therefore*, etc.), or when there is a close relation of cause and effect, or of contrast, between the two statements. The following sentences are correctly punctuated: "Come on, laddie. It's time to go home." "Tom wasn't afraid. He was simply waiting for the right moment." "You'd better not try that bridge. It isn't safe." "He would not take the crown; therefore 'tis certain he was not ambitious." "Be sure you're right; then go ahead." "Be sure you're right, and then go ahead." Special care should be observed in the writing of dialogue to avoid the comma blunder.

The only exception to the rule here stated is the case of the series form, in which short statements are sometimes separated merely by the comma; *e. g.*, "I have fought a good fight, I have finished my course, I have kept the faith."

Agreement.—Grammatical correctness requires an agreement or concord between certain parts of speech in the sentence. The commonest error is to confuse singular with plural. A verb must agree with its subject in number; both must be singular, or both plural.

The writer is sometimes misled in this matter when the subject comes before the verb. Notice the following: "Here *were* located the banking facilities of the colonies" (not *was*). "Coupled with the demand for the teaching of patriotism *have* come suggestions as to what course such instruction should take" (not *has*). "There *exist* in the minds of many people certain

prejudices against the foreigner." (Not *exists*).

Subjects joined by *and* commonly require a plural verb; *e. g.*, "There *are* my friend Barton and his wife coming toward us." (Not *there is* or *there's*.) "There *are* in this room a table, three or four chairs, and a small stove." (Not *is*.)

A plural noun coming between subject and verb sometimes misleads the writer: "The sound of his steps *was* gradually lost." "The size of the plates *varies* with the current capacity of the battery."

A collective noun is to be construed as singular or plural according as its parts are thought of separately or in the mass: "The crowd *were* throwing up their hats and shouting with excitement." "The crowd *was* headed by McAndrews, who was carrying a red flag."

The pronoun must agree with its antecedent in number: "The negro did not ask for the suffrage; but the responsibility involved in it has been good for *him*." (Not *them*.) "The drill press is a very useful machine. *It is* made in various forms and sizes." (Or, drill presses *are* made: not *They are* made.) The indefinite pronouns, *each, everybody, any one, a person, one*, etc., are singular, and should be so construed: "A person must have plenty of time if *he is* to do good work." (Not if *they are*.) "England expects every man to do *his* duty." (Not *their*.) The same is true of the correlatives *either —or, neither—nor*, when they connect singular nouns: "Either Arch street or Bond street *is* to be paved at once." "Neither your assumption nor your conclusion *is* justified."

Certain miscellaneous cases of agreement may be noted: "All the sprinters were attired in *track suits*." (Not *a track suit*.) A student writes: "The faces of both Goldsmith and Johnson were disfigured." He should say: "The face of Goldsmith was disfigured, and so was that of Johnson." Again: "There were *two* stained glass windows on *both* sides of the entrance." This is ambiguous. The writer means either "*A window to each side* or *two windows to each side*."

Government.—Certain cautions must be observed in the use of nominative and objective. After *it is* and *it was* we must have the nominative forms of the pronoun: "Is it *I* whom you mean?" "I believe it is *they*." "Wasn't it *she* whom we met at Newport?" Do not use the objective form of the pronoun for the nominative, or the nominative form in place of the objective. "*We* boys are going to the circus." "Uncle is going to take *us* boys to the circus." The same holds true when two pronouns are joined by *and*: "*He* and *I* were asked to report on the power loom." "The instructor asked *him* and *me* to report on the power loom." "Mr. Barlow invited Frank and *me* to be present at the recital." "Between you and *me*, I think he will bear watching."

Who and *whom* follow the same rule as any other pronoun: "I can't remember *who* it was." "*Who* was present at the reception?" "*Whom* are you looking for?" "For *whom* are you looking?" "He is a man *who*, I believe, is well qualified for the position." "He is a man *whom* I believe to be well qualified for the position."

In this connection may be noticed the correct use of verb tenses. The confusion of present, past, and perfect forms is unpardonable. We need only mention such horrible examples as, "He *come* up and introduced himself to me." "I think he *has went* out to lunch." "The water was *froze* solid." "I *seen* at once that there was no hope."

The forms of *lie* and *lay* are as follows:

Present	*Past*	*Past Participle*	*Present Participle*
lie (lies)	lay	lain	lying
lay (lays)	laid	laid	laying

Notice the following sentences: "I usually *lie* down for a little nap after dinner." "Just as I *lay* down yesterday, Dr. Harmon called." "The leaves have been *lying* on the lawn for some days." "*Lay* your books on the shelf, and let them *lie* there." Less obvious are certain inaccuracies in the use of the perfect tenses. In general, whatever goes back of the main verb should be stated in the pluperfect tense: "I often wish I *had been* born in the country." (Not *was born*.) "Men and women who *had been* shut up all day in the houses and shops came out to get a little fresh air." (Not *were* shut up.)

Unity.—Unity in the sentence means on a smaller scale the same thing as unity in the theme and in the paragraph. The sentence must be about *one* principal thing.

This does not imply that all sentences must be short: a very short sentence may be lacking in unity, while a very long one may be perfectly unified. "Peter Cooper founded Cooper Union, and his father made hats." Here is a sentence of only ten words, stating only two facts about Cooper, but the facts are so distantly related that they do not belong in the same sentence. Now take a longer sentence: "The road winds along by the river bank, and affords a glimpse of the stream now and then; and it is a shady, quiet road; but once in a while there is a clearing, and there the sun is very bright and warm." Here are five facts about the road; but they are so stated that not one of them stands out as the unifying fact.

Such a sentence may either be broken up into two or three shorter ones, or some of the facts may be subordinated by the use of other connectives besides the overworked *and*. Both methods might easily be applied to this sentence, and we should get something like this: "It is a shady, quiet road, *winding* along by the river bank, and affording a glimpse of the stream now and then; once in a while, however, there is a clearing, *where* the sun is bright and warm." A mastery of the principle of subordination, and of the various subordinating connectives, is more than half the battle for sentence unity.

Converse to the example just cited is the practice of writing a sentence in several separate fragments, when they really belong together: "We came to a path. It led off from the wagon road. It led through the woods. This path apparently was not much used. It was a narrow path." It should read somewhat as follows: "We came to a narrow path, apparently not much used, that led off from the wagon road through the woods."

Coherence.—So far as this principle applies to the sentence, it means that the parts should stand in a normal position. The subject must not be very far removed from the verb; modifiers must be reasonably close to the parts they modify; the reader must not be zigzagged through the sentence in a disconcerting way. A few examples will make the principle clear. The portions italicized should be inserted where indicated by the encircled 1. "Last week *I*, ① with an old friend of my father's, took a trip to New York City." "If a workman is honest, he *usually* is ① repaid for his honesty." "Of course ① everybody can*not* become the head of a great business concern." "I lived ① in the small western town in which I was born, *for about three years*." "*While I was in New Mexico*, I remember that ① I had a burro, which I rode every day." "The account was confirmed ① by Colonel Shackleton, who some years ago headed an exploration party to the far south, *to-day*." "In front of the stores ① different kinds of electric lights *hang*." "His hat ① had a narrow black band around it, *which he had worn all summer*."

A special case is that of condensed comparison, often attempted in such sentences as the following: "Every year was as bad if not worse than the year before." Such sentences are faulty in syntax as well as incoherent, and should be written as follows: "Every year was as bad as the year before, if not worse."

It is disconcerting to travel through a sentence like the following, with two *but's* in it: "Even in his letter to his wife, Macbeth shows that the temptation is strong, but he does not put it actually into words, but suggests that the third prophecy may come true." The second part of the sentence should read, "He does not, however, actually put it into words, but suggests," etc.

Coordination.—Parts of a sentence that are joined by coördinating conjunctions, such as *and, but, or*, should be similar in form: *e. g.*, "This ordinance was passed by the village board May 13th last, and which is now in effect." This is bad form. *Which* after *and* must be elided, or else it must appear in the first part of the sentence. Either of the two following forms is correct: "This ordinance was passed by the village board May 13th last, and is now in effect." "We have here an ordinance which was passed by the village board May 13th last, and which is now in effect." Take another example: "Elaine's treatment of Lancelot shows not only how great her love was, but also that she was kind and gentle." It should read, "*that* she loved him greatly," or "*how* kind and gentle she was," so that both clauses shall be introduced by *that*, or both by *how*. Again: "Finally the two friends parted, Savage going to the west of England, and Johnson remained in London." It should read, "Savage *went*," (with period after *parted*), or, "and Johnson *remaining*," so that both expressions shall be participial, or neither expression. Again: "A protective tariff is laid not as a source of revenue, but to protect growing industries." It should read, "*to produce* a revenue," or, "*as* a protection for." Again: "The northern colonies produced wheat, corn, and potatoes; and in the southern, tobacco, rice, and cotton were produced." Make both members active by writing, "and the southern, tobacco, rice, and cotton."

A special case of faulty coördination is what is known as the false series. A true series requires that all the members be in the same grammatical form. One method of correcting a false series is to introduce another *and*, where indicated, for example, by the circled 1 in the following: "The men were at work making molds, ① cores, and fixing the cupola for the afternoon heat." "The sudden introduction of a large volume of water causes contraction, ① leakage, and necessitates rapid firing." "During the summer I got lost in a cornfield ① got into two or three fights, and a few other disturbances." Another method is to supply such words as will make the three

members of similar construction; *e.g.*, "The men were at work making molds, *making* cores, and fixing the cupola."

Wordiness.—In general all statements should be as brief as is consistent with clearness. The thought is often unnecessarily repeated in the words of a sentence: "to return again," "to try the attempt," "a fine-looking appearance," "during the meantime," "all the whole afternoon," etc. Such phrases should be condensed. Somewhat more obvious, perhaps, is a certain loose extravagance of words resulting in a weak, spongy effect. The portions bracketed in the following should be excised: "It isn't right to lie to your employer in order [that you may be able] to go to the ball game." "You can see a number of fishermen fishing for [a species of fish known as the] black bass." "We drove along a beautiful road [which was] bordered by tall elms."

A careless writer will sometimes duplicate his constructions, especially his prepositions and conjunctions. The words bracketed in the following should be cut out: "The experience [of] which I am going to write about happened in my childhood." "It is argued that, because many children leave school at an early age, [that] their schooling should be such as will enable them to become good workmen."

A word may be said about *repetition*. There should be no awkward attempt to avoid repetition when it is necessary to clearness or effectiveness, but when neither of these ends is served the repetition becomes a burden. There is nothing gained by the presence of the bracketed words in the following: "Some of the lights were strung straight across the street, some [were strung] in a circle, and some [were strung] in arches." On the other hand, there is a distinct gain in force by the presence of those bracketed in the following: "I don't expect you to depend altogether on your notes, but [I do expect you] to study them." "If slavery is not wrong, nothing is [wrong]."

Ellipsis.—Words should not be omitted that are necessary to the grammatical or logical completeness of the statement. The verbal forms must be expressed whenever a change of construction makes it impossible for a single form to do double duty. Notice the forms supplied in brackets: "We rode back a great deal faster than we had [ridden] coming out." "Several proposals were received, but only one [was] considered." "All that Burns writes about is true; it has [taken place], and will again take place in the life of man." The same is true of the preposition: "We are not only prepared [for] but equal to the task." The article must be repeated when the nouns stand for distinct persons or things: "Thine is the kingdom, the power, and the glory." "The sum and substance of the matter is this." "Goldsmith produced a descriptive poem, a novel, and a comedy that are among the best of their kind." "We think of Browning as a poet and as a philosopher." *The* must always be used before *United States*. Idiom requires the following: "All day," "all night," "all the morning," "all the afternoon," "all the evening," "all the week," "all the spring," "all the autumn (or fall)," "all summer," "all winter." An adverb should be inserted between *very* (or *too*) and the participle in *ed*: "very greatly pleased," "very well satisfied," "too highly delighted." *That* should not ordinarily be omitted from the indirect discourse construction: "It must be remembered [that] they had no difficulty in getting the best education." Logical comparison requires insertions as follows: "The general appearance of the church is like [that of] most city churches." "His face has the appearance of [that of] a bright, hard-working young man." "Our basket-ball team ranks high compared with [those of] other schools." Correct syntax requires the following: "On the opposite shore from [that on] which the town is situated, you can see lofty hills."

Reference.—Pronouns and other reference words must be clear and explicit in their reference. The agreement of pronoun with antecedent has already been explained. A pronominal reference must not be ambiguous, as it is in the following: "Chesterfield had treated Johnson discourteously many years before when *he* had called on *him*." "The parasite lives on the host until all *his* energy is gone." "Duncan tells Macbeth that he intends to stay over night at *his* castle."

Reference must be explicit, and not merely implied: "There's no use writing to John; he won't answer *it*." Here *it* refers to the noun *letter implied* in the verb *writing*. Similarly we have sentences like the following: "He invited me to join him in a bear hunt, *which* I readily accepted." "True friendship is so rare that when you find *one* you cling to *him* like a drowning man to a straw." Sometimes the implied reference is in a noun: "The shore is very rocky at this point, and *these rocks* are broken by the force of the waves." "The marquis taxes the people for everything. they use; *this money* he spends in banquets and suppers." Occasionally it is the adverb that is not explicit: "The increase of patriotism is due to school training; it is *there* that the child is first taught to love the flag." "He fainted, and remained *so* for some minutes."

The participial construction is often difficult to handle. There must be a real subject to which the participle can be logically and grammatically related. The misrelated participle is a mark of careless thought and careless writing: "On preparing to leave the next morning, the ax could not be found." Grammatically this means, "The ax, on preparing to leave, could not be found." Now, it is not the ax that is preparing to leave. The writer really means, "On preparing to leave, *we* could not find the ax." The same fault is apparent in the following: "Some time ago, while attending a debate, the negro question was discussed." "On hauling up the anchor the breeze carried us down to the far end of the lake." "After scarfing the two pieces of iron, they are heated to a high temperature." "Being a girl, he saw that she was afraid to protest."

In this connection we may notice what Professor Newcomer has called sins against *logical conformity*. One or two examples will illustrate: "Honesty is the best policy in business as well as any other place." But *business* is not a *place*, and cannot logically be referred to as a place. The sentence should read: "as well as in any other calling, or occupation." Again: "The same thing is true of the doctor, the lawyer, or any other profession." Medicine and the law may be referred to as professions, but not doctor and lawyer.

Diction.—The bulk of the English language is made up of Latin and of Saxon terms. In the dictionary there are more words of Latin origin than of Saxon, but in the usage of conversation and in the most enduring monuments of our literature the Saxon element prevails. In general the inexperienced writer will do well to rely mainly on Saxon words. They are the words with which he is most familiar. They have the merits of naturalness, directness, simplicity, strength, and emotional coloring. They come from the heart, and life, and experience. On the other hand Latin words afford the advantages of formality, dignity, sonorousness, and a certain lofty and superior tone of discourse. They also offer a more exact and discriminating choice of terms than the Saxon, and hence constitute by preference the scientific and professional vocabulary.

Good Usage.—The choice of words implied in the term good usage is impossible of exact limitation. The best we can do is to indicate certain forms that are to be avoided, and generalize from the result. In ordinary written discourse, except realistic narrative, the following classes of words should be avoided: *localisms*, such as "peart," "sun-up," "tuckered out," "right smart," "some chilly," etc.; *vulgarisms*, such as "ain't," "might of been," "hadn't ought," "complected," "most everybody," "photo," "auto," etc.; *improprieties*, such as "leave us see," "the balance of the morning," "a man who is well posted," "an invite," "real pleasant," "a nearby house," etc., and slang terms, except in rare instances; *colloquialisms*, such as "up-to-date," "anyway," "quite warm," "right away," "handy," "a nice time," etc.; *technical terms*, except when one is writing for a special group of readers, such as "tort," "metabolism," "eidolon," "pony brake," "isothermic," "epicycloidal," "oxymoron" "esemplasm," "rheostat," etc.; *pretentious and affected terms*, such as "fistic encounter," "tonsorial parlor," "culinary department" (for kitchen), etc.; and *foreign terms*, such as "de trop," "fin de siècle," "cuisine," "sub rosa," "nil admirari," "zeitgeist," etc.

Apart from such cautions little can be said. The right choice of words is the ultimate test of one's place among the elect, and is a thing which only in its more obvious phases is subject to rule. It is to be acquired in its finer and more real quality only through wide and sympathetic contact with the masters of literature. (See Correct Use of Words.)

Precision, or discrimination between words of related meaning, can be acquired by scrupulous attention to definition and usage. Certain grosser faults, almost as much matters of spelling as of meaning, are involved in the confusion of the following: There, their; to, too; its, it's; then, than; lose, loose; led, lead; forth, fourth; principal, principle; quite, quiet; effect, affect; except, accept; later, latter; cavalry, Calvary. The writer should, however, train himself in the finer distinctions, such as are involved in obtain, attain; secure, procure; survive, recover; apt, likely, liable; imaginary, imaginative; poetry, verse; fact, truth; democracy, republic; egoist, egotist; human, humane; effective, effectual, efficient; grief, grievance; act, action, activity; last, latest; education, schooling, culture; accurate, correct, exact, precise; start, begin; politic, political, etc. (See Multiplex Dictionary, or books by Fernald, Fallows, or Roget. See, also, Dictionary of Homonyms.)

Idiom.—Every language has its idioms—peculiar personal forms that are in a way the meat and kernel of it, and yet often illogical and not amenable to rules or principles. No one knows English who does not know its idioms, and yet few suggestions can be given as to how they can be learned. They must be acquired by con-

tact and absorption. The most we can here do is to indicate a few idiomatic expressions by way of illustration.

Much of our idiom centers about the preposition. The cars stop *at* Adams street, not *on* Adams street. The picture hangs *on* the wall, *at* the right hand end of it, *to* the left of the door. There is a window *in* the west wall, not *on* it. We have the privilege *of hearing* a noted speaker, not the privilege *to hear* him. We are *under* the necessity of cutting expenses. We go *into* the room, and move about *in* it. There is a fence *in front of* the house, and one *back of it*, or *to the back of it*, or *behind it* (not *in back of* it). We leave *about* nine o'clock in the morning, not *around* nine o'clock, and there are *about* twenty of us in the party. We say *seldom if ever*, or *seldom or never*, but not *seldom ever*, or *seldom or ever*. Similarly we say *seems to be*, or *looks as if*, but not *looks to be*. We have confidence *in* a person, and confide a secret *to* him, because we have a high regard *for* him on account of our long intimacy *with* him. Your way may be different *from* mine, but is not necessarily better *than* mine. The student will have to master these and hundreds of others, each in its own special application. (See Dictionary of Prepositions.)

Proof Reading.—The correction of proof requires scrupulous attention to every unit of composition from the smallest to the largest. Corrections should be indicated in the margin, as nearly as possible opposite the mistake. When this is not possible a line should be drawn from the mistake to the correction. Mistakes are indicated on the page by underscoring, crossing out, drawing a vertical line through certain letters, drawing a line around certain words, and placing the caret where necessary. Corrections should be made neatly, and should be absolutely legible and unambiguous.

The signs commonly used in the correction of proof are the following:

✕ Change bad letter.	⊏ Move over.
⊥ Push down space.	□ Em quad space.
⅁ Turn over.	/–/ One-em dash.
⅁ Take out (*dele*)	/–/ Two-em dash
^ Left out; insert.	¶ Paragraph.
# Insert space.	No ¶ No paragraph.
v Even spacing.	*w.f.* Wrong font.
⌣ Less space.	..... Let it stand.
⁀ Close up entirely.	*stet.* Let it stand.
⊙ Period.	*tr.* Transpose.
⁄ Comma.	*Caps* Capital letters.
⊙ Colon.	*s. c.* Small caps.
;/ Semicolon.	*l. c.* Lower case or small letters.
⅄ Apostrophe.	*Ital.* Italics.
⅄⅄ Quotation.	*Rom.* Roman.
⁄ Hyphen.	
// Straighten lines.	

Punctuation and Capitals.—**The Period** as indicating the end of a declarative statement has been already explained. It must also be placed after every abbreviation, and after Roman numerals.

The Interrogation Point is placed after a direct question, or a part of a statement that is a question: "Where are you going?" "'What about the boy?' is a question that is more and more demanding an adequate answer." It is used—but with doubtful propriety—in parentheses to indicate doubt: "The patriotism (?) typified by the *Dreadnought* is much in evidence," etc.

The Exclamation Point is placed after words or expressions that are definitely exclamatory in character: "Oh! look! They're being driven back." "Oh, if John were only here now!" The words Oh and O are interjections expressing strong feeling. O is used in direct address and in expressions of surprise, indignation, or regret, and should never be followed directly by the exclamation point. "O Thou Great Helper of the weak, give us now of Thy strength."

The Comma is used (a) to set off clauses within the sentence, as "The way was long, and the wind was cold." "Not that I loved Cæsar less, but that I loved Rome more." (b) The dependent clause is usually set off when it begins a sentence, and is also set off when it ends one, unless closely connected in sense with preceding clause: "When you are ready, say so." "Come to the tent when you are ready." "We were about to give up the search and start for home, when we heard a faint call in the distance." (c) The relative clause is set off when it is additional, but not when it is restrictive: "This road, which is the old St. Louis trail, runs past our farm." "Our farm is on the road which is known as the old St. Louis trail." (d) The comma is used to separate the members of a true series: "Days, weeks, months passed slowly by." " * * * * * precept upon precept; line upon line; here a little, and there a little." "Society has to care for the pauper, the delinquent, and the defective." "For winter is past, the rain is over and gone; the flowers appear on the earth; the time of the singing of birds is come, and the voice of the turtle is heard in our land." Notice the comma before *and* in the last two quotations. The comma is used to separate two or more adjective or adverbial modifiers when they are not logically an integral part of the word they modify: "A tall, young, handsome fellow he was." "A tall, handsome young man." (e) The comma is used to set off vocatives, and introductor and more closely related parenthetical elements. "My gentle Puck, come hither." "What mercy can you render him, Antonio?" "Well, honor is the subject of my story." "There is, if I remember rightly, a spring near the shore." (f) The comma is used to set off an introductory adverb lest it may be regarded as a preposition: "Beyond, the mountains rose in their strength and silence." "Beyond the mountains lies the land of our hope." The comma, as does punctuation in general, marks divisions in the grammatical construction and it is used especially to prevent misunderstanding. It should not be overworked, and must not be used to show elocutionary pauses. A good elocutionist may make a pause, called the rhetorical pause, after any word of a sentence, if by so doing he can increase the impressiveness of his interpretation.

The Semicolon is often used to separate complete statements that are so closely related in thought as to make the period too much of a stop. It should not ordinarily be used to separate a dependent clause from the main clause. It is used before *i. e.*, "that is," and *e. g.*, "for example."

The Colon is the most formal of all the marks of punctuation. It is used to separate statements that are set in formal apposition with each other, the second being a repetition or explanation or illustration of the first: "The engineer is supremely the man of scientific imagination: he must see the structure before he builds it." The colon was formerly much used to separate the two parts of a long compound sentence, if the parts themselves contained semicolons; but the practice is not to be commended. It is used, also, to introduce a list, or a quotation formally stated: "We have to consider, therefore, the three following propositions: government ownership, government control, and private enterprise." Moulton, on page 246, says as follows: "A foundation task of the artist, etc." The colon is also used after the salutation in a letter: "Gentlemen: Referring to yours of the 14th, etc." No dash need follow the colon after such a salutation.

The Dash is used informally, somewhat as the colon is used formally: "There is only one method left—concession." "There were only three of us present—Hayes, Carter, and I." The dash also indicates a sudden break in the thought: Now, the silurian strata—but of course that doesn't interest you." It is further used to set off a parenthesis more decided than those inclosed by commas: "Any one who has had that experience—and almost every one has had—will understand what I mean."

The Parentheses, or curves, are used to inclose a still more definite parenthesis, one that is often independent grammatically of the rest of the sentence: "Late that night (it was about eleven-thirty, as a matter of fact) I became aware that he (Stanley) was regaining consciousness."

The Quotation Marks are used to include quoted matter that is stated in direct form. A quotation within a quotation is indicated by single quotation marks. Notice the following, observing, also, the use and position of period, comma, question mark, and capitals: "I can hardly agree with you in that matter," said David. "I don't suppose," remarked Anne, quietly, "that there is anything more to be said." "Come here, Silas," said Arden; "I want you to look at this letter." "Why do you ask me that?" inquired the grocer, anxiously. "A few minutes later," continued my father, "Dexter came up to me and said, 'What are you doing here?'" But note the absence of quotation marks in the following: The printer said that the bill would come to about twelve dollars.

The Apostrophe is used to indicate possession. For the singular we add *'s*: "Henry's watch." "Fisherman's luck." "Charles's ideas." The apostrophe without *s* is permissible when the noun ends in *s*; *e. g.* "Charles' ideas," and must be used alone in such names as Crœsus', Achilles', Moses', etc For the plural we add the apostrophe when the noun ends in *s* and *'s* when it does not: "The boys' tasks." "The ladies' aid society." "A book of children's stories." The apostrophe is less frequently used to indicate the possessive of objects; as, "the length of the field," not "the field's length," etc. But we say, "A year's absence," "two weeks' vacation," "at arm's length," "the water's edge," "a day's wages," "a dollar's worth," etc. The apostrophe is also used to indicate omitted letters in contractions: Don't, hasn't, you're, o'clock, etc. The *'s* is used also to indicate the plural of letters and figures: "Three 8's." "He doesn't make his *m's* correctly."

Capitals are used in general to distinguish personal or individual names from class names: David Farragut, Harlequin, Hamburg, Ceylon, American, etc. The words river, mountain, lake, street, building, etc., and official and professional titles are capitalized only when attached to prope

names: the Ohio River, Lake Erie, the Borland Block, the Hamilton Club, Central Park, Amherst College, Doctor McDonald, President Harper, etc. The following words are regularly capitalized: names of the Supreme Being; important words in the title of a book, article, etc.; historical epochs, wars, etc.; days of the week and months of the year (but not the seasons), holidays, holy days, etc.; abbreviations of title attached to proper names, and also A. D. and B. C.; the interjection O and the pronoun I; names of relationship when immediately preceding the name (*e. g.*, Aunt Amanda, Brother Amos,), and Father, when referring to any of the orthodox writers of the early Christian church (as, the Fathers); names of things personified, the first word of every independent sentence, and of every direct quotation (unless it is a phrase or fragment not in dialogue), the first word after a colon if it begins a letter or a formal quotation, and the first word of every line of poetry.

Argument and Debate.—The purpose of *argument* is to convince some one of the truth or falsity of a proposition—to make him agree with you in your view of the matter. To bring some one else to think as you do means that you must have good reasons for your own attitude and be able to present them in a convincing way. We have to consider, therefore, what constitutes a good reason.

(1) Practically all our reasoning falls under two broad general laws—those of induction and deduction. *Induction* is the primary form of reasoning. It means the drawing of a general conclusion from specific facts and observations. You decide, from certain facts, that a particular business firm is unfair or unreliable. It is apparent that the soundness of your conclusion will depend upon your getting at the real truth of the matter, and getting at it in a broad way.

Direct evidence is, on the whole, the best kind of proof. What you have yourself actually seen or experienced, may well be offered in support of your attitude. The experience of some one else may, however, be more convincing than your own, if he is a more practical observer or an authority. In citing authorities, it is absolutely essential to cite the best, those who are known to be accurate, truthful, unprejudiced, and thoroughly informed. Depend on weight of authorities, not on number. In offering *examples* to support a contention, you must remember that "one swallow does not make a summer," and that, similarly, one example does not prove a contention. In the same connection we may notice that, because one thing happens *after some other thing*, the first is not necessarily to be declared the cause of the second. We may be pretty certain that, if a field looks fresher after a rain, it is because of the rain; but we cannot be so sure that, if the wheat field is discovered ablaze after the train has just passed, it was the train that set it ablaze. A step further removed is the argument by *analogy*. The growth of the lily from the bulb is no argument for the immortality of the soul, though it is a very beautiful symbol of it. *Indirect evidence* is often very strong, as, to quote Thoreau, when you find a trout in the milk; but it is subject to the same allowances as direct evidence. The presence of a man at a horse race may indicate that he is interested in racing, but not that he is a gambler.

(2) The other general law of reasoning is that of *deduction*. It consists in the application to a specific case of a general proposition that is already admitted. The general proposition (major premise), its application (minor premise), and the resulting conclusion, constitute what is known as the syllogism. Take an example: Governments derive their just powers from the consent of the governed; our government of the Filipinos is without their consent; therefore it is unjust. It is obvious that you must be absolutely sure of your premises, or else your conclusion will be false. Practically every argument involves both the inductive and the deductive process.

(3) The presentation of arguments by speakers on both sides of a stated question constitutes a *debate*. The purpose of debate is, or ought to be, to get at the truth of the matter; and nothing can be more humiliating or demoralizing than the use of subterfuge, quibbling, rant, abuse, and intellectual trickery for the trivial satisfaction of beating one's opponents. The question chosen for debate should have two distinct sides to it. It should be stated affirmatively; *e. g.*, Resolved that the United States is justified in her occupancy of the Philippines (not, is *not* justified). The question should be discussed, and so formulated that both sides understand exactly in what sense it is to be understood. Then the preparation of the debate should proceed. The affirmative should apportion the arguments among its speakers, and the negative among its speakers. Each speaker should then study his argument, formulate its terms, collect his material, and prepare his brief.

The brief is the most important step in the process. It consists of a statement of the points which the speaker proposes to make, arranged in a logical way as main topics, minor topics, and subtopics. The order should be that of increasing importance, the weaker points coming first, and the stronger ones toward the end. All the points in the brief should be stated in the form of complete sentences. The speaker must prepare his refutation as well as his direct argument: that is, he must answer arguments that will be made, or might be made, on the other side. He will do well also to consult frequently with his colleagues to see that there are no overlappings or omissions. When the brief is completed, the argument should be written out *in extenso*, and absolutely mastered. It need not, and ordinarily should not be learned word for word. But the speaker must be sure of the exact phrasing of certain points, and must make certain that his transitions are easily apparent. In the delivery there should be no shouting, no striving for applause, no cheap allusion to the "ignorance and stupidity of our opponents." Speak calmly, naturally, firmly, quietly, and above all courteously.

The Forms of Public Speech.—We may distinguish the after-dinner speech, the address, the oration, the lecture, the sermon.

The After-Dinner Speech must be short and informal, yet it may be weighty. The greatest offense of after-dinner speeches is tedium. One good story is better than half a dozen. The diction should be eminently simple; for it is the very essence of the social temper to avoid technicalities on the one hand and extravagance on the other. Simplicity, restraint, and understatement are marks of breeding. Yet an examination of five-minute addresses by such men as Lowell, Curtis, and Henry Grady shows that this tiny form of composition may express important thoughts: it can get down to fundamentals; it can set up noble ideals. It can be "built like a watch," obeying on its own scale all those rules of organization which have been previously set forth.

The Address is a dignified speech of considerable length and great variety of subject. In a recent collection of addresses we note such topics as the influence of universities, the leadership of educated men, the scholar in a republic, the drama in America, the child and the state, general amnesty, secession. The presidential address of a society usually sums up recent tendencies which interest the society, and then gives some outlook on the future. Such is Miss Jane Addams' address on "Charity and Social Justice," before the St. Louis Congress of Charities, 1910, an address marked by broad historical retrospect and a penetrating philosophic prospect. The tone, or degree of dignity, in the diction of an address must be high. Humor must be kept very subordinate, and colloquialisms must be rare. On the other hand, unnecessary technicalities must be avoided, and display must be entirely absent. Before a recent meeting of the American Philosophical association the "papers" were so technical that even the members wrangled for hours as to their meaning. But the presidential address, by the late William James, on "The Energies of Men," was given in language so picturesque and clear that it was sought by a popular magazine, and was quoted far and wide.

The Oration is an elaborate discourse, treating an important subject in an impressive manner. Its purpose is not primarily that of the address; it seeks sooner or later to move the loftier emotions deeply. For this reason it is commonly felt that an oration should not be read; it should seem impressively impassioned and extemporaneous. The very name suggests *oral*, and recalls the whole ancient tradition of *rhetoric*, or public speech. It recalls Aristotle, with his distinction between the oratory of deliberation and that of display. Ancient *epideictic* oratory permitted a certain amount of display and beauty for its own sake. The modern form of oration which still preserves this tradition is the *eulogy*. Blaine's eulogy upon Garfield is a striking example of the legitimate exercise of the power of pure oratory. One who listened to the nominating speeches in the Republican Convention of 1908 cannot help regretting that the power of dignified eulogy—eulogy which unites a significant man to the times of which he is the expression—is practically lost. But the loss has some compensations. It is almost wholly a gain that young men are now advised to study Wendell Phillips instead of Daniel Webster. The plain, direct, *conversational* style is far more effective to-day than the older decorative and rhetorical style.

The basis of every good oration must be good organization and sound argument. Beyond that, the most important thing is for the orator to know his audience, that he may appeal to their sympathy, and, if need be, to their foibles. Remember that Aristotle, that great student of humanity, devoted a third of his treatise on oratory to the psychology of different audiences.

Journalism. Short Stories.—Perhaps the most valuable single gift to the journalist is the sense of mass and proportion. He must write accurately to space. He must

dwell on the significant, and boil the less important down to its lowest terms. Headlining is a science in itself, and keeps one man busy on every daily, for it is the art of telling the whole story in a few phrases.

As for diction, the trend of the times is toward simple words. It is only in rural districts that we find "fine writing," pretentious phraseology. Here it is often due to forcing an ignorant man to report something that he knows nothing about—as, for example, in this: "He has a pliable tenor of immense range, coupled with deep organ tones in his lower register. He will doubtless advance into deserved prominence in that mimic world which proves so fascinating to the actor and the singer." The day is passing when reporters talk about "infuriated animals" when they mean runaway horses. Headlining, however, has one bad effect on diction. It leads to the coining of short and ugly cant words, like *talk-fest*, to fit the exigencies of space. A sensible reporter avoids smartness in his diction; the people want the news, and not his verbal antics.

Short Stories.—The writing of short stories is an art which has grown with journalism and is closely allied to it. The short story finds its audience in the tired business men and the tired youths and maidens who shrink f om prolonged dealings of mind with novels—especially the sociological novels of the day. This means that the short story must be so constructed as to capture weak attention. An allegory or a tale, however lovely, does not do that, because it lacks plot and surprise.

Plot and surprise, then, the short story must have. Its material may be realistic or romantic, but it must be worked up into a story. On the other hand, there can be no intricate and elaborate plot, for that takes up space and time. The problem is to get a surprising incident, a surprising turn of affairs, and lead up to it neatly and briefly. The events must not cover a long period; the past must be ruthlessly foreshortened; a single day, sometimes a single hour, must disclose the whole complication and resolution of the events. So, as Brander Mathews has put it, a short story is not merely an abridged novel.

Again, there is no opportunity for showing the development of character. If there is to be change of character in your hero, you must catch him at the moment before the change comes. Most short stories do not attempt character-change, but deal with incidents. Of course, the more significant the incident is, the better. The ideal thing would be to catch the most important day, hour, and incident in the hero's life.

A good beginning is half the battle for it gets you your reader. Make it fresh and striking. Roughly speaking, do not begin either with description or with dialogue. Votes have shown that both are less acceptable than a paragraph which flashes before you an intrinsically interesting person or a striking situation.

Avoid dialect: there is no sale for it now, except to a few magazines from a few masters.

Avoid unpleasant and ghastly and cynical and "suggestive" material. Pure love, heroism in daily life, friendship, loyalty, ludicrous happenings, fair and honorable getting on in the world; hope, poetic justice—these are the themes that sell. Be human! and don't be trite, hackneyed, or commonplace.

Choose your title as carefully as if you were advertising.

Study your market—as in the book *1001 Places to Sell MS.* (Editor Co., Ridgewood, N. J.)

Sermons.—A sermon is not a lecture, although preachers sometimes forget the fact. The primary business of a sermon is to influence the human will in such a way as to bring the eternal into time; to make men feel that they may live the eternal life in the midst of time; and to make them attempt this divine task immediately. This definition may seem vague and abstract, but neither *eternal* nor *will* can be omitted from it. The teaching of morality without reference to spiritual motives is not preaching. The words *eternal* and *spiritual* are indeed difficult of definition, but the practical and progressive definition of these words is precisely the homiletic task.

So far as literary art is concerned, this end may be advanced by, say, three means: vitality of diction, vitality of organization, vitality of direct appeal.

Vitality of diction may best be studied in the sermons of the Christ. What strikes the literary student here is the variety, homeliness, beauty, and freshness of the language. The kingdom of heaven is not formally or scientifically defined. It is a kingdom of children, and of men reborn. It is a pearl, a net, a wedding-feast, a piece of silver, etc. This warm flood of fresh spiritual poetry was poured by the Great Preacher into the formal and frozen vocabulary of the Pharisees. No evangelist can be effective who does not learn this lesson. Preaching means relating the eternal to the ever-changing temporal, and the universally spiritual to the individually human.

Vitality of organization means that the whole sermon is easily grasped, that its main divisions are easily remembered, and that the point of the whole could be expressed in one paragraph or sentence.

Vitality of direct appeal means that the end is direct and forcible; that the peroration is not for display, but to accomplish a change of mental habits. Lyman Beecher drove one of his theological students back into the pulpit, and cried: "You have not cracked your whip; your whip has no lash." The figure was not wholly happy, for a preacher should leave his audience with a sense that he loves their souls more than he loves to lash them. But it emphasizes the indispensable appeal to the will.

Preaching from texts is primarily exegetical; but exegesis must not stop with formal explanation; it must run deep into life; here and now there are words and situations of common life which are essential to such exegesis as really comes home to men's business and bosoms. From the literary point of view there is one thing about texts, which the present writer does not remember to have seen mentioned. The Bible is full of superficially contradictory texts. This is because, of all books, it is truest to life. It does not blink the paradoxes of experience, but reconciles them by the *will*. A sermon on private prayer (Matt. 6: 6) should logically include or be followed by one on religious solidarity (Matt. 6: 10). It is characteristic of the Christ that he demands the coming of the whole kingdom as the first interest in the most private petition.

The *diction* of sermons should have a full Saxon element, and should be free from neologisms. The pulpit has done too much toward introducing such wretched words as *enthuse* and *mentality*. The pronunciation of the preacher should be correct, not eccentric; this is for no other reason than that false or eccentric pronunciation diverts the attention of the critical (and that means all the young) from his message.

Lecture means "reading," and most lectures are read—at least by the authors. They vary from the technical lectures of a university to the popular humorous lectures of a Bill Nye. Even in the case of popular lectures, no two styles or messages could differ more than Matthew Arnold's lecture on *Numbers* differs from Artemus Ward's on *The Mormons*. In the very same evening Wendell Phillips used occasionally to give his famous lecture on *The Lost Arts*, and follow it with an impassioned appeal to the same audience on the iniquity of slavery.

But in all popular lectures it is the primary purpose to please rather than to exhort. There must be fresh information, and there must be fresh humor. Scientific terms, if used at all, must be used sparingly, and must be explained. A wise lecturer will note the effect of his first delivery on the audience, and will remodel the lecture accordingly. Long descriptive passages will be shortened. Even in narratives of travel the human element must be present in every paragraph; for, as Stevenson said: "Nobody talks about mere scenery for more than two minutes at a time."

Business English. Social and Business Letters.—Saxon and Latin Elements.—Many of our most technical business words are of Latin origin; *e. g., advertise, auction, bill, bona fide, bonus, cancel, capital, cheat, clerk, collateral, competition, coöperation, corporation, currency, fiscal, fortune, gratis, grocer, guinea, interest, item, lien, mint, money, pecuniary, pound, premium, redeem, salary.*

A study of the history of these words, as found in any good unabridged dictionary, will throw a flood of light upon the movements which have produced modern business conditions. But, apart from these technical terms, it is inadvisable to load business English with Latin derivatives. Saxon terms still make the strongest appeal to the emotions and the will, and goods cannot be sold unless the will is touched. Plain, simple, strong words are the most effective. People's love of food, dress, the family—this must be reached; and it is best reached through words which were earliest associated in the buyer's mind with these deep interests.

Degree of Dignity.—But plain, simple words are not necessarily slang words. Business slang has so vast a vocabulary that it vitiates the usage of everybody. Business expressions are tending to displace social and literary expressions. Many Americans speak of "the balance" of the day instead of "the rest"; they speak of a man as "well posted," as if he were a ledger; and instead of asserting, declaring, maintaining, contending, they "claim" everything.

The young business man will not regret mastering certain more dignified phrases for many of the commoner vulgarisms of business parlance. If he is in the habit of saying *ain't*, he should master the following: *I'm not; you're not* or *you aren't; he's not* or *he isn't; we're not* or *we aren't; they're not* or *they aren't.*

Business English cannot always be as dignified as literary English, for business deals with all sorts and conditions of men. But a business man must command more than one vocabulary. Note the following

list of phrases, the second of which in each pair is the more dignified: *knock, complain; boost, praise; folks, family; cheap, inexpensive; back down, recede; anyway, at all events; a great success, very successful; mighty fine, extremely fine; right then, just then; quite a few, several; fired, dismissed; faked, falsified; hadn't ought, ought not; indorsed, approve; auto, car; without, unless.*

These are merely examples. Different situations and different customers require different vocabularies. But in general, business English should be plain and forcible without being vulgar. It is an error to think that educated customers wish to be addressed in magnificent words and swelling sentences. A truly educated man speaks simply. He goes to bed—not "retires"; has legs, not "lower limbs"; eats dinners, not "banquets"; builds a house, not a "residence"; calls a soup delicious, not "elegant"; has in his house a kitchen, not a "culinary department". If he receives a booklet advertising certain goods in highflown and bombastic language, he is as much offended by it as if it were full of such words as *fake, knock, boost, graft, boodle, swell, scads.*

Wordiness.—Time is money, and business English should cultivate brevity. A few words that catch the eye, hold the attention, present the arguments in a nutshell, are better than a wilderness of fine expressions. This principle applies to every form of business composition, from advertisements to report, from letters to booklets. Yet there is no merit in mere brevity. The few words must be the right ones. The short paragraphs must contain much meaning. Important facts must not be omitted. And if a good deal depends on one word, that word should appear often enough to be remembered.

This is particularly true in advertisements. A good advertiser keeps his keyword before the people. He varies the context to give freshness and attract attention, but he does not allow you to miss his precious word—his "Sapolio" or "Gold Dust Twins," or whatever it be. Into that word or phrase he packs as much of his story as possible.

Also the name and address of the maker are never absent from a good advertisement.

The headlines of an advertisement, like the headlines of a newspaper item, are extremely important. Their business is to catch the fleeting attention, for (as has been proved by the investigations of Professor W. D. Scott) people do not spend more than one-tenth the time on advertisements that they spend on the text of a paper or magazine, and many persons are unaware that they ever read advertisements—though we all do. A clear Saxon phrase, striking at once into some genuine human instinct or interest—this is the proper opening of an advertisement.

Not the price, but the quality—that is the important matter to name tellingly.

Business Letters.—We may distinguish three essentials of a good business letter—first, *courtesy*; second, *clearness*; third, *persuasiveness*. Brevity has been mentioned above.

Salutation and Closing.—Courtesy requires, first, that the salutation and the leave-taking should be free from brusqueness or indifference. Every man is entitled to the abbreviation *Mr.* before his name in the salutation and on the outside of the envelope. Physicians and other professional men are never offended if their correspondents take the trouble to give them their right professional title. Firms are entitled to be addressed as *Messrs.*, though incorporated companies—*e. g.*, The Macmillan Company—are not usually so addressed nowadays. *Dear Sir, Dear Sirs, Gentlemen, Dear Madam,* are proper business salutations. The last-given applies equally to girls and married women. The leave-taking may be *Yours truly, Yours very truly, Very truly yours*—the capital being used for the first word only. An unmarried woman should prefix *Miss* to her signature, or should place her full address to the left. A married woman should sign her legal name, and then place to the left the exact address which she wishes to see on the envelope of the reply, thus:

Yours truly,
Ellen Gates Adams.

Address!
Mrs. James Ward Adams,
1372 *Linden avenue,*
Chicago.

Care should be taken to avoid hackneyed, curt phrases, such as "Yours received and contents noted." The letter should have some ease, some individuality. It should impress the receiver as a piece of the courteous conversation of an educated and alert business man. Note how beginnings of replies may be varied: "We are glad to learn from your letter of March 12"; "The impression that we get from your favor of the third"; "We are glad to have your inquiry of the seventh concerning"; "You advised us on the fifth of last month that."

In cases where business relations are long established, the social form of salutation may be used; as, *My dear Mr. Jones.* This, however, should follow the full name and address of the person saluted, since business is business, and the letter is addressed to a particular Mr. Jones. Go out of your way to get his name right, and sign your own name uniformly every time; don't have John G. Jones doing business with F. H. Smith one day, and J. G. Jones with Frank H. Smith the next. Or, the name of the addressee may be put at the end of the letter, to the left of your signature.

Latterly it is the custom of many correspondents to begin sales-letters to strangers with the familiar *Dear Mr. Jones.* A good many people resent being so addressed by strangers. The form is not to be recommended, although it shows that the would-be seller is taking pains to be personal.

Circular or Form Letters are a necessity of modern business, and great things are claimed for them by houses that make a business of preparing and supplying them, together with specially inked ribbons which make it possible to match the salutation with the body. But no form-letter can wholly take the place of the individual letter. The personal touch at the end—"The last time I saw you"—cannot successfully be imitated in any form-letter.

In all business letters it is both courteous and persuasive to say *we* as little as possible and *you* as much as possible, provided condescension and undue familiarity are avoided. The customer is not much interested in your affairs or your success; he is deeply interested in his own. You must learn to take his point of view.

Collecting Letters.—In answering letters of complaint or in sending collection letters, courtesy must be observed with especial care. The hotter your correspondent's tone, the cooler should be your own. Do not argue with an angry man. Take all the blame you honestly can, and then be generous, if you would keep your trade.

Clearness means that descriptions and terms should be beyond mistake. Descriptions of goods should be exact, but not tedious. The person addressed must receive a clear mental picture, and without undue effort. Try to hit the thing off in telling phrases, presenting the goods imaginatively—*i. e.*, in a way that satisfies the buyer's needs.

Sales Letters.—A good sales-letter begins by nailing attention; the start is half the battle. It proceeds to describe the goods. Then it gives reasons for buying them—for the particular man's buying them; but he should not be furnished with descriptions of competing goods, for that divides his attention, increases his responsibility, and often unintentionally suggests buying elsewhere. Then the letter closes with some inducement to act promptly. The imperative mood "Do it now" is well enough if reasons and inducements have actually been offered; otherwise it is an impertinence.

Too much care cannot be exercised in the selection of stationery, the type of engraving or printing, penmanship or typing, etc. The first impression of a letter is given not by its subject matter (ideas, phraseology), but by its general appearance. A letter represents to some degree its sender, and one should not forward a shabby or a gaudy missive; these characteristics do not inspire confidence.

Social Letters.—We distinguish (a) formal notes in the third person, (b) notes to a stranger, (c) notes to acquaintances, (d) intimate personal letters.

Formal notes should be in the third person throughout, except when engraving makes the words "your presence" necessary. Thus: *Mr. and Mrs. Charles Henry Webster requests the pleasure of Mr. and Mrs. James Henry Hammond's company at dinner, Monday, June the seventeenth, at seven o'clock.* Below, at the left, appears the street number of the sender, and the date, thus; 1274 *Washington avenue, June the third.* The acceptance reads: *Mr. and Mrs. James Henry Hammond accept with pleasure the kind invitation of Mr. and Mrs. Charles Henry Webster to dinner on Monday, June the seventeenth.* The sender's address appears below, at the left. Regrets read: *Mr. and Mrs. James Henry Hammond regret that a previous engagement prevents their acceptance of Mr. and Mrs. Charles Henry Webster's kind invitation to dinner on Monday, June the seventeenth.*

These forms are pretty definitely fixed, and do not admit of much alteration or addition. The full names are used; it is *at* dinner in the invitation, *to* dinner in the reply; it is *on Monday* in the invitation, and *on* or *for Monday* in the reply. It is *June third* or *June the third*, not *June* 3d; and the year is not given. Wedding invitations of course give the year, and etiquette varies slightly in other details from year to year, as any good stationer is able to indicate. *Previous engagement* covers all excuses in regrets. *Illness in the family, absence from the city*—these expressions may be used, but are not necessary; any other excuses are inserted at the risk of bungling the note. Notes to a stranger begin *My dear Sir*, or *My dear Madam*, and his or her name appears at the left at the end. *Yours sincerely, Yours very truly* are proper endings. *Yours respectfully* is no longer used by careful writers in any sort of letter. *Yours cordially* is impossible in a note to a

stranger, and is of doubtful taste except when used by women in social notes. Observe the use of capitals in *Sir* and *My*.

Notes to acquaintances begin with *My dear Mr. Jones, My dear Miss Jones, My dear Mrs. Jones,* and end *Yours sincerely, Yours very sincerely, Very sincerely yours.* The addressee's full name need appear nowhere save on the envelope. In no kind of note or letter should a clergyman be addressed to or referred to as *Rev. Jones.* The initials, or the name, or *Mr.*, or *Dr.* must appear after *Rev.* The best form is *The Rev. William Mead Jones, D. D.*

Notes and letters to friends and inimates are of every shade of familiarity. *My dear Mr. Jones, My dear Jones, My dear William Jones, My dear Billy Jones, My dear Billy, Billy*—all of them are good if used with tact. Signatures vary from *Yours sincerely* to *Yours ever* to *Yours*, and may respond still further to personal affection, whim, or humor. *Your friend* is very rarely used, but it comes well from older people who mean it. The tone of intimate letters should be individual, recalling the very voice and gesture of the writer. All pretense, all stiffness, all bookishness must be absent from a truly intimate letter. In their place there is room for all the personal charm that the writer can command.

Order for Goods.—

Menominee, Mich., Jan. 10, 1936,
Burke and James,
Chicago.
Gentlemen:

If you have in stock a camera of the following specifications, will you please ship it to me at once by express, C. O. D.?

V. P. size, for roll film 2¼ x 3¼.
Anastigmat lens, f 4.5.
Shutter to 1/300 sec. preferably an Ilex.

If I am correctly informed, there is nothing in the Eastman line which quite meets these requirements, so the camera may be an Ansco V. P. Speedex No. 3.

Truly,
John P. Jones

Dun.—

OFFICE OF BROWN & SMITH
GROCERIES AND MEATS
Aug. 20, 1936.

Mr. Robert Henry,
114 Eagle St.,
Chicago, Ill.
Dear Mr. Henry:

We find ourselves considerably embarrassed just now, owing to the fact that so many of our customers have gone away for the summer, leaving considerable balances unpaid, whereas the wholesalers allow us only ten days' time.

Under the circumstances, would you mind our suggesting a credit period of not more than thirty days for all our charge accounts, including yours?

Respectfully yours,
BROWN & SMITH

Philadelphia, Pa.,
November 9, 1936.

James Clark, Esq.,
Boyertown, Berks Co.,
Pennsylvania.
Dear Sir:

We have waited patiently to receive a settlement from you of our overdue account, $322.85, and have written you sundry urgent requests to that effect without response.

You are a business man and must be aware that an account in this shape is not satisfactory. We do not want to go to law in this matter, but if we must suffer loss would rather come to a prompt and friendly compromise with you. If you cannot pay us 100 cents on the dollar, can you pay 75?

We want the matter closed as soon as possible, and shall expect to hear from you without further delay.

Yours very truly,
Caldwell & Kane.

Claim.—

Chicago, Ill.,
February 6, 1936.

Henry Carson, Esq.,
Little Rock, Ark.
Dear Sir:

We learn that you have been appointed assignee of Rogers & Green, of your city. Our claim against this firm is $213.42, for which we hand you duplicate bills inclosed, and would thank you to inform us what is the prospect for an early settlement.

We feel friendly toward the suspended firm and would willingly join in any reasonable composition of their affairs, so as to give them a chance to retrieve their losses.

Awaiting your early reply advising us of the condition of affairs, we remain

Yours very truly,
L. M. Tyson & Co.

Application.—

29 Wildover St., Xenobia, Wis.,
Oct. 1, 1936.

J. P. Samson, Ph.D.,
Principal Xenobia Academy.
Dear Sir:

May I ask you to have my qualifications in mind when students apply to you for private instruction in French or English?

I am a graduate of the university of this state, and hold a master's degree from Vassar College, with major and minor subjects named above. I have taught French for the past three years in the high school at Singleton, N. J., and would have continued there this year, had my mother's ill health not required me to be at home.

Very truly,
Fannie Wilson

Formal Invitation.—

Mr. and Mrs. Herbert Glenn Martin request the pleasure of Mr. and Mrs. Wentworth Smith's company at dinner on Friday the third of April at eight o'clock.
Windermere Woods.

Formal Acceptance.—

Mr. and Mrs. Wentworth Smith accept with pleasure Mr. and Mrs. Martin's kind invitation for dinner on Friday the third of April at eight o'clock.

Formal Regret.—

Mr. and Mrs. Wentworth Smith regret very much that a previous engagement prevents their accepting Mr. and Mrs. Martin's kind invitation for dinner on Friday the third of April.

Friendly Invitation.—

Dear Doc.:

You remember you promised to join me next year, for the kind of summer you and I like best? I have found the place. It's a small island off the coast of Maine, a place unspoiled by the rush of summer folks. Only eight or ten interesting native families and two or three camps of artists, the natives clustered in a hamlet near their harbor, and the camps tucked away in thickets of "cat-spruce" a mile from the village.

I know you will love it there. Those sailor-fishermen are a bit shy about accepting strangers,—perhaps that is what has kept the island from Bohemian intrusion,—but nobody can resist you, Doc. We stayed long enough this year to get some notion of what the place will be like. It's a little paradise, beautiful beyond anything else I know, and rare fun for a fisherman like you. It's too far north for blue fish, but cod are caught near there up to seventy-five pounds, haddock to twenty-five, gamy sea-pollock will rival big salmon for sport, and you are likely at any minute to hook a halibut for a battle unbeaten this side of California.

I've heard a lot about salt water fish not putting up a fight. Take it from me, Doc, that's all wrong. Small cod and hake do come up easily, but most of the fish you strike in this region I'm taking you to will empty your reel spool over and over if you let them have their way.

I claim your promise, Doc, on my double guarantee that you cannot be disappointed. Let me know when I can see you to talk it all over.

Jim.

Sept. 20, '37.

Congratulation.—

Dear A. N.:

It's a good many years since we heard from each other directly, but I learn in a roundabout way of your change of occupation for next year.

May I congratulate? You have outlasted by a good many years all the men we knew who were in the game when you and I began. You have come through the ordeal of managing a system that has doubled its difficulties every fifth year since you took hold. You have lived solidly up to your code, with a fair deal for every youngster and every teacher in your town. In an age of unreasoning quackery you have kept your head, favoring no half-baked schemes.

And while you have been a good school man, you have been so good a business man that you can step across now without a jolt from the second stage of life to the third—your own master, busy as you please, and no busier, at tasks of your own choosing, unharassed by the pressure of false standards.

You have had two parts of a fine life. I am sure the third will be best yet.

Your old friend,
Dick Henry.

Albany, N. Y.,
Sept. 20, 1938.

Condolence.—

365 Madison Ave.,
New York City, N.Y.,
December 6th, 1937.

My dear Marie:

The melancholy news of your sister's death has grieved me more than I can express, and I beg to tender you my heartfelt sympathy. Truly we live in a world where solemn shadows are continually falling upon our path—shadows that teach us the uncertainty of all temporal blessings and warn us that "here there is no abiding stay." We have, however, the blessed satisfaction of knowing that death cannot enter that sphere to which the departed are removed. Let hope and faith, my dear friend, mingle with your natural sorrow. Look to that future where the sundered ties of earth are reunited.

Affectionately yours,
Ada Jones.

Answer to Condolence.—

613 Greene Street,
Pittsburgh, Pa.,
December 16th, 1938.

My dear Ada:

You can't imagine how much good your words of comfort did me. It is in our hour of trial that we appreciate the sympathy of our kind friends. It helps us to bear more patiently the burden which is sent us. I shall, indeed, try to live in the hope that time will ease the pain.

Assuring you of my deepest appreciation of your sympathy, I am

Gratefully yours,
Marie Smith.

Announcing Visit.—

Kalamazoo, Michigan,
December 16th, 1937.

Mrs. Thomas Wood,
735 Park Avenue,
New York, N. Y.

Dear Aunt Carolyn:

I am eagerly looking forward to spending the holidays with you, and am planning to leave just as soon as school is over. Have decided to come on the train arriving at Pennsylvania Station at three in the afternoon Christmas Eve.

Hoping to see you and uncle Tom at the station, I am

Your loving niece,
Jane.

FIGURES OF SPEECH.—For practical purposes the distinction sometimes made between figures of speech, figures of grammar, and figures of thought, may here be discarded. The essential principle, which the reader may apply for himself, holds the same in all.

Definition. — A figure of speech is a means of expressing or intensifying one idea in terms of another. This fusion of terms is the essential principle of figures of speech; it is called connotation. That is to say, in addition to what is *denoted* or literally meant, there is *connoted* something else which serves as a helping or carrying idea. This connoted idea may be a distinct thought in itself, in which case its value is mainly illustrative; or it may be merely felt in the manner of expression, in which case it has an emotional value of some kind. The two values may be proportioned or blended in many degrees; but in any case the principle of connotation is present; the reader is made to think or feel somehow in terms foreign to the literal idea.

Illustration.—This connotation of ideas may be seen in its simplest form in the following paragraph from Macaulay, in which he is explaining the difference between two kinds of historical composition, the descriptive and the philosophical: "Of the two kinds of composition into which history has been thus divided, the one may be compared to a map, the other to a painted landscape. The picture, though it places the country before us, does not enable us to ascertain with accuracy the dimensions, the distances, and the angles. The map is not a work of imitative art. It presents no scene to the imagination; but it gives us exact information as to the bearings of various points, and is a more useful companion to the traveler or the general than the painted landscape could be, though it were the grandest that ever Rosa peopled with outlaws, or the sweetest over which Claude ever poured the mellow effulgence of a setting sun." Here the terms applicable to a map and a painting respectively, used purely to illustrate, are of material aid in making clear a somewhat abstruse literal subject. On the other hand, we are aware of a heightened feeling when David, lamenting over Saul and Jonathan, says of them: "They were swifter than eagles, they were stronger than lions." Here his sense of their work is so keen that he greatly overstates the case, describing them in terms that belong only to another order of beings; this because his emotion has so borne him on.

The Good of Figurative Language.—It is a mistake to suppose that figures of speech are merely decorative and ornamental elements put on for display. Nor are they more natural to educated people and men of letters than to the common and unlearned. They are an even more primitive and spontaneous manner of expression than the literal; reflecting, as they do, the picturing play of imagination, more native to man than the logical powers. Figurative language has advantages over literal, both for reader and writer. For the reader it is of advantage because it gives him the benefit of an associated idea more concrete or more intense than the literal, thus calling forth his more vivid realization. For the writer it is of advantage because it enables him to express a hard or subtle idea not only more clearly but in much less space; it enables him also to imply his feeling about some matter without dictating what the reader's emotion shall be. It is a kind of literary shorthand, conveying twice as much thought in the same place, thus economizing attention; and a literary tonic, using as it does twice as vivid terms and forms.

Note.—It follows from this that figurative language is especially adapted to the more inward and abstract ideas, which need to be reduced from hard logical processes to the picturing terms of sense perception. Thus, when Tennyson wants to describe the subtle idea of the manifold meanings of poetry, he puts it: "Poetry is like shot-silk with many glancing colors. Each reader must find his own interpretation according to his ability, and according to his sympathy with the poet." Here the simile both shortens and vivifies the whole description.

The Most Commonly Used Figures.—It would serve no practical purpose to make a minute list or analysis of the various figures of speech. It will be better to classify the most commonly occurring ones, reduce them to principle as the connoting idea is related to the literal, and refer them in each class to certain salient types.

As intimated in the paragraph of "Definition" figures fall into the two leading classes of *illustrative* and *emotional*; and as several figures in each class may be mere variants of one essential principle, they are best grouped according to types.

Illustrative.—In this class, which comprises the forms most commonly recognized as figurative, the connoted idea is introduced mainly for its interpretative and clarifying value; that is, the literal idea is associated with something more concrete, or better known, or more directly present to the senses. Three types may be named.

Figures of the Similitude Type.—In this type of figures the writer's effort is most purely illustrative: he is concerned with showing how in some point the literal idea resembles something which in other respects is totally different. Note that it is the general difference of class between the literal and the connoted idea which makes the figure; comparison of things in the same class is not figurative at all, but literal.

Simile.—When the idea to be illustrated is relatively simple it is said or assumed to be like something else; the word simile being just the Latin adjective *similis*, *simile*, like. Generally the comparing term, *like, as, so, resembles*, is expressed, though this is not essential.

Examples.—The figures from Macaulay and Tennyson are similes; the way in which they apply the connoted idea to the literal explains itself. The following is a plain and telling simile from Abraham Lincoln: "Once let slavery get planted in a locality, by ever so weak or doubtful a title, and in ever so small numbers, and it is *like the Canada thistle or Bermuda grass*—you cannot root it out."

Analogy.—But the ideas that need figurative illustration are not always so simple; they involve complex relations and principles that need to be brought out into the open, where the whole can be seen. Hence the similitude needs to be enlarged and deepened; it becomes not so much a likeness of things as a likeness of relations; one thing is represented as working in its sphere as does some other thing in its sphere. This deepening of the likeness, less picturesque perhaps but more charged with thought, is called analogy.

Examples.—Abraham Lincoln's well-known illustration of the divided house is an analogy. Its point is not that the state is like a house, but that the state in a certain condition is like the house in an analogous condition. "A house divided against itself c. not stand. I believe this government cannot endure permanently half slave and half free. I do not expect the Union to be dissolved—I do not expect the house to fall—but I do expect it will cease to be divided." A very familiar analogy is that between r : argument and a chain: as a chain is no stronger than its weakest link, so an argument is no stronger than its weakest premise. Analogy is probably the most widely useful of all the figures of the similitude type.

Parable.—In this figure the analogy is carried out in detail, in the form of a story or an extended description, so that not merely one but several elements of the connoted idea are made to convey a meaning and lesson. It is an analogy elaborated into a parallel case in which more familiar objects or events are displayed in like relations.

Examples.—The parables of the Bible, expecially in the teachings of Jesus, furnish the most perfect examples of this figure. A whole series of his parables, for instance, is devoted to explaining the real inwardness of the kingdom of heaven, in many aspects and relations. The following is one of his shortest parables: "The kingdom of heaven is like unto leaven, which a woman took, and hid in three measures of meal, till it was all leavened." In other parables he represented it as "like unto a grain of mustard seed"; as "like unto a man that is a merchant seeking goodly pearls"; as "like unto a treasure hidden in the field," etc. (*R. V.*); and by such parables he revolutionized men's ideas of what the kingdom of heaven essentially is.

Figures of the Identity Type.—This type comprises the figures wherein the similitude is not expressed, but implicit; that is, the connoted idea is not likened to the literal, but squarely identified with it. By this means vigor is gained, and the reader is put more directly in position to think the matter out for himself.

Metaphor.—In this figure the type is embodied most plainly, the other figures being in fact merely aspects or enlargements of this. Instead of saying one thing is like another, it says or assumes that one thing *is* the other. The word metaphor means a transfer; that is, of meanings.

Example.—In the following, from Chesterton, the literal idea conveyed is that men have many more ways of communicating ideas to each other than by words: "In the last resort all men talk by signs. To talk by statues is to talk by signs; to talk by cities is to talk by signs. Pillars, palaces, cathedrals, temples, pyramids, are *an enormous dumb alphabet; as if some giant held up his fingers of stone.*" Here, it will be noted, the figure is finished by a kind of simile (*as if*, etc.). Metaphor and simile, in fact, often interact with each other.

Trope.—This figure is merely metaphor in its most condensed and least obtrusive form.

The word, derived from a Greek word meaning *to turn*, denotes a word turned from its literal meaning to connote some figurative idea. *Trope* is by far the most frequent and spontaneous figure of all; all language, in fact, that has vigor and life in it will be found to derive its interest in large part from the words of metaphorical suggestiveness that it contains.

Examples.—Thus, to speak of a man's character as *warped*, or *twisted*, or *unbalanced*; of his disposition as *sunny* or *sour*; to speak of one as an *all-round* man, or as having intellectual *poise*, or as standing *four-square to all the winds that blow*, is to use the perfectly natural yet vigorous language of trope. Men are frequently using the vocabulary of their business or occupation in this accommodated sense; as when a person's sincerity of conduct is described as *straight goods*, or when a man who fulfills his promises is said to *deliver the goods*. A certain Cape Cod skipper once described an untrustworthy man's character by saying that "his center-board was crooked;" a farmer would perhaps have said that "you could not hitch to him." Stevenson describes the endeavors made by a certain community to dispossess a supposed haunted house of its infernal occupant: "Every kind of spiritual *disinfectant* was put in requisition." (*R. V.*,) When we speak of "improving the moral *tone*," we are employing the language of music for a more abstract idea.

Personification.—This is a form of metaphor in which the literal idea is conceived as a person, having something of the life and traits of personality; thus the idea is made to think and act is if alive. A very powerful figure, rightly used; its abuse consists in employing it idly or insincerely.

Examples.—Instead of enumerating the noble qualities with which a man was endowed by nature, Shakespeare puts the thought in far more vigorous form by making nature speak:

"His life was gentle; and the elements
So mix'd in him, that Nature *might stand up*
And say to all the world, This was a man!"

Personification is fully as effective in the form of personal touches, a kind of trope, as for instance: "Ideas have hands and feet, as Hegel said, and move the world," where the metaphorical attribution of personal members is sufficient to suggest the life that inheres in personality.

Allegory.—This figure expands and carries out the metaphor, much as parable expands the similitude; only, instead of blending the literal and connoted ideas, it gives merely the connoted idea, in the form of a narrative or description, and leaves the reader to make out the literal meaning for himself. It is much used as a vehicle for moral or spiritual truth.

Example.—It is a mistake to deem allegory an obsolete form, or to associate it only with its great literary exemplars like the *Pilgrim's Progress*, or Spenser's *Faërie Queene*. Its principle can be seen equally well in a shorter example, such as the following, from a German source: "A man had a plain strong-bow with which he could shoot far and true. He loved his bow so well that he would needs have it curiously carved by a cunning workman. It was done; and at the first trial the bow snapt." Here a story is told, and no claim is made for a second meaning of it; yet the reader cannot help getting a moral lesson from it. Another example employs the kindred figure called fable, in which animals are endowed with personality: "An old ruinous tower: which had harbored innumerable jackdaws, sparrows and bats, was at length repaired. When the masons left it, the jackdaws, sparrows, and bats came back in search of their old dwellings, but these were all filled up. 'Of what use now is this great building?' said they: 'come, let us forsake this useless stone-heap' " The figures allegory, fable, apologue, and parable are closely akin to each other, and frequently so run together that a minute distinction between them is unpractical.

Figures of the Selective Type.—In this type of figures the connoted idea, instead of being taken from some alien class of objects, is selected from the class to which the literal idea belongs; that is, the part or accompaniment which is immediately concerned in the action—the business part so to say—is used, and the rest is left out or taken for granted. Thus the reader's attention is concentrated and economized. Two figures, alike in principle, belong to this type.

Synecdoche.—This figure takes a part for the whole, or, less often the whole for a part, and makes it do the work of the whole idea. The figurative suggestion may be conveyed either by the noun or the verb, as best serves the writer's purpose.

Examples.—1. A part for the whole. This is very common in the language of business or labor: as when we say so many *hands* for work in the field; so many *spades* for digging; so many *spindles* in a factory; so many *rifles* in the army; so many *sail*, or *hulls*, in a fleet. "Every *eye* shall see him; with *fire* and *sword*:" "sounds as if some fair city were one *voice*," are synecdoches. 2. This is seen in the use of such a term as the *administration* for the persons in power. "That I may make thee an *astonishment*, and the *inhabitants* thereof a *hissing*," is a Scripture synecdoche, the effect or result, as a whole, put for the cause of it. 3. "Coleridge *sat on the brow* of Highgate hill in those days," is a synecdoche conveyed by the verb; it is Carlyle's way of saying that Coleridge resided in Highgate at a certain period of his life, which (also by synecdoche) he designates as "those days."

Metonymy.—In this figure not a part stands for the whole, but the aspect or accompaniment or result of the idea which has most direct significance for the thought conveyed is selected to do the work. The word metonymy means a transfer of terms.

Examples.—In "The bright *death* quivered at the victim's throat," Tennyson is speaking of a sacrificial knife. In "he had drunk up two thriving *businesses* like a bottle of sherry," Stevenson names the result of a life of dissipation. "The pen is mightier than the *sword*" uses the concrete instruments for what they produce: literature and war.

Emotional.—In this class of figures the connoted idea is not a definite image called up from a different class of objects, but rather a state of mind belonging to a different level of feeling: an emotion of wonder, or intense realization, or humor, or contempt, which draws the reader out of his ordinary placid mood to some degree of its own intensity. This emotional state is brought about not directly, but by assuming the manner of expression peculiar to such connoted mood and trusting to the reader's sympathy to share in it. Two types of this class of figures may be distinguished.

Figures of the Intensity Type.—In this type of figure the writer's feeling is heightened by his sense of the greatness or importance or deep meaning of his idea, and his manner of setting it forth corresponds. Of this type of emotional figures the most representative are:

Exclamation; which is simply an outburst of wonder or exultation, generally expressed by an elliptical form of the sentence, in which the thought is not formally stated by an indicative verb, but held up, as it were, for contemplation and wonder. In case where the thought is stated in full grammatical structure there is intensity enough in the context to support the emotion, which then is indicated merely by the mark of exclamation (!). The utterance of the emotion is often aided also by interjectional words.

Examples.—Hamlet's expression of wonder at the greatness of man is a very pure example of the figure: "What a piece of work is a man! how noble in reason; how infinite in faculty; in form and moving how express and admirable! in action how like an angel! in apprehension how like a god!"—Simple as the figure is, the right use of exclamation is a delicate mark of literary skill. Especially, if the writer marks his emotion merely by an exclamation point, he must judge accurately if the emotional value of his context warrants it; and, if he ventures on the support of interjections, he needs to guard against giving the impression of forcing the emotional note.

Interrogation.—A figure used principally in oratory and animated argument, is the asking of a question, not in order to elicit an answer, but to imply strongly the opposite of what is asked. It connotes a conviction so strong that the truth of it cannot be gainsaid; it is thus a kind of challenge.

Examples.—In the following, from one of Burke's speeches, it can be felt how he is asking questionss not to get an answer, as if it were something to be investigated, but as indignantly challenging hi: hearers to make any other answer than is implied- "What! Gentlemen, was I not to foresee? or, foresee: ing was I not to endeavor to save you from all these multiplied mischiefs and disgraces? * * * Was I an Irishman on that day that I boldly withstood our pride? or on that day that I hung down my head, and wept in shame and silence over the humiliation of Great Britain? I became unpopular in England for the one, and in Ireland for the other. What then? What obligation lay on me to be popular?"

Apostrophe.—This figure is an address to some absent or distant object as if it were present and could hear and respond; it connotes the fervor of intense realization. Thus, with the connoted idea, is conveyed emotionally the beauty or pathos of the thought.

Examples.—In the following, Stevenson, filled with the vivid realization of the truth that men follow ceaselessly after vague ideals, and never attain them, breaks forth into this fervid address to them: "O toiling hands of mortals! O unwearied feet, travelling ye know not whither! Soon, soon, it seems to you, you must come forth on some conspicuous hilltop, and but a little way further, against the setting sun, descry the spires of El Dorado." The intensity of the apostrophe, it will be noted, is supported by exclamation. Note also the synecdoche, "toiling hands," "unwearied feet."

Figures of the Animus Type.—In this type, as in the previous, there is a degree of intensity in the emotion; but the controlling element is the *kind* or direction of the emotion: it reveals how the writer would have his reader feel, in a sense of sublimity or of humor or of the absurd, toward the idea thus set forth—in other words, a certain animus toward it.

Hyperbole.—This is simply overstatement: describing a thing in terms so beyond all reasonable or possible bounds that the reader cannot be misled into understanding it literally; he adjusts the statement to fact, rather, in the spirit of it.

Examples.—The figure hyperbole, which is essentially a descriptive figure, seems to have had an interesting history. In the old times men used hyperbole because they could not set bounds to their own imagination; as when the Hebrew spies, sent out to explore Canaan, reported that the cities of that land were "fortified up to heaven," and of the inhabitants: "we were in our own sight as grasshoppers, and so we were in their sight." Of a hostile army also it is said: "The children of the east lay along the valley like locusts for multitudes; and their camels were without number, and as the sand which is upon the sea-shore for multitude." (*R. V.*) In modern times, however, it is used rather to induce in the reader an unbounded imagination, describing in exaggerated terms so that he will not try to measure or to number, but

simply surrender himself to an impression; as when an old-fashioned table is described in Hawthorne as "exhibiting as many feet as a centipede," or as when, describing an astonishing run in a violin passage, a non-musical man averred that the performer played "more than a million notes."

One can produce much the same effect as in hyperbole by a studied *understatement*, an exaggeration in reverse; and this may be regarded as a kind of transition to the next figure.

Irony.—In this figure the writer's animus is so strong, and the real state of the case so obvious, that he says or assumes the exact opposite, in the certitude that his meaning will be taken as it is. It connotes various degrees of contempt, or resentment, or indignation, or ridicule. Being mainly a vituperative figure, it is best employed in a tone of playfulness and lightness, else the writer may injure his case by seeming morose and cynical.

Examples—When Job says to his friends, in whose arguments he had discovered a fallacy, "No doubt but ye are the people, and wisdom shall die with you," we can feel the contempt with which he estimates their mental powers and conclusions. When Macauley, describing a man whose character he detests, begins, "It may well be conceived that, at such a time, such a nature as that of Marlborough would riot in the very luxury of baseness," the word *luxury* apprises us that he is putting his conduct in ironical terms; and he goes on to say, "Lest his admirers should be able to say at the time of the Revolution he had betrayed his King from any other than selfish motives, he proceeded to betray his country." Here the animus is unrelieved by any lightness of touch; it is pure vituperation. Such handling of one's aversions does not make friends.

The figure *Irony* has many forms and degrees of intensity; giving rise to a whole class of kindred figures: from *Innuendo*, which conveys the ironical suggestion by light hints and touches; through *Satire*, which makes its way by the general ironical or disparaging tone of the writing, to *Sarcasm*, which lets loose its indignant animus in undisguised and scathing terms. On the whole, irony is a rather dangerous figure; if much employed, it is apt to react on the writer's own disposition, or at best to misrepresent his character, especially to unsubtle readers.

Examples of Mixture Good and Bad.—1. When Stevenson, speaking of certain suburban resorts in the vicinity of Edinburgh, says, "There are places that still smell of the plough in memory's nostrils," he is mixing three figures together: trope or metaphor (*smell*), metonymy (*plough*, for farm usages), and personification (*memory's nostrils*, as if memory were a person;) and all the figures are alive. 2. When, however, a rustic preacher says "the Gospel ship is sailing on, full-laden and well-rigged, and will continue to sail and prosper, because it is founded on a rock," he is using two figures that have had their day, and were both true; but the mixture of them makes an incongruous idea, the two members annulling each other.

DICTIONARY OF WORDS FREQUENTLY MISUSED

Americans are said to speak their own language with less correctness than do any other intelligent people in the world. Perhaps the reason is that we do things too rapidly to do them well; we are careless of our speech as we are careless of many things we do; we perhaps consider correct speech a trifle, being quite satisfied in our communications of thought with a crude approximation of our real meaning.

The general classes of errors made by people of ordinary intelligence are few, and if one cares, these may be readily corrected. If one wishes to use words correctly he must give attention to what he reads; he must read good things, and he must study the words as well as the thought. If one wishes to speak correctly he must give conscious daily attention to his own speech, and to the speech of others. A man's speech is judged by the worst he does—not by the best—so that one who realizes that his use of words is faulty will be saved from his errors only by constant attention to his regular and daily use of words, either in speech or writing. It is not a case of using words with correctness and effectiveness on occasion, but if one is to be prepared for the occasion, he must learn never to lapse into slovenliness. Any man who values correct speech, and is willing to pay the price of constant attention to his own speech, will soon make few errors.

Abbreviations.—Such abbreviations as *e'er*, *ne'er*, *o'er*, *e'en*, *'tis*, *'mid*, and *'neath*, are legitimate in verse, but should not be used in prose.

Ability, Capacity.—*Ability* is the power of doing; *capacity* the faculty of receiving. "The *ability* is in me to do him good." "Man's *capacities* have never been measured."

Abortive.—That is *abortive* which is premature, not brought to completion. A plan may be *abortive* but not an act. We may speak of an *abortive* effort.

About.—Not to be used as *almost*. "The day is *almost* gone," not "The day is *about* gone."

Above.—This word should not be used as an adjective; as, "The *above* statement." Say "The *foregoing* statement."

Accept, Except.—*Accept* means to take; *except* means to exclude. "I *accept* your terms." "A few were *excepted* from condemnation."

Administer.—Not to be used in the sense of *deal*. We *deal* blows; we *administer* medicine, oaths of office, and affairs of state.

Affect, Effect.—To *affect* means to influence or to pretend. To *effect* means to bring about. "He *affected* intoxication." "He *affected* the audience strongly." "I shall *effect* a reform."

Aggravate.—This word means to make worse or to increase in intensity. Do not say, "His conduct *aggravates* (annoys) me," but "The climate *aggravates* the disease."

Ain't.—This is illiterately employed as a contraction for *are not, am not, is not*. It should not be used.

Allow.—This word is frequently misused for *think*, as "I *allow* that I shall go to town." Say, "I *think* that," etc.

Alone, Only.—That is *alone* which is unaccompanied; that is *only* of which there is no other. "He suffered *alone*" means that no one was with him. "*Only* he *suffered*" means that no other person did.

Alternative.—This word should not be used when more than two things are referred to. Not to be used for *course*. "He had this *alternative* left him"—a choice between two.

Amateur.—Do not use the word to mean one new, or unskilled, at a business, a novice. An *amateur* is skilled in something he likes but does not pursue as a business, as "An *amateur* photographer."

Anxious.—The word does not mean desirous, but concerned or worried. "I am not *anxious* to live in the country" should be "I am not *desirous*." We may say, "I am *anxious* concerning your safety."

Anybody, Any one, Anything.—These words are singular, and should always be referred to by singular pronouns. "*Anybody* can do as *he* pleases." "*Any one* is at *his* best here."

Anybody else's, Anybody's else.—The predominance of usage seems to be in favor of the first form, which is correct according to analogy of similar cases, which "throw" the apostrophe and s to the last word of the unified expression, generally nouns in apposition.

Appreciate.—The word does not mean *prize at value*, but *to rate at its true value*. In such expressions as "I *appreciate* your services *highly*," the adverb is superfluous.

Apt, Likely, Liable.—*Apt* means fit; *likely* means probable; *liable*, unpleasant probability. "Such *apt* and gracious words." "We are all *likely* to make mistakes." "If he exposes himself to the weather, he is *liable* to contract a cold."

As—As, So—As.—Use the former in affirmative and the latter in negative propositions. "We are *as* wise *as* our teachers." "I am not *so* young *as* I used to be."

As I take it.—Better say "As I understand," or "As it seems to me."

As though is often used for *as if*. In the sentence "He walked *as though* he were lame," if the ellipsis is supplied the error will be evident. "He walked *as* (he would walk) *though* he were lame." *As though* is seldom correct.

At.—"Where are you *at?*" A common error, in which *at* is superfluous. Say "Where are you?"

Audience.—Do not use when you mean *spectators*. An *audience* listens; *spectators* see what occurs. The preacher had a good *audience*. There were many *spectators* at the ball game.

Avoid is often used for prevent. "He shall receive no pay if I can *avoid* it." Say, rather, "If I can *prevent* it."

Awful, Awfully.—Do not use these words as intensives or for supposed force. *Awful* should mean that which inspires awe. "The *awful* mysteries of the world unseen."

Bad, Badly.—*Bad* is not to be used for severe, as "I have a *bad* headache." *Badly* is also inelegantly used for very much, as "I need money *badly*."

Balance.—The word means the *excess of one thing over another*, and should not be used for *remainder* or *what is left*. We may say, "He has a large *balance* in the bank."

Been to.—Do not say "I have *been to* New York," for "I have *been in* (or *at*) New York." You cannot *be to* a place.

Beside, Besides.—*Beside* is a preposition; *besides* is an adverb. "The tree stands *beside* the house." "I have more *besides* this."

Between.—Should be used with reference to two things only. Not "*Between* us three," but "*Between* you and me."

Blame it on.—A vulgarism used to mean *accuse* or *suspect*. "He *blames it on me*," should be "He *accuses* (or *suspects*) me."

Both alike.—In such expressions as "They are *both alike*," "The two boys *both* have blue eyes," *both* should be omitted.

Bran new.—The correct form is *brand new*.

Bring, Fetch.—*Bring* means to convey to this point; *fetch* means to go and bring. "*Bring* me your books." "*Fetch* the racquets from the house."

Burgle.—The word is an entirely unauthorized form.

But what.—Do not use when you mean *but that*. "I know nothing *but what* you told me," is correct. "I do not doubt *but what* he will succeed," should be, "I do not doubt *but that*," etc.

Calculate.—Often vulgarly used for *think* or *suppose*. To *calculate* means to arrive at by a mathematical process. We *calculate* a result. We do not *calculate* that it will rain.

Caliber.—The word means the diameter of a body, especially of the hollow inside of a cylinder. Figuratively it means *capacity of mind*. "His work is of high *caliber*" should be "His work is of high *order*. "He has a mind of great *caliber*" is correct.

Can, May.—These two forms are often misused. *Can* suggests power or ability; *may*, permission. "*Can* I take your place?" means "Am *I able* to do it." "*May* I go with you?" requests *permission*.

Character, Reputation.—One's *character* is what one really is; one's *reputation* is what people think of one. We may have a good *character* and a poor *reputation*, and *vice versa*.

Claim.—Not to be used in the sense of *assert* or *affirm*. *Claim* means properly to demand as due. It is incorrect to say "He *claims* that he is your brother." We may correctly say "I *claim* my right."

Clerk.—Not a verb. Do not say "John *clerks* for Smith & Co.," but "He is a *clerk*," etc.

Co-ed.—An unauthorized expression used to mean a young woman in a coeducational institution.

Complected.—This word is generally misused for *complexioned*.

Condign.—Often used to mean *severe*, but properly means *worthy* or *deserved*, as "The criminal suffered *condign* (that is *deserved*) punishment.

Congregate together.—In such expressions as "A large crowd *congregated together*" the word *together* should be omitted. *Congregate* means *gather together*.

Continual, Continuous.—The former often means *frequently repeated*; the latter means *uninterrupted, without break*, and is the stronger word. Thus we may say that the flow of a stream is *continuous;* that the clanging of a bell is *continual;* that *continual* showers drenched the ground.

Convict, Convince.—*Convict* is always used of something wrong, and refers to one's outer condition; "The man was *convicted* of the crime." *Convince* refers to the inner judgment, and may be used of either right or wrong; as, "I am *convinced* that you are right."

Couple.—This word does not mean *two* merely, but *two things paired* together; as, "The young *couple* is living on the hill."

Credible, Creditable.—*Credible* means worthy of belief, as, "Dr. Cook's story is not *credible*." *Creditable* means *worthy*, as, "He made a *creditable* address."

Dandy.—As an adjective the word is overworked slang, and should be avoided.

Definite, Definitive.—*Definite* means *specific*; *definitive*, final. "A *definite* (that is, *specific*) answer was given, but it was not *definitive (final)*."

Demean.—This word is often incorrectly used for *bemean* (that is, *lower*), as "He *demeaned* himself by his careless actions." It properly means to *behave one's self*, as "He *demeaned* himself properly."

Depot, Station.—A *depot* is properly a place where goods or stores are kept. The place where a railway train stops for passengers may better be called a *station*.

Die with, from.—Invalids do not die *with*, nor *from* but *of*, a disease.

Differ from, with.—One thing differs *from* another in appearance; one person differs *with* another in opinion.

Directly.—Not to be used in the sense of *as soon as*. Do not say "*Directly* they came we left," but "We left *directly*" is correct.

Disremember.—Provincial for *forget*, and should not be used.

Donate.—An unauthorized formation from *donation*. Better say "Make a *donation*."

Don't for doesn't.—Don't is the plural contraction of *do not*, therefore such common expressions as "He *don't* live here," "She *don't* like to sing," etc., are ungrammatical.

Don't think.—Instead of saying "I *don't think* it will rain," it is better to say "I *think* it will *not* rain."

Double negative.—Double negatives in English are universally common but incorrect. Avoid such expressions as "I *didn't* know *nothing* about it;" "I *haven't never* been there," "I *haven't* had *but* one vacation in ten years."

Due, Owing.—That is *due* which ought to be paid; as, "The note is *due* next month." *Owing* is used in the sense of *on account of;* as, "It was *owing* to his daring that the insurrection was checked."

Dutch for German.—Do not say *Dutch* when you refer to *German*. *Dutch* refers to *Holland*.

Each.—*Each* is singular in number, and should be used with a singular noun and verb. Do not say "*Each* comes in *their* turn," but "*Each* comes in *his* turn;" not "*Each* man were singled out," but "*Each* man *was*," etc.

Elegant.—*Elegant* means *refined*, in *good taste*. A much misused and much overused word.

Elocute.—This form is not justified by good usage.

Else.—By preponderance of custom, when *else*, joined to *anybody, somebody, any one*, or *some one*, forms a possessive, the '*s* is added to *else*, as *somebody else's*. Many, however, prefer to write the form *somebody's else*.

Emigrant, Immigrant.—These two words are often confused. *Emigrants* are people going out of a country; *immigrants* are people coming into a country.

Endorse or **Indorse.**—Do not say "*Endorse* (or *indorse*) on the back of," for these words mean *to write upon the back of*. *Indorse* is the spelling now generally preferred.

Enjoy poor health.—This expression should be avoided; no one really enjoys poor health.

Enthuse.—A verbal form not authorized by good usage. Better say "*Arouse enthusiasm*."

Equally as well.—The *as* is not necessary; say "*Equally well*."

Every.—Be careful to see that a verb in the singular number follows. "*Every* man *was* at his post."

Every one, Everybody, Everything.—These words, being singular, should always be referred to by singular pronouns. "*Every one* should mind *his* own business." "*Everybody* has *his* troubles." "*Everything is* in *its* place."

Evidence, Testimony, Proof.—*Evidence* is anything that tends to convince; *testimony* is evidence given by witnesses; *proof* is whatever establishes the truth of a proposition.

Except, Unless.—*Except* is not to be used for *unless*. Do not say "*Except* I am delayed, I shall arrive at three," but "*Unless* I am delayed," etc.

Existing truths.—*Existing truths* should always be expressed in the present tense. Do not say "Galileo taught that the world *was* round," but "*is* round."

Expect.—*Expect* refers only to the future, and is not to be used for *think* or *suppose*. Do not say "I *expect* I was there;" "I *expect* you had a pleasant time yesterday."

Farther, Further.—*Farther* refers to *linear distance*. "We had gone *farther* than I supposed." *Further* measures quantity or degree as, "I shall speak *further* on the question."

Female.—Not correctly used for *woman*.

Few and **a few.**—These words are different in meaning. "*Few* persons like Mr. Jones" means that he is generally disliked. "*A few* persons like him" means some, and perhaps all who know him.

Firstly.—Not an approved form. *First* is both an adjective and an adverb.

First-rate.—Correctly used as an adjective. "He has a *first-rate* place." but not "He did *first-rate*."

Fix.—Be sure that you intend to convey the idea of fastening firmly when you use *fix*. It should not be used to mean *repair, arrange*, or *set up*. "He stopped to *fix* the machine" is an error.

Former, Latter.—The less a writer uses these words the better, unless they are followed by a noun, as "the *former* rule" or "the *latter* member."

For to.—Do not say "I went *for to* see the show." *For* is superfluous.

Funny.—The word should not be used to mean *strange* or *curious*.

Gent.—This word should never be used.

Gesture.—Not to be used as a verb. Do not say "The speaker *gestured* frequently." Say, rather, "*gesticulated*."

Get.—Strictly, *get* means to obtain by voluntary effort. It does not signify mere possession. Do not say "I haven't *got* a cent," but "I haven't a cent." *Got* is also preferred by good writers to *gotten* in such expressions as "When he had *gotten* over his illness."

Get over.—Often incorrectly used for *survive* or to *recover*, as "He *got over* the disease," or "*to get over* a fact," meaning to *refute* it.

Get to go.—This expression is common in some parts of the country but should be avoided. Say "I was unable to go," or "I was prevented from going" rather than "I didn't *get to go*."

Good deal, great deal.—Perfectly correct expressions. "I have walked a *great deal*." "The boy liked school a *good deal* better than play."

Good, Well.—*Good* should not be used as an adverb. Do not say "You sang *good*," "Did you sleep *good* last night?" In these cases *well* should be used.

Guess.—*Guess* is commonly used in the United States to mean *think*, as in "I *guess* you are right" for "I *think*," etc.

Had ought.—Provincial and incorrect. *Had* or any form of the verb *to have* cannot correctly be used as an auxiliary with *ought*. Use *should* or *ought not*. Not "He *hadn't ought* to have gone," but "He *should not* have gone."

Hain't.—A vulgarism. There is no such contraction for *have not* or *has not*.

Hang, Hanged.—The verb *hang* has two forms for the past participle, *hanged* and *hung*. *Hanged* is used for persons; *hung* for other objects. "The man was *hanged*." "The coat was *hung* on the rack."

Have got.—See *get*.

Healthy, Healthful.—That is *healthy* which is in good health; that is *healthful* which promotes health. "The family was in a *healthy* condition, because they had been living on *healthful* food."

How.—*How* is not to be used for *what* nor for "*What did you say?*"

Human.—Not to be used as a noun. Do not say "The house was not fit for *humans* to live in," but "The house was not fit for *human beings* to live in.

Ideal.—Not to be used in the sense of *perfect* or *beautiful*; it properly means *that which exists in idea only*. "His *ideals* are high."

If I was.—Use the subjunctive in all cases where the conditions are contrary to fact. "If I *were* you, I should go." "If I *were* a man, I should practice law." I am not you, and I am not a man. Use the indicative in cases of uncertainty. "If I *was* in town that day, I did not see you." I am uncertain as to whether I was or not.

Illy.—Should be avoided; *ill* is the proper word, both as adjective and adverb. "He did the work very *ill*."

In, Into.—Use *in* to signify rest in a place; use *into* to signify motion toward a place. "He was standing with his hands *in* his pockets." "I put my hands *into* my pockets." "I came *in* an automobile." "The stranger walked *into* the room."

Inaugurate.—The word means to *induct into office* or to make a *ceremonious beginning*. It is not to be used for the simple things of life.

Individual.—The word should not be used in the mere sense of *person*. The word is correctly used in "Changes both in *individuals* and in communities."

Infinitive, cleft.—The *cleft* or *split infinitive* (that is, the *infinitive* with an adverb between the two parts) is avoided by careful writers. Do not say "He was in a position *to accurately observe* the proceedings," but "*accurately to observe*," or "*to observe* the proceedings *accurately*."

Initiate.—The word ought not to be used simply for begin. The word suggests ceremonious form; as, "The candidates were *initiated* into the lodge."

In our midst.—The possessive case is not to be used, but rather a construction with of; as, "*in the midst of us*."

Invite.—Not to be used as a noun. Do not say "I received an *invite*," but "I received an *invitation*."

Kind of a.—The "*a*" is superfluous.

Lady.—This word is not to be used for *wife*, or to mean simply *woman*.

Learn, Teach.—These words are often vulgarly misused. *To learn* is to receive instruction; *to teach* is to give instruction. "I can *learn* if you will *teach* me," is correct.

Lend.—*Lend* is a verb; *loan* a noun. I *lend* a man a dollar, and he receives the *loan*.

Less, Fewer.—*Less* has to do with *amount* or *quantity*, and *fewer* with numbers. "He had *less* money and *fewer* clothes than he needed."

Let requires the objective case. "*Let him* and *me* go," not "Let *he* and *I*."

Liable.—See *Apt*.

Lie, Lay.—By a vulgar error these verbs have been so confounded as to deserve some notice. *To lie* is neuter, and designates a state: *to lay* is active, and denotes an action on an object; it is properly to cause *to lie*. "A thing *lies* on the table;" "Some one *lays* it on the table." "He *lies* with his fathers;" "They *laid* him with his fathers." In the same manner, when used idiomatically, we say, "A thing *lies* by us until we bring it into use;" "We *lay* it by for some future purpose."

The confusion arises probably from the fact that *lay* appears in both verbs. The words are correctly used in the following sentences:

I *lay* myself upon the bed (action). I *lie* upon the bed (rest).

I *laid* myself upon the bed (action). I *lay* upon the bed (rest).

I *have laid* myself upon the bed (action). I *have lain* upon the bed (rest).

A hen *lays* an egg (action). A ship *lies* at the wharf (rest).

The murdered Lincoln *lay* in state (rest); The people *laid* the crime upon the rebels (action).

Like. As.—*Like* has a prepositional use, but *as* is a conjunction. Do not say "It looks *like* it was caused by fire," but "It looks *as if*," etc. The following are correct: "My brother looks *like* me." "He acted *as if* he were insane." "Do it *as* I do."

Likely.—See *Apt*.

Limb.—Do not use *limb* when you mean *leg*. *Limb* may be applied to any member, and it is not more modest than *leg*. "The woman had her *leg* broken."

Lit.—Not to be used for *lighted*. Instead of saying "He *lit* the gas," say "He *lighted* the gas." Do not say "He *lit* on his feet," but he *lighted* on his feet."

Locate.—This word should not be used in the sense of *settle*. It is used transitively to mean to *fix* or *place in a position;* as, "He *located* a claim."

Lot, Lots.—Very inelegantly used for *a great many, a great deal;* as, "He had a *lot* of money left him;" "She looks a *lot* like her brother." The word means *a distinct part or portion*. "He divided his goods into *lots*."

Lunch.—An authorized form both as noun and verb, but not considered so elegant as a noun as *luncheon*.

Mad.—Should not be used for *angry*.

Mail man.—An inelegant form for *postman*.

Me being.—Do not say, "He did not know of *me being* there." The possessive case is required. "He did not know of *my being* there." "There is little chance of *his winning* the game."

Monstrous.—*Monstrous* means *abnormal* or *deformed*. Not to be used for *large* or *immense;* as, "It was a *monstrous* gathering."

Most.—Not to be used for *almost;* as "He is here *most* every day."

Mutual.—Does not mean *common*, but *reciprocal*. "We may have a *common* friend, but a *mutual* dislike;" that is, a dislike for each other.

Myself.—Not to be used for *I*. Do not say "John and *myself* are friends;" but "John and *I*," etc.

Near.—Not to be used for *nearly*. Say "He was not *nearly* so unselfish as his brother," instead of "not *near* so unselfish," etc.

Nearby.—Should not be used as an adjective. We may say "The house is *nearby*," but not "A *nearby* house."

New beginner.—Omit the *new*; all beginners are *new*.

Nice.—A very generally misused word. Properly *nice* means *delicate, discriminating, fastidious*. The works of a watch show *nice* construction; a man may be *nice* in his manners. The word should not be used to mean *agreeable* or *charming*, as "I had a *nice* time."

Nicely.—Do not use *nicely* for *well*, as "The sick man is doing *nicely*."

Not as I know of.—Incorrectly used for *not that I know of*.

Notorious.—Implies some *bad* or *doubtful quality;* as, "He has a *notorious* reputation." Here his reputation is *not good*.

Noways.—Incorrectly used for *nowise*. Say "He was *nowise* to blame."

Of all others.—Do not say "He is the last one *of all others* you would expect it of." He could not be one of the *others*.

Off of.—Ordinarily *of* is superfluous. Say "The man fell *off* the roof," not "*off of*."

Only.—This word is often misplaced. Properly it should immediately precede the word or expression which it limits. Say "I have *only* three dollars;" "She sang *only* for us;" not "I *only* have" and "She *only* sang." "She *only* sang" would mean she did nothing else but sing.

Onto.—We get *on* a horse and *on* a chair, not *onto*.

Orate.—An unauthorized form commonly used to mean *to give an oration*.

Over.—Do not use *over* in the sense of *more than;* as, "I have *over* a hundred dollars;" "The stick is *over* a yard long."

Pants.—The word is a vulgar abbreviation for *pantaloons*, and should not be used.

Pardner.—Often incorrectly used for *partner*.

Partake.—One cannot *partake* of a meal alone. *Partake* means to *take* or *share* with another.

Partially.—The word is sometimes used in the sense of *partly;* as, "I have only *partially* examined it." It also means *with partiality*.

Party.—*Party* means a *group of people*, not a *single person*. Do not say "The *party* you sent to me," when you mean the *person*.

Patron.—A *patron* is one who shows *consideration* or *favor*. A charity ball may have *patrons*. Not to be used for *customer*.

Pellmell.—*Pellmell* means *mixed* or *mingled together*. The term cannot properly be applied to an individual. "He rushed *pellmell* out of the house" is obviously impossible.

Per.—*Per* day, *per* man, *per* pound, are better expressed by the plain English *a* day, *a* man, *a* pound. The word should be used only with Latin nouns, as *per diem, per annum*.

Photo.—Not to be used as an abbreviation for *photograph*.

Pled.—Not to be used for *pleaded*. Say "He *pleaded* for a pardon," "He *pleaded* for his friend."

Posted.—Not to be used in the sense of *informed*, as "He is a well *posted* man," "If I had been better *posted*."

Prejudiced.—*Prejudice* is an *unfavorable bias*; we cannot, therefore, be *prejudiced in favor* of anything. In such a case we should use *prepossessed*.

Presume.—Not to be used for *think* or *believe*. Do not say "I *presume* he is right," but "I *think* or *believe*."
Preventative.—Wrongly used for *preventive*.
Privilege, Right.—A *privilege* is a special advantage granted for conceded; a *right* is one's due. We grant *privileges*, but we claim *rights*.
Propose, Purpose.—*Propose* means to put forward for discussion or consideration; *purpose* means to intend. "I *purpose* going to town to *propose* a plan to my business partner."
Purchase.—Sometimes used pretentiously when *buy* would be better.
Quite.—To be used in the sense of *fully, completely*, as, "I am *quite* satisfied." Do not say, "There was *quite* a crowd," "I have *quite* a few friends."
Raise.—Often misused for *rear* or *bring up*. We *raise* chickens, but we *rear* children.
Real.—Not to be used adverbially in the sense of *very*, as "I am *real* tired. Say "I am *really* tired," or "*very* tired."
Reckon.—Provincial for *think*. "I *reckon* he will come soon." Say "I *think*" or "I *believe*."
Recommend.—Not to be used as a noun; as, "The teacher gave him a good *recommend*." *Recommendation* is the proper word.
Referee.—Not to be used as a verb. "The man acted as *referee*" is correct, but not "He *refereed* the game."
Replace.—To replace an object is *to restore it to its place*. Not used in the sense of *take the place of*.
Resurrect.—A colloquial word not to be used in writing.
Retire.—It is better to avoid the use of *retire* in the sense of *go to bed*.
Reverend.—As a title not to be used without *the*. "*The Reverend* Mr. Brown," not "*Reverend Brown*."
Set, Sit.—These verbs, like *lie* and *lay*, are often confounded in their use. *To set* is both transitive and intransitive; *to sit* is intransitive. "I *set* the hen, but she *sits* on her eggs." Incorrectly we speak of a *setting* hen instead of a *sitting* hen.

Christ came "*sitting* upon an ass," and, therefore, his disciples took a colt and "they *set* him thereon." The verb is correctly used in these sentences: "My dress *sits* well;" "We will *sit* up," that is, will not go to bed; "Congress *sits*." "We *set down* figures," but "We *sit down* on the ground."

We *set* a post, *set* glass, *set* milk, *set* the sails, *set* a bone, *set* a clock, *set* a price, *set* jewels, *set* an example.

The sun *sets*, one *sets* out, the current *sets* to the north; one *sets* forward, *sets* forth, *sets* off; Winter *sets* in.
Shall and Will.—These two forms are perhaps more commonly misused than are any other words in English. The rules with regard to the use of these words are as follows:

In declarative sentences, *shall* is used in the first person and *will* in the second and third persons to express simple futurity, as "I *shall* come"; "You *will* come"; "He *will* come."

In questions, however, *shall* is used rather than *will* in the second person to indicate simple futurity, as, "*Shall* you come?" In the first and third person, *will* is the proper word; as, "*Will* I come?" "*Will* he come?" To say "*Shall* I come?" would be to ask permission to come. "Shall he come?" would be a request that he be allowed to come.

In other cases *shall* and *will* express purpose or determination on the part of the speaker—*will* in the first person, and *shall* in the second and third.
Should and Would in general follow the same laws as *shall* and *will*.

In clauses expressing a condition, *should* is used in all three persons. "If I *should* try, I *should* succeed." "If he *should* come, he *would* meet you." (Here *should* expresses a condition.) *Should* is also used in all three persons to express a sense of duty. "I *should* (he *should*) come home early." (*Should* here expresses duty.) *Would* is also sometimes used to express a customary action; as, "He *would* come up to the window and look out." (*Would* here expresses habit or customary action.)
Sleeper.—Very generally misused for *sleeping car*.
Some.—Often misused for *somewhat*. "I am *some* tired this evening." Say "I am *somewhat* tired," etc.
Speciality.—An erroneous writing of *specialty*.
Splendid.—The word properly means *brilliant*. It should not be used for what is only *ordinarily good* or *commonplace*.
Stop.—Wrongly used for *stay*. We *stop* at the roadside; we *stay* with a friend or at a hotel.
Suicide.—Should not be used as a verb; as, "The prisoner *suicided* in the jail."
Sunday.—Not to be used as a verb. Say "He spent *Sunday* at home," not "He *Sundayed* at home."
Sure.—*Sure* is frequently misused for *surely*. "He will be here *sure*." Say, rather, "He will *surely* be here."
Suspicion.—Not a verb. Use instead *suspect*. "I *suspected* the truth of his statements."
That for So.—Instead of "He was *that* independent he would not speak," say "He was *so* independent."
Then.—Not an adjective. Do not say "the *then* president."
Thence.—Remember not to use *from* with this word. *Thence* means *from that place*. "He departed *thence* at noon."
These kind, Those sort.—*Kind* and *sort* are singular nouns, and should be modified by singular adjectives. Say "*this kind*," "*that sort*."
Through.—Often misused in the sense of *finished* "I am *through* with my breakfast" instead of "I have *finished* my breakfast."
Thusly.—An unauthorized form for *thus*.
Transpire.—*Transpire* properly means *to leak out, to become known*. It should not be used for *happen*. "It *transpires* that the couple had been married for a year" is correct.
Try and.—Do not use "*try and*" for "*try to*." Say "*try to come*," not "*try and come*."
Two first, two last.—Say "the *first two*," "the *last two*" rather than "the *two first*" or "the *two last*."
Unbeknown.—Not to be used for *unknown*.
Unique.—*Unique* means the only one of its kind. We cannot say, then, "*very unique*."
Use to.—Properly *used to*. There are many inelegant forms of this verb. Do not say "I *use* to"; "Didn't you *use* to?" "You *usen't* to."
Verbal.—Misused for *oral*. "He would not trust himself to write her a note, but sent her a verbal (should be *oral*) message."
Vocation.—A man's *vocation* is his calling, his regular business. His *avocation* is something outside of his business with which he occupies himself incidentally. My friend's *vocation* is the practice of law; his *avocation* is photography. Still, while *avocation*, in the sense of *vocation*, is usually avoided by good writers, such use has some sanction of authority.
Want, Need.—*Want* expresses both the desire for a thing and the fact that the thing is lacking; *need* expresses the necessity of having a thing. A man may *want* an automobile, though he may not *need* one.
Wa'n't.—Not to be used as a contraction for *was not* or *were not*.
Ways.—Often incorrectly used for *way*. Instead of "I walked a long *ways* with her" say "I walked a long *way*."
Whatsomever.—An unauthorized form for *whatsoever*.
While.—Often incorrectly used for *although* or *and*, as "*While* I believe you are honest, I cannot vote for you." *While* properly means *during the time that*, as "*While* I was musing the fire burned."
Widow woman.—The word *woman* is superfluous in this expression, as all widows are women.
Without, Unless.—*Without* is a preposition, and should not be used to take the place of the connective *unless*. "I shall not go *without* my father consents," should read "*unless* my father consents," or "*without* my father's consent."
Worse.—Not to be used for *more*. We do not dislike one thing *worse* but *more* than another.
Worst kind, worst way.—Vulgarisms used in the sense of *very much*.

BOOKS OF THE BIBLE ANALYZED

BOOKS OF THE OLD TESTAMENT

PENTATEUCH

Genesis. Account of creation, early history of the human race, and story of the patriarchs.
Exodus. Account of the exodus and the giving of the moral law by Moses.
Leviticus. Development of the nation and institution of priestly law.
Numbers. Further development and institution of social and political law.
Deuteronomy. Recapitulation of history and law.

HISTORIC BOOKS

Joshua. Conquest of Canaan, and separation of the tribes.
Judges. History of Israel under the administration of thirteen Judges.
Ruth. An Idyll of Jewish life in the period of the judges.
Samuel. Establishment of the kingdom under Saul and David.
Kings. Political history of the kingdoms of Judah and Israel.
Chronicles. Priestly history of the kingdoms of Judah and Israel.
Ezra. Continuation of Chronicles. Priestly restoration after the captivity.
Nehemiah. Continuation of Ezra. The political restoration.
Esther. A story of the Hebrew captivity.

POETRY

Job. A drama of the soul.
Psalms. Book of hymns.
Songs of Solomon. Hebrew pastoral poems.

DANIEL

From *The Prophets*, on the ceiling of the Sistine Chapel, Vatican. Painted by Michelangelo.

DIDACTIC POETRY OR BOOKS OF WISDOM

Proverbs. Practical moral maxims.
Ecclesiastes. Practical moral reflections.

MAJOR PROPHETS

Isaiah. The Messianic prophet.
Jeremiah. The prophet of sorrow.
Ezekiel. The priestly prophet.
Daniel. The apocalyptic prophet.

MINOR PROPHETS

1. Hosea.
2. Joel.
3. Amos.
4. Obediah.
5. Jonah.
6. Micah.
7. Nahum.
8. Habakkuk.
9. Zephaniah.
10. Haggai.
11. Zechariah.
12. Malachi.

BOOKS OF THE NEW TESTAMENT

Biography. Life of Christ as found in the four gospels, Matthew, Mark, Luke, John.
Historical. History of the Apostolic Church as given in the Acts of the Apostles.
Epistles. Continuation of the history of the Apostolic Church as given in the

LIBRARIES

Libraries existed in early Egypt and Assyria, the records of those days being inscribed on bricks of clay and stone. Later came the use of papyrus and parchment, making the keeping of records a simpler matter. The earliest libraries were generally attached to the temples, for but few except the priests were well enough educated to write and read. The scribes were a recognized part of the ecclesiastical organization. By far the most celebrated library of antiquity was the Alexandrian. Some of the great rulers maintained libraries of their own. By the time that the Roman Empire was flourishing, there were a number of libraries established by various emperors, and wealthy Romans like Cicero also maintained private libraries.

Charlemagne encouraged the founding of libraries in the eighth century and there was a continuous growth of the monastery collections. But until the discovery of printing from movable types all books had to be laboriously hand-lettered and reading was not a common accomplishment. Books were so valuable that many of them were chained to the desks and shelves in the libraries of state, or in religious houses, and the Laurentian Library in Florence still maintains one room in which the manuscripts are chained to their desks in order to illustrate the method by which the library once kept all its treasures. With the invention of printing books became cheap enough for the common man to possess them and reading grew to be a more universal accomplishment. Gradually the great state and ecclesiastical libraries opened their doors to students. The universities grew apart from the supervision of priests and established their own secular libraries. As early as the twelfth century the Moors had seventy public libraries, of which that of Cordova contained 250,000 volumes. But, although Pisistratus is credited with the honor of introducing a public library at Athens about 337 B.C., it must be remembered that only free citizens could use such an institution, and that much of the population consisted of bondsmen and slaves. The early public libraries were reference collections and open only to the few who qualified.

The early libraries in the United States were privately owned. In 1731, Benjamin Franklin founded the first public library, to which anybody might belong upon payment of a small annual fee. The modern idea of a public library, supported by general taxes and open free to all people, with lending privileges for all residents of the district who can show their reliability by having a guarantor, or similar method, is virtually a development that has come since 1876. When it is realized that the first free public library was established in 1833 in Peterborough, New Hampshire, and that it was two years later before New York and Michigan became the pioneers in arranging for state authorization of taxes to support public libraries, the growth of library work in its first century is recognized as phenomenal. A number of the larger American libraries were originally private collections. The New York Public Library, for instance, is a combination of the Astor, Lenox and Tilden private collections, to which there are annual additions from private funds and from taxes. Many of the great libraries of the world are reference libraries, but European cities, like American ones, are increasing the number and scope of municipal free libraries from which people may borrow books for home use, as well as consult the reference sections.

Specialized work is constantly increasing the usefulness of the library. There are training schools in which students may prepare themselves for various forms of librarianship. Libraries maintain separate rooms for children's use; have collections of books with raised type for the blind; keep separate collections of music and art; gather data for business and technological workers, and frequently have lecture rooms in connection with their buildings. Library service reaches those in penal institutions, in asylums and hospitals;

it supplies books in various languages for the foreign-born, and installs graded collections of suitable books for use in schools.

In the larger cities the main library establishes branches in outlying districts. It frequently puts small collections into industrial establishments for the use of those employed there. Traveling libraries are sent into rural districts under state and county supervision. In some instances a motor bus carries books and a traveling librarian from place to place. Books may be borrowed and retained until the wagon again makes its rounds. The library extension service in Alberta, Canada, reaches the workers on the Mackenzie River, beyond the Arctic Circle, sending books by canoe and dog sled over a spring and by the same means of transportation getting back the volumes sent the previous year.

Although the number of books in a library is but a partial index of its size, since many contain manuscripts and other data of great value besides the bound books, the table below shows the libraries housing over a million books each.

THE FRENCH ACADEMY

Cardinal Richelieu, Secretary of War and Foreign Affairs to King Louis XIII of France, was the founder of the French Academy. It was in 1635 that he called together some of the most distinguished writers of his day and suggested their forming an association that would have for its objects the development and purification of the French language. To this end the group undertook the publication of a great dictionary that has been revised several times in the course of the succeeding centuries. The membership of the Academy numbered forty and on the death of any member, those remaining elected his successor, so that it has been self-continuing. The members are often called the "immortals." During the French revolution the society was suppressed, but it was renewed in 1795 as a branch of the newly-created Institute of France. The Academy controls several trust funds out of which it grants prizes for literary work that is also of moral worth. Included in the membership are great authors, editors, statesmen, and military leaders of their day.

Great Libraries

Library	City	No. of Vols.
National Public Library	Leningrad	4,566,600
National Library	Paris	4,000,000
Library of Congress	Washington	3,907,400
Public Lenin Library	Moscow	3,500,000
New York Public Library	New York	3,295,400
British Museum	London	3,000,000
Harvard University	Cambridge, Mass.	2,988,000
Prussian State Library	Berlin	2,128,700
Yale University	New Haven	1,922,200
Chicago Public Library	Chicago	1,745,600
Bavarian State Library	Munich	1,500,000
Boston Public Library	Boston	1,442,800
University and Regional Library	Strasbourg	1,300,000
Bodleian	Oxford	1,250,000
National Library	Vienna	1,200,000

III. CULINARY WORDS AND PHRASES

agneau (*ä-nyō*). Lamb.

à la (*ä lä*), **au** (*ō*), **aux** (*ō*). With; according to; after the manner of; as *huitres aux champignons*, oysters with mushrooms.

If a dish is cooked, or served, or made, with anything as an ingredient or garnish, the dish may be said to be "*à la*" that substance. So it may be possible to ascertain the meaning of phrases not given below by looking elsewhere in the vocabulary under the word used with the words "*à la*."

à la béarnaise (*ä lä bā-ärn-nāz'*). With a sauce of tarragon vinegar in which shallots have been boiled till it is reduced, then combined with egg yolks and butter, and beaten in a bain marie, then seasoned with red pepper and lemon juice.

à la béchamel (*ä lä bā-shä-mel'*). After the fashion of Béchamel (a French gastronomer); said of a sauce (see Béchamel); also prepared or served with this sauce.

à la Bercy (*ä lä bâr-sē'*). Served with béarnaise sauce, stuffed green pepper and stuffed tomato.

à la bigarade (*ä lä bē-gä-räd'*). Flavored with (Seville) orange juice or peel.

à la bonne femme (*ä lä bôn fäm*). Of, or in the style of, the housewife; specifically said of a kind of maigre soup made with fish, bouillon, legumes, and an assortment of vegetables.

à la bordelaise (*ä lä bôr-de-lāz'*). With Bordeaux wine; said of various preparations containing it; as of a sauce, with garlic, shallots, or onions, chopped mushrooms, and a piece of marrow; also with sauce à la bordelaise.

à la bourguignotte (*ä lä boor-gē-nyot*). Generally, prepared with the addition of red wine of Burgundy, or of Bordeaux, or of the Midi (*i. e.*, meridional provinces of France). At Bordeaux, or when made elsewhere with Gironde wine, the dish would be *à la bordelaise*.

à la caledo'nion (*ä lä*). Boiled slowly in plain water and then baked with dressing of butter, chopped parsley, and a little lemon juice; said of finnan haddie when so cooked.

à la Camerani (*ä lä kä-mā-rä' nē*). After the fashion of Camerani; said of a kind of rich chicken-liver soup.

à la Chateaubriand (*ä lä shä-tō-brē-äN'*). With maître d'hôtel butter.

à la chevreuil (*ä lä she-vrú'y'*). Served with a savory sauce; said of fillets of beef.

à la chipolata (*ä lä chē-pō-lä'tä*). Containing an addition of the strongly flavored Italian sausages, or the mince with which they are filled.

à la chiffonade (*ä lä shē-fo-näd'*). See chiffonade.

à la cocotte (*ä lä kō-kot'*). Baked (as eggs) in a cocotte, with butter and cream, or with cheese, or the like, and served in the cocotte.

à la crapaudine (*ä lä krä-pō-dēn'*). Like a crapaudine (the flat piece of iron on which a grate pivot rests); said of grilled chicken, pigeon, etc., when prepared by boning, removing the legs and wings, and pressing flat.

à la Créole (*ä lä krā-ōl*). With tomatoes.

à la Croissy (*ä lä krwä-sē'*). Containing carrots in quantity, or at least strongly flavored with them; said specifically of a purée of onions, carrots, turnips, and parsnips stewed in coulis. According to others, containing turnips in quantity, or strongly flavored with them.

à la daube (*ä lä dōb*). Stewed in daube; said specifically of dishes cooked with small square pieces of salt pork, the round slices of carrots, glaced onions, and turnips.

à la Dauphiné (*ä lä dō-fē-nā'*). With various vegetables, spinach, lettuce, leek, onions, sorrel, beets, etc.; said of a kind of soup.

à la Dauphinoise (*ä lä dō-fē-nwäz'*). Generally, sauced over with a thick sauce (or with egg yolk), bread-crumbed, and then fried.

à la diable (*ä lä dē-ä'bl*). Deviled.

à la financière (*ä lä fē-näN-syär'*). With extract of truffles (literally, after the style of a financier); said of a variety of espagnole sauce, and of dishes served with it.

à la Flamande (*ä lä flä-mäNd'*). Containing cabbage, but more particularly Brussels sprouts, and, usually, turnips and carrots cut in big slices.

à la Florentine (*ä lä flō-räN-tēn'*). See à l'Italienne.

à la Génevoise (*ä lä zhä-ne-vwäz'*). Cooked with champagne; said of certain dishes of fish.

à la godiveau (*ä lä gō-dē-vō'*). With balls made of mincemeat, usually of veal.

à la Holstein (*ä lä hōl'stin*). Fried, and served with a fried egg, sardelles, capers, pickled beets, and pickles, and sometimes scraped horse-radish.

à la jardinière (*ä lä' zhär-dē-nyär'*). Made with a typical collection of cooked vegetables, as soups, ragoûts, and removes. See jardinière.

à la julienne (*ä lä zhü-lyen'*). With various vegetables sliced in strips, as carrots, turnips, leeks, onions, celery, lettuce, tarragon, sorrel; said especially of a kind of rich stock soup. Also said of potatoes cut in very slender strips and fried crisp floating in hot fat.

à l'Algérienne (*ä läl-zhā-rē-en'*). Cooked with slices of raw ham; said of a preparation of fowl.

à la Languedoc (*ä lä läNg-dok'*). Cooked with or in olive oil; with olive oil.

à l'Allemande (*ä läl-mäNd'*). Having a German provincial peculiarity of preparation, as a garnish of sauerkraut, prunes stewed in wine, quenelles of potatoes, etc.

à la Loren'zo (*ä lä*). Made of minced crab meat, put on toast spread with anchovy paste, then all covered with parmesan cheese and bread crumbs, buttered, browned in the oven, and served.

à l'Alsacienne (*ä läl-sä-syen'*). With pork and frankfurters; also with onions and pork.

à la lyonnaise (*ä lä lē-ô-nāz'*). With flaked or sliced fried onions; as, potatoes *à la lyonnaise*, or lyonnaise potatoes; sauce *à la lyonnaise*, or Lyons sauce, that is, espagnole sauce with flaked onions fried in oil.

à la macedoine (*ä lä mä-sä-dwän'*). Made with or of a typical collection of *green* vegetables, mostly in white sauce; also applied to collections of ripe fruit imbedded in jellies, etc.

à la Maintenon (*ä lä maN-te-nôN'*). A term variously used to designate a mode of cooking mutton or lamb chops; as, (*a*) wrapped in caul; (*b*) garnished with cockscombs and truffles; (*c*) served with a soubise; (*d*) served with financière sauce; (*e*) served with d'Uxelles sauce, etc.

à la maître d'hôtel (*ä lä mä'tr dō-tel'*). Prepared by a substantial, and homely, modest sort of cooking. Also served with maître d'hôtel butter.

à la Marengo (*ä lä mä-ren'gō*). With some garlic and oil.

à la Marseillaise (*ä lä mär-se-lāz'*). With Marsala wine.

à la Maryland (*ä lä*). With a sauce of butter and cream, with or without wine. It is like à la Newburgh, but less rich.

à la Meyerbeer (*ä lä mī-ûr-bâr'*). Shirred and served with broiled kidney and truffle sauce; said of eggs.

à la Milanaise (*ä lä mē-lä-nāz'*). See à l'Italienne.

à la mode de Caën (*ä lä mōd de käN*). A term used to designate tripe prepared with vegetables, leeks, wine, cognac, etc.

à la Napolitaine (*ä lä nä-pō-lē-tän'*). See à l'Italienne.

à la neige (*ä lä nāzh'*). In some form that suggests snow, as with white-of-egg froth, or in balls of white boiled rice, or the like.

à la New'burgh (*ä lä*). With a sauce made of cream, egg yolks, Maderia or sherry wine, and butter shaken in a dish over a slow fire until they thicken. Said also of this sauce.

à la nivernaise (*ä lä nē-vâr-nāz'*). Containing a nivernaise; said of a kind of soup à la julienne. See nivernaise.

à la Normande (*ä lä nôr-mäNd'*). Generally, with apples in the composition of the dish in some shape or other.

à la Périgord (*ä lä pā-rē-gôr'*). Flavored with, or consisting of, truffles—alluding to the circumstances that these mushrooms grow of excellent size and quality in the province of Périgord.

à la Polonaise (*ä lä pō-lō-nāz'*). Having red beets or red cabbage, so as to have their juice, color, and taste; as Polish ragoût, or borsh, which is the type of dishes *à la Polonaise*.

à la poulette (*ä lä poo-let'*). With white velouté sauce.

à la printanière (*ä lä praN-tä-nyâr'*). Made with a typical collection of cooked *early* or *spring* vegetables; of a somewhat wider application than à la jardinière.

à la Provencale (*ä lä prō-väN-säl'*). Generally, prepared with more or less of olive oil, and flavored with garlic.

à la Reine (*ä lä rän*). Of, or after the style of, the queen; said specifically of a kind of chicken soup [*potage à la reine*, (*pō-täzh' ä lä rän*)] containing white meat of chicken pounded and rubbed to a powder.

à la Ro'land (*ä lä*). Made of minced lobster meat in the same manner as *à la Lorenzo* dishes of crab meat. See à la Lorenzo.

à la Saint Cloud (*ä lä saN'kloo*). With sliced truffles; said of a kind of velouté sauce.

à la serviette (*ä lä ser-vyet*). Served in or on a napkin, as braised truffles.

à la Soubise (*ä lä soo-bēz'*). Generally containing onions in quantity; or, at least, strongly garnished and flavored with them; especially, served with a white onion sauce used with lamb or mutton.

à la tartare (*ä lä tär-tär'*). With tartare sauce, or a sauce of similar ingredients. Also, said of a steak chopped and garnished with onions, pickles, pickled beets sardelles, and yolk of egg, to be eaten raw.

à la turque (*ä lä türk*). Shirred and served with chicken livers and mushrooms; said of eggs. Also boiled with rice and saffron; said of chicken.

à l'Aurore (*ä lō-rôr'*). With a pink sauce made by coloring velouté sauce with lobster coral or Armenian bole. Also said of sliced hard-boiled eggs put in a dish, covered with velouté, sprinkled with grated egg yolk, and baked.

à la vert pré (*ä lä vâr prā*). Colored green with vegetables, as with a purée of spinach.

à la Viennoise (*ä lä vyä-nwäz'*). Applied to dishes usually and typically prepared in the Austrian capital, such as the dumplings termed nockerlin, quenelles of potatoes, and others.

à la Villeroi (*ä lä vēl-rwä'*). With atelets sauce. Also, said of a poached egg put in a thick white sauce, then covered with egg yolk and bread crumbs, and fried.

à la vinaigrette (*ä lä vē-nē-gret'*). With vinaigrette sauce.

à l'espagnole (*ä lä-spä-nyōl'*). Made savory with espangole sauce; specifically, served with a garnish of onions, garlic, green peppers, mushrooms, tomatoes, and minced ham cooked together, and bound with espagnole sauce.

à l'huile (*ä-lwēl*). In olive oil; with olive oil dressing.

Alici (*ä-lē-chē*). Anchovies, or a similar small fish preserved in oil according to the Italian fashion.

à l'impératrice (*ä laN-pä-rē-träs'*). Said of shirred eggs served with a slice of paté de fois gras upon each egg.

à l'Irlandaise (*ä lēr-län-dez'*). Containing potatoes in some form, and often cabbage, etc., in mass or as a prevailing garnish.

à l'Italienne (*ä lē-tä-lē-en'*). Generally made of, or garnished with, savory macaroni, or paste of that kind, or with ravioli; or made savory with Parma cheese.

Allemande sauce (*äl-mäNd'*). Velouté sauce, with the addition of essence of mushrooms, cream, and a leason, or binding, of yolk of eggs.

Alose (*ä-lōs'*). Shad.

Aloyau (*ä-lwä-yō'*). Loin of beef: short rib of beef.

Amontillado (*ä-mōn-tēl-yä'dō*). A cheaper variety of wine classed as sherry, but in reality a wine from Sicily or other Mediterranean or Atlantic islands, mixed with a little real sherry.

ananas (*ä-nä-näs'*). Pineapple.

anchois (*ăN-shwä'*). Anchovies.
anchovy (*an-chō'vi*). A small fish of the herring family caught in the Mediterranean, and pickled for exportation.
andouile (*ăn-doo'y*). Tripe.
anguilles (*ăn-gē'y*). Eels.
anguilles grillée (*ăn-gē'y grē-yā'*). Spitch-cocked, or grilled, eels.
anisette'. A cordial or liqueur flavored with anise seeds.
arroz à la Valencia'na (*ăr-rō'ä lä*). Valencia rice, a farinaceous substance in grains like rice.
artichaut (*ăr-tē-shō'*). Artichoke.
asperge (*ä-spârzh'*). Asparagus.
aspic (*ăs-pēk'*). A savory jelly made of calves' feet, etc., or with extract of meat, flavored to suit the fancy, and stiffened with gelatine.
au (*ō*). See *à la*.
au beurre roux (*ō bûr roo*). With browned butter.
au chingaras (*ō shaN-gä-rä'*). Sandwiched with ham and grilled; said of ox palates.
au four (*ō foor*). Baked in the oven, as a stuffed fish.
au fromage (*ō frō-mäzh'*). With cheese.
au gras (*ō grä*). Containing meat; said of soups so made.
au gratin (*ō grä-taN'*). With a crust made by browning in the oven; as spaghetti is often served *au gratin*.
au jus (*ō zhü*). In juice; in broth.
au kirsch (*ō kērsh*). With kirschwasser; as an omelet or a punch containing this liqueur is termed *au kirsch*.
aumelette (*ōm-let'*). Omelet.
au naturel (*ō nä-tü-rel'*). In the natural condition; as, anchovies *au naturel*—*i. e.*, without oil or seasoning.
au rhum (*ō rüm*). With rum.
auro'ra sauce. Sauce à l'aurore. See *à l'Aulore.*
au suprême (*ō sü-prăm'*). With supreme sauce.
au vert pré (*ō vâr prā*). With sweet or fresh herbs, especially, when they give a green color to the dish.
au vin blanc (*ō vaN blăN'*). With white-wine sauce, as fillets of fish.
aux (*ō*). See *à la*.
aux cressons (*ō kres-sôN'*). With watercresses.
aux rognons (*ō rō-nyôN'*). With kidneys.
ballotine (*bä-lō-tēn'*). A shoulder of lamb, boned, stuffed, larded, and braised.
barbue (*bär-bü'*). A kind of fish.
bard (*bär*). Barbel, a kind of fish.
bardes de lard (*bärd de lär*). Fat slices of bacon for covering meat to be braised.
bar le duc (*bär le dük*). A kind of jam of white gooseberries.
Bava'rian cream. A cream jelly thickened with gelatine and set in a mold, and variously flavored and enriched; a Bavaroise; a kind of flummery.
Bava'rian dumplings. Boiled pudding, consisting of bread fried in fat, bread crumbs soaked in cream or milk, eggs, butter, flour, salt, and spice; or some other similar composition.
Bava'rian sauce. A modified Dutch sauce of vinegar, eggs, and butter flavored with crayfish butter.
Bavaroise (*bä-vä-rwäz'*). Bavarian. See *Bavarian cream.*
bécasse (*bā-käs'*). Woodcock.
Béchamel (*bā-shä-mel'*), or more properly, **Béchamelle.** Velouté white sauce mixed with cream; named after Louis de Béchamel, a French gastronomer.
beignet (*bā-nyā'*). A fritter.
benedictine (*ben-ē-dik'tin*). A cordial resembling chartreuse.
beurre (*bûr*). Butter.
beurre frais (*bûr frā*). Fresh (unsalted) butter.
beurre lié (*bûr lē-ā'*). Dutch sauce with less butter than usual.
beurre noir (*bûr nwär*). Butter browned without flour.
beurre roux (*bûr roo*). Butter browned with flour.
biscuit (*bē-skwē'*). French sponge cake.
bis'cuit à couper (*ä koo-pā'*). A form of sponge cake to be sliced and glaced with flavored sugar or sugar mixed with fruit juice.
bis'cuit à la Génoise (*ä lä zhā-nwäz'*). Sponge cake with anise-seed flavor, to be cut and toasted.
bis'cuit à l'Ursuline (*ä lür-sü-lēn'*). A sponge cake with rice and apple or apricot jam mixed into the paste, and grilled orange flower.
bisque (*bisk or bēsk*). A soup of crayfish, made by cooking them in broth with herbs, sliced roots, and seasoning; other similarly prepared shellfish soups or sauces are also called *bisques.*
blancmanger (*blăN-maN-zhā'*) or **blamange** (*blä-mänj'*). A jelly made with calves' feet, or gelatine, and milk of almonds; also, a jelly made of milk and starch, isinglass, or sea moss, with or without added chocolate, grenetine, or the like. This latter dish is more properly called *flummery.*
blanquette (*blăN-ket'*). A mince of white meat, as of chicken, warmed in velouté sauce, and pointed with butter and lemon juice. It often has added to it mushrooms, morels, or truffles.
blond (*blôN*). Concentrated juice or extract of some viand, used to add to certain sauces to give them body; as *blond de veau* (*de tō*), a rich broth of veal made by slowly stewing veal with accessories of ham, rabbit, or the like, with standard broth, shallots, cloves, etc.
bœuf de chasse (*bûf de shäs*). The sportsman's round of beef—the biggest joint of the animal.
bombe glacé (*bôNb glä-sā'*). A confection consisting of an ice casing frozen in the form of a truncated cone with cream of some kind, as Bavarian cream, inside.
Bordelaise sauce (*bôr-de-läz'*). Espagnole sauce with garlic, aromatic herbs, and Bordeaux wine.
bouillabasse (*boo-yä-bäs'*). A soup made of fish broiled and seasoned with onion, orange peel, saffron, oil, and other seasoning to suit the taste.
bouilli (*boo-yē'*). Beef stewed, generally in one piece, and served with sauce.
boulettes de hachis (*boo-let' de hä-shē'*). Forcemeat balls.
bouquet garni (*gär-nē'*). A tied bunch of parsley, onions, bay leaf, and thyme, used to boil in soup to flavor it.
bourguignonnes (*boor-gē-nyon'*). Snails baked with a dressing of shallots, garlic, lemon juice, and butter.
braise (*brāz*) or **braisé** (*brā-zā'*). A piece of braised meat, or a dish prepared by braising; also a preparation mixed and prepared of various ingredients in or with which dishes are braised.
braisé de Boulanger (*brā-zā' de boo-läN-zhā'*). A compound sauce in which meat is smothered when being braised.
bretonne sauce (*brā-ton'*). Espagnole sauce characterized by juice of fried onions or purée of onions.
Brie cheese or **Brie** (*brē*). A soft, white cream cheese.
bris'ket or **brisquet** (*brē-skā'*). The breast; the part of the breast next to the ribs.
broccoli (*brok'kō-li*). A kind of cabbage resembling the cauliflower.
brochet (*brō-shā'*). Pike; luce—a kind of fish.
brocheton (*brō-she-tôN'*). Pickerel.
brut (*brü*). An effervescent wine.
bückling (*bük'ling*). Red herring. [appearance.
buisson (*bwē-sôN'*). A dish disposed in a pyramid, and having a prickly
bur'goo. Oatmeal porridge.
Burgun'dian sauce. Espagnole sauce flavored with shallots and red Burgundy wine.
cabillaud (*kä-bē-yō'*). A fresh cod.
café (*kä-fā*). Coffee.
café au lait (*kä-fā' ō lā*). Coffee with hot milk; coffee to which milk is added during the process of infusion or boiling.
café bavaroise (*kä-fā' bä-vä-rwäz'*). Coffee with whipped cream.
café noir (*kä-fā' nwär*). Black coffee; that is, coffee without milk.
café parfait (*kä-fā' pär-fā'*). A form of coffee ice cream.
café Turc (*türk*). Turkish coffee; that is, coffee prepared by pouring boiling water on very finely ground coffee in the cup.
caille (*kāl*). Quail.
calipash'. A part of turtle next to the upper shell, containing a dull greenish gelatinous substance, esteemed as a delicacy.
calipee. A part of a turtle attached to the lower shell. It contains a fatty, gelatinous substance of a light yellowish color, esteemed as a delicacy.
Camembert cheese (*kä-măN-bâr'*). A rich, sweet, cream cheese, of a yellowish color, made in the neighborhood of Camembert, in Normandy, France.
canard (*kä-närd'*). A duck.
canellons (*kä-ne-lôn'*). Hollow sticks or rolls of baked puff paste.
canelons (*kä-ne-lôN'*). Rugosities of ox palate, or preparations of them, covered with farce, rolled, and gratinated.
caneton (*kä-ne-tôN*). Young duck; duckling.
cannelon of meat (*kä-ne-lôN'*). A baked roll of highly seasoned mincemeat.
ca'pers. The pungent, grayish green flower buds of a trailing shrub (*Capparis spinosa*) of southern Europe.
capilotade of chick'en (*kä-pē-lō-täd'*). A kind of ragoût made of remains of fowl or game and some simple brown sauce.
ca'pon. A castrated cock. It fattens better and is tenderer than the uncastrated ones.
car'dinal sauce. Velouté variously flavored and colored red, as with cochineal.
carnichons (*kär-nē-shôN'*). Gherkins.
carré (*kä-rā*). Breast.
carrelet (*kär-lā'*). A fish, the sole or flounder.
cassareep'. A brown, slightly sweet, aromatic thick extract made from the juice of the manioc.
casserole (*kas'se-rōl*; French pron. *käs-rôl'*). Stewpan.
cas'serole of rice. An ornamental pie case made of paste of prepared rice.
cassis (*käs-sēs'*). Black currants; also, a kind of jelly, and a kind of liqueur or cordial, flavored with black currants.
caviare (*kä-vē-är*) or **caviar** (*kav'-i-är*). Roe of sturgeon, and other large fish, prepared and salted, and used as a relish. They often resemble morning-glory seeds in appearance.
cèpes (*sāp*) or **ceps** (*sā*). An edible kind of mushroom.
champignons (*shäN-pē-nyôN'*). Mushrooms.
chapon (*shä-pôN'*). Capon.
chapon au gros sel (*shä-pôN ō grō sel*). Plain boiled capon; literally, capon served with a big lump of salt (placed upon it).
charlotte russe (*shär-lot' rüs*) or **charlotte à la russe** (*shär-lot' ä lä rüs*). A dish of custard or whipped cream inclosed in a cup of sponge cake.
chartreuse à la Parisienne (*shär-trûz' ä lä pä-rē-syen'*). A showy entrée, consisting chiefly of quenelles of forcemeat, containing ragoût and kebobs; an entrée de force; an entrée à surprise.
chasse café (*shäs kä-fā'*). A drink of liqueur served after the coffee at dinner.
chateaubriand sauce (*shä-tō-brē-äN'*). See *maître d'hôtel butter.*
chaufroid sauce (*shō-frwä'*). A white or brown jelly containing some sauce; a sauced jelly, or a gelatinized sauce.
cher'vil. A plant (*Anthriscus cerefolium*) with finely divided leaves. Two curly varieties are used in soups and salads.
chiffonade (*shē-fō-näd'*). A salad preparation of lettuce, chervil, sorrel, and scallions, with fresh butter, and some bouillon poured over it. When milk or fresh cream is added, it is called *potage à la chiffonade*; otherwise *potage de santé* (*pō-täzh' de säN-tā'*).
chil'i. A kind of red pepper or capsicum.
chil'i sauce. A sauce condiment made with chilis, tomatoes, etc.
Chinese' stur'geon soup. A soup of beef and veal, containing pieces of cartilage from the sturgeon's head boiled tender.
chive. A plant allied to the onion, of which the young leaves are used in omelets, etc.
choucroute (*shoo-kroot'*). French sauerkraut, or sauerkraut in general.
choufleur (*shoo-flür'*). Cauliflower.
choux (*shoo*). (*a*) Cabbages. (*b*) See *choux pâtissiéres.*
choux de Bruxelles (*shoo de brü-sel'*). Brussels sprouts.
choux de mer (*shoo de mâr*). Sea kale, a kind of cruciferous pottage root.
choux pâtissières (*shoo pä-tē-syâr'*). Soufflés in small molds; small cakes of baked batter.
civet (*sē-vā'*). A ragoût of hare [civet de lievre (lyā'vr)], deer [*civet de chevreuil* (*she-vrü'y*)], or other game, into which wine and onions enter as ingredients.
clare'mont sauce. Butter sauce flavored by frying onions in it. The onions are removed after frying.
cock'a-lee'kie. Capon soup, boiled with leeks and prunes — a favorite Scotch dish.
cock'tail of oysters or clams. A dish containing oysters or clams seasoned with ketchup, pepper, etc., and served in a tumbler or glass.
cocotte (*kō-ket'*). A kind of iron casserole with two loop handles and a cover.
cœurs d'artichauts (*kûr-där-tē-shō'*). Artichoke heads.
cognac (*kō-nyäk'*). A brandy distilled at Cognac, in France; hence, loosely, any French brandy.
coing (*kwaN*). Quince. A liqueur, or ratafia, is made flavored with quince; and a jelly of quinces is called *coing de tranches* (*de träNsh*).
collared. This term is loosely used with no apparent definite meaning in the names of various dishes.
col'lared beef. A thin piece of beef, usually from the flank, rolled into a round form.
col'lops. Small pieces or slices.
com'fit. A dry sweetmeat; fruit, seed, or the like, preserved in sugar and dried.
compiègne cake (*kôN-pyän'*). A kind of cake intended to be drenched with liqueur, sliced, and sandwiched with apricot jam.
com'pote (French pron. *kôN-pōt'*). Cooked fruit; fruit preserved with sugar so as to preserve its form. Also, a savory dish of pigeons, quails or larks, mixed with peas or mushrooms.
confit (*kôN-fē'*). A dry sweetmeat; fruit preserved in sugar and dried; a comfit.
confiture (*kôN-fē-tür'*). Preserves.
consommé (*kôN-sō-mā'*). Strong broth of meat and vegetables, concentrated till slightly browned; in restaurants applied to thin soups such as would be made by this broth diluted.
cor'dial. A sweet and aromatic liquor. A *liqueur* is an alcoholic cordial.
côte (*kōt*). A rib.
côtelette (*kōt-let'*). A small rib; part of a rib; a piece of meat with the rib attached; a cutlet.

court bouillon (*boo-yŏN'*). A very rich bouillon made by braising bouillon vegetables in butter, evaporating down, and then boiling in wine. It is added to sauces.
crême (*krăm* or *krâm*). A cordial of the relatively thick or viscid kind, such as *crême* de la menth (cream of minth), *crême* de la moka (cream of mocha coffee), *crême* de cocoa (cream of cocoa), etc.
crême bachique (*krăm bă-shēk'*). A custard jelly with wine and egg-froth.
crême brulée (*krăm brû-lā'*). Brown sugar, or caramel, with cream.
crême fouettée à la paysanne (*foo-et-ta' ă lă pā-zăn'*). Whipped cream.
créole (*krā-ōl'*). See *à la créole.*
crêpes (*krāp*). Small fried cakes; a form of French pancake.
cressons (*krā-sŏN'*). Cresses.
crevette (*krā-vet'*). Shrimp.
croquants (*krō-kăN'*). A piece of crisp pastry or confection which makes a crunching sound between the teeth, as a macaroon or a nougat.
crouton (*kroo-tŏN'*). Small pieces of bread fried in butter or oil, for use as a garnish to salmis, fricassees, etc., or to serve with soups.
croquembouches (*krō-kăN-boosh'*). Small mounted pieces of crisp pastry, such as macaroons, nougats, gimblettes, etc.
crum'pet. A kind of large, thin, light cake or muffin cooked on a griddle.
cuissot (*kwē-sō'*). Haunch.
cyg'net. A young swan.
dantesques (*dăN-tesk'*). Frozen custards.
dariole (*dă-rē-ōl'*). A piece of pastry consisting of a shallow cup of short paste, filled with a rich compound of cream or custard with macaroons, fruit, or the like.
darne (*dărn*). Slice; cut.
de (*de*). Of.
demi-tasse (*dā-mē-tăs'*). A small cup for black coffee.
désossée (*dā-sō-sāL'*). Boned.
diablotins (*dē-ab-lō-taN'*). (*a*) Frozen custards. (*b*) Neapolitan dragées. (*c*) Chocolate bonbons in paper.
dinde (*dăNd*). Turkey.
dindonneau (*dăN-dō-nō'*). Young turkey; turkey pout.
di zara (*sē zā'rā*). A less common name for maraschino.
Dutch sauce. Butter emulged with yolk of egg, or a sauce with this as a basis; Hollandaise sauce.
éclanche (*ā klăNsh'*). Shoulder of mutton.
écrevisse (*ā-kr-vēs'*). Crayfish.
empotage (*ăN-pō-tăzh'*). Consommé or gravy broth.
en ballon (*ăN bā-lŏN'*). Boned and stuffed with forcemeat, etc.—said of fowls' legs so cooked.
en brochette (*ăN brō-shet'*). On wooden skewers.
en caneton (*ăN kā-ne-tŏN'*). A term used to designate fowls' legs boned and stuffed with forcemeat, etc.
en casserole (*ăN kā-s-rōl'*). In a casserole.
en coquille (*ăN kō-kē'y*). (Served) in shells, as oysters prepared as if to be escalloped and then baked in shells and served.
en cracovie (*ăN krā-kō-vē'*). With salpicon wrapped in calf's udder or pig's caul—said of ox palates.
escargots (*ăs-kär-gō'*). Snails.
escarole (*es-kă-rōl'*). A species of chicory used for salads; also, a variety of lettuce resembling this.
espagnole sauce (*es-pă-nyōl'*). Brown sauce made by boiling meat and flavoring vegetables and spices in normal broth to a glace, browning with roux, and removing the fat.
esturgeon (*es-tûr-zhŏN'*). Sturgeon.
faisan (*fā-zăN'*). Pheasant.
fanchonettes (*făN-shō-net'*). Small cakes like tartlets covered with meringue froth, with jam, currants, etc.
farcie (*fär-sē'*). Stuffing of forcemeat.
farine de riz (*fă-rēn' de rē'*). Rice flour.
fausse tortue (*fōs tôr-tû*). Mock turtle.
fécule de pommes de terre (*fā-kül' de pum de târ'*). Potato starch, used especially in making Savoy cakes, and other gateaux.
feuilletage (*fû-ye-tăzh'*). Puff paste.
filet (*fē-lā'*). Eng. **fil'let.** (*a*) The under cut of the loin of beef and venison. (*b*) Breast of fowl or game when cut out [the inner muscles near the bone being the filet mignons (*fē-lā' mē-nyŏN'*)]. (*c*) Any longish strips of meat or vegetables.
filet du dedans (*fē-lā' dû dă-dăN'*). The under cut of the loin of beef; a filet.
fil'let. See *filet.* Fillet is the usual spelling in English culinary books.
Fin'nan had'die. Haddock cured in peat smoke, originally coming from Findon (pronounced *fin'an*) in Scotland; also, haddock smoked in other ways.
flageolets (*flă-zhō-lā'*). Beans.
flamms. Pancakes.
fleurons (*flû-rŏN'*). Punched-out ornaments of bread (crusted or fried), or of paste (baked), or of other materials.
Flor'ence cakes or **Flor'entines.** A kind of cake consisting of a thin shell of puff paste containing a composition of curds, butter, yolks, flour, bitter almonds, and lemon, or a very similar composition.
flum'mery. A cold, sweet dish chiefly of cereals, often with fruit in it, molded and to be eaten with wine, milk, or sauce.
foie (*fwă*). Liver.
fond (*fŏN*). The broth or juice from braised flesh or fish, usually served as a sauce.
fondue (*fŏN-dû'*). A preparation of cheese, eggs, and butter melted together.
fraise (*frāz*). Strawberry.
framboise (*frăN-bwăz'*). Raspberries.
frangipane (French pron. *frăN-zhē-păn'*). A kind of compound pastry cream flavored with almonds, with which pastry is garnished.
fromage (*frō-măzh'*). Cheese.
fromage à la Chantilly (*ă lă shăN-tē-yē'*). **fromage de Chantilly** (*de shăN-tē-yē'*). Apricot jam.
fru'menty. A food prepared by boiling wheat in milk to a jelly, usually with the addition of currants, sugar, egg yolk, and spice.
fumet (*fü-mā'*). A high-flavored substance, such as extract of game, for flavoring dishes of food; also, less properly, a ragoût of partridge and rabbits braised in wine.
gal'atine. Boned fowl, veal, or the like, stuffed with pieces of meat and force, boiled, and served cold, with a garnish of jelly or aspic.
gal'imaufry or **gallimafrée** (*gă-lē-mă-frā'*). A kind of ragoût of various kinds of meat highly flavored.
garbanças (*gär-băn-săs'*). Chick-peas.
garbure (*gär-bür'*). A soup of bacon and cabbage or other vegetables sometimes with cheese added.
Gas'cony sauce. Velouté with capers, truffles, and egg yolk.
gaspacho (*găs-pă'chō*). A bread-and-vegetable salad, made by the Spanish, containing pimentoes, tomatoes, oil, and vinegar, and (in the richer form) fish, crayfish, piquant preserves, etc.
gâteaux (*gă-tō'*). Cakes of flour, butter, and eggs.
gâteaux de puits d'amour (*de pwē dă-moor'*). Lovewells.
gauffres (*gō'fr*). Waffles.
gelée (*zhe-lā'*). Jelly.
Gene'va sauce. A coulis of fried onions with meat essence or espagnole, with anchovy butter, and usually port or claret wine. It is used especially with fresh water fish.
génoise sauce (*zhā-nwăz'*). Espagnole sauce flavored with fumet and red wine.
génoises (*zhā-nwăz'*). Glazed cakes of sugar, eggs, flour, and almonds.
gibelotte (*zhē-blot'*). Stewed rabbit; sometimes, stewed chicken or other white meat.
gibier (*zhē-byā'*). Game, as hare, deer, etc.
gigot (*zhē-gō'*). Leg of mutton.
gimblettes (*zhaN-blet'*). Small pastry preparations, such as croquignoles and croquembouches. Small pastry, or patés de petit four; they are used as ingredients of croquembouches.
glace (*glās*). A glaze, or broth, reduced by boiling to a gelatinous paste, so that when poured over meats it will give them a shiny appearance.
glacé (*glă-sā'*). Covered with glace.
glaced (*glāst*). Iced; having a shiny appearance produced by a coating of sugar, gelatine, or glace.
glaize or **glase** (*glāz*). A glace.
godiveau (*gō-dē-vō'*). A kind of mincemeat, usually of veal, made into balls, to garnish the interior of hot patés and vol-au-vents.
gold'en buck. A Welsh rarebit served with a poached egg on it.
goujon (*goo-zhŏN'*). Gudgeon, a rather coarse fish.
goulash (*goo-lăsh'*). See *gulash.*
gratin (*grā-taN'*). The brown crust formed upon a gratinated dish; also, the dish itself.
grat'inate. To cook, as macaroni, in a savory sauce or broth until the juice is absorbed and a brown crust forms.
gren'adine. A kind of fricandeau, with a basis of forcemeat.
grenouille (*gre-noo'y*). Frog.
grill. To broil.
grenadin (*grā-nă-daN'*). A small fricandeau, or dish made with a basis of forcemeat.
groseille à maquereau (*grō-zā'y ă mă-k'rō'*). Gooseberry.
gros rôti (*grō rō-tē'*). A large joint of roast meat.
Gruyère cheese (*grü-yâr'*). A kind of salted cheese in thin cakes.
guava jel'ly (*gwă'vă*). An excellent jelly made from the slightly astringent fruit of either of two tropical trees.
gulash (*goo-lăsh'*), or **Hunga'rian gulash.** A ragoût of rump steak flavored with paprika.
gum'bo. A soup thickened with the mucilaginous pods of the okra; also, the okra pods themselves.
hareng (*ă-răN'*). Herring.
haricot (*ă-rē-kō'*). A stew or ragoût of meat. Also, the common string bean.
haricots verts (*ă-rē-kō' vâr*). Green string beans.
Hollandaise sauce (*ō-lăN-dāz'*; Eng. pron. *hol'lan-dāz'*). See *Dutch sauce.*
homard (*ō-mär'*). The European lobster—larger than the American lobster, called *homard americaine* (*ō-mär'dă-mā-rē-kăn'*).
hors d'œuvres (*ôr dûv'r*). Relishes; dishes which, while not sufficient to constitute a substantial meal, are served by themselves; as patties, rissoles, and other hot, light entrées, and cold entrées, such as sardines, oysters, anchovies, etc. The latter (*cold hors d'œuvres*) are eaten directly after the soup.
huitres (*wē-tr'*). Oysters.
huitres au lit (*ō lē*). Same as pigs in blankets.
hure de sanglier (*ür de săN-glyā'*). Head of wild boar.
jambon (*zhăn-bŏN'*). Leg.
jardinière (*zhär-dē-nyär'*). A dish cooked à la jardinière. See *à la jardinière.* Jardinière soup has as many roots and green vegetables as can be; it differs from julienne soup by the prevalence of green vegetables in it.
julienne soup (*zhü-lyen'*). Soup à la julienne. See *à la julienne.*
jus (*zhü*). Broth; soup juice; gravy.
kip'pered her'ring. A herring split, salted, and smoked.
kirshwasser (*kērsh-vds'ür*). A cordial distilled from the juice of the small black cherry.
klöse (*klü'ze*). Dumplings.
kumiss (*koo'mis*) or **kumys.** A beverage consisting of a liquor made by fermenting milk, originally mare's or camel's milk.
kummel (*koom'mel*). A liqueur made in Germany and Russia flavored with cumin, caraway, or fennel.
laitue (*lā-tü'*). Lettuce.
langouste (*lăN-goost'*). The crawfish.
langue (*lăNg*). Tongue.
lapereau (*lă-p'rō'*). Young rabbit; cony.
lapins en accolade (*lă paN ă nă-kō-lăd'*). A brace of rabbits on a dish.
lasagne (*lă-săN'y*). Ribbonlike strips of macaroni paste; also noodles.
leason (*lē'son*). Thickening, as flour, starch, egg yolk, etc.
lebkuchen (*lāp'koo'ken*). A cake of flour and honey, variously flavored; also, a similar cake of flour and sugar.
legumes (*lē-gûmz'*). Peas, lentils, or beans; improperly, fruit or green vegetables.
lev'eret. A young hare.
levreau (*lă-vrō'*). A young hare. *Levreau au sang* (*ō săN*) is a dish of young hares cooked with added pigeon blood.
macarons (*mă-kă-rŏN'*). Macaroons.
macaro'ni. A paste of wheat flour and water dried in the form of long slender tubes. When prepared in still smaller tubes it is called spaghetti and vermicelli.
macaroon. A small cake composed chiefly of whites of eggs and sugar (meringue) with pounded almonds, or sometimes filberts, cocoanut, or the like.
macédoine of fruit (*mă-sā-dwăN'*). A sweet jelly with whole fruit in its substance.
macédoine of veg'etables. A mixture of several vegetables, cooked, with some white sauce added.
macédoine sal'ad. A salad of mixed vegetables.
macroon'. A macaroon.
madère (*mă-dâr'*). Madeira wine.
maigre (*mā'gr*). Lean meat; also, any food other than meat. Also, a kind of fish. *Maigre soups* are those without meat, such as those used in Lent.
maitre d'hôtel but'ter (*mā'tr dō-tel'*). Butter mixed with parsley, lemon juice, salt, and nutmeg—cold *maître d'hôtel sauce.*
manchons de veau à la Gérard (*măN-shŏN' de vō ă lă zhā-rär'*). A dish of slices of veal rolled and stuffed.
maraschino (*mă-rä-skē'nō*). A cherry cordial made in Dalmatia from a sour cherry called *marasca*; hence, a similar liqueur prepared elsewhere.
marasquin (*mă-rä-skaN'*). French for maraschino.
marchand de vin (*mär-shăN' de vaN'*). Stewed with shallots, espagnole, and claret wine—said especially of kidneys.
march'pane. A cake of pounded almonds or pistachio nuts and sugar.
marsala (*mär'sä-lä*). A class of white Sicilian wines, of which the best kinds resemble Madeira, but are lighter.
mayonnaise sauce (*mā-yŏ-nāz'*). A sauce of egg yolk and oil worked together less properly with vinegar.

meringue (*mă-rang'*). Icing of white of egg and sugar thoroughly beaten together, sometimes with starch added.
mouton (*moo-tôn'*). Mutton.
mul'ligatawny. A spiced or curried soup of hashed chicken and rice.
Na'ples biscuit. Lady fingers.
Neapol'itan ice, Neapol'itan ice cream. Ice or ice cream prepared in layers, especially when colored, as in white, red, and yellow.
Neapol'itan sauce. Espagnole flavored with grated horse-radish.
nec'tarine. A smooth skinned variety of peach. The *Spanish nectarine* is a plum-like West Indian fruit, which is made into a sweet conserve.
nesselrode pudding (*nes'sel-rō-de*). Iced or frozen chestnut-and-fruit pudding.
neufchatel cheese (*nûf-shă-tel'*). A cheese made by thickening cream by heat and pressing it in a small mold.
nivernaise (*nē-vâr-nāz'*). A ragoût-like dish of carrots stewed in consommé.
nougat (*noo-gä'*). A mixture of almonds, pistachios, filberts, or the like, and honey or sugar baked together.
nouilles (*noo'y'*). Noodles.
œufs (*ûf*). Eggs.
œufs brouillés. Scrambled eggs.
ognon (*ō-nyôn'*). Onion.
o'kra. A plant, the long green, mucilaginous pods of which are used in soups, stews, etc.
olla (*ōl'lă*). Ragoût.
Or leans sauce. A mince of carrots, anchovies, hard-boiled eggs, and gherkins, with peppersauce.
pain (*pan*). Bread.
panais (*pă nā'*). Parsnips.
panée (*pă-nā'*). Bread-crumbed (over egg yolk, sauce, butter, or fat) previous to frying.
pannequets (*păn-kā'*). French pancakes.
paprika (*pă'prē-kă*). A mild kind of red-pepper condiment obtained from *Capsicum annum*. Pabrica.
paté (*pă-tā'*). A pasty.
paté de foie gras (*pă-tā' de fwă grä*). Pie of fat livers.
patés (*pă-tā'*). Pasties.
patés de petit four (*de pe-tē' foor*). Small fancy cakes.
persillade of fish (*pâr-sē-lăd'*). Fish with parsley.
petit rôti (*pe-tē' rō-tē'*). A roast fowl.
petit salé (*să-lā'*). Pickled pork in small pieces.
petits pois (*pe-tē' fwă*). Peas.
pigeonnaux (*pē-zhō-nō'*). Squabs.
pigeons innocents (*pē-zhôn' ē-nō-sănt'*). Squabs.
pilau (*pi-law'*) or **pillau.** An oriental dish of rice stewed with mutton, lamb, or fowl, almonds, raisins, and saffron and other spices.
pimen'to. Allspice, or Jamaica pepper.
pimo'la. An olive stuffed with sweet peppers.
piquante sauce (*pē-kănt'*). Espagnole with pickles added and flavored with shallots.
plombière (*plôn-byâr'*). A kind of frozen fruit pudding.
poché (*pō-shā'*). Poached.
poisson (*pwă-sôn'*). Fish.
polen'ta. Porridge.
pomme (*pum*). Apple.
pomme de terre (*de târ*). Common Irish potatoes.
pompa'no. A highly esteemed marine food fish.
potage (*pō-tăzh'*). Soup; pottage; broth.
pot pourri (*pō poo-rē'*). A ragoût of various meats and vegetables cooked together.
printanière (*pran-tă-nyâr'*). A dish cooked à la printanière. See *à la printanière*. Printanière soup is the same as jardinière soup, essentially.
pumpernickel (*poom'per-nik'l*). Black bread made in Westphalia of unbolted rye. It is of an acid taste.
purée (*pū-rā'*). A pulpy maceration of meat, vegetables, fruit, or the like, passed through a sieve.
quartier (*kär-tyā'*). Quarter; especially forequarter.
ragoût (*ră-goo'*). A rich compound consisting of quenelles (forcemeat), mush rooms, truffles, etc., mixed with a rich sauce, and used to garnish rich dishes.
ramequin (*ram'ē-kin*; French pron. *rä-me-kan'*). A pastry, consisting of a preparation of cheese inclosed in or mixed with puff paste, and baked or browned. Cheese straws are thin ramequin of cheese mixed with puff paste.
rémoulade (*rā-moo-lad'*). A purée of anchovies, capers, parsley, shallots, and hard-boiled eggs, dressed with spices, oil, and vinegar.
rissole (*rē-sōl'*). A kind of pastry made of minced and spiced meat or vegetables, or fruit, wrapped in paste, and fried in fat.
rissolé (*rē-sō-lā'*). Browned by baking or frying.
romaine salad (*rō-mān'*). A kind of mixed vegetable salad.
roquefort (*rōk-fôr'*). A French cheese made from the milk of ewes, cured in a cavern in the limestone rock at Roquefort, France.
roulette (*roo-let'*). A dish consisting of a slice of meat spread with stuffing, rolled, and stewed or braised.
roux (*roo*). Browned by frying in butter or other grease.
Rus'sian soup. A gravy soup of veal, fowl, etc., with souchets of salmon, eel, perch, mullet, quenelles of whiting, lobster coral, and mushroom purée.
salad russe (*să-lăd'rûs*). A dish of chicken meat, ham, veal, etc., sliced, arranged separately and served with truffles, and tartar sauce, or caviar and sardelles, etc.
Sal'ly Lunn. An English tea cake.
salmagun'di. A salad of cold chicken, veal, eggs, beets, anchovies, etc., finely minced and spiced.
salmis (*săl-mē'*). A ragoût of roast game or fowl in rich gravy or sauce.
sal'picon (French pron. *săl-pē-kôn'*). A ragoût or rich compound of chopped meat or fish and vegetables with savory sauce, used as a separate dish, as a garnish, to stuff meats, etc.
sauce beurrée à l'Anglaise (*bû-rā' ä läng-glāz'*). Butter sauce.
sauce Colbert (*kōl-bâr'*) Brown sauce with meat glace, lemon juice, parsley, and butter stirred in.
sauce de gourmets (*de goor-mā'*). A coulis with a purée of tomatoes and crayfish butter.
sauce piquante (*pē-kănt'*). An acid or sour sauce.
sauce Robert (French pron. *sōs rō-bâr'*). A full-flavored Spanish sauce.
sauce rousse (*roos*). Brown sauce.
saumon (*sō-môn'*). Salmon.
sauté (*sō-tā'*). Lightly and quickly fried in little grease.
scones (*skōnz*). Scotch cakes of oatmeal or flour.
souchet (*soo-shā'*) or **souchie** (*sōō-shē'*). A stew of fish in a soup-like savory broth.
soufflé (*soo-flā'*). A dish consisting of batter of starch or flour, eggs, milk or cream, and butter, beaten light and baked and served hot while light and spongy. Soufflés may be variously flavored, as with ginger, vanilla, chocolate, etc.
spaghetti (*spä-get'tē*). Hollow tubes of dried Italian paste, in size between macaroni and vermicelli.
Span ish cream. Gelatine pudding containing custard, gelatine, and beaten white of eggs, set in a mold.
Span'ish puffs. Meringues.
suprême sauce (*soo-prăm'*). Velouté flavored with mushrooms and consommé of fowls.
tar'tare sauce. Mayonnaise sauce with vinegar and chopped green herbs, pickles, and capers.
tête (*tāt*). Head.
timbale (French pron. *tan-bâl'*). A drum-like case of macaroni or rice filled with some composition, as with forcemeat or ragoût.
truf'fle. A kind of edible mushroom that grows underground.
Turk'ish cof'fee. Café au Turc.
tutti-frutti (*toot'tē-froot'tē*). A confection consisting of preserved fruits of various kinds.
veau (*vō*). Veal.
vinaigre (*vē-nā'gr'*). Vinegar. *Vinaigre a l'éstragon* (*ä lās trä-gôn'*) is vinegar flavored with tarragon.
volaille (*vō-lāl'*). Poultry.
vol-au-vent (*vō-lō-văn'*). A light puff-paste case baked and then filled with a ragoût, fricassée, or the like.
Welsh rare'bit or **rab'bit.** A dish consisting essentially of toasted bread on which is served toasted or melted cheese.
white sauce. Same as velouté, or similar sauce.
wiener schnitzel (*vē'ner shnits'el*). A cut of veal from the leg fried in batter and seasoned with paprika, etc., after a style attributed to the Viennese.

LITERATURE

LITERATURE, IN ITS MOST EXTENDED significance, comprehends everything written in a given language which is colored by the temperament of the writer. A geometrical treatise should be colorless, though Euclid's *Elements* are marked by a sense of form and proportion peculiar to the Greek mind. A plain statement of fact is almost invariably colored by the sentiment of the narrator and his belief as to what is interesting and important. In a narrower sense, literature is restricted to writings to which the temperament of the writer has imparted charm, whether by reason of his earnestness and breadth of mind, his love of nature or of his fellowmen, or his peculiar power of embodying impressions in a verbal form of attractiveness and suggestion.

To the writer, literature is a method of expression and communication. Men naturally desire to express themselves, to put into form their ideas on some subject that appears to them of interest and importance. Matthew Arnold, influenced largely by his familiarity with the poetry of Wordsworth, defined literature to be a criticism (expression of judgment) of life. It would be nearer the truth to say that it contained a criticism of life. As man is essentially a "social animal," in the phrase of Aristotle, he desires to communicate his views to others. Even Milton, whose soul "like a star dwelt apart," sought an audience "fit though few." This desire to express and to communicate is the impelling force to the creation of literature, even when some peculiar perversity makes a writer use a cryptic or unintelligible style. The desire to produce something beautiful—the artistic impulse—which at first would seem to be strictly individualistic, is compounded with and modified by the desire to express thought and sentiment and to communicate them to others.

This being so, it is evident that a writer must use the language of his time and must embody the views and general principles of his age. Even when a man addresses a remnant who adhere to the ideas of the last generation, or the few progressives who have an intimation of the future or have caught sight of the new light which is soon to be the "light of a common day" to the next generation, he must deal with ideas which are somewhat in vogue in his own time. For this reason literature is representative of its own age, though as the temperament which makes the writer is usually one which sympathizes with progress and hates embodied injustice, it tends to express the advanced ideas of that age rather than the reactionary or stationary ones. "Write on my tomb," said the poet Heine, "that I was a soldier in the cause of freedom." The same words might be engraved on Shelly's monument. There are many, like Shakespeare and Tennyson, to whom the ordered civilization of the present seems most significant; to others, like Sir Walter Scott, the pathos or magnificence of the past appeals more strongly. But all write for a certain number of those who sympathize with them; each must have a living audience.

For this reason the literature of any time is a mirror of the thought of the time, and as there is a gradual evolution of thought, not merely an accumulation of knowledge, the tone of literature changes with advancing civilization. It is a peculiarity of this evolution that it is not a continuous process, but is an irregular movement with periods of quiescence and of advance. Nor is the movement, as far as we can see, always in one direction. It seems to follow the line of least resistance, even if the impelling force is forward. Consequently, there are periods in which the national spirit—reflected in national literature—is in quite distinct moods. The prevailing views on politics, religion, philosophy, society, duty, and even property are gradually modified. For a number of years one set of these ideas seems prevalent, then they weaken and change, sometimes with great rapidity, and another period is inaugurated.

ENGLISH LITERATURE.—As the English nation is continuous, so the literature of one period is bequeathed to the next. It may seem that an early period was more energetic or more spiritual or more artistic than a later one, still the influence of what was taught in one century is never entirely lost. The literature survives, and continues to exercise an influence on many minds long after the termination of the period in which it appeared.

AMERICAN LITERATURE. — American literature is not readily or satisfactorily defined. It excludes all the literatures of this Western Hemisphere except that of the United States, and even in the United States is generally reckoned as exclusive of all languages except English.

Branch of English Literature.—Obviously American literature belongs to the generic class English literature. American literature is the American expression of human interests in artistic prose or verse.

But the prose or verse of America does not differ materially in form from that of Great Britain. This definition concedes similarity of interests and methods, but suggests that there is possibly a difference in point of view. Such a difference may be readily discerned, but not in the realm of pure art.

TABLE I. FROM THE BEGINNING TO THE BIRTH OF CHRIST

Date	Egyptian	Babylonian and Assyrian	Hebrew	Indian and Persian	Chinese	Historical Events
4000 to 3000 B. C.	*Moral Precepts* of Ptah-hotep. Hieroglyphic records on tombs.	**King Sargon** (3800 B. C.)—*Early Tablets.*—Earliest record of a Semetic line of kings ruling in North Babylonia.				Civilization in Egypt and Babylonia.
3000 to 2000	Inscription of Una. *Book of the Dead* — A collection of prayers, mythical in character, dealing with the future state of the soul. *Song of the Yarper*—Oldest version of a funeral drinking song.	Inscriptions. **Hammurabi** (c. 2300). — *Code* — Great statesman-ruler. His reign called the Golden Age of Babylon.				2700, Chaldean literature already voluminous. 2234, Astronomical observation in Babylonia.
2000 to 1000	*Pentaur*—A prose poem descriptive of battle. The nearest approach to the epic in Egyptian literature. *Papyrus Ebers* (c. 1550) — An extensive medical treatise found by G. M. Ebers. *Amarna letters*—Clay tablets. The official archives of two kings of Egypt. Show evidence of advanced literary activity.		*Oldest Songs of the Old Testament.* — The Song of Deborah. Many of the psalms.	*The Vedas* (In.)—The collective designation of the ancient sacred literature of India. Prayers, sacrificial formulas, legends, rules for conduct. *Mahabharato* (In.) — A great epic narrative, containing about 100,000 stanzas.	*Oldest Songs of She-King Book of Changes* — A book of poetry, chiefly religious.	2000, Chaldean rule over Syria. Mycenaean civilization. 1380, Rameses II. 1040, King David.
	Greek					
1000 to 500	**Homer.** — *Iliad* and *Odessey* — Epic poems containing the story of the siege of Troy and the wanderings of Ulysses. The greatest epic of all literatures. **Hesiod.**—*Works and Days*—Poet of humble descent and occupation, his work a collection of reflections and precepts relating to a rural household.	668-608. Golden age of Assyrian literature. *Descent of Ishtar Into Hades*, etc. — Ishtar was the chief goddess in the religion of the Babylonians and Assyrians.	*Joel, Amos, Hosea* — Minor prophets. *Psalms* — Sacred poems. *Jeremiah*—The book of lament over Israel's humiliation.	**Zoroaster.** — *Avesta* (Per.) — The bible of Zoroastrianism. *Ramayana* (In.) — The second of the two great epic poems of mediaeval India.	**Lao-Tse.** — The reputed founder of the philosophy of Taoism. **Confucius.**— The most famous of all the sages of China. His doctrines were ethical and political.	1000, Zoroaster. 776, First Olympiad. 753, Founding of Rome.

TABLE I. FROM THE BEGINNING TO THE BIRTH OF CHRIST—Continued

Date	Greek	Latin	Hebrew	Indian and Persian	Chinese	Historical Events
1000 to 500 B.C. Cont.	**Sappho.**—One of the two greatest leaders of the Æolian school of lyric poetry. Passion, sincerity and grace in her work. **Anacreon.**—A graceful, lyric poet who sang of wine, love, and merry company.		*Songs of Solomon*—Hebrew pastoral poems.	*Laws of Manu* (In.)—Ancient law-book of the Hindus. *Brahmanas* (In.)—Writings relating to prayer and sacrifice. *Upanishads*—Speculations on the nature of the world and man.		586, Babylonian captivity.
500 to 400	**Pindar.**—The greatest of the Greek lyric poets. **Æschylus, Sophocles, Euripides.**—Writers of tragedies. Their works are so full of deep human content that they belong to the world's greatest treasures. **Aristophanes.**—The greatest writer of Greek comedy. **Plato.**—The most important of the Athenian philosophers.		*Job*—A drama of the soul. *Ruth*—An idyl of Jewish life in the period of the judges.		**Mencius.**—Second in rank among Chinese sages. Taught that man by nature is good.	492, Persian war. 490, Marathon; age of Pericles. 438, Parthenon. 431-404, Peloponnesian war.
400 to 300	**Isocrates.**—The fourth among the ten Attic orators. **Demosthenes.**—A celebrated Athenian orator. **Æschines.**—An Athenian orator. **Aristotle.**—The founder of the Peripatetic school of philosophy. **Xenophon.**—An Athenian historian.		*Malachi*—A minor prophet. *Daniel*—The apocalyptic prophet.	**Panini's** *Sanskrit Grammar*—The greatest of India's grammarians. His is the oldest preserved Sanskrit grammar. Cuneiform inscriptions near Persepolis.		399, Execution of Socrates. 390, Gauls sack Rome. 336-323, Alexander the Great.
300 to 200	**Theocritus.**—The creator of bucolic poetry in Greek. **Eratosthenes.**—Famous for astronomical, geographical and mathematical labors. **Apollonius.**—A Greek scholar and epic poet. *Septuagint version of Hebrew Scriptures*—A translation made at Alexandria by seventy Greek scholars.		*Ecclesiasticus*, or *Jesus, Son of Sirach*—Practical moral reflections.	*The Puranas* (In.)—The name of a class of poetic Hindu works of mixed cosmogonic, epic, and didactic character. Beginning of the Indian drama.		264-241, First Punic war. c. 229, Achæan league.
200 to 100	**Bion.**—A Greek bucolic poet noted for his sharp and incisive sayings. **Moschus.**—Author of eight bucolic poems elegant in expression. **Polybius.**—One of the most important Greek historians.	**Plautus.**—*Comedies: Aulularia, Captivi, Pseudolus*, etc.—Rich in humor and invention, his comic art rivals that of Shakespeare. Our modern drama owes much to him. **Pacuvius.**—A learned and able imitator of Greek literature. **Ennius.**—*Annals, Thyestes*, etc.—The writer of the first great Roman historic epic. He made the Latin language suitable for lofty poetry. **Terence.**—*Comedies; Andria, Phormio*, etc.—His comedies are almost modern in their elegance, and have been widely copied by French and English dramatists. **Lucilius.**—*Satires*—A daring satirist who spoke out his full meaning in language that was sometimes lofty and sometimes half-Greek and full of slang. **Cato the Elder.**—*Concerning Agriculture*—At once a fine writer and a writer of strong works in prose. "The father of Latin prose."	**Sudraka.**—An Indian dramatist.		218-201, Second Punic war. 168, Fall of Macedonia. 146, Greece became Roman territory. 113-102, Invasion by Teutons.
100 to A.D.	*The Anthology* compiled. Contains poems from forty-seven Greek poets.	**Varro.**—*On Agriculture, On Languages*—"The most learned of the Romans." A great encyclopædist who wrote on various subjects with authority. **Cæsar, Julius.**—*Commentaries*—At once a great statesman, writer, and historian. His work on the Gallic war is read in modern schools for its perfect style. **Cicero.**—*Orations, Essays, Letters*—Rome's finest writer. The model of prose style for all time, ranging from lofty and powerful declamations to urbane and rhythmically beautiful passages. **Lucretius.**—*Concerning Nature*—The most original philosopher-poet in Latin. He expounded the Epicurean philosophy with an intensity of feeling that was almost madness. Tradition makes him to have died insane. **Catullus.**—*Lyrics*—In his strong passionate language the model of the modern Italian poet, d'Annunzio. **Sallust.**—*Histories: Catiline Conspiracy, War with Jugurtha, Memoirs*—An accurate historian who wrote with clearness and vigor. **Nepos.**—*History, Biographies*—Style is colloquial, but biographies are fair, sympathetic and well arranged. **Vergil.**—*Georgics, Æneid*—The greatest of the Roman epic writers. His *Æneid*, partly imitated from Homer, is remarkable for its pathos and deep feeling. **Horace.**—*Odes, Satires, Letters*—The most polished and the most quoted of all the lyric writers. His Satires and Epistles are read with delight as representing the philosophy of life which Horace characterizes as the "golden mean."			63, Cicero consul. 49-45, Civil war. 44, Cæsar killed. 31, Battle of Actium. 27, Augustus emperor. 4, Birth of Jesus?

TABLE II. FROM JESUS TO MOHAMMED, 1-600 A. D.

Date	Latin	Early Christian Literature—Greek and Latin	Greek	Oriental	Historical Events
A. D. 1 to 100	**Livy** (59 B. C.-17 A. D.).—*History of Rome*—Originally in 142 books, only one-fourth of which now exist. Not a philosophical historian, but wrote in a fascinating style. **Seneca** (3 B. C.-65 A. D.).—*Tragedies, Moralistic Essays, Satires*—Epigrammatic, wise, rhetorical; he created a new and florid style.		**Josephus, Flavius** (37-100).—*History of the Jewish War, Jewish Antiquities*—A Jewish historian who wrote in Greek in such pleasing style as to win the title of "the Greek Livy." His history gives a detailed account of the fatal war with Rome. **Plutarch** (c. 46-125), *Lives, Morals, Table Talk*—Master in sketching character. His work is permeated by lofty enthusiasm and a warmth of portraiture.		14, Death of Augustus. 68, Death of Nero.

TABLE II. FROM JESUS TO MOHAMMED—Continued

DATE	LATIN	EARLY CHRISTIAN LITERATURE	GREEK	ORIENTAL	HISTORICAL EVENTS
1 to 100	**Ovid** (43 B. C.-18 A. D.) *Metamorphoses, Heroides,* etc. A court poet who wrote much that is beautiful and much that is indecent. He died in exile. **Pliny the Elder** (23-79).—*Natural History.* An encyclopædist who has left us a large work drawn from the writings of a multitude of other men. He died in the eruption of Pompeii. **Lucan** (39-65 A. D.).—*Pharsalia.* The author of this third important Roman epic. He dared the displeasure of Nero and lost his life. **Petronius** (—66).—*Satire*—The first writer of realistic literature. His work is remarkable for its knowledge of the world, brilliant criticisms, and its pictures of low life in Italy.		**Epictetus** (c. 50).—*Discourses.* — An eminent philosopher, born a slave, who led a life exemplary of the pure morals which he taught.		70, Destruction of Jerusalem by Titus. 79, Destruction of Pompeii by Vesuvius.
100 to 200	**Juvenal** (40-120), *Satires.*—A vigorous satirist of Roman life, depicting hideous vices and cauterizing them with words of fire. **Quintilian** (42-118).—*Rhetoric and Criticism*—A genial writer on practical education, abounding in anecdotes and examples. **Martial** (43-104).—*Epigrams*—Very witty but obscene epigrammatist. **Tacitus** (55-117)—*Germany, History, Annals,* etc.—A scientific, historical writer, though prejudiced against the emperor. His style is obscure yet terse and vigorous. **Pliny the Younger** (61-115).—*Epistles*—A rather self-conscious personage whose letters are written with one eye on the public at large. The facts he gives regarding his time make his epistles attractive reading. **Suetonius** (72-c. 160).—*Lives of the Cæsars, Lives of Eminent Grammarians*—A voluminous writer, from whom we have the lives of the first twelve Cæsars. His style is dry but precise. **Apuleius, Lucius** (c. 130).—*Golden Ass, Concerning Magic*—Writer of romance who protrayed conditions of his time with much humor and in life-like colors.	*New Testament.* **Justin Martyr.**—*Apologies for the Christians.*—Important as defender of Christian religion. Was an ardent student of philosophy. Said to have been beheaded in 165 because he refused to offer sacrifice to heathen gods. **Clement of Alexandria.**—*Exhortation to the Greeks.*—A defense of the faith, designed to win converts. **Tertullian** (c. 150-230).—*Apology, Tracts.* The creator of Christian Latinity. His works imprinted on Western theology a legalistic character which it never lost. Sharply attacked moral laxities of his time. **Origen.**—The greatest theologian of the third century. He developed the allegorical interpretation of scripture.	**Dion Chrysostomus** (c.50-117).—*Orations.*—Though his writings have but little inherent value he is famous on account of the beauty of his style. **Lucian** (c. 120-200).—*Dialogues of the Dead, Satires.*—A bold satirist who, fertile in invention and racy in humor, ridiculed the religion, philosophy and literature of his people. **Appian** (c. 150).—*History of Rome.*—His point of view is purely Roman but the work is invaluable for the history of the civil wars. **Galen** (c. 130-170).—A celebrated physician and prolific writer. Nearly every phase of medical science is indebted to him. **Dio Cassius** (c. 150-235).—*History of Rome.*—Though a Roman senator he adopted Greek in his writings. The work is a model of diligence.	**Kalidasa** (In).—*Dramas*—The most illustrious name in the second epoch of Sanskrit literature. This is the period of artificial poetry. Kalidasa is rich in creative fancy and strong in powers of description. His fame rests on his dramas, but he is also an epic and lyric poet. *Talmud* begun. This great work is the encyclopædia of Jewish civilization.	98-117, Trajan. 117-138, Hadrian. 138-161, A. Pius. 161-180, Marcus Aurelius.
200 to 400	**Ausonius** (310-390).—*Mosella.*—A Latin poet of Gaul in whom we first find the modern love of nature predominant. His best known poem is called *Mosella,* from the river Mosella; but he also dwelt on many subjects.	**Athanasius** (c. 293-373).—*Discourses, Histories.*—The father of Greek orthodoxy. **Chrysostom.** — *Homilies, Commentaries, Epistles.*—An eloquent expounder of Christian doctrine. **St. Ambrose** (c. 340-397).—A learned bishop noted for his mild and gentle, but inflexible character. **Jerome** (c. 340-420).—*Latin Bible* (vulgate).—This translation was destined to become the Bible of the occident. **Prudentius** (c. 348-405).—*Hymns.*—The greatest of the early Latin Church. The *Hymns* were designed for devotional use. **St. Augustine** (354-430).—*Confessions.*—Greatest of the Latin fathers. Taught that outside of the true church there could be no salvation.	**Herodian** (c. 170-c. 240).—*History of the Roman Empire.*—A sober, accurate and impartial historian. **Plotinus** (c. 204-270).—*Enneads.*—A Greek philosopher characterized by depth of thought and pithy language. **Longinus** (213-273).—A rhetorician so learned that he was called "a living library and a walking museum." **Longus.** — *Daphnis and Chloe.*—This pastoral romance is considered the best of all ancient romances on account of its graceful narrative and deep, natural feeling. **Musæus.**—*Hero and Leander*—A short epic of love. In its warmth of feeling it has touches that are almost modern.	Completion of Palestine *Talmud.*	Hau dynasty in China. 226, New Persian empire. 272, Defeat of Zenobia. 273, Death of Plotinus. 284, Reorganization by Diocletian.
400 to 500	**Claudian** (c. 365-408).—*Rape of Proserpine, Epigrams,* etc.—The last of the classical Latin poets. His poetical gifts were considerable, especially in the mastery of language and meter.			GOTHIC **Bishop Ulfilas** (c. 311-381).—*Gothic Bible*—The earliest literary monument in Germanic speech, translated by the bishop of the Visigoths, and formed the basis of Arian Christianity for two centuries. One manuscript is preserved in the *Codex Argenteus* in Upsala.	313, Edict of Milan by Constantine. 361-363, Julian. 376, Visigoths admitted. 395, Death of Theodosius. 410, Alaric sacks Rome. 449, Saxons invade Britain. 455, Vandals sack Rome.
500 to 600	**Boethius** (470-525).—*Consolations of Philosophy, Translations.*—Almost the last Latin prose writer who also knew Greek. He ends the Roman period of literature with his philosophic treatises.	**Fortunatus, Venantius** (c. 530-600).—*Hymns, Epitaphs, Epistles.* The chief Latin poet of his time. *The Royal Banners Forward Go,* is his most famous hymn. **Gregory the Great** (540-604.—*Exposition of Job, Dialogues.*—As a pontiff he was the great organizer of the ritual and public services of the Roman Church. One of the four greatest teachers of the Western church.		*Moallakat* (Arab.)—A collection of seven prize poems by as many authors. ANGLO-SAXON *Beowulf*—An epic poem, one of the most interesting literary monuments among Germanic peoples. Its mythological elements show great antiquity.	527-565, Justinian. 571, Birth of Mohammed. 590, Gregory becomes pope. 593, Books printed in China.

FAMOUS WRITERS

TABLE III. FROM MOHAMMED TO DANTE, 600-1300

DATE	ENGLISH	GERMAN	SCANDINAVIAN	ARABIAN, PERSIAN	HISTORICAL EVENTS
600 to 700	**Bede** or **Baede** (673-735).—*Ecclesiastical History, Poems*—Inspired by early Christian sentiment. **Cædmon** (675?).—*Paraphrase of Scripture*—Showing how strong an appeal the bible story made to the reverence of the race.	This is the period of the infiltration of Roman civilization and Roman ideas.	400-1000, *Hundreds of Runic Inscriptions* (Dan.) — Very brief. Some in verse. Generally commemorate the dead. Very important for history, language, mythology. 400-1500, *About 2000 Runic Inscriptions* (Swed.) — Some authors known, as Ubir, Bali, Asmundr, Karasun. About 160 are in poetic form. Important for history, language, art.	**Mohammed's** *Koran*, the sacred book of Islam, collected shortly after his death. Many odes and lyrics in Arabic. *Bundahish* (Per.)—Date very uncertain. A work on cosmogony and theology.	622, Flight of Mohammed from Mecca, the Hegira. 632, Death of Mohammed. Rapid spread of Mohammedanism.
700 to 800	*Traveler's Song* (700?)—Illustrates the sentiment of a wandering singer and the Anglo-Saxon's love of home. **Alcuin** (735-804).—*Letters, Biographies. Crist, Elene, Andreas*—Friend of Charlemagne, wrote a comparatively pure Latin. **Cynewulf** (c. 750-825).—*Poems*—Serious poems of moral simplicity and power.	*Lay of Hildebrand, Wessobrunn Prayer, Muspilli*—All are in the old Germanic alliterative verse. Authors are unknown. The *Lay of Hildebrand* is an example of the rough, uncouth ballad out of which the German national epic was, later, to be constructed.		In the latter half of this century Arabia enjoyed a glorious reputation in science and literature under the patronage of Haroun-al-Raschid. **Abu Hanifah** (702-772).—*Code of Laws*—Still in force in many parts of the Ottoman empire. **El-Asinal.**—*Romance of Antar* (Arab.)—A long poem upon the poet Antara.	687, Battle of Testry. 711, The Arabs enter Spain. 732, Arabs repelled at Tanes. 751, Pepin the Short, king of Franks.
800 to 900	**Alfred the Great** (c. 849-901).—*Translations* — Some original matter interpolated, *e. g.*, narrative of others; versified by Longfellow.	**Otfrid** (c. 800-870).—*Gospel Book*—A poetic version of the life of Christ, and, like the *Heliand*, doubtless intended to supplant the old heathen epic. *Heliand* (c. 830)—An alliterative epic in Old Saxon speech, treating the gospel account of the life of Christ. Numerous religious writings, visions of judgment, lives of saints, epic gospel narratives, harmonies, and a few political compositions fill up the tenth century.	**Skalds** (800-1100). — *Drapas* (Ic.)—Vivid laudatory poems describing feats and battles of contemporary Scandinavian and English rulers. Traveled from court to court. **Anonymous** (850-1200).—*Elder (or poetic) Edda* (Ic.)— About 35 poems in alliterative verse dealing with myths (Odin, Thor, Frey) and hero legend (Sigfrid story). Composed in Iceland, Norway, Greenland; vivid, dramatic, terse.	**Al-Kindi** (c. 800).—*Medicine, Astrology* (Arab.)—Remains of 200 works on science and philosophy. **Abu Ubaidah** (824), (Arab.).—*History*, in 105 monographs including histories of Mecca and Medina.	800, Charlemagne crowned emperor of the west. 809, Death of Haroun-al-Raschid. 814, Death of Charlemagne. 843, Treaty of Verdun. 878, Treaty of Wedmore.
900 to 1000	**Alfric** (955-1020).—*Homilies, Grammar*—Writings in Latin. A man of power and sincerity. During the tenth and eleventh centuries the Anglo-Saxon or English language was undergoing radical grammatical changes. The great authors of these two centuries wrote in Latin, it being intelligible to the learned, for whom they wrote.	**Ekkehard.**—*Lay of Walther of Aquitaine* (c. 930)—*Waltharius manu fortis* is a short epic in Latin hexameters describing the adventures of Hildegunde of Burgundy and of Waltharius as hostages at the court of Attila. **Roswitha** or **Hrotswith.**—*Dramas*—A nun of Gandersheim who wrote six dramas in Latin in the Christian spirit of her time to take the place of the pagan plays of Terence.	**Egil Skallagrimsson** (Ic.), (900 - 983). — *Höfudlausn* (Head-ransom); *Sonatorrek*, (Son-Loss)—Daring, straightforward, original in expression. **Eyvind Skáldaspillir** (Nor.), (c. 910-995).—*Poem on King Hákon, Háleygjatal*—Is a fine poet and excellent man, but imitator of predecessors, whence his nickname "destroyer of skalds." **King Harald Harfagre** (Nor.), (933).—*Snaefridardrapa*—Encouraged skaldic poetry and is said to have been a poet himself. **Thorbjörn Hornklofi** (Nor.).—*Poem on Harold Harfagre, Wardin.* **Einar Helgason Skalaglam** (Ic.), (c. 945).—*Vellekla* (Goldwant)—Powerful and exalted. Fine diction. Melodious verse. **Halfred Vandraedaskald** (Ic.), (c. 970).—*Poems on Various Chiefs*—Faithful, upright, but a bitter enemy. Fluent poet. Master of language and verse.	**Rudagi** (——954), (Pers.).—*Divan*—Graceful, fluent lyrics. The first great poet of Mohammedan Persia. **Ebu-Alruml** (905); (Arab.).—*Poems*—Lyrics and other types of verse.	912, Treaty with Rollo.
1000 to 1100		**Notker III.**—*Translations*—A monk of St. Gall, the forerunner of the Renaissance. He translated into German Boethius' *Consolations of Philosophy*, the *Psalter*; Aristotle's *Categories*, etc. *Ruodlieb* (c. 1030)—A Latin epic with novelistic features, describing the life of the time. **Williram.**—*Song of Solomon*—William Abbot of Ebersberg in Bavaria, translated the *Song of Solomon* into German. **Ezzo.**—*Lay of Ezzo*—A scholastic of Bamberg whose *Lay* was to be sung as an anthem on the last great pilgrimage to the Holy Sepulchre before the crusades.	**Sigvat Thordarson** (Ic.), (995-1045)—*Vikingarvisur* (Viking lays), *Bersöglisvisur* (Lays of Frankness)—Greatest poet of days of Olaf the Holy. Tactful, discreet, honest, ease and elegance. *Runic Inscriptions* (Nor.), (1050-1350)—Some in verse. About 150, and of no great importance. Some older than 1050.	**Firdusi** (c. 940-1025), (Pers.).—*Book of Kings*—One of the foremost poets of all literature. A great epic dealing with the Persian monarchs. **Mutanabbi** (965), (Arab.).—*Divan*—A series of poems. **Avicenna** (980-1037), (Arab.). *Medicine, Philosophy*—Philosophical and scientific works. His work on philosophy has been a text-book for European universities.	962, Restoration of Holy Roman empire. 981, Greenland discovered.
	ENGLISH / FRENCH			**Hariri** (c. 1054-1122), (Arab.).—*Mohamat*—Moral and satirical prose and verse. **Al-Hasan al-Nisaburi** (died 1015), (Arab.).—*Commentary on the Koran.*	1054, The great schism. 1066, Normans conquer England. 1096, First crusade.
	William of Malmesbury (1095-1142).—*History of Kings of England*—Of some value as an original. **Geoffrey of Mcnmouth** (1154-——).—*History of English Kings*—Largely legendary.	*Song of Roland.* The greatest of the old French epics relating the adventures and death of Roland, a nephew of the Emperor Charlemagne. Probably composed at the end of the eleventh century.			

TABLE III. MOHAMMED TO DANTE—Continued

DATE	ENGLISH	GERMAN	FRENCH	SCANDINAVIAN	SPANISH	ARABIAN, PERSIAN	HISTORICAL EVENTS
1100 to 1200		*The Lay of the Nibelungs*—It is the Iliad of Germany.	**Villehardouin** (1150-1212). *Conquest of Constantinople*—The most valuable French prose of the Middle Ages.	**Snorre Sturlason** (Ic.), (1178-1241).—*Heimskringla* — History of kings of Norway from prehistoric times to 1177. *Younger* (or prose) *Edda*. Scientific handbook on Norse mythology poetic diction and versification.	**Unknown,** twelfth century (Sp.).—*Poem of the Cid*—Great narrative poem on the national hero.	**Omar** (-1123), (Pers.).—*Quatrains*—Philosophic and meditative stanzas.	1118. Order of Knight Templars founded.
		Wolfram von Eschenbach (c.1170-1220).—*Parzifal*—The greatest epic of its time. A phychological treatment of the story of the spotless Percival in his search for the Holy Grail.				**Averrohes** (1126-1198), (Arab.).—*Science, Philosophy*—Important works on criticism, astronomy, medicine.	1138. Battle of the Standards. 1163. Notre Dame of Paris founded.
1200 to 1300	**Roger Bacon** (1214-1294).—*Natural Science, Philosophy*—A man in advance of his age.	**Gottfried von Strassburg** (c. 1200).—*Tristan and Isolde*—His great court epic is naturalistic, breathing the spirit of French poetry. Gottfried was the master poet of passion.	**Jean, Sire de Joinville** (1224-1317).—*Life of St. Louis*—A friend of Louis IX., whom he accompanied in the first crusade.			**Sadi** (Pers.) (c.1184-1291) *Rose-Garden, Tree-Garden, Odes*—Catholic in view and taste, elegant in finish.	1196. Observatory at Seville.
		Berthold von Regensburg (1247-1272).—*Sermons*—The greatest German preacher of the middle ages. His language is direct, dramatic, sincere.					1206. Franciscan order founded. 1215. Magna Charta signed.
		Master Eckart (1260-1327).—*Sermons*—The first of the mystics.					1229. University of Toulouse founded. 1248. Cathedral at Cologne begun.

Marie de France.—*Lays, Fables*—Peculiar charm from their elegant conciseness and their personal note. *Aucassin et Nicolette*—An excellent example of the chanter fable of the twelfth century.
Lorris and **Meung.**—Joint authors of the *Romance of the Rose*, a poem on the "Art of Loving."

TABLE IV. FROM DANTE TO THE PRE-REFORMATION PERIOD, 1300-1600

DATE	ENGLISH	GERMAN	FRENCH	PERSIAN	ITALIAN, SPANISH, PORTUGUESE	SCANDINAVIAN	HISTORICAL EVENTS
1300 to 1400	**Sir John Mandeville** (1300-1371). *Travels*—Possibly a pen name. His travels are an extraordinary medley of invention and report.	**Tauler** (1300-1361)—*Sermons*—A great preacher of Strassburg, and the forerunner of Luther.			**Dante Alighieri** (It.), (1265-1321).—*Divine Comedy*—Great epic, written in the first person.	Collections of old provincial laws (Dan.),(c. 1300).—Fine picture of life of early times in all its phases.	1295. Marco Polo returned to Venice.
					Francesco Petrarch (It.), (1304-1374).—*Sonnets and Songs*—Lyrics mostly concerning Laura.	**St. Birgitta** (Swed.), (1303-1373).—*Revelations*—Mystical, conversations between Christ, Mary and Saints.	1309. Popes in Avignon.
	John Wycliffe (1324-1384).—*Translation of Bible*—A man of great power and sincerity. A dialectician and scholar.				**Giovanni Boccaccio** (It.), (1313-1375).—*Decameron*—A series of 100 tales in prose.		
	William Langland (1330-1400).—*Piers the Plowman*—Extraordinary man of broad humanity. First expression of the voice of the poor.		**Jean Froissart** (1337-1410). *Chronicles*—A vivid and striking account of the events which took place in his days.				
	Geoffrey Chaucer (1340-1400).—*Canterbury Tales, Short Poems*—A scholar, a poet of chivalry and a witty narrator of stories in verse.			**Hafiz** (c.1390), (Pers.)—*Poems*—Lyrics of a very high order.		**Eystein Asgrimsson** (Ic.),(1350).—*Lily*—Artfully wrought, popular religious poem.	1348. University of Prague founded.
					Iñigo López de Mendoza (Sp.), (1398-1458).—*Sonnets*—The first in Spain to compose sonnets in imitation of Petrarch.		1386. University of Heidelberg founded.
1400 to 1500	**Sir Thomas Malory** (1430- —).—*Morte d'Arthur*—Worked over a large part of the Arthurian legends in prose. The original for Tennyson's *Idylls of the King*.	**Geiler von Kaisersberg** (1445-1510).—*Sermons*—The representative preacher of the century.	**Charles of Orleans** (1391-1468).—*Poems*—Called the last of the Trouvères. His poetry in which art takes too often the place of thought, reaches a perfection of form in which we see already the approach of the Renaissance.		**Matteo M. Boiardo** (It.), (1430-1494).—*Orlando Inamorato*—A long romantic poem.		1409. University of Leipzig founded.
					Girolamo Savonarola (It.), (1452-1498). — *Sermons, Poems*—Political and theological writings.		1453. Fall of Constantinople.
		Johann Reuchlin, Erasmus of Rotterdam—Famous humanistic scholars.	**François Villon** (1431-1485).—*Ballads*—The most remarkable poet of the fifteenth century. His *Testaments* are among the masterpieces of French poetry.		**Niccolò Machiavelli** (It.), (1469-1527).—*History, The Prince*—Profound but not too scrupulous.		
	Sir Thomas More (1478-1535).—*Utopia, Life of Edward V.*—A man of fine character. Plan suggested perhaps by Plato's *Republic*.	**Thomas Murner** (1475-1537).—*Satires, History*—Famous for attacks on Luther. Witty, ironical pulpit-orator.	**Philipe de Commines** (1445-1509). — *Memoirs*—Give the best accounts we have of the reigns of Louis XI. and Charles VIII.		**Ludovico Ariosto** (It.), (1474 - 1533). —*Orlando Furioso*—A romantic poem of chivalry.		
						Christian Pedersen (Dan.),(1480-1554) —*Translation of Luther's Bible* (1550)—Father of modern Danish literary language.	

TABLE IV. DANTE TO THE PRE-REFORMATION PERIOD—Continued

Date	English	German	French	Italian, Spanish, Portuguese	Scandinavian	Historical Events

Much admired by Walter Scott.	**Martin Luther** (1483-1546).—*Translation of the Bible, Treatises, Hymns*—Inaugurator of the Reformation. **Ulrich von Hutten** (1488-1523).—*Poems, Songs*—Humanist and soldier, he supported the work of Luther. **Hans Sachs** (1494-1576).—*Shrove Tuesday Plays, Poems*—Prolific cobbler mastersinger of Nuremberg. **Philipp Melanchthon** (1497-1560).—*Treatises, Text-Books*—Colleague of Luther.	**Francois Rabelais** (1483-1553).—*Philosophy, Satire*—Scholar, philosopher, satirist, and innovator. Rabelais has left to posterity in the *Life of Gargantua and Pantagruel* a compendium of his vast knowledge. **Clément Marot** (1495-1544). — *Poems*—Excelled in the lighter forms of poetry, such as the madrigal, the rondeau, the ballad, etc. Boileau calls his poems "elegant badinage."	**Francesco Guicciardini** (It.), (1483-1540).—*History, Politics.*—Cool, observant *Recollections*; masterly *History of Italy.* **Gil Vicente** (Port.), .(c. 1485-1536). — *Dramas* — Founder of the Portuguese drama. **Vittoria Colonna** (It.), (1490-1547).—*Poems*—Sonnets on the death of her husband. **Juan Boscán** (Sp.), (1493-1543).—*Poems*—Introduced Italian measures into Spain. **Jacopo Nardi** (It.), (1496-1556).—*History of Florence*—Animated history with the faults of a contemporary. **Benvenuto Cellini** (It.), (1500-1571).—*Autobiography*—A remarkable picture of his times. **Garcilaso de la Vega** (Sp.), (1503-1536).—*Poems*—Refined but lacking in originality. **Hurtado de Mendoza** (Sp.), (1503-1575).—*History, Fiction—War of Granada*, a comic novel, *El Lazarillo de Tormes.*	**Brodr Niels** (Dan.), (1495).—*Rimkrönikel* (rhymed chronicle).—Each king tells his own life and deeds. First Danish book printed. **Olaus Petri** (Swed.), (1493-1552).—*Religious Works, History, Hymns*—Unbiased historian. Luther of Sweden. Father of modern Swedish literary language. **Hans Tausen** (Dan.), (1494-1561).—*Religion*—Age of Reformation. Polemical. *Morality and Mystery Plays* (Dan.), (1500-1600)—Same origin and fate as in other countries.	1492. Discovery of America. 1498. Martyrdom of Savonarola. The Reformation Raphael and Michelangelo in art. 1509-1547. Henri VIII. king of England.
	Sir Thomas Wyatt (1503-1542).—*Sonnets, Lyrics*—Introduced with Howard the Italian forms, sonnet and madrigal; made Italian literature a new force in England. **Henry Howard** (earl of Surrey), (1517-1547).—*Translation of the Æneid, Songs, Sonnets*—Introduced Italian forms and blank verse. **John Fox** (1517-1587).—*Book of Martyrs*—His book had great influence in strengthening the reformers and was one of the literary influences on the Puritans who came to America.	*Till Eulenspiegel*, oldest version (1515)—A large collection of witty, popular anecdotes, the hero of which was the prince of rogues, Till Eulenspiegel.	**John Calvin** (1509-1564).— *Institutes of Religion*, etc. The second head of the reform. His *Institutes of the Christian Religion* is a statement of the doctrine of the religious innovators, and, like his other works, shows a remarkable erudition. **Jacques Amyot** (1513-1593). — *Translations From the Greek.* These translations, especially those from the works of Plutarch, stand as a model of the best language of the sixteenth century. **Pierre de Ronsard** (1524-1585).—*Sonnets, Odes*, etc.—As a poet Ronsard enjoyed in his time a celebrity second to none. **Etienne Jodelle** (1532-1573).—*Cléopâtre, Eugène* — His *Cléopâtre* may be said to mark one of the epochs of the French theater. **Michel E. de Montaigne** (1533-1592).—*Essays*—The work of the sixteenth century the most read to-day. Writing without order or plan he reaches the knowledge of mankind through the study "in good faith," of himself.	**Giorgio Vasari** (It.), (1512-1574).—*Lives of Celebrated Artists*—A gossipy book of information and anecdote about artists. **Luiz de Camoens** (Port.), (1524-1579).— *Lusiad, Poems*—Greatest poet of Portugal. *Lusiad* a celebrated historical epic. **Ponce de León** (Sp.), (1528-1591).—*Lyrics*—Original poems; translations from classics; translations from Hebrew poets.	1531. College de France.
	Thomas Sackville (1536-1608).—*Mirror for Magistrates.* A poet of force and imagination. Afterward, as Lord Buckhurst, a courtier and politician. Worked in collaboration with others and had a hand in the first English tragedy. **Edmund Spenser** (1552-1599.)—*Faërie Queene, Shepherd's Calendar.* Called the "poet's poet." Great in romantic allegory, the ode, and the sonnet. **Sir Walter Raleigh** (1552-1618).—*History of the World*—A politician and adventurer; friend of Spenser. Some fine passages in his work.	**Johann Fischart** (1550-1590).—*Treatises, Epic and Satire*— The master of German satire in the later sixteenth century. Achieved fame in 1577 by *The Fortunate Ship of Zürich*, treating the friendship between the cities of Zürich and Strassburg. Toward the end of the sixteenth century English comedians introduced English plays into Germany.		**Ercilla** (Sp.), (1533-1595).—*Aruacana*—An epic poem on the revolt in Chili. **Fernando Herrera** (Sp.), (1534-1597). — *Lyrics*—Erratic and patriotic poems; author called the Divine. **Torquato Tasso** (It.), (1544-1595).— *Aminta, Jerusalem Delivered*—The latter a great epic on the capture of Jerusalem in 1099. **Miguel de Cervantes Saavedra** (Sp.), (1547-1616).—*Don Quixote, Poems in Galatea*—The first is the great masterpiece of Spanish literature. *Galatea*, a prolix pastoral romance in prose, with verses.	**Tycho Brahe** (Dan.), (1546-1601).—*Astronomy*—Made regular and careful observations of the movements of the planets.	

TABLE IV. DANTE TO THE PRE-REFORMATION PERIOD—Continued

Date	English	German	Italian, Spanish, Portuguese	Scandinavian	Historical Events
1500 to 1600 Cont.	**Richard Hooker** (1553-1600).—*Ecclesiastical Polity*—His prose has dignity and force. His book is the authority for the Church of England. **Sir Philip Sidney** (1554-1586).—*Arcadia, Poems*—Singular beauty of character. *Arcadia* is a pastoral romance of great merit. **Francis Bacon** (1561-1626).—*Essays, Philosophy* — Many beautiful and acute things in his essays and his philosophical works. **Christopher Marlowe** (1564-1593).—*Dramas*—Most important of Shakespeare's predecessors. His tragedies, although full of horrors, are sublime in tone. **William Shakespeare** (1564-1616).—*Dramas* (37 plays), *Sonnets*—The best of all writers, compounded; wit, humor, characterization, philosophy, musical and phrase power, and construction.		**Pietro Sarpi** (It.), (1552-1623).—*History of Council of Trent* — Philosophical and historical.	**Gudbrand Thorlaksson** (Ic.), (1584).—*Translation of Bible*—Unwearied author and translator of religious works.	

TABLE V. SEVENTEENTH CENTURY, 1600-1700

English	German	French	Scandinavian	Italian, Spanish, Portuguese	American	Historical Events
	Jacob Ayrer (1605).—*Dramas*—Constructed under the influence of the English comedians, a new German drama, based on the art of Hans Sachs. He popularized the operetta. Sixty-six plays were published in 1618 under the title *Opus Theatricum.*	*L'Avocat Patelin*—Is the masterpiece of the French theater in the middle ages and it remains to-day as one of the best examples of the comic play and of the Gallic wit. **François de Malherbe** (1555-1628).—*Poems*—Brought into poetry a harmony and a purity of style unknown before him. There is more work than genius in his poems.		**Lope de Vega** (Sp.), (1562-1635).—*Dramas, Lyrics*—Dramas of unusual number, variety, and power. **Galileo Galilei** (It.), (1564-1642).—*Scientific*—Physical and astronomical discussions. **Tassoni** (It.), (1565-1638).—*Rape of the Bucket*—A mock heroic poem. **Tommaso Campanella** (It.), (1568-1639).—*Philosophy*—Philosophical and political. **Guillen de Castro** (Sp.) (1569-1631).—*Dramas*—His *Youth of the Cid* furnished the basis for Corneille's *Cid.*		
		St. François de Sales (1567-1622).—*Religious Works*—Preacher and writer of religious works whose influence was felt and is still felt by pious minds.	**Arngrim Jonsson** (Ic.), (1568-1648).—*History of Iceland*—Revived study of Icelandic antiquities. **Johannes Thomae Bureus** (Swed.), (1568-1652).—*Book on Runes*—Founder of runology. Grammatical works. Busy with old Scandinavian manuscripts.			
Ben Jonson (1574-1637).—*Dramas*—A scholar and man of letters. A learned constructor of plays, had also the true lyrical faculty. **John Fletcher** (1576-1625); **Francis Beaumont** (1586-1616).—*Dramas*—Well constructed plays, but of a low moral tone.	**Jacob Boehme** (1573-1624).—*Mysticism, Theosophy*—The founder of the mystical theosophy of the century.	**Mathurin Régnier** (1573-1613).—*Satires*—His poems, few in number, are imitated from the ancients. He borrowed also considerably from the Italian satirists.	**Magnus Olafsson** (Ic.), (1573-1636).—*Dictionary* — First Icelandic dictionary.			1572. Massacre of St. Bartholomew.
Robert Burton (1577-1640).—*Anatomy of Melancholy*—Full of out-of-the-way learning and quotations bearing on the subject.	**Georg Weckherlin** (1584-1653). — *Odes* and *Songs*—One of the first German poets to write sonnets and Alexandrines.	**Hugo Grotius** (Dutch), (1583-1645). — *Law, Philosophy, Translation*—Famous scholar and statesman. Modest, pious, gentle, generous.	**Anders Arrebo** (Dan.) (1587-1637).—*Poetic version of David's Psalms, Hexaemeron*—Florid language. Good description of nature, Alexandrines, mythological references	**Gomez de Quevedo** (Sp.), (1580-1645).—*Theology, Satires, Poems*—Political and religious prose; humorous and satirical works.	**John Smith** (1580-1631).—*A True Relation of Virginia*—A romantic recital of thrilling adventures. **William Bradford** (1588-1657).—*History of Plymouth Plantation*—A full and clearly written account to 1649.	1588. Defeat of the Spanish armada.
Robert Herrick, (1591-1674).—*Poems*—Lyrics, many of them of charming quality and ingenuous construction.	**Johann Lauremberg** (1590-1658).—*Satirical Poems* — A patriotic satirist of the customs, language and dress of his time, especially of imitation of the French. **Friederich von Spee** (1591-1635).—*Lyrics*—Von Spee and Johann Scheffler were exponents of the Catholic religious lyric.	**Racan** (1589-1670).—*Pastoral Poems*—A poet full of a melancholy charm, highly appreciated by his contemporaries.			**John Winthrop** (1590-1649).—*History of New England*—A simple, personal narrative, with occasional freshness of style.	
George Herbert (1593-1633).—*The Temple*, etc.—Animated by a devotional spirit and an æsthetic spiritualism.						

TABLE V. SEVENTEENTH CENTURY—Continued

English	German	French	Scandinavian	Italian, Spanish, Portuguese	American	Historical Events
Izaak Walton (1593-1683).—*The Complete Angler*—Prose of a delightful character, full of simple piety and love of outdoor nature.	**Martin Opitz** (1597-1639). — *Criticism, Translations, Poems*—Translated from Greek, Latin and Italian, and set up fixed principles of poetic art. He has been called "the father of German poetry"	**Guez de Balzac** (1594-1654).—*Eloquent Prose*—His somewhat oratorical but elegant and harmonious style had an excellent influence on the progress of the anguage. **René Descartes** (1596-1650).—*Philosophy*—The founder of the school of philosophy, based upon reason, known under the name of *Cartesianism*. Besides being a great philosopher, Descartes made remarkable scientific discoveries.	**Gustavus Adolphus** (Swed.), (1594-1632).—*Speeches, History, Hymns* — Hero of Thirty Years' war. Intended to write also about his own life and reign, but did not get beyond Karl IX.			
	H. M. Moscherosch (1601-1669).— *Novels, Poems* — Represents the beginning of the transition from satire to novel under Spanish influence.	**Vincent Voiture** (1598-1648).—*Letters.*—Enjoyed during his lifetime the reputation of a wit and his letters had a prodigious success. **Jean de Mairet** (1604-1686).—*Tragedies*—His *Sophonisbe* and *Cleopatra* are the first tragedies adhering strictly to the unities.	**Georg Stiernhielm** (Swed.), (1598-1672).—*Works on Language and Mathematics, Poems* — Introduces new period in literature. Earliest Swedish sonnets. Great linguist, greater poet.	**Calderón Barca** (Sp.), (1600-1681).—*Dramas*—Dramas with love, jealousy and honor as motives.		1600. Martyrdom Giordano Bruno. 1603, England and Scotland united under James I.
Sir Thomas Browne (1605-1682).—*Philosophy, Theology*—One of the most learned men of his time. His style exerted a great influence on Charles Lamb.	**Friederich von Logau** (1605-1655).—*Epigrams*—This great epigrammatist wrote 3000 German epigrams. Some were translated by Longfellow.	**Pierre Corneille** (1606-1684).—*Tragedy, Comedy*—Called the "Father of French tragedy." Among his tragedies four are ranked among the masterpieces of the world's literature: *Le Cid, Horace, Cinna* and *Polyeucte.* He was also the author of the best comedy written until then (1642): *Le Menteur.*	**Lars Wivallius** (Swed.), (1605-1669).—*Lyrics*—Love of liberty and nature. Long imprisoned.			
Thomas Fuller (1608-1661).—*Church History of England*—A chronicle, with passages of wit or natural pathos. **John Milton** (1608-1674), *Areopagitica, L'Allegro, Il Penseroso, Comus, Paradise Lost, Paradise Regained,* etc.—A poet, grave, learned, of mental dignity but gifted with musical power as much as Shakespeare. **Samuel Butler** (1612-1680).—*Hudibras*—A rhyming jingle, destitute of elevation but with here and there a witty couplet. Anti-Puritan throughout. A favorite book of Charles II.	**Paul Gerhardt** (1607-1676).—*Hymns and Poems*—After Luther the greatest hymn-writer of the Lutheran church, and like Luther modeled his hymns on the popular ballads.	**Mlle. de Scudéry** (1607-1701).—*Novels*—One of the leaders of the "Précieuses" and called by them the "Tenth Muse." She published a number of voluminous novels which contain many interesting allusions to the events of her days. The best known of these novels is *Artamène, ou le grand Cyrus.* **Paul Scarron** (1610-1660).—*Comic Plays, Poems*—Author of a number of witty, burlesque poems. His widow became the famous Madame de Maintenon.		**Antonio de Solis** (Sp.), (1610-1686), —*Conquest of Mexico*—An eloquent spirited account of Cortes in Mexico.		1607, Jamestown, Va., founded. 1610, Galileo discovered Satellites of Jupiter.
Jeremy Taylor (1613-1667).—*Holy Living,* etc.—The "Shakespeare of Divines." Passages of rare poetic beauty and organ-like volume. **Richard Baxter** (1615-1691).—*Saint's Rest*—One of the *Vade mecums* of the later Puritans, earnest and sincere.	**Andreas Gryphius** (1616-1664).—*Dramas*—The German Shakespeare of the seventeenth century. His best work is in his comedies.	**François de la Rochefoucauld** (1613-1680).—*Maxims, Memoirs*—His maxims, full of bold paradoxes, give him a lasting reputation. He asserts that the love of self is the only motive for all human actions.	**Hallgrim Pjettursson** (Ic.), (1614-1674).—*Psalms* — Printed about 40 times. Clearest revelations in a northern tongue of the spirit of reformation.		**Anne Bradstreet** (1613-1672).—*The Tenth Muse*—An affected and cumbersome didactic poem.	
John Evelyn (1620-1706).—*Diary*—Of inestimable value, as it covers seventy years of dramatic English history.	**Philip von Zesen** (1619-1689).—*Novels*—Showed original talent as translator of the novel of gallant adventure.	**Jean de la Fontaine** (1621-1695).—*Fables, Contes,* etc.—The *Contes,* inspired by Ariosto and Boccaccio, although full of wit are too often indecent. The reputation of the poet rests on his remarkable *Fables* which won for him the surname of "The Inimitable." **Molière (Jean B. Poquelin),** (1622-1673).—*Comedies; Le Misanthrope,* etc.—The greatest writer of comedies not only of his time but of all times. He has not been equaled in France, perhaps not in any country, and he is placed by common consent among the great men of genius who belong to the world. **Blaise Pascal** (1623-1662).—*Philosophy, Mathematics*—Not only a great mathematician but also a thinker and a philosopher. His *Pensées* (Thoughts), fragments of a religious work which he did not live long enough to finish, and his *Letters* remain as models of French literature.	**Stefan Olafsson** (Ic.), (1620-1688).—*Poems*—Lyric, ironic, satirical, moralizing.			1618-38, Thirty Years' war.
	Christoffel von Grimmelshausen (1624-1676).—*Novels*—The most important novelist of the period. *Simplicissimus,* the first great rogue novel in German literature, deals with the vicissitudes of the Thirty Years' war.					

TABLE V. SEVENTEENTH CENTURY—Continued

English	German	French	Scandinavian	Italian	American	Historical Events
		Mme. de Sévigné (1626-1696).—*Letters*—Her charming familiar letters written to her daughter give interesting information on the court life of her time. **Jacques Bossuet** (1627-1704).—*Sermons*, etc.—The greatest orator and the greatest writer of his time. In his funeral orations especially he reached absolute perfection of oratorical style.				1625. Charles I., king of England.
John Bunyan (1628-1688).—*Pilgrim's Progress, Holy War*—Simple, idiomatic, with passages of rare beauty. Animated by simple, natural piety. A classic too much neglected.		**Charles Perrault** (1628-1703).—*Stories for Children*—His stories are known all over the world and have immortalized his name.	**Olof Rudbeck** (Swed.) (1630-1702).—*Atlantika, Works on Botany and Anatomy*—Very famous in anatomy. *Atlantika*, fanciful, represents the north as cradle of civilization.		**Henry Norwood** (1628-1670?)—*A Voyage to Virginia*—Surprisingly well written in parts, and informative.	1628. Gustavus Adolphus killed at battle of Lützen.
John Dryden (1631-1700).—*Virgil Translated, St. Cecelia's Day*, etc.—A fine critic. The father of fluent prose. Many energetic lines of verse, especially in his satires. A man of fine talent but limited genius.			**Peder Syv** (Dan.), (1631-1712).—*Collection of Proverbs*—Promoted study and use of Danish instead of Latin. Wrote first Danish grammar.		**Michael Wigglesworth** (1631-1705).—*The Day of Doom*—A poem on the day of judgment, according to the views of the time.	
John Locke (1632-1704).—*Essay on Human Understanding, Thoughts on Education*, etc.—A sound, practical thinker, whose works illustrate the common sense and unspiritual tone of his age.		**Louis Bourdaloue** (1632-1704).—*Sermons*—A severe and austere preacher. The strength of his reasoning has made his sermons famous.				
Samuel Pepys (1633-1703).—*Diary* — His *Diary*, not intended to be public, throws light on the life and habits of a capable business man of the eighteenth century.	**Caspar von Lohenstein** (1635-1683).—*Dramas, Novels*—Represents the decline of German Renaissance. Reveled in themes of blood, incest, and cruelty.	**Mme. de La Fayette** (1634-1693).—*Novels*—Replaces the bombastic style of the pastorals of the time by a real language. **Nicolas Boileau** (1636-1711).—*Epistles, Art, Poétique, Satires*—These works stamp him as a real poet and as a great critic. He did much to elevate the literature of the century. **Malebranche** (1638-1715).—*Philosophy*—Whatever may be the opinion of his theology, his rich and poetical style cannot be denied, and he is considered a great writer. **Jean Racine** (1639-1699).—*Tragedy*—Brought the French classic tragedy to its perfection. He understood men better than Corneille and consequently his tragedies are more human. It has been said that Racine painted men as they are, and Corneille as they should be. **Jean de La Bruyère** (1645-1696).—*Character Studies*—Above all a moralist who in his *Charactères* satirized without mercy his surroundings.	**Thomas Kingo** (Dan.), (1634-1703).—*Hymns*—Denmark's most favorite hymn-writer and one of the world's best. **Thormod Torfason** (Ic.), (1636-1719).—*History of Norway*—A revolutionizing history. **Niels Stensen** (Dan.), (1638-1686).—*Mineralogy*—Finest work on subject ever written. Great student of astronomy. **Lars Johansson** (Swed.), (1638-1674).—*Lyrics*—Drinking songs, songs of love, casual poems.			1634. Wallenstein assassinated.
Sir Isaac Newton (1642-1727).—*Principia*, etc.—A great mathematician, he laid the foundation of our understanding of the mechanical structure of the universe.	**Christian Weise** (1642-1708).—*Plays, Novels*—Schoolmaster poet of Zittau, wrote after the manner of the Latin school dramas. He marks an advance by introducing fresh characters from the life about him and employing an unstilted style. **G. W. Leibnitz** (1646-1716).—*Philosophic Writings*—The first great scientific German philosopher of the modern type, sought to reconcile spirit and matter. Chief works deal with the goodness of God, the liberty of man, the origin of evil, and his theory of monads, or atoms. **Christian Thomasius** (1655-1728).—*First German Monthly*—Sought to bring universities into close touch with national life. Delivered the first of university lectures ever given in the German tongue.	**Samuel Columbus** (Swed.), (1642-1679).—*Works on Grammar, Poems, Hymns*—Unusually melodious poetry. **Harvin Spegel** (Swed.), (1645-1714).—*Glossarium Swedogothicum, Poems, Hymns*—Wrote *Guds Verk och Hvila*, religious, didactic poem. Best as writer of hymns. **François de la Motte Fénelon** (1651-1715).—*Télémaque*, etc.—Was not equaled in his century for the charm of his style. Less vigorous than his rival Bossuet, the influence of his sermons and his religious works was not less great. **Jean François Regnard** (1655-1709).—*Comedies in Verse*—His comedies, especially *Le Joueur*, show a decided comic talent.	**Vincenzo da Filicaja** (It.) (1642-1707).—*Lyrics*—Purely academic poet. Odes in lofty style.	**William Penn** (1644-1718).—*Brief Account of Pennsylvania*—Confidently religious and philanthropic in tone.	1642. English civil war. 1649. Charles I. of England beheaded. 1660. Restoration of the Stuarts.
			G. E. Dahlstierna (Swed.), (1661-1709).—*Poems*—Affected and bombastic, Patriotic. **Jon Thorkelsson Vidalin** (Ic.), (1666-1720).—(*Postille Family Book of Sermons*)—Bold eloquence.			

TABLE VI. EIGHTEENTH CENTURY, 1700-1800

English	German	French	American	Italian, Spanish, Scandinavian	Historical Events
Daniel Defoe (1661-1731).—*Robinson Crusoe*—A born story-teller and pamphleteer.			**James Blair** (1656-1742).—*Sermons, No Cross No Crown*—Comparatively modern prose, written with pious zeal.		
Jonathan Swift (1667-1745).—*Tale of a Tub, Gulliver's Travels* — Unequaled as a satirist and writer of allegories in simple, nervous, idiomatic English.		**Jean Massillon** (1663-1742).—*Orations*—One of the great French sacred orators. He lives in his *Petit Carême*.	**Cotton Mather** (1663-1728).—*Elegy of Rev. Nathaniel Collins, Sermons*, etc. — Voluminous ecclesiastical writings of "pedantic and fantastic quaintness."		1666. Great fire of London.
Joseph Addison (1672-1719)—*Essays*—Originator of the social essay, marked by kindly, gentlemanlike humor in the urbane style.		**Alain René Le Sage** (1668-1747).—*Gil Blas, Comedies*—Best known as the author of *Gil Blas*, a satirical novel, and the first one to depict truly the manners of society.		**G. Battista Vico** (It.), (1668-1744).— *Scienza Nouva* — Metaphysical and scientific.	
Sir Richard Steele (1672-1729).—*Essays*—Established the *Tatler*. A good second to Addison.			**William Byrd** (1674-1744).—*The Dividing Line* and *other tracts* — Full of fresh humorous observations on life.		
		Duc de Saint Simon (1675-1755).—*Memoirs*—An original and powerful writer whose memoirs are a rich mine for those who study the period in which he lived.	**Robert Beverly** (1675-1716).—*History of Virginia*—A straightforward narrative of slightly polemic purpose.	**Scipione Maffei** (It.), (1675-1755).—*Dramas*—His *Merope* is the first classic Italian tragedy.	1675. Greenwich observatory founded.
	Christian von Wolff (1679-1754).—*Philosophical Writings* — The modern scholastic who popularized philosophy and brought rationalism to bear upon theology.				
Bishop Berkeley (1684-1753). — *Philosophy* — A very acute thinker, English founder of one form of idealism.		**Philippe Destouches** (1680-1754). — *Comedies in Verse*—His *Le Glorieux* is an excellent comedy of manners and the best of his plays.		**Ludvig Holberg** (Dan.), (1684-1754).—*Comedies, Historical Works, Philosophy, Comic Poetry*—Founder of Danish drama. Satirical comedy. Natural language of daily life. Fine picture of Copenhagen life.	
Alexander Pope (1688-1744).—*Poems*—The model poet of his time and century. Imparted to the couplet vigor, pungency, and some variety.				**Emanuel Swedenborg** (Swed.), (1688-1772).—*Philosophy* — Prominent scientist. Founder of religious sect with adherents chiefly in England and America.	1688. English revolution.
Samuel Richardson (1689-1761).—*Novels; Clarissa Harlowe, Pamela, Sir Chas. Grandison* — Founder of the sentimental moral novel, and gifted with the story-telling faculty.		**Alexis Piron** (1689-1773).—*Comedies in Verse*—The many superior qualities displayed in his poetical works are spoiled by the licentious nature of some of them. His best comedy *La Métromanie*, is one of the masterpieces of the French theater.			
Bishop Butler (1692-1752).—*Natural and Revealed Religion*—The orthodox moralist of his day, ponderous in style and common-place in method.	**J. C. Guenther** (1695-1723).—*Lyrics* — A lyric poet of personal feeling, modeling his lyrics upon the ballad, and thus the forerunner of Goethe.	**Voltaire** (**François Marie Arouet**) (1694-1778).—*History, Letters, Philosophy, Poems, Dramas*, etc. — The greatest literary genius of the eighteenth century. Poet, historian, political and satirical writer, philosopher, writer of tragedies, he excelled in every branch of literature. His works fill from 75 to 80 volumes.		**H. A. Brorson** (Dan.), (1694-1764). — *Hymns*—Wrote some of the best Danish hymns.	
	J. Bodmer (1698-1783).—*Criticisms, Translations*—Attacked Gottsched for subordinating the poet's imagination to the understanding, and finally wrought the latter's downfall.			**Pietro Metastasio** (It.), (1698-1782).— *Musical Dramas*—Lyric smoothness of melody.	1697. Peace of Ryswick.
Henry Carey (1700-1743). *Poems; Sally in Our Alley*, etc.—A light gift of doggerel satire.	**J. C. Gottsched**, (1700-1766).—*Dramas, Criticisms*—For twenty years literary dictator in Leipzig, sought to reform the German drama on the model of the French, but insisted upon historic costume, and banished the clown from tragedy.				
James Thomson (1700-1748).—*The Seasons*, etc.—A delicate feeling for the quieter aspects of nature, harmoniously expressed.			**Jonathan Edwards** (1703 - 1758) — *Sermons, Surprising Conversions*, etc.—Strong and highly imaginative proclamations of Calvinism.	**Ignacio de Luzan** (Sp.), (1702-1754).—*Art of Poetry, Poems*—Helped introduce French influence in Spanish.	
			Benjamin Franklin (1706 - 1790). — *Poor Richard's Almanac, Autobiography*— Wise and sagacious utterances of a fair, avowed utilitarian.	**Finn Jonsson** (Ic.), (1704-1789). — *Ecclesiastical History of Iceland*—List of royal decrees. History up to 1740.	1704. Boston *News Letter* established.

TABLE VI. EIGHTEENTH CENTURY—1700 to 1800—Continued

English	German	French	Scandinavian	Italian, Russian	Historical Events
Henry Fielding (1707-1754).—*Tom Jones, Amelia, Jonathan Wild*, etc.—The first great realistic novelist. Depicts life broadly and faithfully.		**Comte de Buffon** (1707-1788).—*Natural History* — A great naturalist and a writer whose style still serves as a model.	**Karl von Linné** (Swed.) (1707-1778).—*Botany, Travels* — Founder of science of botany. Language is naïve, expressive, simple, clear. **Johan Ihre** (Swed.), (1707-1780).—*Swedish Dictionary* — Founder of modern Swedish philology. His dictionary was epoch-making. **Sven Lagerbring** (Swed.), (1707-1787).—*History of Sweden*—Opposed fantastic historical writing of Rudbeck and other predecessors.	**Carlo Goldoni** (It.), (1707-1793).—*Comedies*—Animated character comedy, mostly in prose.	
Samuel Johnson (1709-1784).—*Dictionary, Rasselas, Lives of the Poets, Vanity of Human Wishes*—A man great in eighteenth century learning and letters. The critical authority of his day. **David Hume** (1711-1776).—*History of England*—The first learned historian of England. A philosopher of acumen.	**Friederich von Hagedorn** (1708-1754).—*Anacreontic Lyrics, Fables*—Essentially a social poet. He gave the dominant tone to the German lyric for twenty-five years. **Albrecht von Haller** (1708-1777).—*Science, The Alps*—Great Swiss anatomist and physiologist. Came under the influence of English poets and wrote *The Alps* in the spirit of the English nature poetry.	**Louis Gresset** (1709-1777).—*Poems, Comedies—Vert-Vert*, a jocular poem, and *Le Méchant*, a comedy, are the best known of his works. **Jean Jacques Rousseau** (1712-1778).—*Fiction, Education*—The world-wide influence of the works of this man cannot be measured.	**Olof von Dalin** (Swed.), (1708-1763).—*Journalism, History, Comedy, Tragedy, Poems*—Represents beginning of era of French influence. Shows influence of Pope, Addison, Swift, Voltaire.	**Prince Antioch Kantemir** (Russ.), (1708-1744).—*Poems*—Bold satirist of the social life of his own people. Verse form under French influence. **Michail Lomonossow** (Russ.), (1711-1765).—*Lyrics*—Scholar and poet Founder of Russian metrics. Grounded in Russian folk-song.	1708. Battle of Oudenarde. 1710. St. Paul's cathedral, London, completed.
Laurence Sterne (1713-1768).—*Tristram Shandy, Sentimental Journey*—A writer in whom affectation becomes an art. Some pathetic passages have become classic.		**Denis Diderot** (1713-1784).—*Fiction, Encyclopedie* (Ed). One of the most powerful exponents of the ideas and philosophy of the eighteenth century. **Etienne de Condillac** (1715-1780). — *Metaphysics*—A friend of Rousseau a d Diderot, and, as a philosopher, for a long time a disciple of Locke. His *Treatise on Sensations* put him at the head of the "Sensualiste" school.			
Thomas Gray (1716-1771).—*Elegy in a Country Churchyard*, etc.—A scholar-poet, Production limited but of fine workmanship.	**C. F. Gellert** (1715-1769).—*Novels, Letters, Fables, Poems*—A poet of the people. Great stylist as letter writer. His *Swedish Countess of G.* is the first social novel in Germany. **Ewald von Kleist** (1715-1759). — *Nature Poetry, War Odes* — A Prussian military officer. Influenced in his poetry by Thomson. A spirit of melancholy unites with his passionate love for nature. **J. J. Winckelmann** (1717-1768).— *History of Ancient Art*—His work opened a new epoch in the history of art, and marked the beginning of modern archæology as a branch of science. **J. W. L. Gleim** (1717-1803).—*Anacreontic Lyrics, Grenadier Songs*—A mediocre poet of love and wine and of war-songs, best known as a generous patron of needy poets.				1717. Alliance between France, England and Holland.
Tobias Smollett (1721-1771).—*Humphrey Clinker, Roderick Random*, etc.—Originator of the sea-story. Inclined to vulgar coarseness. **Sir William Blackstone** (1723-1780).—*Commentaries on the Laws of England*—Learned and careful, with a conception of the dignity of law. **Adam Smith** (1723-1790).—*Wealth of Nations*—The first great economist. The moderns hardly equal to him in natural keenness of insight. **Oliver Goldsmith** (1728-1774).—*Vicar of Wakefield, Essays, Deserted Village, She Stoops to Conquer*, etc.—A true and graceful touch both in prose and poetry. Supposed to be the original compiler of *Mother Goose Melodies.* **Edmund Burke** (1729-1797).—*Essays, Orations*—Prose, sometimes musical and poetical, and, at the same time, a statesman's grasp of principle.	**F. G. Klopstock** (1724-1803).—*Messiah, Lyrics, Odes*—The first genuine poet of the eighteenth century. Inspired by Milton's *Paradise Lost*, he wrote his *Messiah.* He was also a great lyric poet. **G. E. Lessing** (1729-1781).—*Criticisms, Plays*—The greatest critic of Germany. Turned the minds of the Germans from the French stage to Shakespeare and German folk-drama, introduced the English comedy of common life, developed a new type of national German tragedy, and preached the evangel of brotherhood and religious toleration.	**Jean François Marmontel** (1723-1799).—*Novels, Tragedies*—Also a noted encyclopedist.	**Gerhard Suhm** (Nor.), (1722-1780).—*History of Norway*—Wrote a work on the north to 1400 in 14 volumes. **Bjorn Haldorsson** (Ic.) (1724-1794).—*Dictionary*—Originally an Icelandic-Latin dictionary, but published for the first time in 1814 with Danish meanings by R. Rask. **P. F. Suhm** (Dan.), (1728-1798).—*History of Denmark*—In 14 volumes ending with the year 1400. Characteristic ponderousness of age. **C. B. Tullin** (Nor.), (1728-1780).—*Poems*—Poems describing nature and didactic poems. Influenced by Thomson and Pope. Too much detail in description.	**Carlo Gozzi** (1722-1806).—Italian dramatist. **Guiseppe Parini** (It.), (1729-1799), *Poems, Odes*—His *Giorno* is one of the best works in Italy in the eighteenth century.	1727. George II., king of England.

TABLE VI. EIGHTEENTH CENTURY—Continued

English	German	French	Scandinavian	Italian, Spanish, Russian, American	Historical Events
William Cowper (1731-1800).—*The Task, John Gilpin*, etc.—Divests poetry of the affectations of Pope. Writes on simple themes.	**Solomon Gessner** (1730-1788).—*Idyls, Pastorals*—His *Idyls* the most popular German book in Europe before the appearance of *Werther*. His prose is delicately balanced, but very artificial. **C. M. Wieland** (1733-1813).—*Oberon, Novels*—Best known as author of the novels *Don Sylvio of Rosalva*, describing his transition from pietism to nature poetry; *Agathon*, giving his views of the antique; and the metrical romance *Oberon*, treating of the adventures of Huon of Bordeaux. **Immanuel Kant** (1724-1804).—*Critical Philosophy*—The greatest German philosopher. Substituted critical philosophy for the old dogmatic metaphysics, demanded obedience to the moral law, laid the foundations of modern æsthetics. He was the founder of the transcendental philosophy.	**A. de Beaumarchais** (1732-1799).—*Comedies*—Celebrated especially for his two witty and well constructed plays, *Le Barbier de Séville* and *Le Mariage de Figaro*, in which we find much of the spirit that is coming with the French revolution.	**Gustav Filip Crentz** (Swed.),(1731-1785).—*Poems*—Idyllic poetry. Tender in personality and expression. Delights of nature and of love. **Gustav Fredrik Gyllenborg** (Swed.), (1731-1808).—*Poems*—Best in didactic and satirical poetry. Wrote also fables and an epic.	**Girolamo Tiraboschi** (It.), (1731-1794).—*Literary History*—A valuable history of Italian literature. **Ramonde Cella Zrug** (Sp.),(1731-1799).—*Dramas*—Short farces of everyday life. **George Washington** (1732-1799).—*Farewell Address, State Papers*, etc.—Broadly patriotic and well-considered.	
				Thomas Godrey, Jr. (1736-1763).—*The Prince of Parthia, Poems*—Imitative but original in imagination and marked by color. **Patrick Henry** (1736-1799).—*Speeches, Letters*, etc.—Eloquent, ardent, and profoundly impressive. **Thomas Paine** (1737-1809).—*The Crisis, Common Sense, Rights of Man, Age of Reason*, etc.—Journalistic and talented, and generally effective.	1734. University of Göttingen founded.
Edward Gibbon (1737-1794).—*Decline and Fall of the Roman Empire*—A painstaking and learned historian. Constructive powers of broad scope.		**Bernardin de St. Pierre** (1737-1814).—*Paul and Virginia*. This popular work brings into French literature the taste for "nature" as it is. St. Pierre was in literature a disciple of J. J. Rousseau.			
James Boswell (1740-1795).—*Life of Samuel Johnson*—Shows the true reporter's instinct for the point of a story. The book is otherwise that of a toady, though an unusual biography.			**Karl Mikael Bellman** (Swed.),(1740-1795).—*Songs, Lyrics*—Bubbling joy of life. Fluent writer. Wrote just to amuse. Musical. Very popular. **J. H. Wessel** (Nor.), (1742-1785).—*Poems, Plays*—Effective parody of dramas of the day, which were written in French style. Elegant language. *Love Without Stockings* is his best known work.		1740. Reign of Frederick the Great begins.
William Paley (1743-1805)—*Evidence of Christianity, Natural Theology*—A cogent reasoner on the old premises. **Hannah More** (1745-1833).—*Coelebs in Search of a Wife, Sacred Dramas*—Something of a minor poet, something of a dramatist and story-teller.	**J. G. von Herder** (1744-1803).—*Criticisms, History*—The chief factor in the literary revolution known as "storm and stress." His work in history sets forth the evolution of human institutions.		**Klaus Fasting** (Nor.), (1746-1791).—*Poems*—Famous for critical essays and spirited epigrams. Admirer of French literature.	**Gabriel Derschawin** (Russ.) (1743-1816).—*Lyrics, Odes*, etc.—His ode *To God* translated into all European languages. Rhetorical but a strong poetic vein.	
Jeremy Bentham, (1748-1832), *Philosophy, Essays*—Greatest critic of legislation and government in his day.	**Johann Wolfgang von Goethe** (1749-1832).—*Dramas, Lyrics, Elegies, Sonnets, Epigrams*—The greatest German poet. A universal genius. Before 1800 he had imitated Shakespeare, Ossian, Goldsmith and the ballad poetry, sung odes in the manner of Pindar and Klopstock, lived his story of *Werther*, and created a new German classicism in *Iphigenie, Tasso*, and *Hermann and Dorothea*. His life poem, *Faust*, is based upon the doctrine of redemption by ceaseless striving, and typifies the philosophical struggle of the poet's own life.	**Comte Mirabeau** (1749-1791).—*Orations*—The greatest orator of the French revolution. His speeches have been published and are his principal title to literary distinction.	**Edw. Storm** (Nor.),(1749-1794).—*Poems*—Author of splendid heroic ballads.	**Vittorio Alfieri** (It.), (1749-1803).—*Tragedies* Classical in spirit, observing the unities.	
Richard B. Sheridan, (1751-1816), *The Rivals, School for Scandal, Speeches*, etc.—Writer of witty dialogue and constructor of telling stage situations. Comedies still acted. **William Blake,** (1757-1827), *Songs of Innocence, Songs of Experience*—"The single Englishman of supreme and simple poetic genius of his time." **Robert Burns,** (1759-1796), Scotch poet. *Poems*—Lyrics, songs and satires in Scotch dialect, marked by music, pathos and wit.			**Johan Henrik Kellgren** (Swed.), (1751-1795).—*Journalism, Poems*—Lyric and satiric poetry. Most prominent of the literary men who were intimate with Gustaf III. **Enevold Falsen** (1755-1808).—*Dramas*—His *Dragedukhen* enjoyed great popularity.	**Tomás de Yriarte** (Sp.), (1750-1791).—*Literary Fables*—Original fables directed toward literary subjects.	1755. Earthquake at Lisbon. 1756-1763. Seven Years' war. 1759. Battle of Quebec.
		Claude Rouget de Lisle (1760-1836).—*Marseillaise*—The immortal national hymn of France.			
	A. von Kotzebue (1761-1819).—*Plays*—Now almost forgotten, he was the most popular dramatist of his time. His plays are very numerous, and catered to the public taste.	**André Chénier** (1762-1794).—*Lyrics*—A model in purity of form. His style in the lyrics is passionate, but not personal.			

TABLE VII. NINETEENTH

English	American	French
	Thomas Jefferson (1743-1826).—*Notes in Virginia, Declaration of Independence*—Full of wise foresight and keen acumen. **John Marshall** (1755-1835).—*Life of Washington, Decisions*, etc.—Profound and wise, but rather heavy. **Alexander Hamilton** (1757-1804).—*Contributions to the Federalist*—Keen and ingenious, full of information.	
	Alexander Wilson (1766-1813).—*American Ornithology*—Pioneer investigations of a shrewd observer.	**Xavier de Maistre** (1763-1852).—*Novels, Essays*—Models of vigorous narration. Deserves prominent place among French novelists. **Mme. de Staël** (1766-1817).—*L'Allemagne, Delphine, Corinne*, etc.—The first to set forth the principles of the Romantic school. Her book on Germany did much to bring the thought of that country into France.
Maria Edgeworth (1767-1849).—*Popular Tales*—Stories of middle-class domestic life, of excellent moral tone and some power of characterization.		**Benjamin Constant** (1767-1830).—*Politics, Religion*—His works, both on politics and religion, are skeptical in tone. He also wrote *Adolphe*, a novel of some value. **Jean François Michaud** (1767-1839).—*History of the Crusades*, etc.—The founder of the universal biography.
		François de Chateaubriand (1768-1848).—*René, Genius of Christianity, Atala*, etc.—Undoubtedly the greatest writer of his century, and his influence on the literature of the first half of the nineteenth century is considerable.
		Baron de Cuvier (1769-1832).—*Natural History*—One of the best known French naturalists. **Napoleon I.** (1769-1821).—*Proclamations, Letters, Memoirs*—His letters and his memoirs bear the stamp of the great genius whose characterization cannot be given in this restricted space.
William Wordsworth (1770-1850).—*The Excursion, Poems.*—Nature poems and descriptive poems. Many fine sonnets. First expression of modern feeling for nature. **James Hogg** (1770-1835).—*Pastorals, Shepherd's Calendar*—Scotch verses. One or two lyrics of sweetness and simplicity. **Sir Walter Scott** (1771-1832).—*Novels, Lady of the Lake, Poems*—Originator of the historical novel. Tone natural and wholesome. Secure in the estimation of posterity. **Sidney Smith** (1771-1845).—*Sermons, Essays*—The witty divine. Master of the expository style. **James Montgomery** (1771-1854).—*Hymns, Poems*—A man universally esteemed; best remembered now for his hymns, of which some hundred are found in our hymnals. **Samuel T. Coleridge** (1772-1834).—*Essays, Rhyme of Ancient Mariner, Translation*, etc.—A man of remarkable gifts, intellectual and poetic; a keen critic; a natural master of verbal melody.	**Charles Brockden Brown** (1771-1810).—*Wieland, Ormond*, etc.—Weird and sensational, of the Godwin type. **William Wirt** (1772-1834).—*Life of Patrick Henry, Letters of a British Spy*—Interesting and informative, but also imaginative.	**Charles Fourier** (1772-1839).—*Socialism*—A socialist whose system did not prove practical although it had many followers.
Robert Southey (1774-1843).—*Biographies of Nelson, Wesley*, etc., *Poems*—A man of industry and worth. Better as a prose stylist than a poet. **Charles Lamb** (1775-1834).—*Essays of Elia*, etc.—A quaint and delicate essayist; a friend of Coleridge. **Walter Savage Landor** (1775-1864).—*Imaginary Conversations, Count Julian, Heroic Idyls*, etc.—Classic scholar and writer. Reactionary and old-fashioned in his thought but a remarkable stylist. **Jane Austen** (1775-1817).—*Novels; Pride and Prejudice, Emma*, etc.—Her novels depicting upper middle-class life are delightfully realistic and full of quiet humor. **Thomas Campbell** (1777-1844).—*Pleasures of Hope, Lyrics*, etc.—Something of a critic His lyrics have much vigor and verve. **Henry Hallam** (1777-1859).—*Europe During the Middle Ages, Constitutional History of England*—Strong, vigorous, historical writing from a standpoint now antiquated. **William Hazlitt** (1778-1830).—*Table Talk, English Poets*, etc.—Critical essays; contain some true eloquence, and many powerful phrases **Thomas Moore** (1779-1852).—*Biographies, Lalla Rookh, Irish Melodies*, etc.—Songs of much melody but of an unreal sentimentality.	**Robert Treat Paine** (1773-1811).—*Adams and Liberty, Poems*—Superficial, but of noticeable metrical facility. **Henry Clay** (1777-1852).—*Speeches, Letters*, etc.—Attractive because of personality and power. **Washington Allston** (1779-1843).—*Art Lectures, Poems*—Highly artistic in intent and achievement. **James Kirk Paulding** (1779-1860).—*Novels*—Romances of little present interest. **Francis Scott Key** (1780-1843).—*Poems, Star Spangled Banner*, etc.—The chief poem is a national song of patriotic ardor. **William E. Channing** (1780-1842).—*Addresses, Sermons*—Social papers, clear, tolerant, thoughtful. **John James Audubon** (1780-1851).—*Birds of America, Quadrupeds of America*—Marked by keen observation and wide interest.	**Jean Baptiste Biot** (1774-1862).—Philosopher and mathematician. **Pierre de Béranger** (1780-1857).—*Lyrics*—His songs, which have great lyric qualities, were very popular in his day and are still valued.

CENTURY, 1800-1900

German	Scandinavian	Italian, Spanish, Russian	Historical Events
	Anna Maria Lenngren (Swed.), (1755-1817).—*Poems*—Satiric and idyllic, but realities depicted in natural and simple colors. Her poetic career rather too late to show extreme traits of this period.		
J. G. Fichte (1762-1814).—*Philosophic Writings, Orations*—The philosopher of the Romantic school and the exponent of the philosophy of individualism. His great work *Addresses to the German Nation* helped arouse the revolt against Napoleon. **Jean Paul Friederich Richter** (1763-1825).—*Novels, Esthetics*—United elements of "storm and stress" with Fichte's philosophy. Often represents the idealist in conflict with real life.	**J. T. Baggesen** (Dan.), (1764-1826).—*Novels, Essays, Travels, Lyrics, Rhymed Letters*—Clothed his sparkling wit in most elegant language. Restless nature.	**Carlo G. Botta** (It.)—(1766-1837).—*Histories*—Dignified histories of the American war of independence and of Italy.	1763. *Georgia Gazette* established at Savannah.
Wilhelm and **Alexander von Humboldt** (1767-1825 and 1769-1859).—*Criticism, Science, Travels*—Great scientists and travelers. Wilhelm, virtual founder of the University of Berlin, was a great classical scholar. Alexander wrote the great masterpiece *Cosmos*. **A. W. von Schlegel** (1767-1845).—*Criticism, Poems*—The great critic of the Romantic school. Gave the Germans his famous lectures on *Dramatic Art and Literature*, and contributed to their classical translation of Shakespeare, 1797-1810. **Zacharias Werner** (1768-1823).—*Plays, Sonnets*—Next to Tieck, the greatest dramatist of the Romantic school. **F. E. D. Schleiermacher** (1768-1834).—*Addresses, Criticisms*—The preacher of the Romantic school, famous for his *Addresses on Religion*, his *Monologues*, and his *Letters* on *Lucinde*. **Ernst Moritz Arndt** (1769-1860).—*Warsongs, Lyrics*—A sturdy patriot. An earnest, religious spirit prevades his work. Most effective in stirring his nation to revolt against Napoleon. **Friederich Hölderlin** (1770-1843).—*Hyperion, Lyrics*—Devoted to Greek culture. Poetic activity early cut off by insanity. Was the most gifted lyric genius at the close of the century. **G. W. F. Hegel** (1770-1831).—*Philosophy*—The philosopher of collectivism and of evolution in history.		**Quan Krylow** (Russ.), (1768-1844).—*Fables, Odes, Epistles, Tragedies*—Full of wit and humor. His fables very popular with the Russian people.	
	Jon Espolin (Ic.), (1769-1836).—*History of Iceland 1262-1832*—Twelve large quartos in annalistic form. Valuable as source, but often uncritical.		
Heinrich Zschokke (1771-1848).—*Novels*—Prolific novelist, social and political reformer. His best novels are written in the spirit of Scott's *Waverley Novels*.	**Hans Christian Oersted** (Dan.), (1777-1851).—*Science*—Discovered electric magnetism.		
Novalis (Friederich von Hardenberg) (1772-1801).—*Novels, Lyrics, Criticism*—The sentimental poet of the Romantic school. His *Hymns to the Night* contain some of the most spiritual poetry in the German tongue. **Friederich von Schlegel** (1772-1829).—*Criticism, Novels*—Both critic and poet and wrote the greatest novel of the Romantic school, entitled *Lucinde*, dealing with the limitations of conventional society. **J. L. Tieck** (1773-1853).—*Novels, Lyrics*—The most prolific writer of the Romantic school. His *Puss in Boots* is the best satirical German drama. He is unrivaled in the world of phantasy.	**Franz Mikael Franzén** (Swed.), (1772-1847).—*Poems, Hymns*—Exquisite lyric poems. Tender in feeling, clear in form.		1772. Partition of Poland.
	Countess Gyllembourg (Dan.), (1773-1856).—*Novels* — Pseudonym. J. L. Heiberg's mother. Describes everyday life in all classes of society.	**Jean Charles Sismondi** (It.), (1773-1842), *Histories*—Extensive history of the literature of the south of Europe.	
F. N. J. Schelling (1775-1854).—*Philosophy*—A disciple of Spinoza, taught the identity of spirit and nature, and published *Philosophy of Nature* (1797), *The World Soul*, (1798) and *System of Transcendental Idealism* (1800).	**Malte Bruun** (Dan.), (1775-1826).—*Geography.* **J. P. Mynster,** (Dan.), (1775-1850), *Theology*—One of Denmark's greatest theologians.	**Alberto Lista** (Sp.), (1775-1848).—*Criticism*—Literary criticism of a wholesome nature.	1775. Battle of Bunker Hill.
			1776. American independence.
Heinrich von Kleist (1777-1811).—*Dramas, Novels*—Poet of a tragic life. The most original dramatist of North Germany. His *Prince von Homburg* is Prussia's greatest historical drama. **F. de la Motte Fouqué** (1777-1843).—*Tales, Lyrics*—A later Romanticist, popularly known for his charming *Undine* (1811), the story of a water sprite without a soul. **Clemens Brentano** (1778-1842).—*Novels, Ballads*—Best known for his work on *The Boys' Wonder Horn*, the first extensive collection of German ballads.	**Jons Jakob Berzelius** (Swed.), (1779-1848).—*Chemistry.* Enjoys world-wide fame. **Adam Gottlob Oehlenschlaeger** (Dan.), (1779-1850).—*Poems, Tragedies*—Very prolific and brilliant writer. Material chiefly from Scandinavia. Wholesomely human. His *Helge* was model for Tegnér's *Frithiofs Saga*.	**Ugo Foscolo** (It.), (1778-1827).—*Poems, Dramas*—Serious, often melancholy.	
Friedrich von Raumer (1781-1873).—*Historian*—A voluminous writer.			

TABLE VII. NINETEENTH

English	American	French
	John C. Calhoun (1782-1850).—*Speeches, Papers*, etc.—Forceful in logical thinking and clear exposition. **Daniel Webster** (1782-1852).—*Orations*—Elevated in thought and eloquent. **Thomas Hart Benton** (1782-1858).—*Thirty Years' View*—Rich and racy observations of wide experience.	
Leigh Hunt (1784-1859).—*Essays, Sketches, Memoirs, Poems*—A minor poet. A *littérateur* of appreciation rather than of creative power. **Thomas De Quincey** (1785-1859).—*Confessions of an Opium Eater*, etc.—Passages of magnificent color. A learned man, lacking in sound realistic judgment.	**Washington Irving** (1783-1859).—*Knickerbocker's History of New York, Sketch Book*, etc.—Humorous, with delicate sentiment and grace.	**Henri Beyle** (Stendhal), (1783-1842).—*Novels*—His novels *Le Rouge et le Noir* and *La Chartreuse de Parme* bring into literature an analysis of one's self more true than the self-presentation of the Romantic school in general.
Lord Byron (1788-1824).—*Poems*—Vigorous, eloquent, sardonic, iconoclastic. A great satirist and in many respects a great poet.	**Richard Henry Dana** (1787-1879).—*Poems: The Buccaneer*, etc.—Overambitious and not wholly successful. **Alexander Campbell** (1788-1866).—*Religious Debates, Editorials, Sermons*, etc.—Incisive in thought, tolerant in spirit, vigorous.	**François Guizot** (1787-1874).—*Histories*—His remarkable historical works have founded the school of philosophical history.
	James Fenimore Cooper (1789-1851).—*Leather Stocking Tales, The Spy*, etc.—Romantic and overfortunate in coincidence, but readable. **Jared Sparks** (1789-1866).—*American Biographies*—Commendable efforts of a pioneer biographer. **Fitz Greene Halleck** (1790-1867).—*Poems, Marco Bozzaris*, etc.—Spirited but overwrought; sometimes graceful. **Augustus B. Longstreet** (1790-1870).—*Georgia Scenes*—Frankly humorous and delightfully fresh.	**Alphonse de Lamartine** (1790-1869).—*Poems, History of the Girondists*, etc.—The first, in date, of the great poets of the Romantic school. An idealist whose harmonious verses and high ideals have continued to grow in favor.
	George Ticknor (1791-1871).—*History of Spanish Literature*—Scholarly and authentic.	**Eugène Scribe** (1791-1861).—*Comedies*—The author of a large number of plays which show more dramatic skill than study of manners or character.
Percy B. Shelley (1792-1822).—*Queen Mab, Adonais, The Sky Lark*, etc.—A remarkable gift of lyrical melody. Full of generous impulse and the unbalanced judgment of youth. A genius. **Capt. Fred Marryat** (1792-1848).—*Peter Simple, Jacob Faithful*, etc.—Boys' stories, but evincing considerable narrative skill. **Felicia Hemans** (1793-1835).—*Lyrics*—A minor poet of grace, sweetness and tenderness.	**John Howard Payne** (1792-1852).—*Home Sweet Home*—Universal in appeal and satisfying in form.	**Victor Cousin** (1792-1867).—*Philosophy, Metaphysics*—The chief of a school of philosophers called the Eclectics.
	Samuel G. Goodrich (1793-1860).—*Peter Parley Books*—Popular introductions with a flavor of fiction.	**Casimir Delavigne** (1793-1843).—*Dramas, Elegies*—Author of popular elegies, but especially remembered as a dramatic writer.
George Grote (1794-1871).—*History of Greece*—A learned and sound historian, but superseded by modern exact research.	**William Cullen Bryant** (1794-1878).—*Addresses, Letters, Poems: Thanatopsis*, etc.—Dignified and poised, serious and helpful.	**Augustin Thierry** (1795-1856).—*History of France*, etc.—Historian of the Romantic school.
John Keats (1795-1821).—*Endymion, Hyperion*, etc.—A true poet, dying too young to reach full fruition of his remarkable artistic powers. **Thomas Arnold** (1795-1842).—*Roman History, Sermons, Essays*—A man of wide influence as headmaster of Rugby. An historian of the old school. **Thomas Carlyle** (1795-1881).—*French Revolution, Cromwell, Sartor Resartus, Essays*, etc.—A very great though one-sided man. A prose poet, an historian of insight and industry, impatient of shams.	**Joseph Rodman Drake** (1795-1820).—*The Culprit Fay*—Cleverly executed, but ingeniously fanciful. **James G. Percival** (1795-1856).—*Poems: Prometheus*, etc.—Unsustained, though not without positive merits. **John Pendleton Kennedy** (1795-1870).—*Swallow Barn, Horse Shoe Robinson*, etc.—Old-fashioned but interesting pictures of southern life. **William H. Prescott** (1796-1859).—*Conquest of Peru, Ferdinand and Isabella*, etc.—Excellent history, very interestingly told. **Thomas C. Haliburton** (1796-1865).—*Sam Slick*—Humorous with the raciness of the soil.	**François Auguste Marie Mignet** (1796-1884).—*Histories*—Like that of Guizot his history is founded upon a philosophical basis.
Samuel Lover (1797-1868).—*Songs, Ballads*—A writer of slap-dash Irish stories and some good songs.	**Hugh Swintose Legaré** (1797-1843).—*Addresses, Articles, Letters*—Academic, stilted and in good form.	**Louis Adolphe Thiers** (1797-1877).—*French Revolution, History of the Empire*, etc.—A great historian and statesman. His histories are realistic and scientific.

CENTURY—Continued

German	Scandinavian	Italian, Spanish	Historical Events
Achim von Arnim (1781-1831).—*Novels, Poems*—Like Brentano, a Heidelberg Romanticist, and assisted with the *Wonder Horn*. **Adelbert von Chamisso** (1781-1838).—*Peter Schlemihl, Poems*—A later Romantic lyrist, wrote ballads and *Peter Schlemihl*, the story of a man who sells his shadow, and finds his way through the world with seven league boots, a romantic treatment of the poet's own life.	**Finn Magnusson** (Ic.), (1781-1847).—*Mythology*—Thorough student of northern antiquities. **N. M. Petersen** (Dan.), (1781-1862).—*History, Mythology*—Wrote a work on Scandinavian mythology and a history of Danish literature. **Esaias Tegnér** (Swed.), (1782-1846).—*Speeches, Poems, Frithiofs Saga*—World-wide renown. Great persona ity and original poet. Brilliant figures, clear expression. Musical lyric verse. Influenced by German and Greek. Emphasizes Scandinavian mythology. **Erik Gustaf Geijer** (Swed.), (1783-1847).—*History, Philosophy, Poems*—Very great both as historian and poet. A scholar. His poetry appeals to the people. **Christopher Hansteen** (Nor.), (1784-1873).—*Astronomy*—Became widely known by his study of the earth's magnetism.		
Jacob Grimm (1785-1863).—*Fairy Tales, Dictionary*—With his brother W lhelm, founder of modern German philology, and compiler of the great German dictionary; known in literature for his large collection of *Fairy Tales*. **Ludwig Börne** (1786-1837).—*Letters from Paris*—A Jew from the Frankfort ghetto. Famous for his *Letters*, written as a protest against narrowing social limitations. **Wilhelm Grimm** (1786-1859).—*Critical Writings*—See Jacob Grimm mentioned above. **A. Justinus Kerner** (1786-1862).—*Lyrics, Soothsayer of Prevorst*—Famous lyric poet and Romantic mystic. His *Soothsayer* is a collection mysterious sayings and doings. **Ludwig Uhland** (1787-1862).—*Criticism, Ballads*—Poet of Romantic type, wrote ballads, historical plays, patriotic poems, and treatises on German legends. **J. von Eichendorff** (1788-1857).—*Lyrics, Life of a Good-for-Nothing*—The greatest lyric poet of the Romantic movement. Essentially a poet of nature, and the ideal of a free "Wanderleben" is the recurring theme. **Arthur Schopenhauer** (1788-1860).—*Philosophy*—The philosopher of pessimism. His *World as Will and Idea* left a deep impression. **Friedrich Rückert** (1788-1866).—*Sonnets in Armor, Poems*—Poet of the war of Liberation. His *Sonnets in Armor* resound with the clank of arms. Also a great interpreter of oriental life and poetry.	**Bjarne Thorenson** (Ic.), (1786-1841).—*Poems*—Unique poems of love and patriotism. Excellent poems on deceased fr ends. **Rasmus Rask** (Dan.), (1787-1832).—*Grammatica Works*—Great scholar in comparative philology. Was the first to publish the so-called Grimm's law. **B. S. Ingemann** (Dan.), (1789-1862).—*Novels, Lyrics, Hymns*—The Walter Scott of Denmark. Romantic idealization of middle ages. **Gustaf W. Gumaelius** (Swed.), (1789-1877).—*Historical Novels*—In spirit of Walter Scott. **J. C. Hauch** (Dan.), (1790-1872).—*Novels, Dramas, Lyrics*—A genuine Romanticist of deep moral earnestness. Not very popular. Best are his lyric poems.	**Alessandro Manzoni** (1785-1873).—*Novel, Dramas—The Betrothed*, the greatest Italian novel. **Silvio Pellico** (1789-1854).—Italian dramatist, poet, novelist.	1786. Swedish academy founded. 1789. Beginning of French Revolution.
Theodor Körner (1791-1813).—*Lyre and Sword*—The young hero-poet, who fell in Lützow's corps in the war of Liberation, immortalized his poetic gift in his *Lyre and Sword*, a collection of patriotic lyrics. **Franz Grillparzer** (1791-1872).—*Dramas, Lyrics*—The greatest Austrian dramatist. He has neither contemporaries not successors who can be compared to him for classic beauty and depth of human experience. His *Waves of the Sea and of Love* is a great modern love-tragedy. **Wilhelm Müller** (1794-1827).—*Lyrics*—Master of the popular lyric. Poet of the German people in a higher degree than any other Romantic singer. His *Songs of the Greeks* are full of sentimental patriotism for Greek independence.	**K. F. Dahlgren** (Swed.), (1791-1844).—*Novels, Short Stories, Poems*—At first allegorical and mystical. Later became leading humorist. **J. L. Heiberg** (Dan.), (1791-1860).—*Dramas, Poems*—Humorous. Son of P. A. Heiberg. Very popular. One of the best writers. Sharp critic. Musical comedies and other romantic plays. **Karl J. L. Almqvist** (Swed.), (1793-1866).—*Novels, Essays, Poems*—Unique, imaginative, mystical. Fine characterization. **H. N. Clausen** (Dan.), (1793-1877).—*Criticism*—A clear critic in the domain of theology. **Poul Möller** (Dan.), (1794-1838).—*Novels, Poems, Student Songs*—Spiritually sound and original in thought and expression. Influence on later realism. **M. C. Hansen** (Nor.), (1794-1842).—*Novels*—Romantic. His stories are bright, but not national.	**Gino Capponi** (1792-1876).—Italian historian.	1792. French republic declared.
August von Platen (1796-1835).—*Venetian Sonnets, Poems, Stories*—A romantic poet and master among the German sonnetists. His drama *The Fateful Fork* ridiculed the fate tragedy of the time. **K. L. Immermann** (1796-1840).—*Novels*—A late Romantic writer best known as the author of *The Epigons*, foreshadowing the tragedy of his own life, and *Munchhausen* distinguished for its description of Westphalian peasant life. **Heinrich Heine** (1797-1856).—*Lyrics, Short Stories*—The greatest lyric poet after Goethe, strongly imbued with Romanticism. Best known as the author of *The Journey to the Harz Mountains* (1826), and the *Book of Songs* (1827).	**Christian Winther** (Dan.), (1796-1876).—*Tales, Poems*—A master of style. Thoroughly and naturally Danish. Emphasizes nature of Denmark. **K. J. Böstrom** (Swed.), (1797-1866).—*Philosophy*—Created an independent philosophic system. **Henrik Hertz** (Dan.), (1797-1870).—*Dramas, Epics, Satires*—Founder of the new comedy in Denmark. Elegant and correct in style. Most original in his lyric poetry.	**Cecilia Bohl von Faber** (Fernan Caballero), (1797-1877).—Spanish *novels*.	1796. Washington issues his "Farewell Address."

TABLE VII. NINETEENTH

English

Robert Pollock (1798-1827).—*Course of Time*—A sound, serious, and heavy poet; suits Scotch theologians.

Thomas Hood (1798-1845).—*Poems*—A humorous poet of the first rank: some pathetic verses of high quality.

Thomas B. Macauley (1800-1859).—*Essays, History of England, Lays of Ancient Rome*—He makes history alive and readable. A partisan, but on the right side.

Harriet Martineau (1802-1876).—*Political Economy*, etc.—A woman of remarkably strong intellect. Her positions well argued but perhaps too radical.

Sir Edward Bulwer Lytton (1803-1873)—*Last Days of Pompeii, Last of the Barons*, etc.—A versatile and successful *littérateur* in several forms of the novel, but preëminent in none.

Benjamin Disraeli (1804-1881).—*Lothair, Vivian Grey*, etc.—Society novels eminently readable but thoroughly artificial.

James Martineau (1805-1900).—*Philosophy*—A philosophical thinker of insight and honesty.

Elizabeth Barrett Browning (1806-1861).—*Aurora Leigh, Poems*—A pleasing lyrical gift and warm, human sympathy made her a favorite poetess in the Victorian era.

John Stuart Mill (1806-1873).—*Political Economy*—Of thorough intellectual honesty and diamond-clear intellect, he furthered the cause of political justice and personal freedom.

Charles Darwin (1809-1882).—*Origin of Species, Descent of Man*—Lucid and attractive in style and an unflinching lover of truth, he has had a greater influence on thought than any man of his time.

Alfred Tennyson (1809-1892).—*In Memoriam, Idylls of the King, Poems*—The national poet of the late nineteenth century; a painstaking artist and master of verbal melody.

Elizabeth Gaskell (1810-1865).—*Cranford, Mary Barton*, etc.—A writer of charming feminine humor. One of the first to make the economic problems the basis of a story.

William M. Thackeray (1811-1863).—*Vanity Fair, The Newcomes, Henry Esmond*—Satirist and humorist, but with great powers of characterization, especially of the everyday social elements.

Charles Dickens (1812-1870).—*Novels: David Copperfield, Oliver Twist, Christmas Carol*, etc.—A broader humorist than Thackeray, appealing to the common human sympathies and the ordinary sense of the ridiculous.

Robert Browning (1812-1889).—*Dramatic Lyrics, Poems, The Ring and the Book*—A powerful poet, intent more on subtle analysis of character than lucidity. His interest lay "in the development of a soul."

American

Amos Bronson Alcott (1799-1888).—*Concord Days, Table Talks, Sonnets and Canzonets*—Suggestingly idealistic, but lacking in general interest.

George Bancroft (1800-1891).—*History of the United States*—Faithfully prepared and honestly presented.

Horace Bushnell (1802-1876).—*Nature and the Supernatural, Work and Play*—Serious, didactic efforts with spiritual purpose.

George D. Prentice (1802-1870).—*Editor Louisville* (Ky.) *Journal*—Witty, sarcastic, daring and effectiv .

Ralph Waldo Emerson (1803-1882)—*Conduct of Life, Representative Men, Essays, Poems*—The prophet of American culture. Coalesces oriental conceptions and occidental individualism.

Jacob Abbott (1803-1879)—*Rollo Books*—Popular favorites of unsophisticated youth.

Nathaniel Hawthorne (1804-1864).—*Twice Told Tales, Scarlet Letter, Marble Faun*, etc.—Marked by a subtle mastery and the touch of genius.

John S. C. Abbott (1805-1877)—*Biographies, Histories*, etc.—Ephemeral in interest or easily eclipsed.

Charles E. A. Gayarré (1805-1895).—*History of Louisiana, Fernando de Lemos*, etc.—Entertaining and scholarly bilingual productions.

Nathaniel P. Willis (1806-1867).—*Poems, Sketches, Editorials*, etc.—Skillfully elaborated but diminishing in fame.

William Gilmore Simms (1806-1870).—*Poems, Novels, Biography*, etc.—Versatile, original and artistic.

Henry W. Longfellow (1807-1882).—*Outre Mer, Hyperion, Poems, Hiawatha*, etc.—Popular in appeal and simple in form.

John G. Whittier (1807-1892).—*Editorials, Household Poems*—With Burns' love of nature and human nature.

Edgar Allan Poe (1809-1849).—*Tales, Poems: Raven, Annabel Lee*, etc.—Excellent in artistic "totality of effect."

Albert Pike (1809-1891).—*Hymns to the Gods, Poems*, etc.—Of recognized interest and merit.

Oliver Wendell Holmes (1809-1894).—*Autocrat of the Breakfast Table, Novels, Poems*—Clever, witty, versatile, and skillful.

Margaret Fuller Ossoli (1810-1850).—*Summer on the Lakes, Papers on Literature and Art*—Notable in transcendental aim and in merit of achievement.

Harriet Beecher Stowe (1811-1896).—*Uncle Tom's Cabin*, etc.—Far-reaching in its influence.

French

Auguste Comte (1798-1857).—*Positive Philosophy*—His course on positive philosophy is one of the important works of the nineteenth century.

Jules Michelet (1798-1874).—*History of France*—Has given a new conception of history. According to him it is a resurrection of the life of the people studied in its material and in its spiritual aspect. His style is admirably adapted to his conception of history.

Honoré de Balzac (1799-1850).—*Novels*—The author of the *Comédie Humaine*, a collection of novels which embraces the whole of society. Balzac is considered as the chief of the "realistic school," although there is great share of idealism in his novels, in which many of the heroes are mere symbols.

Alfred de Vigny (1799-1863).—*Cinq Mars*, etc.—One of the great poets of the Romantic school. His distinguishing features are an extreme delicacy and a subtle melancholy. His *Cinq Mars*, in which history is often arranged to suit his views, is recommended on account of its style.

Victor Hugo (1802-1885).—*Novels, Lyrics*—One of the world-poets. In the field of epic poetry he has no rival and as a lyricist but very few. His dramas are valued more as admirable lyric pieces than as plays

Alexandre Dumas (1803-1870).—*Novels, Dramas*—The author of a large number of popular novels based upon history and remarkable for their easy style and the excessive fertility with which they abound. His dramas have a place in the history of the French theater.

Prosper Mérimée (1803-1870).—*Stories, Novels*—His stories alone give him a place among the authors of the nineteenth century. They are little masterpieces.

Eugène Sue (1804-1857).—*Mysteries of Paris, Wandering Jew*, etc.—His popular novels, in which imagination plays the principal part, were enjoyed in his time.

C. A. de Sainte-Beuve (1804-1869).—*Criticisms*, etc.—Is the incomparable master of criticism.

George Sand (Mme. Dudevant), (1804-1876).—*Novels*—Her literary career can be divided into four periods She wrote romantic novels, then philosophical or socialistic novels, before reaching the rustic idyls in which she excelled.

Alexis de Tocqueville (1805-1859).—*Political Science, Histories*—The author of *Democracy in America*, in which the institutions and customs of America are keenly observed.

Alfred de Musset (1810-1857)—*Tales, Poems, Dramas*—Some of his poems—*Les Nuits, te Souvenir*, etc.—are among the most beautiful in French literature. They express the sufferings of love as they have never been expressed before or after. His comedies are an exquisite blending of dream and reality.

Henri Martin (1810-1883).—*History of France*—One of the best reference works we have.

Theophile Gautier (1811-1872).—*Criticism, Novels, Poems*—Poet and prose writer who regarded plastic beauty as the supreme aim of art. His constant preoccupation was to suppress all emotions which might interfere with the composition in his writings.

J. Sandeau (1811-1883).—*Novels*—A painstaking writer whose novels have enjoyed a certain popularity.

Victor Duruy (1811-1894).—*History*—His *History of Rome* is especially valuable. He was the originator of many reforms made in public instruction in France.

CENTURY—Continued

German	Scandinavian	Italian, Spanish, Russian	Historical Events
Wilhelm Häring (W. Alexis), (1798-1871).—*Patriotic Novels*—One of the first and the ablest of the German imitators of Walter Scott, wrote a series of patriotic novels treating of German history. **Hoffmann von Fallersleben** (1798-1874).—*Poems*—Philologist and poet, best known for his lyrics in the style of the ballad.		**Giacomo Leopardi** (It.), (1798-1837).—*Poems*—Permeated with "the infinite vanity of all things."	
		Alexander Pushkin (Russ.) (1799-1837).—*Poems, Stories, Novels, Dramas*—A great poet. Romantic at first. Later emphasized national feeling in Russian literature. Greatly influenced by Byron.	1799. Death of Washington.
C. D. Grabbe (1801-1836).—*Dramas*—Deeply pessimistic and romantically unbalanced, but often masterful in dramatic characterization. **Wilhelm Hauff** (1802-1827).—*Lichtenstein, Man in the Moon, Short Stories*—An eminent novelist, greatly influenced by Walter Scott. *Lichtenstein* is a story of Württemberg in the sixteenth century.	**Fredrika Bremer** (Swed.), (1801-1865).—*Novels*—Describes family life of middle classes realistically. Worked for emancipation of woman. Was popular in America and England.	**Manuel Breton de los Herreros** (Sp.), (1800-1873).—*Dramas*—Popular modern Spanish poet. Gives a good picture of Spanish social life.	1801. Discovery of first asteroid by Piozzi.
	R. Keyser (Nor.), (1803-1864).—*History*—Wrote a learned work on the Catholic church in Norway.		
Eduard Mörike (1804-1875).—*Lyrics, Stories*—The greatest lyric poet of Suabia. There is a peculiar charm in his delicacy of touch and his simplicity.	**Johan Ludvig Runeberg** (Swed.), (1804-1877).—*Poems, Dramas*—Born in Finland. Describes realistically Finnish home-life. Idyllic, epic, and lyric poetry. Fine characterization. Most popular are *Fänrik Ståls Sägner*, dealing with Finnish-Russian war of 1808-1809. **J. N. Madvig** (Dan.), (1804-1886).—*Latin Grammar*—Great linguist and Latin scholar.		1804. Napoleonic code adopted in France.
Heinrich Laube (1806-1884).—*Novels, Plays*—Witty, declamatory and sententious, but seldom a delicate poet. His chief works are novels or dramas of purpose in the spirit of radical Young Germany.	**Hans Christian Andersen** (Dan.), (1805-1875).—*Fairy Tales, Novels, Dramas, Poems*—Used language of the people and of childhood. Next to Bible, his *Fairy Tales* have been translated into the most foreign languages.		1805. Battle of Trafalgar.
	Jonas Hallgrimsson (Ic.), (1807-1845).—*Island Gunnarsholmi*—Popular patriotic songs. Excellent power over language. One of the best poets of modern Icelandic. **J. S. C. Welhaven** (Nor.), (1807-1873).—*Poems*—Polemic sonnets, lyric and descriptive. Opposed bitterly the hyper-patriotism of Wergeland. **H. A. Wergeland** (Nor.), (1808-1845), *Poems*—Poet, patriot, and hater of Denmark. Brilliant, original, and imaginative. **Fred. Paludan-Müller** (Dan.), (1809-1876).—*Poems, Mythological Plays*—Subjects from Greek mythology, Bible and from life. *Adam Homo* is his greatest work. Satire of life. A monumental work.		1807. Fulton's steamboat on the Hudson.
		Alexei Kolzow (Russ.), (1809-1842).—*Lyrics*—Deep feeling. The Russian Burns. **Nikolai Gogol** (Russ.), (1809-1852), *Plays, Tales, Novels*—The greatest of Russian humorists. Satirizes all classes of society.	1809. Battle of Wagram.
Fritz Reuter (1810-1874).—*Poems, Novels*—A Mecklenburg poet who wrote in his own dialect. A born story-teller, with broad realistic humor. **H. Ferdinand Freiligrath** (1810-1876).—*Poems, Translations*—Poet of the Revolution and friend of Longfellow. Some of his finest translations are from Robert Burns.	**P. A. Munch** (Nor.), (1810-1866).—*History*—His great history of Norway is in eight short volumes. Brilliant and industrious. Both Munch and Keyser were overpatriotic in believing Norway the hearth of Scandinavianism from the historic point of view.	**W. G. Belinsky** (Russ.), (1810-1848).—*Criticism*—In spite of the censorship of the press he exerted a powerful uplifting influence on society by his literary criticisms.	
Karl Gutzkow (1811-1878).—*Novels, Plays*—For a time the most influential writer in Germany. Combated the misuse of political and clerical power. *Uriel Acosta*, his best drama, is a strong plea for freedom of thought.	**A. Munch** (Nor.), (1811-1884).—*Lyric Poems*—His chief work is *Pigen fra Norge*, taken from Norwegian history. **August Blanche** (Swed),. (1811-1868).—*Comedy, Novels, Short Stories, Sketches*—Was very popular. Comedy deals with lower classes. Novels sensational. Stories and sketches realistic.		
Berthold Auerbach (1812-1882).—*Novels, Short Stories*—The poet of the Suabian Black Forest. His stories of village life, though not realistic, charm by their naive elements.	**P. C. Asbjörnsen** (Nor.), (1812-1885).—*Folk Tales*—The Grimm of Norway.	**Alexander Herzen** (Russ.). (1812-1870).—*Journalism*—Greatest journalist of his time. Devoted to pleas for liberal institutions.	1812. U. S. and English war.
Friederich Hebbel (1813-1863).—*Dramas*—The chief German dramatist of the century. A great innovator. His best works represent the clash of new epochs with those passing away.	**S. A. Kierkegaard** (Dan.), (1813-1855).—*Philosophy*—Denmark's greatest religious thinker. Strong imagination. Wrote a beautiful poetic prose.		

TABLE VII. NINETEENTH

English

Charles Reade (1814-1884).—*Peg Woffington, Cloister and Hearth*, etc.—A vigorous narrator, animated by hatred of injustice.
Anthony Trollope (1815-1882).—*Barchester Towers*, etc.—Admirably realistic presentation of English society, political and ecclesiastical.
George Rawlinson (1815-1902).—*Five Great Monarchies*—A learned Assyrian and Oriental scholar.
Charlotte Brontë (1816-1855).—*Jane Eyre, The Professor*, etc.—Great power in novels based on narrow experience.

James Anthony Froude (1818-1894).—*History of England*—A brilliant prose-writer, makes history human and interesting and suggestive.
George Eliot (1819-1880).—*Silas Marner, Spanish Gypsy, Poems*—The greatest woman novelist. A realist with insight. Powers of wit and characterization; construction not remarkable.
Charles Kingsley (1819-1875).—*Hypatia, Poems*—His novels, in spite of slight affectations and a taint of sentimentality, are vigorous and wholesome.
John Ruskin (1819-1900).—*Stones of Venice, Modern Painters*, etc.—A great stylist. As art critic, subjective and governed by the moral suggestiveness of the object. As economist, an idealist.

John Tyndall (1820-1893).—*Scientific Papers*—Unsurpassed, unless it be by Huxley, as a popularizer of Darwin's ideas.
Hebert Spencer (1820-1903) —*First Principles*, etc.—A deep thinker but ponderous in style. Applied principle of evolution to sociology, history, etc.

Matthew Arnold (1822-1888).—*Essays and Criticisms, Sohrab and Rustum, Poems*—Liberal in thought, but dominated by aristocratic prejudice on the literary side. As a poet inclined to despairing pessimism; weak in the power of verbal melody.

Edward A. Freeman (1823-1892).—*Histories*—A conscientious, honest, painstaking historian.
Thomas Hughes (1823-1896).—*Tom Brown at Oxford*, etc.—A manly, breezy person, who wrote one good book for boys.

Thomas Henry Huxley (1825-1895).—*Man's Place in Nature*, etc.—A master of exposition and, with Tyndall, very effective in presenting the idea of evolution.
R. D. Blackmore (1825-1900).—*Novels: Lorna Doone*, etc.—Infused an element of romance into the modern novel, *Lorna Doone*.
Dinah Maria Mulock (1826-1887).—*John Halifax*, etc., *Poems*—Author of some twenty novels of which *John Halifax* is the best. Also of pleasing minor verse.

Dante Gabriel Rossetti (1828-1882) —*Poems: The Blessed Damozel*, etc.—A highly imaginative poet, a master of color in verse and on canvas.

American

John Lothrop Motley (1814-1877).—*Dutch Republic. United Netherlands*—A rapid, easy style in presenting results of research.
Rufus W. Griswold (1815-1857).—*Christian Ballads, Poets and Poetry of America, Famous Poets*—Valuable critical studies marred by partisanry

John G. Saxe (1816-1887).—*The Money King, New Rape of the Lock*, etc.—Humorous and sprightly.
Samuel A. Allibone (1816-1889).—*Literature and Authors*, etc.—Laborious and valuable.
Henry D. Thoreau (1817-1862).—*Walden, Excursions*—Redolent of nature love, and cultured scholarship.
John Bigelow (1817-).—*Life of Benjamin Franklin*—Sympathetic and sage. Died 1911.

J. G. Holland (1819-1881).—*Timothy Titcomb's Letters, Kalvina*—Enjoyed a large popularity.
Edwin P. Whipple (1819-1886).—*Essays and Reviews, American Literature*—Of very distinct cultural value.
James Russell Lowell (1819-1891).—*Among My Books, My Study Windows, Bigelow Papers, Poems: Sir Launfal*, etc.—Keen, sparkling, scholarly, and artistic.
Walt Whitman (1819-1892).—*Poems: Leaves of Grass, My Captain*, etc.—Unique in claim and form.
Julia Ward Howe (1819-1910).—*Social and Philosophical Papers, Battle Hymn of the Republic*—Representative of the spirit of the times.
Margaret J. Preston (1820-1897).—*Beechenbrook, Cartoons, Colonial Ballads*—Cultured and of human interest.

Richard Grant White (1821-1885).—*Words and Their Uses, Everyday English*—Scholarly and suggestive.

Thomas Buchanan Read (1822-1872).—*Poems, Drifting, Sheridan's Ride*, etc.—Commendable, especially in form.
James Parton (1822-1891).—*Biographies*—Serviceable, but not satisfying.
Edward Everett Hale (1822-1909).—*The Man Without a Country, His Level Best*—Vigorous and pointed, but provincial.
Donald G. Mitchell (1822-1909).—*Dream Life, Reveries of a Bachelor*—Attractive in meditation and grace.
George H. Boker (1823-1890).—*Plays, Poems of the War*—Inadequately appreciated.
Francis Parkman (1823-1893).—*Oregon Trail, Montcalm and Wolfe*, etc.—Romantic, picturesque and of real interest.

George W. Curtis (1824-1892).—*Potiphar Papers, Prue and I*, etc.—Widely popular and effective.
Bayard Taylor (1825-1878).—*Northern Travel, Greece and Russia, Poems of the Orient, Translation of Faust*—Too good at many things to be best at any.

Stephen Collins Foster (1826-1864).—*Old Folks at Home, Old Uncle Ned*, etc.—Popular in vein and melody.

Lew Wallace (1827-1905).—*The Fair God, Prince of India, Ben Hur*—Uneven, but at times highly successful

French

Eugene Labiche (1815-1888).—*Comedies*—A master in the art of writing many light comedies or vaudevilles.

Leconte de Lisle (1818-1894).—*Poems*—One of the greatest poets of the second half of the nineteenth century. He was the head of the group of poets called the Parnassians who sought above all technical perfection in poetry. He is a pessimist and in all his poems we see an aspiration toward death as the final rest.

Emile Augier (1820-1889).—*Dramas*—One of the masters of the modern French drama. Less aggressive than his contemporary Dumas the Son, his influence in some respects was greater
Gustav Flaubert (1821-1880).—*Novels*—Wrote the most perfect novel of the century, *Madame Bovary*. On the other side his *Salammbo* is purely romantic.
Octave Feuillet (1821-1890).—*Novels, Dramas*—All his novels describe society.

Henri Murger (1822-1861).—*Novels*—His *Scenes of Bohemian Life*, in which he depicts the bohemian life of a certain class of students, is still enjoyed.
Edmond de Goncourt (1822-1896).—*Novels*—He and his brother Jules de Goncourt claim to be the first to paint true life. They are the apostles of "modernism."
Emile Erckmann (1822-1899).—*Novels*—With Alexandre Chatrian he wrote a large number of novels in which are painted in a free and simple style the customs and thoughts of the Alsatians especially during the wars of the first empire.
J. Ernest Renan (1823-1892).—*Life of Jesus*, etc.—Critic and historian but above all a marvelous artist, he greatly influenced the thought of his day. With Taine, but in a different way, he contributed to the triumph of positivism.

Alexandre Dumas the Son (1824-1895.)—*Novels, Dramas*—Marvelously clear and concise style. Dramas full of wit but lack in kindliness.

Alexandre Chatrian (1826-1890).—*Novels*—See Erckmann (1822-1896).

Francisque Sarcey (1827-1899).—*Criticism*—A recognized authority on the drama, his criticism bears especially on the theater.
H. A. Taine (1828-1893).—*History of Literature*, etc.—*Origins of Contemporary France*, his most powerful work, shows his genius as a critic and as historian. He belongs to the same school as Renan but he is more aggressive.

CENTURY—Continued

German	Scandinavian	Russian, Spanish, Hungarian	Historical Events
Otto Ludwig (1813-1865).—*Dramas, Shakespeare Studies, Novels*—Master of detail-painting in his novels. His novel *Between Heaven and Earth* has become a classic. His dramatic work suffered under critical acuteness. **Richard Wagner** (1813-1883).—*Operas*—Creator of the music-drama. Insisted that German drama must be national and so drew for themes on older Germanic myths.	**J. Moe** (Nor.), (1813-1880).—*Poems*—Lyrics. Assisted Asbjörnsen in collecting the popular tales of Norway.	**Iwan Gontscharoff** (Russ.), (1813-1891).—*Novels*—At first romantic then realistic. His great work *Oblomoff* represents strongly that inertia which renders the hero incapable of action.	
Emanuel Geibel (1815-1884).—*Poems, Voices of the Time*—Successful writer of popular songs. *Voices of the Time* treats political events in a conciliatory tone.		**Michail Lermontow** (Russ.), (1814-1841).—*Poems, Novels*—Powerful prose. Strongly attacked the government and the prevailing tone in society.	1814. Stephenson's locomotive. 1815. Battle of New Orleans.
Gustav Freytag (1816-1895).—*Novels, Dramas*—His *Ancestors* is a cycle of the greatest modern German novels, awaking the national consciousness of the German people.		**José de Espronceda** (Sp.), (1816-1842).—*Lyric Poetry*—Imbued with the manner and spirit of Byron.	1815. Napoleon defeated at Waterloo.
Theodor Storm (1817-1888).—*Lyrics, Novels*—Masterful writer of the novel of reminiscence. The lyric note is prominent in his prose.		**Alexis Tolstoi** (Russ.), (1817-1875).—*Dramas*—Excellent historical dramatist. Fine artistic sense.	
	J. C. Hostrup (Dan.), (1818-1892).—*Comedies, Popular Songs*—A great favorite. Adapts language to characters. Vivid picture of student life and life of middle classes.	**Iwan Turgenieff** (Russ.), (1818-1883).—*Stories, Novels*—Great prose-artist. Melancholy pessimism. Faithful reflection of the inner development of Russian society.	
Gottfried Keller (1819-1890).—*Novels, Short Stories*—Master of the "novelle," or short story. Strong independence of spirit reflected in this Swiss poet.	**Meir Goldschmidt** (Dan.), (1819-1887).—*Journalism, Novels, Short Stories*—Good stylist. Felt keenly his Jewish origin, but was not ashamed of it.		
Salomon Mosenthal (1821-1877).—*Novels*—Chiefly historical, including *Leah the Forsaken, The Queen of Sheba*, etc.		**Feodor Dostoveysky** (Russ.), (1821-1881).—*Novels*—Great power of psychological analysis. Even claimed by Russian criminologists as their colleague. **Nikolai Nekrassoff** (Russ.), (1821-1888).—*Lyrics*—Depth of feeling. Rare impassioned lyric power.	1821. Greek war of independence against Turkey.
		Alex. Petőfi (Hung.), (1823-1849).—*Lyrics, Translations*—One of the greatest lyric poets of the nineteenth century. Truth and naturalness. Full of the passion, melancholy, and humor of the Hungarian.	1824. National gallery in London opened.
Conrad Ferdinand Meyer (1825-1898).—*Short Stories, Novels*—Countryman of Keller, and one of the best story writers of the century. Particularly happy in giving true historical coloring to his novels.			
J. V. von Scheffel (1826-1886).—A late successor of Walter Scott. *Ekkehard*, one of the greatest German historical novels. *The Trumpeter of Säkkingen*, an epic in the Romantic spirit.		**Michail Saltykow** (Russ.), (1826-1889).—*Satiric Tales*—Written with his heart's blood. Keen wit, original in invention. **Juan Valera** (Sp.), (1827-).—*Novels*—Combines elegance of language with depth of thought.	
	Victor Rydberg (Swed.), (1828-1895).—*Philosophy, History, Mythology, Novels, Poems*—Great scholar, poet, and philosopher. Extreme purist in language.		

TABLE VII. NINETEENTH

English

George Meredith (1828-1909).—*The Egoist, Diana of the Crossways*, etc.—Novels of extraordinary power. Style epigrammatic and not attractive.

Samuel R. Gardiner (1829-1902).—*Histories*—A happy combination of attractive narrative and scholarly thoroughness.

Jean Ingelow (1820-1897).—*Poems*—A charming lyrical talent, of limited productive power.

Justin McCarthy (1830-) —*History of Our Own Times, Novels*—A prolific journalist, novelist, and historian of modern times Died 1912.

Edward Lord Lytton, (Owen Meredith), (1831-1891).—*Biography of Bulwer Lytton, Lucile*, etc.—Fluent writer of light verse and society verse.

Edwin Arnold (1832-1904).—*Light of Asia, Poems*—An able journalist and prolific minor poet.

William Morris (1834-1896).—*Essays on Art*, etc., *Poems, Earthly Paradise*—Prolific as a narrative poet, fond of classic and mediæval legends.

George du Maurier (1834-1896).—*Peter Ibbetson, Trilby*—Artist and poet. *Peter Ibbetson* is a fanciful romance of dream life. *Trilby*, scene in Latin quarter of Paris, a masterful study of character.

John Richard Green (1837-1883).—*History of the English People*—Industrious and conscientious. His work more than a record of war and politics. Clear and simple style.

Algernon Chas. Swinburne (1837-1909).—*Poems*—A poet of remarkable musical power, master of headlong but involved prose, a critic of enthusiasm and eloquence.

John Morley (1838-).—*Criticisms, English Men of Letters*, (Ed.).—A sound literary historian and critic and a thinker of force and scope. Died 1923.

Walter H. Pater (1839-1894).—*Marius the Epicurean*, etc.—A wonderfully finished prose style, which sometimes diverts attention from the justness and beauty of the thought.

Henry Austin Dobson (1840-1921).—*Vignettes in Rhyme, Proverbs in Porcelain*—The English Horace. An authority on eighteenth century social and literary life. Charming light verses.

Thomas Hardy (1840-).—*Novels: Tess of d'Urbervilles*, etc.—Novels depicting country life. A writer of broad humanity. His books possess at once wit, realism, and an idyllic quality. Died 1928.

William Black (1841-1898).—*Novels: In Silk Attire*, etc.—His stories have considerable charm but not much force. Gaelic Scotland depicted pleasantly but unconvincingly.

Robert W. Buchanan (1841-1901).—*Alone in London, Poems*—A minor poet and dramatist of considerable output Known for his attack on Rossetti in *The Fleshly School of Poetry*.

American

Henry Timrod (1829-1867).—*Poems*—Admirable in poetic instinct and manner

Chas. Dudley Warner (1829-1900).—*My Summer in a Garden, Little Journey*, etc.—Catholic in interests and attainments

John Esten Cooke (1830-1886).—*Novels: Survey of Eagle's Nest*, etc. *Lives of Lee and Jackson*—Prime favorites with romantic youth.

Paul Hamilton Hayne (1831-1886).—*Sonnets, Legends, Lyrics*—In sonnets excellent, in other poems too prolific.

Louise May Alcott (1832-1888).—*Little Women, Little Men*—Influential in their popular appeal.

Edmund C. Stedman (1833-1908).—*Victorian Poets, Poets of America, Alice of Monmouth, Panic in Wall Street*—Showing creative power and critical ability.

Chas. Farrar Browne (Artemus Ward) (1834-1867).—*Artemus Ward, His Book*, etc.—Humorous in exaggeration and perversion.

Frank R. Stockton (1834-1902).—*Rudder Grange, The Lady or the Tiger*—Ingenious in plot, straightforward in style.

Moses Coit Tyler (1835-1900).—*History of American Literature*—Accurate and exhaustive.

Samuel L. Clemens (1835-1910).—*Innocents Abroad, Huckleberry Finn*, etc.—Thoroughly representative of American humor.

Thomas Bailey Aldrich (1836-1907).—*Novels: Marjorie Daw*, etc.—Cultivated and of literary talent.

William Dean Howells (1837-1921).—*Venetian Life, Rise of Silas Lapham*, etc.—Realistic and entertainingly descriptive.

John Burroughs (1837-1921).—*Wake Robin, Winter Sunshine*—Strongly uttering the charms of nature.

Mary Mapes Dodge (1838-1905).—*Hans Brinker*—In high favor with children.

Albion W. Tourgée (1838-1905), *A Fool's Errand, Bricks Without Straw*—Valuable for the point of view.

Thomas R. Lounsbury (1838-).—*Life of Cooper, Studies in Chaucer*, etc.—Of recognized scholarship and ability. Died 1915.

Francis Bret Harte (1839-1902).—*Luck of Roaring Camp, Gabriel Conroy, Poems*—Of international fame. Faithful and skillful character portrayal.

Joaquin Miller (1841-1913).—*The Danites in the Sierras, Songs of the Sierras*—With the sweep and breadth of the prairies.

Sidney Lanier (1842-1881).—*The Boy's Froissart, Tiger-Lilies, Poems*—Artistic to a high degree

John Fiske (1842-1901).—*Myths and Myth-Makers, Histories*—Scholarly and fair-minded.

Henry James (1843-1916).—*Daisy Miller, Portrait of a Lady*, etc.—Of characteristic conception and style.

George W. Cable (1844-) —*Old Creole Days*, etc.—Successful in achievement of purpose.

Elizabeth S. Phelps Ward (1844-1911) *Gates Ajar*, etc. Widely read for religious sentiment.

French

Jules Verne (1828-1905).—*Twenty Thousand Leagues Under the Sea, Around the World in Eighty Days*, etc.—His novels have done much to popularize several branches of science. Interesting and instructive, they have been widely read all over the civilized world by both young and old.

Jules de Goncourt (1830-1870).—*Novels*—See Edmond de Goncourt (1822-1896).

Victorien Sardou (1831-1908).—*Dramas*—Although the theater of Sardou is generally superficial this author has a remarkable talent for showing exterior life and many of his vaudevilles, comedies and historical dramas met with pronounced success.

Henri Meilhac (1832-1897), **Ludovic Halévy** (1834-1908).—*Comedies*—Wrote together a number of very successful light comedies. They created the "operetta."

Edouard Pailleron (1834-1899).—*Comedies*—His light comedies are full of graceful and delicate touches. In the *Monde ou l'on s'Ennuie* his tone is considerably raised.

Henri Becque (1837-1899).—*Dramas*—With the "Corbeaux" (Crows) a new school of drama was inaugurated: The naturalistic play. In spite of his exaggerations dramatic art owes a great deal to Becque.

Sully-Prudhomme (1839-1907).—*Poems*—One of the greatest poets of the nineteenth century. From the "Parnassians" he took their respect for form. He was not only an artist but a thinker and a moralist. In him positivism and idealism are perfectly blended.

Gaston Paris (1839-1903.)—*Philology*—Greatest literary critic of France since Sainte-Beuve, especially on early French literature.

Alphonse Daudet (1840-1897).—*Novels*—In most of his works Daudet is a painter of rare ability of manners and customs; in two or three he shows a very keen psychological insight. He is one of the great prose writers of the century.

Emile Zola (1840-1902).—*Novels*—Called the head of the naturalistic school because he defined the theories of the school. His twenty volumes of the Rougon-Macquart series are a grand epopee of "human animality." In his later works materialism becomes idealism and his intense pessimism an exaggerated optimism. He is in literature a great painter of immense crowds.

Albert Sorel (1842-1906).—*Histories*—A brilliant writer. His history of *Europe and the French Revolution* is much esteemed.

Ernest Lavisse (1842-).—*Histories*—Is a moralist as well as an historian. He draws from the history of the past examples and lessons.

François Coppée (1842-1908).—*Poems, Dramas*—The poet of the humble, as he called himself, has excelled in pictures of real life and the study of interiors. Wrote also a number of plays which deserve praise

José de Hérédia (1842-).—*Poems*—The most impersonal and impassive of the Parnassian poets. His poems are on a small scale but perfect in form. Died 1905.

Paul Verlaine (1844-1896).—*Poems*—A unique poet. Without discipline or method he produced among a large number of imperfect and meaningless poems a few masterpieces which have made of him the imitator of a certain kind of modern poetry.

Anatole France (1844-).—*Novels*—His novels are really "frames in which he puts the adventures of his soul." In *Sylvestre Barnard* and other works we find the author himself and his philosophy, which derives from Montaigne and Renan. His style is inimitable and by many he is considered the greatest writer of our times. Died 1924.

CENTURY—Continued

German	Scandinavian	Italian, Spanish, Russian	Historical Events
	Henrik Ibsen (Nor.), (1828-1906).—*Dramas, Poems*—Most masterful dramatic genius of the nineteenth century. Sharp satire, terse and vivid dialogue. Attacked conventional hypocrisy.	**Leo Tolstoi** (Russ.), (1828-1910).—*Novels, Essays, Criticisms*—Strong individualism paired with the doctrine of non-resistance. Powerful appeal to simple life of the people as a standard of civilization.	
Friederich Spielhagen (1829-).—*Novels*—The novelist of German social conditions. *Problematic Characters* and *In Rank and File* are two novels attempting to reconcile the clash of the classes. Died 1911.			
Paul Heyse (1830-).—*Novels, Short Stories, Poems*—Long the central figure of the Munich school of poets.			
Marie von Ebner-Eschenbach (1830-).—*Tales, Novelettes*—The most venerable among the women writers of Germany Died 1916.			
			1831. Death of Mrs. Siddons.
	B. Björnson (Nor.), (1832-1910).—*Novels, Dramas, Poems*—Very popular. Forceful, deeply in earnest. Author of Norway's favorite national song. Active in public questions.		1832. Cholera in Europe and America.
Felix Dahn (1834-).—*History, Novels*—Noted historian and historical novelist, famous as author of *A Struggle for Rome*, dealing with the conflict between the Goths and Romans. Died 1912.	**Jonas Lie** (Nor.), (1833-1908).—*Stories, Dramas*—Sketches of nature and popular life in the north of Norway.	**José Eschegaray** (Sp.), (1833-).—*Dramas*—Most prominent representative of the modern Spanish dramatists. Romantic in tone.	
	Mathias Jochumsson (Ic.), (1835-).—*Poems, Dramas*—Lyric and tragic. Translator of Shakespeare, Byron.		1835. Morse's model electrical telegraph.
		Giosué Carducci (It.), (1836-1907).—*Poems*—Progressive, liberty-loving lyrics.	
Georg Ebers (1837-1898).—*Egyptology, Novels*—An Egyptologist. Wrote novels dealing with Egyptian life.			
Ludwig Anzengruber (1839-1889).—*Dramas, Prose Tales, Poems*—Highly endowed Austrian dramatist. A pioneer of realism.			1839. Daguerre's perfected photographic process.
		Giovanni Verga (It.), (1840), —*Novels*—Tales of Sicilian peasantry. Died 1922.	
	Karl Snollsky (Swed.), (1841-1903).—*Poems*—Clear elegant form.		1844. Electrical telegraph between Baltimore and Washington.
Karl Robert Eduard Hartmann (1842-1906).—*Philosophy, criticism.*	**Georg Brandes** (Dan.), (1842-).—*Literary Essays*—A piercing literary critic. Splendid use of language. Has had a hard career. Died 1927.		
Friedrich Nietzsche (1844-1900).—*Philosophy, Criticisms*—Prophet of individualism. His greatest work, *Thus Spake Zarathustra*, left an indelible impression on the literature of his time.			
Detlev von Liliencron (1844-1910).—*Epics, Poems*—The chief lyric poet of the epoch.			

TABLE VIII. LATE NINETEENTH CENTURY AND EARLY TWENTIETH CENTURY

English	American	French	German, Scandinavian	Russian, Czechoslovak, Polish, Italian, Spanish	Historical Events
Robert Louis Stevenson (1850-1894). *Poems, Essays, Stories*—A great stylist.	**Arthur S. Hardy** (1847-1930). *Novels.*	**Anatole France** (pseud. of Jacques Anatole Thibault), (1844–1924). *Novels*—A master of satire and form.	**Ernst von Wildenbruch** (German), (1845–1909). *Dramas, Short Stories, Poems*—A great historical dramatist.	**Antonio Fogazzaro** (It.), (1842–1911). *Poetry, Novels.*	1848. A DICTIONARY OF AUTHORS, BOOKS, CHARACTERS AND LITERARY TERMS

The following dictionary aims to supply information about books and authors, and has been prepared with the purpose of omitting everything which does not contribute its mite of usefulness or pleasure to him who seeks to read intelligently. Its probable service may be indicated by the following questions and answers:

1. What does the careful student need to know concerning an author?

Ans. His nationality or his language, when he lived, for what he is famous.

2. What does a student need to know about a literary work?

Ans. What it is about, in what manner or style it is written, why it has value, what is its significance.

3. What does a student need to know about a character in drama or novel?

Ans. The human type to which he belongs, what his individual characteristics are, why he is admirable or despicable, whether he is well portrayed.

Such questions as these every reader of intelligence will wish to answer; this dictionary will help him. If the student happens to hear the name of Artemus Ward, for example, he may find by turning these pages who he was, when he lived, and what he wrote. If the student wants to know about the Iliad, he will find it summarized here. The things he will find in this dictionary may be indicated clearly in a table:

1. Names, dates, chief or representative works of English authors.
2. Names, dates, chief or representative works of American authors.
3. Brief identification of important foreign authors.
4. Descriptions of many of the more famous works of English and American authors.
5. Description of famous works in other languages.
6. A few character sketches which may serve as models in school work.
7. Explanation of some of the common literary terms, e. g., epic, ballad, comedy, etc.
8. Miscellaneous literary information.

Adam Bede, English novel by George Eliot, published in 1859. In this as in most of her works two stories are intertwined. Adam Bede, the hero, is a faithful and honest carpenter. He falls in love with Hetty Sorrel, a pretty dairymaid who has not the good sense to appreciate his worth. She becomes infatuated with the local squire, Arthur Donnithorne, and is betrayed by him. He is good-hearted but thoughtless. That he is not wholly bad is shown by his remorse after a child is born to him and Hetty and she is brought to trial on a charge of murdering it. Dinah Morris, a Methodist preacher, stands by Hetty in her trouble, and eventually becomes the wife of Adam Bede. The first story, then, is of Adam's disappointed love and later happy marriage; the second is of Hetty's tragedy and its effects.

The book is famous for its pictures of country life, its understanding of human nature, and of the motives of conduct. Many of the sayings of Mrs. Poyser, one of its rustic characters, have become proverbial. She is "not one of those as can see the cat i' the dairy an' wonder what she's come after." *Adam Bede* is often regarded as the best of the author's works. Dickens said that reading it marked an epoch in his life.

Adams, (Parson), Character in Fielding's novel *Joseph Andrews.* One of the most lovable characters in fiction. Parson Adams was absent-minded enough to forget he had a horse to ride and set forth afoot; he was improvident enough to give away all his money and having nothing with which to pay his own debts; he was often in a fist fight; he was the butt of innumerable practical jokes. In spite of his faults, his simple piety, his generosity, and his good intentions have endeared him to all who read.

Ade, George (1866-), American humorist, best known for his *Fables in Slang,* many of which have been dramatized for motion pictures, and *The College Widow,* a very successful play.

Addison, Joseph (1672-1719), English poet, dramatist, essayist, author of narrative sketches, statesman. He is most famous for the essays and narratives. Many of these, like the Sir Roger de Coverly sketches, appeared in papers like the *Spectator,* of which he was an editor. He praised good books, criticized the follies of mankind with a mild satire, never bitter or malicious. Common sense, moral purpose, and pleasant humor are characteristic of him. Johnson said: "Whoever wishes to attain an English style, familiar but not coarse, and elegant but not ostentatious, must give his days and nights to a study of Addison". Benjamin Franklin studied Addison with such a purpose.

Adonais, a formal elegy (1821) in which the English poet, Shelley, laments the death of a fellow poet, John Keats, whose death was at that time thought to have been hastened by harsh criticism. The poem imitates the classical elegy, as does Milton's *Lycidas.* The first half of the poem mourns the loss of the poet, cut off in his prime; the second half rejoices that he is with the immortals.

Aeneid, The, an epic poem in the Latin language by Vergil. The poem tells the story of the flight of Aeneas from Troy after it was captured by the Greeks in the famous war, of his adventures on land and sea, his visit to the underworld, and his final arrival in Italy where he founded the Roman state. Book I. Aeneas sails from Troy, heading for Italy, but is driven ashore at Carthage, where he is hospitably received by Queen Dido. Book II. Aeneas tells Dido the story of the capture of Troy, through the deceit of the wooden horse, of his flight with his family, and of his wife's death. Book III. Aeneas tells of his perilous voyage and of the death of his father, Anchises. Book IV. Dido falls in love with Aeneas, but he sails away. She then kills herself. Book V. Aeneas visits Sicily, and holds games there in honor of his father's memory. Book VI. Aeneas visits the infernal regions. Book VII. Aeneas reaches Italy and wins the king's daughter, thereby incurring the hatred of Turnus, who had been betrothed to her. Book VIII. Preparations for war are made by Aeneas and Turnus. Book IX. Turnus attacks the camp of Aeneas and burns his ships. Books X and XI. The war goes on. Book XII. Aeneas accepts the challenge of Turnus to single combat. Turnus is killed.

Aesop, ancient Greek fabulist. See FABLE.

Alcott, Bronson (1799-1888). American. Member of the transcendental group of authors living chiefly in Concord and Boston, Mass., about the middle of the nineteenth century.

Alcott, Louisa M. (1832-1888), American writer of stories for children. The best known is *Little Women.* Daughter of Bronson Alcott.

Aldrich, Thomas Bailey (1836-1907), American author of stories and poems. *Marjorie Daw* and *The Story of a Bad Boy* are well known.

Alfred, (The Great) (849-901). He was a patron of learning and letters, and himself an author, translating various books from the Latin into English.

Alice's Adventures in Wonderland (1865), a delightful story for children with much truth in its whimsical absurdities. It was written by C. L. Dodgson a learned mathematician of Oxford University, England, under the pen-name of Lewis Carroll, and, was illustrated by Sir John Tenniel. Alice falls asleep and dreams that she follows a rabbit into his hole and finds herself in a strange land where she meets and talks with the Mad Hatter, the Walrus, the Tortoise, and many other grotesque personages. *Through the Looking Glass* (1871) is a sequel.

Allen, James Lane (1849-), American novelist and short story writer. Best known work *The Choir Invisible.*

Allworthy, (Squire), a character in Fielding's novel, *Tom Jones* (1749). In Allworthy, Fielding has depicted the eighteenth century gentleman who is the "favorite of both Nature and Fortune", one who has "an agreeable person, a sound constitution, a solid understanding, and a benevolent heart", as well as "one of the largest estates in the county". Like Sir Roger de Coverly, Allworthy has all the substantial merits of the century and fewer than usual of its vices.

Amelia, the heroine of Fielding's novel, *Amelia* (1751). She is a character of unfailing charity, wedded to a man of many faults. She is depicted with the tenderness which characterized the writing of Fielding's last years. Thackeray said she was "the most charming character in English fiction".

Ancient Mariner (1817), ballad by Coleridge. The ancient mariner is a man condemned to wander forever and tell his story in expiation of his cruelty in shooting the albatross which followed his ship.

Anna Karenina, a Russian novel, by Tolstoy, English translation 1886. This is one of the world's greatest novels. Dealing with the familiar entanglement of husband, wife, and lover, it surpasses other novels in the subtlety with which it traces the heroine's character. Wedded to a selfish husband much older than she, Anna Karenina falls in love with Count Vronsky, a brilliant young officer, and thereafter

wavers between happiness and regret, until she becomes an exile from society, and, as she realizes what people think of her, passes gradually from defiance to ennui and despair. When she can endure life no longer, she throws herself beneath the wheels of a moving train. "And the candle by which she had been reading the book filled with pain and sorrow, deceit and evil, flared up with a brighter light, illuminating for her everything that had been enshrouded in darkness, then flickered, grew dim, and went out for ever."

Antiquary, The, English novel, by Scott. This is a novel of superstition and magic, with the talkative eccentric, Jonathan Oldbuck, and the weak-minded Edie Ochiltree as its most interesting characters. The story is a conventional one, involving rival lovers, a villain, and a wicked mother-in-law, but is full of excitement, humor, and tenderness.

Antony and Cleopatra. This is a tragedy by Shakespeare founded on information given in North's *Plutarch*. It relates the story of the infatuation of Mark Antony, the Roman triumvir, for Cleopatra the queen of Egypt. The splendor of ancient Egypt makes a rich setting for this representation of one of the most powerful men and one of the most fascinating women known to tradition. The fascination of Cleopatra, "Serpent of the Nile", undermines in this play the character of the man who was so strong and ambitious in the play, *Julius Caesar*.

Apologia Pro Vita Sua (In defense of his life) (1865), an autobiography of spiritual experience and a justification of religious affiliation written by John Henry, Cardinal Newman. The work was called forth by an attack upon Newman, who had gone from the church of England to the church of Rome, by Charles Kingsley, an Anglican clergyman. The work is famous for its clearness of expression and of reasoning, for its spiritual refinement, and for the light it throws upon the mental unrest of the time.

Apparition of One Mrs. Veal, The, a story (1706) by Daniel Defoe of a visit paid by the spirit of Mrs. Veal to one of her friends. It is told with such particularity that it seems true. Defoe learned this trick for making a narrative seem true long before he employed it in *Robinson Crusoe*.

Arcadia (1580-81), a pastoral romance by Sir Philip Sidney. The name Arcadia has come to designate a land of ideal simplicity and charm where the intrigues of elegant lovers and the affairs of state always run fortunately, unimpeded by the laws of probability or of cause and effect.

Arden, Enoch. A poem by Alfred Tennyson, narrating the adventures of a seaman who, shipwrecked on an uninhabited island in the tropical seas, spends many years in solitude, and when rescued, returns home to find his wife married to another, with whom she lives in happiness. Arden proves his nobility of spirit by refusing to reveal to her the fact of his existence, suffers in silence, and dies broken-hearted. Arden is a true hero after the highest conception of a hero. He is as great as King Arthur—by his unconquerable will, and by bowing before love and duty.

Ariosto (1474-1533), Italian poet, author of *Orlando Furioso* (The Mad Orlando), a romantic story in verse dealing with chivalric adventure.

Artful Dodger, The, a youthful character in Dickens's novel, *Oliver Twist*. He has been reared among criminals and gets his nickname because of skill in eluding the police. He is remembered for his droll and jaunty comments on everything and everybody.

Arthurian Romances, stories concerning a mythical king of the Britons and his knights of the Table Round. These stories appeared in various languages during the Middle Ages and have been much developed in modern times, especially in German and English. The chief groups, or cycles, of these romances are those dealing with (1) Merlin, the magician. (2) Gawain, originally a model knight, but in later stories (like the *Idylls of the King*) debased. (3) The search for the Holy Grail, in which either Percival or Galahad is the hero. (4) Tristan and his love for Iseult. (5) Launcelot and his love for Queen Guenevere. (6) The death of Authur. In English the best known of modern works based on this material are Tennyson's *Idylls of the King* and *Sir Galahad*, Arnold's *Tristram* and *Iseult*, Morris's *The Defence of Guinevere*. Richard Wagner's employment of the Arthurian material in his operas is well known. Some of the best of the older versions of the material are: *The Mabinogion*, a collection of Welsh tales of the fourteenth century; *Lays of Marie de France*, twelfth century; *Romances of Chretien de Troies*, twelfth century. These may be obtained, translated into English in the convenient *Everyman's Library*, published by E. P. Dutton.

The characters of the Arthurian stories represent types of men and women. Those who live according to the code of chivalry are made heroic; those who transgress the code are disapproved. Thus the stories as a whole enable us to see a knightly community in which each individual holds his place by virtue of his moral ideals and conduct. Much of the moral enthusiasm of the Middle Ages and later periods has been wrought into the characters and plots of these stories.

As You Like It is one of Shakespeare's romantic comedies, fanciful, witty, and full of the spirit of youth. The action is divided between the court of Charles, who has usurped the dukedom of his older brother, Frederick, and the forest of Arden, where the deposed Frederick holds sway. The play describes the flight to the forest of Arden of Frederick's daughter, Rosalind, disguised as a boy, and Charles' daughter, Celia, dressed as a rustic lass. There several scenes of love-making ensue. Touchstone, the court jester, tries his court manners on Audrey, a simple country maid; Rosalind, beneath her disguise, has a chance to test the fidelity of her lover, Orlando; and Celia finds a mate in Orlando's brother. The happy outcome of these love affairs and the repentance of the usurping duke furnish a pleasant ending to which the persistent melancholy of Jaques is in amusing contrast.

Aurora Leigh (1857), a novel in verse form by Elizabeth Barrett Browning. In telling a conventional love story, the author introduces contemporary theories regarding the improvement of society.

Austen, Jane (1775-1817), English novelist who gives neat pictures of life among the gentry of an English village. Best novels *Pride and Prejudice* and *Emma*.

Autocrat of The Breakfast Table. A series of narrative essays by Oliver Wendell Holmes which purport to record the conversation of a boarding-house. Holmes introduces comment on various subjects, anecdotes, poems, puns, and fancies. The book is a good one to read at odd moments, dipping in here and there.

Bacon, Francis (1561-1626), English prose writer, statesman, scientist. Best known work, *Essays*.

Baconian Theory, the theory that Bacon was the author of literary works which are usually attributed to Shakespeare. Supporters of this theory argue that the name of Bacon is introduced in acrostic cipher in many of the plays and sonnets.

Ballad. A ballad is "a song that tells a story". The oldest baliads were handed down from parents to children by word of mouth, as proverbs and weather sayings often are, and only in comparatively recent times got into writing.

Balzac, Honore de (1799-1850), French novelist, author of *The Human Comedy*, a series of novels classified to represent all phases of human experience. *Old Goriot* and *Eugenie Grandet* are two of the best.

Barchester Towers (1857). The title novel of a series by Anthony Trollope. The series depicts the life of an English cathedral town, and is notable for its realistic treatment of the clergy.

Bardolph is one of the group of low but amusing characters found in *Henry IV*, *Henry V*, and *The Merry Wives of Windsor*, plays by Shakespeare. He is an unprincipaled thief, roysterer, and coward whose end is hanging. His red nose is a great source of amusement to his companions.

Barkis is the stage-driver who marries Peggotty, the faithful old nurse of *David Copperfield*, a novel by Dickens. His chief claim to fame is his proposal of marriage, couched in the words, "Barkis is willing".

Barnaby Rudge (1841). One of the two historical novels written by Dickens. It deals with the religious riot of 1780 in England. Dickens gives an effective portrait of Lord George Gordon, the fanatic who incited this riot.

Barrie, Sir James M. (1860-), Scotch novelist and dramatist. *Sentimental Tommy* (a novel); *The Little Minister*, *Peter Pan*, *What Every Woman Knows*, (plays).

Bell, Currer and Acton, see **Bronte.**

Ben Hur. An historical romance by Lew Wallace (American), the action of which takes place in the time of Christ. Judah Ben Hur, a wealthy young man, because of accidentally knocking a tile from the roof while he is viewing the entrance of a new Roman governor into Jerusalem, gets arrested and condemned to the galleys. Many exciting adventures ensue, including the famous chariot race. The account of the conversion of Ben Hur to Christianity has added greatly to the popular interest in the book. Its sales have been enormous. The dramatic representation of the story has also had great popularity.

Beowulf. An early English (Anglo-Saxon) epic. The story consists of three episodes: (1) Beowulf with a small band of followers crosses the sea to aid a friendly people whose land is being ravaged by a monster named Grendel. Beowulf defeats Grendel in hand to hand conflict, and the monster flees, mortally wounded. (2) Grendel's mother seeks to avenge her son, but Beowulf follows her to her lair at the bottom of a mere and kills her. (3) In his old age Beowulf loses his life in combat with a fire-dragon which is devastating his kingdom. The hero of this poem shows a spirit of self-sacrifice which gives a nobility of spirit to the work, unusual in primitive compositions. So many of the customs and ideals of the people are revealed in the narrative that we are able to get a good conception from it of the Anglo-Saxon civilization.

Biglow Papers. Humorous and shrewd verses in the Yankee dialect, by James Russell Lowell, begun during the Mexican War. They are vigorously anti-slavery.

Blackmore, R. D. (1825-1900), English novelist. Best known for his romance of Devonshire life, *Lorna Doone*.

Blake, William (1757-1827), English poet, painter, engraver. Highly imaginative. *Songs of Innocence*.

Bleak House (1852-3). Novel by Charles Dickens. In this novel Dickens satirizes the injustice of delay in the Court of Chancery. The story is one of sin, concealment, and retribution. Several of the characters are memorable: Mrs. Jellyby, a woman devoted to foreign missions but neglecting her own family; Mr. Chadband, a shallow-minded pulpit-orator; Mr. Skimpole, poverty-stricen through his own improvidence; Jo, the street sweeper, a pathetic boy of the slums, who "don't know nothink". The novel is one of the most carefully constructed of all the author's narratives.

Blithedale Romance, The (1852). Novel by Hawthorne. This is a story which grew out of Hawthorne's interest in the Brook Farm Experiment. It depicts a community united in equality and fraternity. The novel is not one of Hawthorne's best, but the portrait of Zenobia, probably suggested by the character of Margaret Fuller, is interesting.

Boffin, Mr. A character in Dicken's novel, *Our Mutual Friend*. He is an illiterate old man who comes into a fortune, and uses it with generosity and wisdom. He assists the marriage of John Harmon and Bella Wilfer, though it means the loss of most of his fortune. Mrs. Boffin is equally amiable.

Boswell, James (1740-95), English writer (Scottish) who, though contemptible personally, wrote the best biography in the language, *The Life of Samuel Johnson*.

Bottom, Nick, the weaver in Shakespeare's *Midsummer Night's Dream*, belongs to a group of artisans including Quince, the carpenter; Snug, the joiner; Flute, the bellows mender; Snout, the tinker, and Starveling, the tailor. Shakespeare represents these characters as artisans of his own time living in ancient Athens. They plan to give a play of *Pyramus and Thisbe* before the Duke on his wedding day. Bottom is cast for Pyramus, but he covets the other parts, even that of the lion. He is a great braggart and very self-important, ordering about the other characters, although he is not in charge of the play. During the rehearsal Puck places an ass, head upon him, and causes the fairy queen to fall in love with him. Bottom's self-esteem is so great that he accepts the attentions of the fairies with perject equanimity. The clownish, literal Bottom is the most clearly individualized character in the play.

Bride of Lammermoor, The (1819). A tragical romantic story by Scott, depicting the love of a penniless youth, Edgar, Master of Ravenswood, for Lucy Ashton. A feud between the families and the intrigues of Lucy's worldly mother, culminating in Lucy's madness and Edgar's death, makes the story as pathetic as *Romeo and Juliet*. Leslie Stephen called this "in some respects the best and most artistic of Scott's novels". The opera, *Lucia di Lammermoor*, is based on this novel.

Bronte Sisters: Charlotte (1816-55), **Emily** (1818-48), **Anne** (1820-49). Three gifted English women, poets and novelists, of unfortunate life and morbid temperament. Two novels, *Jane Eyre*, by Charlotte, and *Wuthering Heights*, by Emily, entitle them to fame.

Brook Farm Experiment (1841-47), was an unsuccessful attempt to found an ideal community where all the members should labor with their hands as well as pursue scholarly vocations. The members were in sympathy with the Transcendentalists. Hawthorn's *Blithedale Romance* is an idealized picture of this community.

Brooke, Dorothea. The heroine of George Eliot's novel, *Middlemarch*. Dorothea is a high-minded woman who wishes to devote herself to service of mankind, but never finds so noble an opportunity as she seeks. Her life is one of good intentions unfulfilled, and unfulfilled not so much through any fault of her own as through the lack of opportunity which the author thinks characteristic of modern life.

Browning, Elizabeth Barrett (1806-61), English poetess. Wife of Robert Browning. Author of *Sonnets from the Portuguese*.

Browning, Robert (1812-89), English poet. Browning's chief characteristics are vigor and eccentricity of style, originality of thought, extraordinary range in subject-matter, and a resolute cheerful philosophy. *Rabbi Ben Ezra*; *Cavalier Tunes*.

Bryant, William Cullen (1794-1878), American poet and editor. Poems of nature and of general human experiences. *Thanatopsis*.

Bulwer-Lytton, Edward (1803-73), English novelist and dramatist. Novel: *The Last Days Of Pompeii*; play: *Richelieu*.

Bunner, H. C. (1855-96), American poet and story writer. Editor of *Puck*. Author of *Short Sixes*, (stories).

Bunyan, John (1628-88), English Puritan. *Pilgrim's Progress* was written by him while he was in prison for preaching without authority.

Burke, Edmund (1729-97), English prose writer. Devoted to liberty, (*Speech on Conciliation with the Colonies*, speeches against Warren Hastings), but also conservative, seeking liberty through the gradual improvement of existing government (*Reflections on the French Revolution*).

Burnett, Mrs. F. H. (1849–1924), American author of *Little Lord Fauntleroy* (1886), a story for children.

Burney, Frances (Madame D'Arblay) (1752-1840). English. Disciple of Dr. Johnson, who spoiled her style. Novel, *Evelina*; *Diaries and Letters*, famous for the pictures they give of men and events in her time.

Burns, Robert (1759-96), Scottish poet. Burns appeals to emotions common to all men, and alike in tenderness and humor, is everywhere read with affection. He is the favorte poet of the common man and of the outcast. Conviviality has never found better expression than in his works; better

songs than have never been written. *Auld Lang Syne; Tam O'Shanter.*

Burroughs, John (1837-1921), American naturalist. Author of many books about nature.

Byron, George Gordon Noel (1788-1824), English poet, "the arch-apostle of revolt". He was a man of brilliant abilities but undisciplined character. For his wit and fluent rhetoric he remains famous, though he has not kept the great fame he once had. *Prisoner of Chillon; Childe Harold.*

Cable, George W. (1844-1925), American story writer. Stories of Louisiana. *Old Creole Days.*

Caliban. Character in Shakespeare's *The Tempest.* He represents human intelligence combined with bestial morality. The son of a witch, half beast and half man, he has been introduced into several literary works since Shakespeare's day. Recent works are Percy Mackaye: *Caliban and the Yellow Sands*; W. L. George: *Caliban.*

Campbell, Thomas (1777-1844), English poet. Poems of warfare: *Ye Mariners of England, Hohenlinden.*

Canterbury Tales. A collection of stories written by Geoffrey Chaucer, English poet of the fourteenth century. In a *Prologue* the author describes nine and twenty pilgrims, typical mediaeval folk of different social stations, who agree to entertain themselves on their pilgrimage to Canterbury by telling stories as they ride. After this introduction the stories begin. They are of various sorts, some coarse, some refined, some humorous, some tragic. In the stories and in the description of the pilgrims between stories we get an idea of the character of Chaucer himself. He seems to have been a man with remarkable power to observe men and women, understand their faults and follies and see through their hypocrisies. This power of observation was combined with a remarkable sense of humor and a remarkable kindliness.

Carducci, Giosue (1835-1907), Italian critic and poet

Carey, Alice (1820-70), American poetess, chiefly known as the author of playful and moral verses for children.

Carlyle, Thomas (1795-1881), English prose writer. Carlyle was a man of personal oddity, querulous, savage, gloomy, tender, by turns. He developed an eccentric, vigorous style. His favorite subjects were history, biography, literature, economics. *Essay on Burns, Sartor Resartus, French Revolution, Heros and Hero Worship.*

Carmen (1847) is the title of a romance by Prosper Merimee (French). It is a tragic story with a passionate gypsy heroine who is beloved by Don José, the cavalryman. The story is well known in its operatic version, and as a motion picture play, acted by Geraldine Farrar.

Carroll, Lewis, see **Alice in Wonderland.**

Carton, Sidney. The hero of Dicken's *Tale of Two Cities.* Through the greater part of the story Carton appears as a dissipated and unprincipled man, but at the end shows himself a hero by taking the place of a condemned prisoner, Charles Darnay, to whom he bears a striking resemblance. By this means he saves Darnay and secures the happiness of Darnay's wife, with whom he is in love, but loses his own life.

Cass, Godfrey. Godfrey Cass, in George Eliot's *Silas Marner,* is a self-centered man who had concealed a previous marriage from his wife, Nancy, a woman whose main characteristics were "an unselfish clinging to the right, and a sincerity clear as the flower-born dew." His character is skillfully drawn. He had a "wavering nature, too averse to facing difficulty to be unvaryingly simple and truthful". At last, however, he brings himself to confess the secret he has concealed and partially redeems himself thereby. He is a character of the sort George Eliot frequently introduced in her novels, one in whom weakness and amiability mingle.

Castle Rackrent (1801) Story by Maria Edgeworth. It is a chronicle rather than a novel, recounting without a very careful plot, the follies and crimes of an Irish family through several generations. The story lacks plot but has humor and depicts character well. Scott acknowledged great indebtedness to Miss Edgeworth

Caxton, William (1422-91), first English printer. Important for spreading the influence of the Renaissance through England.

Caxton, The (1850). Novel by Bulwer-Lytton. The story concerns a love-affair interrupted by wordly ambition. There is gentle satire of politics and of society. One of Lytton's best novels.

Cellini, Benvenuto (1500-71), Florentine artist in gold, silver, and bronze, whose memoirs sketch his own brilliant and spectacular career, and also give a good picture of the most interesting of all periods in the history of Italian art. *Autobiography.*

Chanson de Roland or "The Song of Roland" is a poem in Old French which tells the heroic story of the fight of Count Roland, a leader in Charlemagne's army, against the Saracens. Roland's army was treacherously ambushed at the pass of Roncesvalles. There a prodigious combat ensued in which the knights did marvelous deeds of valor. Roland fought more fiercely than any, with his sword, Durendal, but at last, fatally wounded, was constrained to sound on his horn of ivory a call for help. The call was heard by Charlemagne thirty leagues away. He came and took revenge on the Saracens.

Chateaubriand, Francois Rene, Viscount de (1768-1848). Champion of Christianity and of the American Indian, whom de depicted as a noble savage.

Chatterton, Thomas (1752-70). A precocious genius who passed off his own poems as ancient works he had found in manuscript. Unappreciated and despairing, he committed suicide in his eighteenth year. *The Rowley Poems,* were his chief productions

Chesterfield, Lord (1694-1773), statesman and author, best known for his *Letters to his Son* in which he gives wordly advice for self advancement. His attempt to take the credit for aiding Samuel Johnson in writing his *Dictionary* (without deserving the credit), called forth a stinging letter from Johnson which marked the end of the system of patronage of authors.

Chesterton, Gilbert K. (1874-), an English essayist who writes in a clever, paradoxical style.

Childe Harold's Pilgrimage. A narrative and descriptive poem by Lord Byron. Canto I. describes travels in Spain and Portugal; Canto II. in the near East; Canto III in Belgium (including a visit to the field of Waterloo, a year after the famous battle), and up the Rhine to Switzerland; Canto IV. in Italy, with famous descriptions of Venice and Rome.

Christmas Carol, A. A ghost story of Christmas, by Charles Dickens, published in 1843, with illustrations by John Leech. "We are all charmed," wrote Lord Jeffrey to the author, "with your *Carol,* chiefly, I think, for the genuine goodness which breathes all through it, and is the true inspiring angel by which its genius has been awakened. The whole scene of the Cratchits is like the dream of a benevolent angel, in spite of its broad reality, and little Tiny Tim in life and death almost as sweet and touching as Nelly."

Churchill, Winston (1871-), an American novelist who chooses American problems and settings for his stories. Author of *The Crisis* and *Richard. Carvel.*

Cid, The, (1636). A play of the cape and sword type by the French dramatist, Corneille, who adapted it from a play in Spanish. It preserves the legend of the Cid, a hero of ancient Spanish romances and chronicles. The Cid killed the father of the girl he was to wed because of an insult to his own father. His betrothed then demanded vengeance upon him, but eventually found her love strenger than her desire for revenge.

Clarissa Harlowe, The History of. A novel by Samuel Richardson, published in 1751. It is written chiefly in the form of letters, and tells the story of a young woman of good country family who is abducted by the libertine, Lovelace. Clarissa's misfortune and death form the story, which is expanded to eight volumes by the microscopic analysis of every emotion of the unfortunate heroine. She was the favorite heroine of Richardson's generation.

Climax. The word is derived from a Greek word meaning ladder, and properly applies to the complete rising action of a plot. It has, however, come to be used of the acme, or highest point of the rising action.

Cloister and The Hearth, The. An historical novel by Charles Reade, depicting the life of the fifteenth century in Europe, when the Renaissance ideals were struggling with the mediaeval. The journey of the hero, Gerard, through Holland, Germany, France, and Italy gives a chance for the author (1) to recount many thrilling adventures; (2) to describe peasants, clergy, burgomasters, adventurers, German mediaeval innkeepers, robbers, deported French villagers, and Italian coutiers; and (3) to emphasize the power of the church by description and inoident. The author studied innumerable documents to enable himself to write his novel. The hero, Gerard, and the herione, the devoted Margaret, are represented as being the parents of the distinguished Dutch scholar, Erasmus.

Coleridge, Samuel Taylor (1772-1834), English poet and critic. He was one of the English Lake Poets, so-called from the section in which they preferred to live. With Wordsworth he published the famous *Lyrical Ballads* in 1798. This work heralded a new era of imaginative work. Like De Quincy, Coleridge was a victim of the opium habit. Best known works: *Kubla Khan, Christabel, The Ancient Mariner.*

Collins, Wilkie (1824-89), an English novelist whose stories are distinguished for their elaborate plots. He wrote *The Woman in White* (1860) and *The Moonstone* (1868).

Comedy In comedy men and women are represented in a conflict with circumstances which renders them ridiculous and is ended without disaster.

Complete Angler, The (1653). A book of narratives in dialogue form, with scenes from nature, advice on angling, songs and reflections pleasantly mingled. The author was Isaac Walton.

Comus. This is a masque written by John Milton for a Michaelmas festival in 1634 at Castle Ludlow, the home of the Earl of Bridgewater, in Shropshire. Music written by Henry Lawes and stage settings designed by Inigo Jones, accompanied its production. The triumph of virtue over evil is the tneme. Virtue is embodied in the lady, who is lost in the wood and lured to the home of the enchanter Comus, a son of Circe. She refuses to drink his potion, and is rescued by the Attendant Spirit, with the aid of Sabrina, the water-nymph. The high moral quality of the Lady's speeches makes a striking contrast to the gross materialism of Comus's utterances.

Confessions of an English Opium Eater (1821). Thomas De Quincey's account of his own experiences, telling how much opium he could take in a day and what the effects were, recounting various trivial events of his life and showing how these became the material of his dreams, glorified and distorted by the influence of the drug. This book, first published without his name, brought De Quincey a ready market for his writings and confirmed him in a literary career.

Conrad, Joseph (1857-1924). A novelist of Polish birth who writes in English. He is the author of stories of thrilling adventure, chiefly of the sea. Among his best works are: *Youth* (short stories); *The Arrow of Gold, Victory* (novels).

Cooper, James Fenimore (1789-1851). An American novelist who describes life on the Indian frontier and at sea. *The Leather-Stocking Tales, The Pilot,* and *The Spy* are the best of his works. He has been widely read in other countries.

Coriolanus. An historical play of Shakespeare's later dramatic period. The scene is laid in the time of the early Roman republic in the fifth century B.C. Coriolanus was banished from Rome, and, in consequence, led the Volscian troops against his native city. He was persuaded to turn back only by the prayers of a procession of Roman matrons, headed by his own wife.

Cotter's Saturday Night, The. A poem by Robert Burns published in 1786. The picture he gives of the Scoteh laborer's family gathered around the hearth to rest and worship drives home the truth that the strength of a nation lies in its devotion to work and religion.

Count of Monte Cristo, The. A novel by the elder Dumas. This is one of the most exciting boy's books in the world. Edward Dantés is unjustly imprisoned for twenty years through the evil schemes of two rivals and the corruption of a magistrate. While in prison he is told the secret hiding place of an enormous treasure on the Island of Monte Cristo, and, escaping from his dungeon, finds the treasure, and establishes himself as Count of Monte Cristo, a mysterious person of unparalleled wealth. The sole purpose of his life comes to be the punishment of those who had wrongfully sent him to prison, but though he accomplishes his purpose he finds that revenge is not sweet.

Cowper, William (1773-1800). An English poet. Author of *The Diverting History of John Gilpin* (a humorous ballad, widely known), and *The Task.*

Crabbe, George (1754-1832). English poet who wrote realistic descriptions of country life in *The Village.*

Craddock, Charles Egbert (1850-1922). Under this pen name Mary Noailles Murfree, American novelist, writes stories of life in the Tennessee mountains. *The Prophet of the Great Smoky Mountains.*

Cranford is a novel by Mrs. Gaskell, published in 1853. It makes interesting to the reader the petty economies and pleasures of a group of old ladies in an English village. Miss Mattie Jenkins, Miss Betty Barker, Miss Pole, Miss Forrester, and others are described with sympathetic humor.

Crawford, Francis Marion (1854-1909). An American writer of romantic novels, many of which have Italy as their scene. *A Roman Singer, Saracinesca.*

Crawley, Rawdon. In Thackeray's *Vanity Fair.* "a novel without a hero," Rawdon Crawley is one of the chief male characters. Good of heart, slow of intellect, with boyish affection and spendthrift neglect of obligations mingling, he is best remembered for the great scene in which he strikes down the profligate Lord Steyne in defence of his honor. The character of Rawdon Crawley is in itself adequate proof of the completeness with which Thackeray understood the "gentleman" and the "gentleman's code."

Criticism. The chief objects of literary criticism are (1) to judge, (2) to interpret, (3) to give personal impressions of books. Criticism may be favorable or adverse. It has been said that the aim of criticism is to give answers to three questions with regard to a book: (1) What is it about? (2) How is it written? (3) Is it worth while? Matthew Arnold defines criticism as "a disinterested endeavor to learn and propogate the best that is known and thought in the world." (See *Suggestions for Preparing Reports on Books,* in another part of this *Encyclopedia.*)

Crothers, Samuel (1857-1918). Unitarian minister and author of witty essays. *The Gentle Reader*

Curtis, George William (1824-1892). American editor and political orator; author of *Prue and I.*

Cycles. Cycle is a word used to designate works which taken together represent a complete story or a complete division of some great narrative material. For instance, all the romances telling of Sir Gawain constitute the Gawain Cycle. (See Arthurian Romances.) A cycle of miracle plays is a group which tells the biblical story of mankind from creation to the day of doom.

Dame Care (Frau Sorge) (1888). This story by Hermann Sudermann tells of a boy whose life was so full of misfortune that he seemed to be a foster-child of Dame Care. His father was shiftless but tyrannical, his mother full of complaint, his sisters somewhat disreputable. The boy made great sacrifices in attempting to save the family honor. At the close of the story he seems about to gain release from trouble in a happy marriage.

Dana, Charles A. (1819-97). Editor of the *New*

York Sun from 1868 to his death.

Dana, Richard Henry, Jr. (1815-82). Author of *Two Years Before the Mast*, an excellent sea story for boys.

Daniel Deronda (1876). George Eliot's last novel. In this novel two stories are merged. The first tells of the life of Gwendolyn Harleth, a beautiful but selfish girl. She marries Grandcourt, a cynical man of the world, and is very unhappy. At last she is partially released from misery by his death. The second story, which is the main thread of the plot, tells of Daniel Deronda, a boy who is ignorant of his parentage. He falls in love with a Jewish girl, Mirah, and eventually learns that he is himself the son of a Jewish opera singer. The two stories unite through the intimacy which grows up between Gwendolyn and Daniel Deronda, and the improvement of her character under his influence. George Eliot wrote the novel as a study in racial heredity, and succeeded in making it an interesting defence of the Jewish tradition.

D'Annunzio, Gabriel (1864-). Italian. Author of plays and novels. He has attracted much attention by his occupation of Fiume. *The Triumph of Death.*

Dantes, Edward, see **Count of Monte Cristo.**

D'Arblay, Madame, see **Burney, Frances.**

Darwin, Charles (1809-82). An English scientist whose book, *The Origin of Species*, published in 1859, presented elaborate evidence in support of the theory of evolution, and had a marked effect upon the thought of the time.

David Balfour (1893). Romantic novel by Robert Louis Stevenson. This novel continues the story of *Kidnapped*. It tells of David's attempt to help Alan Breck Stewart out of Scotland, of his own imprisonment, subsequent release, and marriage after varied fortunes to Catriona Drummond.

David Copperfield (1850). Novel by Charles Dickens. It gives the biography of the hero, including his sad childhood and bitter experiences as student and apprentice, the loss of his child-wife, Dora, and the later business prosperity and second marriage of his manhood. The novel is undoubtedly to some extent autobiographical. David's nurse, Peggotty; his tyrannical stepfather, Mr. Murdstone; his aunt, Betsy Trotwood; his landlord, Mr. Micawber, and other characters, are famous examples of Dickens's ability in characterization. Most of the characters are eccentric. David Copperfield was Dicken's own favorite among his works and is sure to hold its place because of the humor, kindliness, and graphic delineation of persons and places. No one can afford to be unfamiliar with this novel.

Davis, Richard Harding (1864-1916). American war correspondent and author of delightful stories of adventure. *Gallagher and Other Stories, The Princess Aline.*

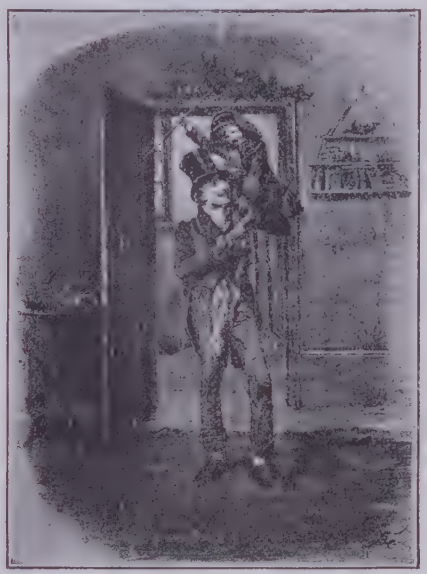
Daudet, Alphonse (1840-98). French author of pleasing novels and short stories. He prefers to deal with subjects from common life. The Tartarin series, including *Tartarin of Tarascon* ,are humorous stories about a boastful French provincial.

Decameron. A collection of one hundred tales by Boccaccio, an Italian of the fourteenth century. A group of ladies and gentlemen isolate themselves in the garden of a country estate to escape from the plague, according to the opening of the book, and there tell these hundred stories for their amusement.

Defoe, Daniel (1659-1731). An English political pamphleteer and realistic novelist. He had the gift of making a story seem real by putting in a great deal of small detail. Author of *The Shortest Way With Dissenters*, a tract which brought him to trouble with the authorities of church and state; *The Journal of the Plague Year*, which is almost wholly fiction; and *Robinson Crusoe.*

Deland, Margaret (1857-). American writer of novels and short stories of village life. *Old Chester Tales. The Awakening of Helena Ritchie.*

De Morgan, William (1839-1917). English novelist. He is the author of books which have been compared to the novels of Dickens, because of their subject-matter, tone, and length. He began writing novels after he was sixty years old. *Alice for Short, Joseph Vance.*



De Quincey, Thomas (1785-1859). A brilliant English prose writer, famous for the musical quality of his style. His habit of taking opium undoubtedly affected his writing, increasing a natural tendency to queer dreams. Carlyle wrote of him: "Eccovi, this child has been in hell!" Some of his best works are *Levana and Our Ladies of Sorrow, Confessions of an English Opium Eater, The English Mail Coach.*

Desdemona. The heroine of Shakespeare's play, *Othello*. Her character is one of entire sincerity and devotion. Rarely has a dramatist succeeded so well in portraying innocence without any sacrifice of interest. Hazlitt says of her, "we lose sight of her personal charms in her attachment and devotedness to her husband." That a woman of this sort should be killed by the man she loves makes a tragic situation of the most powerful kind.

Deserted Village, The. A poem of about three hundred lines by Oliver Goldsmith (English), written in heroic couplets. It is supposed to describe Goldsmith's native village in Ireland, which was depopulated to make part of the large private estate of a noble. Goldsmith introduces into the poem descriptions of the village parson and of the schoolmaster. These portraits are done with a kindliness and truth which makes them favorites. Throughout, the virtues and the pleasures of common life are depicted with sympathy.

Diana of the Crossways. A novel by George Meredith in which Diana, the heroine, is continually finding herself in a critical position. She is always coming to the crossways, that is to say, and must choose which of two difficult paths to take. Her difficulties are those of love, marriage, divorce, and money matters. They offer a chance for the making of several witty epigrams, such as Meredith is fond of weaving into his narratives. Diana is a remarkable study in feminine character. She has wit, beauty, and a capacity for loyalty. Her betrayal of a state secret to a newspaper is an incident the probability of which has caused a good deal of discussion. It has been alleged that her character was modeled upon that of Mrs. Norton, granddaughter of Richard Brinsley Sheridan.

Dickins, Charles (1812-70). The most popular of English novelists. Dickens's genius was best employed in telling stories of odd and humorous characters, but he enjoys great fame for the tender and pathetic narrative in which his work is often artificial and melodramatic. Perhaps the best of his works are: *Pickwick Papers* (early humorous sketches), *Tale of Two Cities* (a story of the French Revolution), *David Copperfield* (partly autobiographical), *Bleak House* (a story of the law's delay), *Christmas Stories* (in which the author's optimism finds best expression), and *Great Expectations* (the best of the later novels.

DICKENS CHRISTMAS CAROL

Dickinson, Emily (1830-86). A New England poet, author of quiet and simple verses.

Doctor Faustus, see **Faust.**

Dr. Jekyll and Mr. Hyde by Robert Louis Stevenson, was published in 1886. This is the story of a London physician of good reputation, who by means of a drug which he has discovered can change himself from Dr. Jekyll to Mr. Hyde, a person of cruel and criminal tendencies. The story is, therefore, one of a double personality, and is readily understood as an allegory of the good and the bad which unite in every human being. The allegory is carried to its natural conclusion when the evil personality predominates and Dr. Jekyll becomes transformed into Mr. Hyde without the aid of his drug and even against his own wish.

Dodgson, C. L., see **Alice in Wonderland.**

Dogberry. A character in Shakespeare's *Much Ado About Nothing*. Dogberry is a conceited and ignorant official with a blundering tongue. Hazlitt calls him a standing record of "formal gravity of pretension and total want of common understanding."

Doll's House, The. A play by Henrik Ibsen, the great Norwegian dramatist. Nora, the heroine, is a woman of restricted education who has been brought up to be merely an ornament, or doll, in the house of her husband. She makes tragic mistakes in consequence of this, and finally, at the end of the play, leaves the house to learn for herself the necessary lessons of which she has been deprived. The play is a protest against undue restriction of woman's sphere.

Dombey and Son (1846-7). A novel by Dickens. It tells a melodramatic story of the Dombey family. Mr. Dombey neglects his gentle daughter, Florence, but takes great pride in Paul, his son. His pride is shattered by misfortunes, however. Mrs. Dombey, a second wife, humiliates him by deserting the house; Paul dies while still a boy; Mr. Dombey's business fails. Meanwhile Florence gains the friendship of some plain seafaring people and marries one of them, Walter Gay. Her good fortune and faithfulness relieve Mr. Dombey's old age. Among the minor characters Cap'n Cuttle, with his seaman's jargon, is prominent. Paul Dombey's death afforded Dickens a chance for exhibiting the pathos of which he was fond.

Don Juan. A character famous in literature as the type of licentious adventurer. After Don Juan's many escapades, according to legend, the statue of a man he had killed in a duel descended from its pedestal and delivered him to the devil, body and soul. Mozart has an opera founded on this story. The title is *Don Giovanni*. Byron's *Don Juan* and Shaw's *Man and Superman* show its influence. There are dramas based upon the story in various languages.

Don Quixote (1605-15). A famous satirical romance by Cervantes, a Spaniard. The two chief characters are Don Quixote, a dignified gentleman crazed by reading stories of chivalry, and Sancho Panza, an ignorant but shrewd country fellow, his servant. The ill-sorted pair go adventuring, and Don Quixote's insane attempt to demean himself always as a knight leads them into many ridiculous situations. To his disordered mind windmills are giants and hotel wenches are beautiful princesses. After long wanderings the odd pair return to the village from which they set out and Don Quixote regains his sanity. The book satirized the absurdities into which chivalric stories and chivalric sentiment had degenerated. It is so full of fun and wisdom that dramas and stories have been derived from it in many languages.

Donatello is a young Italian count in Hawthorne's *Marble Faun* who bears a marked resemblance to the famous statue of a faun by Praxiteles. His character is that of a carefree pagan until he falls in love with Miriam and commits a crime for her sake. Then he develops into a conscience-stricken member of civilized society, and gives himself up to justice. Throughout the story Hawthorne makes a mystery of the resemblance of Donatello to the statue, producing thereby that sense of wonder so familiar to readers of his works.

Dooley, Mr., see **Dunne, F. P.**

Doyle, Sir Arthur Conan (1859-). Englishman, author of short stories and historical romances. The best known are the *Sherlock Holmes Series* of detective stories, and *The White Company*, an historical romance.

Drama. The drama is a form of art in which a story is presented by means of action.

Dramatic Monologue. A form of art, perfected by Robert Browning, in which a speaker reveals his character by the words he utters at a critical (or dramatic) moment of his life.

Drinkwater, John (1882-). Contemporary English playwright. Author of the successful play *Abraham Lincoln.*

Drummond, William Henry (1854-1907). A Canadian poet who wrote in the dialect of the French-Canadian habitant. *Johnny Courteau, The Habitant.*

Dryden, John (1631-1700). Author of dramas, poems, and essays. He was a man of strong intellect who wrote in a polished style.

Dumas, Alexandre (the elder) (1803-70). Frenchman; author of an enormous number of novels written alone and with collaborators. Professor Cross says: "Dumas made history a background for imaginary adventure and sword-play." *The Count of Monte Cristo, The Three Musketeers*, and *Twenty Years After*, are the best.

Dumas's son, Alexandre, became a famous dramatist Because the names of the two men are the same, it is customary to designate them as "father" and "son," or "the elder" and "the younger."

The Dunciad. "The epic of the dunces," a satire in heroic verse by Alexander Pope. It is directed against the people who had offended the author, and especially against authors. Daniel Defoe and Robert Walpole were among those satirized.

Dunne, Finley Peter (1867-). An American humorist who writes in the dialect of an Irish-American very shrewd and entertaining comments upon interests of the day, especially political affairs.

Dunsany, Lord (1878-). A contemporary English playwright. *The Gods of the Mountains.*

Edgeworth, Maria (1767-1849). An Irish novelist who excelled in descriptions of Irish life and manners. *Castle Rackrent.*

Edwards, Jonathan (1803-58). A minister and writer of stern Puritanical works of theology. He was missionary to the Stockbridge Indians, and president, for a brief time just before he died, of Princeton College. *The Freedom of the Will, Sinners in the Hands of an Angry God.*

Eggleston, Edward (1837-1902). An American novelist who pictures early days in Indiana. *The Hoosier Schoolmaster.*

Egoist, The (1879). English novel by George Meredith. This was the novel which established Merideth with the reading public at home and abroad. The interest centers in Sir Willoughly Patterne and his fastidious search for a woman sufficiently perfect to become his wife. There is little action in the novel, but much very subtle analysis of egoistic sentiments. R. L. Stevenson wrote in praise of the novel in his essay "Books Which Have Influenced Me."

Egyptian Princess, The (1864). Historical romance by the German author, Georg Ebers. This novel unfolds a story of deception and revenge in ancient Egypt and Persia. The main story concerns

Cambyses, deceived into marrying Nitetis, an Egyptian princess who he thinks is the daughter of the king. He spurns Nitetis, when he learns the truth, and revenges himself upon his deceivers. The novel is based upon a careful study of ancient times, and depicts them with fidelity. Several historical personages are introduced.

Elegy. A funeral song or a song in honor of the dead.

Elegy Written in a Country Churchyard. A much quoted poem by Thomas Gray, the English poet of the eighteenth century. It embodies happily phrased reflections upon fame and death. Stoke-Pogis, near Eton, is the churchyard described.

Elia. The name assumed by Charles Lamb in writing his essay. He took this name from a clerk in the South Sea House.

Eliot, George (1819-80). Under this name Mary Ann Evans wrote her novels. She was a woman of remarkable intellect, well known as a translator before she began to write fiction. As a novelist she is notable for her sincerity, her insight into character, and her sympathy with common life. She was greatly influenced by the scientific thought of her time, and shows this influence in the comments upon life introduced into her stories. Her best novels represent English country life: *Adam Bede*, *The Mill on the Floss*, *Silas Marner*, *Middlemarch*. *Romola*, a story of Florentine life in the fifteenth century, is only a little inferior to these.

Elsie Venner. This is a novel of New England life by Oliver Wendell Holmes, published in 1859-60. It is based on the theory that pre-natal accidents may influence the character of a human being. Elsie Venner has a nature so strange that it seems allied to that of the snake which bit her mother before she was born.

Emerson, Ralph Waldo (1803-1882). American essayist, poet, lecturer. Emerson was a writer of energetic intellect, with ethical enthusiasms very valuable in the growing democracy at home and in the intellectual relationships with Europe which were developing.

Emile (1762). A narrative by Jean Jacques Rousseau, French novelist and philosopher. Though narrative in form, the book aims to lay down an ideal method of educating children. Emile, the hero, is a boy who learns directly through experiment and personal experience. Many educators since Rousseau have based their theories upon his principles.

Emma (1816). This is one of Jane Austen's realistic stories of English village life one hundred years ago. The charming but officious heroine, who is anxious to make matches among her friends, finally marries her wise counsellor, Mr. Knightley. So cleverly drawn are the characters that they seem like old friends.

Epic. An epic is a long narrative poem in a dignified style, celebrating the deeds of great heroes. Example: Homer's *Iliad*, Virgil's *Aeneid*, Milton's *Paradise Lost*.

Epictetus. Greek slave (first century A. D.) who gained his freedom and became famous as a philosopher, teaching calm endurance of the ills of life. *Discourses*.

Esmond, Beatrix. An interesting character in Thackeray's novel, *Henry Esmond*, and in its sequel, *The Virginians*. In the first novel she is a coquette, none too scrupulous, but beautiful and vivacious enough to charm men. With her, Esmond, the hero, is in love until her flirtation with the pretender to the throne of England reveals to him her true character. In *The Virginians* she is an old woman, conceited and not in the best repute, her beauty gone, a pathetic and unpleasant remnant of her old self.

Essay, The. A brief expression of opinion either upon some special aspect of a subject, or upon the whole subject, treated very generally. The essay is usually in prose. Examples: Montaigne's *Essays* (French); essays in the *Spectator* and *Tatler*, by Addison and Steele.

Essay on Man, An. A verse essay by Alexander Pope (English), in which the author attempts to explain the nature of man, his place in nature, and his relation to God. The style is epigrammatic.

Eugene Aram (1832). A novel by Bulwer-Lytton. The hero is a man of blameless character who has committed murder under unusual circumstances. The work is founded upon an incident of actual life, and furnishes an early instance of the tendency of our times to sentimentalize the criminal.

Eugenie Grandet (1833). A novel by Balzac (French). This is a story of Eugenie Grandet, daughter of a rich miser. Left with great wealth by the death of her father, she unselfishly helps the man she loves to marry another woman, and, left alone, without the power of enjoying her wealth, devotes herself to philanthropy. Her whole life is one of self-sacrifice.

Eustacia Vye, see **Vye, Eustacia.**

Evelina, by Frances Burney, is a novel which portrays the manners of London society in the eighteenth century. It consists chiefly of the letters of Evelina, a young girl visiting in London, to her guardian, Mr. Villars, in the country, describing her visits to Bath and Ranelagh, to the opera and the play. A mystery about the heroine and several complicated love affairs enliven the plot.

Evelyn, John (1620-1706). An English scholar whose most interesting work is his *Diary*.

Everdene, Bathsheba. The heroine of *Far From the Madding Crowd*, a novel by Thomas Hardy (English). Capricious, headstrong, and a bit vain, she has nevertheless enough womanly charm and beauty to win the love of three men. Something sterling in her character survives the tragic experiences which life brings her, and unites her finally with Gabriel Oak, who has loved and deserved her for years.

Everett, Edward (1794-1865). American statesman, editor, and orator, governor of Massachusetts, minister to England, president of Harvard.

Expedition of Humphrey Clinker (1771). A novel in the form of letters, written by Tobias Smollett (English). The novel tells of the journey of the hero and of Mattew Brambel about England. The characters are humorous; the incidents coarse but amusing; the pictures of the life of the times vivid.

Fable. A simple narrative which has the purpose of illustrating or teaching a plain truth. The most famous fables are those supposed to have been written by Aesop, an ancient Greek. In the most familiar fables animals are represented as speaking and acting like human beings.

Faerie Queene (1590-96). A long poem by Edmund Spenser. The poem was planned as an epical account of the virtues of the Christian knight. Only six complete books exist, though Spenser planned to write twelve. The six books tell of the adventures of knights and ladies, each of whom represents a virtue. Holiness, temperance, chastity, friendship, justice and courtesy are represented, each in a book. Spenser professed to be writing an allegory, but no one has been able to understand completely the application of his incidents and characters to events and persons of the age.

Falstaff, Sir John. A famous character in Shakespeare's *Henry IV.* and *The Merry Wives of Windsor*. He is a fat old rogue, the leader of a gang of thievish ruffians with whom Prince Hal, later King Henry V., consorts. Dr. Johnson says: "He is a thief and a glutton, a coward and a boaster, always ready to cheat the weak and prey upon the poor, to terrify the timorous and insult the defenceless". Yet he "makes himself necessary to the prince by perpetual gaiety, and by unfailing power of exciting laughter".

Far From The Madding Crowd, A novel by Thomas Hardy, appeared in 1874. The love affairs of the delightful rustic heroine, Bathsheba Everdene, are the basis of a narrative which includes vivid and charming pictures of rural life, such as the lambing and the scenes at the public house. Other models of graphic description in the book are the scene of the storm at night and of the sword play in the glen.

Farce. A form of comic drama in which the humor is often boisterous, the situations somewhat improbable, and the characters unreal.

Farewell Address, see **Washington's Farewell Address.**

Fathers and Sons (1861). A novel by Turgenev (Russian). The novel depicts the rebellion of the younger generation against the political and social institutions sanctioned by the elder generation. The book is interesting for the insight it gives into the intellectual unrest of the period.

Faust. Faust, or Dr. Faustus, is a famous literary character appearing in dramatic works in several modern languages. He typifies the gifted human being who is eager to enjoy life completely, to know all, to have all power, and to enjoy all pleasure. This zest for living brings him to realize that the satisfaction of all his desires will mean the loss of his soul. Thus the story of Faust, however told, presents a spectacle of contrasting light and shade, portraying the life of man in all its richness, but with the gloom of supernatural evil always in the background. Dramas: (English) Marlowe's *Dr. Faustus;* (German) Goethe's *Faust*. Operas: (German) by Schumann; (French) by Gounod and by Berlioz.

Federalist, The (1787-88). A series of papers which advocated the principles embodied in the proposed constitution of the United States. It was written by Hamilton, Madison, and Jay.

Fiction. Fiction is a term which properly describes all representations of scenes, characters, or events, some of which are imaginary. The word is, however, commonly applied to novels, short stories, and romances, rather than to dramatic works. Fiction and fact are antithetical in meaning.

Field, Eugene (1850-95). American author, best known for his verses for and about children. *Love Songs of Childhood*.

Fielding, Henry (1707-54). English dramatist and novelist, most famous for his novels. They give hearty and honest pictures of life, sometimes frankly coarse, but never mean. The candor of Fielding's work has given him an influence over later writers, who have admired the quality in him. His novels are: *Joseph Andrews*, *Tom Jones*, and *Amelia*. Byron called him "the prose Homer of human nature."

Fiske, John (1842-1901). American historian. Author of *Periods in the Modern History of America*, a series of histories.

Fitch, Clyde (1865-1909). American playwright, author of *The Truth*, *Captain Jinks of the Horse Marines*, and *Nathan Hale*.

Fitzgerald, Edward (1809-1883). An Englishman; translator from the Persian of the *Rubaiyat*, or quatrains, supposed to have been written by Omar Khayyam in the twelfth century.

Flaubert, Gustave (1821-80). French novelist, famous for the elaborate care with which he wrote his stories. *Madame Bovary*.

Folio. Literally a *leaf*. The word is commonly used to designate a book of the largest size. Strictly it applies to a book made of sheets of paper each of which is folded once in the process of making the book.

Foster, Stephen C. (1826-64). American poet, best known for his songs in negro dialect, such as *Old Black Joe* and *Old Kentucky Home*.

Fox, John Jr. (1863-1919). American novelist who wrote conventional and popular stories with the scene laid in the South. *The Little Shepherd of Kingdom Come*, *The Trail of the Lonesome Pine*.

Foxe, John (1516-87). English Protestant. Author of the *Book of Martyrs*, a very widely read work giving a prejudiced account of the religious persecution under Queen Mary.

France, Anatole (1844-1924). French author whose real name is Thibault. Best known for his narrative work in which irony, tenderness, humor and fancy mingle. Best known work, *The Crime of Sylvestre Bonnard*.

Francesca Da Rimini. A character in Dante's *Divine Comedy*. In real life she was a person of only local importance, but through Dante's masterly handling of her story she has become a famous personage. She was the wife of Gianciotto Malatesta, but fell in love with his brother Paolo. Their reading together of an old romantic story led to the expression of their love. When their love was discovered they were both killed by Gianciotto. In the *Inferno*, Francesca suffers for her sin, saying in her suffering: "There is no greater pain than to remember happy days in days less fortunate." The story of Francesca and Paolo has been given dramatic form by Stephen Phillips (English), George Boker (American), and D'Annunzio (Italian).

Frankenstein (1818). A "scientific" romance by Mrs. Shelley, wife of P. B. Shelley, the English poet. A young man named Frankenstein becomes interested in discovering the principle of life, and after long study constructs a being in likeness of a man, to which he succeeds in imparting vitality. The monster thus created upon the laboratory table finds his life unhappy because his frightful appearance keeps all human beings aloof, and demands that Frankenstein create a companion for him. When Frankenstein refuses, the monster becomes an avenging fury venting his resentment in a series of brutal crimes which culminates in Frankenstein's death. The monster is last seen floating to his own extinction upon an ice-raft in the arctic sea.

Franklin, Benjamin (1706-90). Early American statesman, inventor, and author of an *Autobiography* and *Poor Richard's Almanac*. He was a poor boy who learned the printer's trade, educated himself by reading and observation, and became prosperous and famous both at home and abroad. He was a signer of the *Declaration* and the *Constitution*, and ambassador to France. He made Philadelphia the center of the American culture of his time. No man in the history of modern times has shown such pre-eminent ability in so many fields as Franklin.

Free Verse. Free verse is a form of writing midway between verse of the usual rhymed sort and prose. It has "unrhymed cadence," as Miss Amy Lowell says. It is writing "whose cadence is more marked, more definite, and closer knit than that of prose, but which is not so violently nor so obviously accented as the so-called 'regular verse'." Good examples are to be found in the writing of Miss Amy Lowell, Mr. Robert Frost, Mr. Edgar Lee Masters.

Freeman, Mary E. Wilkins (1862-1930). A writer of realistic short stories describing life in New England villages. Her work has humor and pathos alike. *The Revolt of Mother* is one of the best short stories in the English language. Her best work is in the volume called *A New England Nun and Other Stories*.

Freneau, Philip (1752-1832). An early American writer of poems on political subjects, humorous poems, and poems about nature. In politics he was a strong anti-Federalist. Some of his best poems are: *The British Ship*, *The Wild Honeysuckle*, and *The Indian Burying Ground*.

Froissart, Jean. A French chronicler of the fourteenth century who gives a faithful picture of men and events of his time. He gives full expression to the ideals of chivalry as he comprehended them. His *Chronicle* is the best contemporary account that we have. Scott's historical novels dealing with the middle ages have been described as "Froissart modernized."

Frost, Robert (1875-). An American poet who has attracted much attention for his poems of New England country life, many of them in free verse. *North of Boston*.

Fuller, Margaret (1810-50). An American essayist and literary critic. She was a transcendentalist, editor of the *Dial*, and interested in the Brook Farm Experiment. Married Marquis Ossoli. Author of *Women in the Nineteenth Century*.

Gallegher and Other Stories. A volume of short stories by Richard Harding Davis. Gallegher, the title story, is an excellent story of a quick-witted boy in a newspaper office who turns amateur detective and has many thrilling adventures. Of the other stories in the volume the best are perhaps the Van Bibber stories, in which the hero is always getting into difficulties and always getting out with neatness, ease, and despatch. The whole volume is readable.

Galsworthy, John (1867-). English novelist and playwright. Among his best works are *The Patricians*, a novel; and *Strife* and *Justice*, plays.

Garland, Hamlin (1860-). American author of

narratives which often depict life in the Middle West. *A Son of the Middle Border* is autobiographical. *Main Travelled Roads.*

Garrick, David (1717-79). A famous actor, especially of Shakespearean parts; a friend of Dr. Johnson, and member of the Literary Club. In spite of short stature he succeeded in acting tragic parts as well as comic. Goldsmith described him as "an abridgement of all that is pleasant in man".

Garrison, William Lloyd (1805-79). An American orator and editor. The avowed purpose of his paper, *The Liberator*, was to effect the abolition of slavery. Garrison was one of the more violent or radical abolitionists. He was once dragged through the streets of Boston for expressing his views upon the policy of the government.

Gaskell, Mrs. Elizabeth (1810-65). An English novelist of much personal charm. She is best known for her novel, *Cranford*, in which she tells the story of a community of ladies. She was interested in the economic questions of her day and wrote of them, but is remembered best for her pictures of quiet village life.

Gibbon, Edward (1737-94). An English gentleman of means who gave his life to the most careful study of Roman antiquities, and wrote *The Decline and Fall of the Roman Empire.*

Gil Blas. A rambling tale of adventure written in the early eighteenth century by a Frenchman, Alain Rene Le Sage. The purpose which the author announced was to give true pictures of life and convey moral instruction. The scenes of the story are laid in Spain. Gil Blas sets forth with a mule and a little money to complete his education at the university and to seek his fortune. He is diverted from his first object by the accidents of his journey and his own love of adventure. Many lively and humorous incidents ensue, in the course of which the reader is enabled to become acquainted with all grades of society and all kinds of men and women, with the dens of thieves, the chambers of noblemen, the prison and the palace. The most famous character in the book is a quack doctor named Sangrado, who is depicted with great truth and satire. The book is a mine of incident seemingly invented without effort.

Gilbert, Sir William (1836-1911). An Englishman, author of the words of some of our best comic operas, like *The Mikado* and *Pinafore*, and of the highly diverting verses called *The Bab Ballads.* Sullivan composed the music for the operas, and the combination of Gilbert's words and Sullivan's music has proved unusually fortunate.

Gilder, Richard Watson (1844-1909). An American lyric poet, editor of *The Century* magazine for many years.

Gissing, George (1857-1903). An English writer of novels and short stories. He is particularly successful in showing the life of the poor. His novels are sad but give an impression of being true. They reflect the sadness of Gissing's own life. *The Odd Women, The New Grub Street.*

Glasgow, Ellen (1874-). An American novelist. Her best known work is *The Wheel of Life.* She often deals with the problems of women.

Godfrey, Cass, see **Cass, Godfrey.**

Godkin, Edwin Lawrence (1831-1900). A war correspondent and editor, born and educated in Ireland. He spent most of his life in America, and as editor of the *Nation* had a very important effect upon men and events. He was a fearless critic of political corruption.

Godwin, William (1756-1836). An Englishman who had a marked effect upon the men of his time, although he is now little read. He wrote novels, but is best known for an anarchistic treatise on society and government, entitled *Political Justice.*

Goethe, Johann Wolfgang Von (1749-1832). German. One of the greatest writers of modern times. He wrote plays, novels, and poetry. His best known plays are *Faust, Iphigenia in Tauris,* and *Hermann and Dorothea.* Carlyle translated one of his novels, *Wilhelm Meister's Apprenticeship.*

Gogol (1809-52). The "father of Russian realism". Author of *Dead Souls,* a novel, and *The Inspector,* a comic play.

Goldoni (1707-93). Italian. He was the author of many plays, comedies representing Italian life and types of character. The plots and the dialogue are especially good.

Goldsmith, Oliver (1728-74). Son of an Irish clergyman. Goldsmith is famous for his plays, his novel, *The Vicar of Wakefield,* and his poem, *The Deserted Village.* In addition to these he did a great amount of hack writing, and it has been said that he touched nothing with his pen which he did not adorn. His play, *She Stoops to Conquer,* still holds the boards. Very few plays see production for a hundred years. He was a very improvident and lovable character. In a comic description by one of his friends he was said to write like an angel but talk like poor Poll.

Grant, Robert (1852-). An American lawyer who has written several novels dealing with social problems. *Unleavened Bread, The Chippendales, Law and the Family.*

Grant, Ulysses S. (1822- 85) American general and President of the United States. Author of a very successful and interesting autobiography, called *Personal Memoirs.*

Gray, Thomas (1716-71). English poet. Gray was the author of *An Elegy Written in a Country Churchyard.* which is one of the most frequently quoted of English poems.

Greeley, Horace (1811-72). Founder and editor of the *New York Tribune.* Greeley had a very wide influence upon American opinion about the time of the Civil War especially throughout the country districts. His writing was often terse and effective. He made the phrase, "Go West, young man".

Gregory, Lady Augusta (1859-) One of the group of poets interested in the Irish Theatre. Author of many successful one act plays. *The Gaol Gate, The Bogie Man.*

Grimm Brothers,-Jacob (1795-1863), Wilhelm (1786-1859). German scholars, students of philology, grammar, and folk-lore. They are interesting to readers of literature because they collected and preserved the old German fairy stories.

Gulliver's Travels by Jonathan Swift is a satire published in 1726-27. The point of the satire is lost now that the conditions satirized are past, but the book remains interesting as a story. In four parts it tells of the hero's voyages to imaginary lands. pigmies; Book I to Brobdigna, the land of the pigmies: Book II to Brobdingang, the land of the giants; Book III to various countries, chief of which is Laputa, the home of eccentric scholars; and Book IV to the country of the Houyhnhums, a land where horses with an intelligence superior to that of mankind, carry on an ideal government. The first two books are the best.

Haggard, H. Rider (1856-1925). English novelist. Author of interesting stories, improbable in plot. His stories are told of strange lands. Africa is a favorite scene. *Allan Quatermain.*

Hakluyt, Richard (1552-1616). English traveller in the age of Elizabeth who compiled from the books of travel of the day a volume called *The Navigations, Voyages, and Discoveries of the English Nation.*

Hale, Edward Everett (1822-1909). An American clergyman best known to us for his story *The Man Without a Country.* Another well known story of his is *My Double and How He Undid Me.*

Halleck, Fitz-Greene (1790-1867). One of the so-called Knickerbocker school of writers, a group of men living in New York during the early nineteenth century. He was the author of *Marco Bozzaris.* He was a close friend of Joseph Rodman Drake who wrote *The Culprit Fay.*

Hamilton, Alexander (1757-1804). American statesman of the Revolutionary period. Chief contributor to the *Federalist.*

Hamlet. Perhaps the best known of Shakespeare's tragedies. Hamlet, Prince of Denmark, urged to seek vengeance by the ghost of his murdered father, defers action and indulges in melancholy reflections; but at last he screws his courage to the sticking point, and kills the usurping king. The walking of the ghost across the stage, the madness of Ophelia, the feigned madness of Hamlet, the assassination of the king and the death of Hamlet by a poisoned rapier furnish the somewhat melodramatic excitement which still makes the play popular.

Handy Andy. A rollicking story by Samuel Lover, who was a song-writer and popular entertainer as well as novelist. The story tells of the mishaps which befell the well-intentioned bungling hero. He was always doing the wrong thing, his mistakes bringing about complications in love and in politics which are very farcical. "Andy Rooney", says the author, "was a fellow who had the most singularly ingenious knack of doing everything the wrong way". At the end of the book Handy Andy is discovered to be really Lord Scatterbrain and weds his cousin like the true hero of old romance.

Hard Cash (1863). A novel by Charles Reade which purports to disclose abuses in the management of private asylums for the insane and in the laws governing such institutions. The story is highly sensational, but like most of Reade's works is full of facts gathered by the author with great pains.

Hard Times (1854). A novel by Charles Dickens in in which he satirizes extreme reliance upon statistics and a mechanical understanding of human relations. Its best known characters are Thomas Gradgrind, who worships statistics, and Josiah Bounderby, a conceited self-made man who holds in contempt the humble life from which he came.

Hardy, Thomas (1840-1928). The venerable English novelist and poet. Author of *Tess of D' Urbervilles, Far From the Madding Crowd,* etc.

Harris, Joel Chandler (1848-1908). American author who wrote *Uncle Remus, His Songs and Sayings.* Uncle Remus, the old negro, and his humorous stories of Brer Rabbit are well known abroad as well as in America.

Harte, Francis Bret (1839-1902). American author, best known for his stories about mining and lumbering camps in the West. *The Outcast of Poker Flat, The Luck Of Roaring Camp, Tennessee's Partner.*

Hawthorne, Nathaniel (1804-64). American novelist whose masterly novels and short stories depict with great subtlety the austere ideals and the mysteries of conscience which are sometimes called Puritan. *The Scarlet Letter, The House of the Seven Gables.*

Hay, John (1838-1905). American statesman and author. Wrote one novel, a considerable amount of verse, and with Nicolay, the authoritative life of Lincoln.

Hazlitt, William (1778-1830). English literary critic and essayist. Stevenson said, "We are all mighty fine fellows, but we can't write like William Hazlitt".

Hearn, Lafcadio (1850- 1904). American author. Wrote stories and sketches of singular beauty, chiefly New Orleans or Japan. *Out of the East.*

Heart Of Midlothian, The (1818). A novel of Scottish life and character by Scott. The story mainly concerns two sisters, Jeanie and Effie Deans. When Effie is on trial for child-murder, Jeanie will not tell a lie to save her, but after sentence is pronounced walks all the way to London to secure a pardon. The character of Jeanie and that of Madge Wildfire, the witch, are the most memorable in the book.

Hereward The Wake (1866). An historical romance of the period of the Norman Conquest, written by the English clergyman, Charles Kingsley, with copious use of historical records of the time with which it deals. Manly daring in heroic contests against odds, with a constant purpose on the part of the author to illustrate muscular Christianity, gives the work its individuality.

Herrick, Robert (1591-1684). A Cavalier poet, author of religious poems and dainty lyrics of nature. *Hesperides.* Author of the well known

"Gather ye rosebuds while ye may,
Old time is still a-flying."

Hewlett, Maurice (1861-1923). Author of novels and short stories whose scene is usually laid in the Middle Ages. *The Forest Lovers, New Canterbury Tales.*

Hiawatha (1855) Poem by the American poet, Longfellow. Hiawatha is a mythical hero of the American Indians. He gives them their arts and after founding their civilization withdraws at the coming of the white man

"To the kingdom of Ponemal
To the land of the Hereafter."

Henry, Patrick (1736-99). American orator of the colonial period. Only fragments of his speedhes have been preserved.

Henry Esmond (1852) An historical romance by Thackeray telling the story of Esmond's life, of his courtship of the beautiful Beatrix Esmond, of his military career, of his part in bringing the Pretender to England when Queen Anne was dying, of the failure of his political hopes and of his hope of marrying Beatrix, and finally of his marriage to Lady Castlewood. Beatrix's mother, and their emigration to America.

Herbert, George (1593- 1623). English clergyman and poet. Author of verse fantastic in form and sentiment, but at times genuinely sincere.

Hooker, Richard (1554-1600). Author of a treatise, *Of the Laws of Ecclesiastical Polity.*

Hoosier Schoolmaster, The (1870). A story by Edward Eggleston, depicting country life in Indiana in the middle of the last century. The hero encounters many difficulties in his school-teaching, but faces them all pluckily, and at last wins through. To-day the book has interest chiefly for the vivid and intimate picture it gives of pioneer conditions in the Middle West.

Horatius. A ballad by Macaulay. One of the *Lays of Ancient Rome.*

Howe, Julia Ward (1819-1910). American poet, author of the *Battle Hymn of the Republic,* reformer, and advocate of woman's suffrage.

Howells, William Dean (1837-1920). American editor, essayist, and novelist. Novel, *The Rise of Silas Lapham;* farce, *The Sleeping Car.*

Huckelberry Finn, The Adventures of (1884). A humorous chronicle of the life of boys by Mark Twain (S. L. Clemens). Huck and his pal, Tom Sawyer, run away from home and adventure down the Mississippi River on a raft. Until their final return home, thrilling, and pathetic incidents succeed one another in rapid succession in a narrative so skillful and human that it places the author among the great natural story-tellers of the world.

Higginson, Thomas Wentworth (1823-1911). American historian. *Young Folks' History of the United States.*

Hohenlinden. A famous ballad by Thomas Campbell, beginning,

"On Linden, when the sun was low
All bloodless lay the untrodden snow".

Hollinshed, Raphael (d. about 1580). Wrote the *Chronicles of England, Scotland, and Ireland.* The work furnished Shakespeare with much of the historical material of his plays.

Holland, J. G. (1819-1881). Founder of the *Century Magazine,* then called *Scribners' Monthly.* Author of poetry and novels. *Bittersweet, Seven Oaks.*

Holmes, Oliver Wendell (1809-94). American physician, author of poetry, novels and prose sketches. Famous for his humor and his sentiment. *The Chambered Nautilus* (poem), *Elsie Venner* (novel), *The Autocrat of the Breakfast Table* (miscellany).

Homer. The reputed author of the early Greek epic poems, *The Iliad* and *The Odyssey,* which preserve ancient Greek traditions and have influenced tremendously the art and literature of Europe and America. Homer is supposed to have lived in the ninth or tenth century B. C.

Hughes, Thomas (1823-96). English. Author of *Tom Brown's School Days,* probably the greatest story of its kind in the language.

Hugo, Victor (1802-85) Great French romantic poet, dramatist, and novelist. He is best known in America by his novels, *Les Miserables, Notre Dame de Paris,* and *The Toilers of the Sea.*

Hume, David. (1711-76). Scottish philosopher. Author of *Treatise of Human Nature.*

Hunt, Leigh (1784-1859). Essayist and poet, literary critic, friend of Shelley and Keats.

Huxley, Thomas (1825-95). English scientist who had remarkable gifts for stating in clear and simple language the scientific ideas of his time. *On a Piece of Chalk.*

Hypatia (1838). An historical romance by Charles Kingsley (English) with its scene laid at Alexandria in the fifth Christian century. Here, as in a half dozen other great books, we see two civilizations confront one another, and realize the opposition of their ideals. The grapple of Goth, Greek, Roman, and Christian is depicted in scenes of great vividness and energy. The defect of the book is its inclusion of a great mass of erudition, which makes many pages dull.

Ibsen, Henrik (1828-1906). Scandinavian playwright. Author of problem plays dealing with modern life. In these he raises questions without answering them. Typical plays are *A Doll's House*, *Pillars of Society*, *Hedda Gabler*, *Ghosts*. In all these we see a somewhat morbid society. Nazimova has acted in several of Ibsen's plays with great success.

Idylls of the King, The (1859-85). A group of narrative poems in excellent blank verse, by Tennyson (English). The poems tell incidents which are either drawn from the old romances of King Arthur's court, or invented by Tennyson in the manner of the old romances. King Arthur, with his sterling virtue, is the central figure. The stories are arranged in such a way as to show the gradual decline of knightly ideals through sin, until, in the *Passing of Arthur*, the great king, mortally wounded, is borne to Avalon by fairy maidens, and the civilization which he established is left to crumble. In his last words King Arthur declares his faith that this civilization will contribute something to the progress of mankind.

Iliad, The. An epic poem of ancient Greece, attributed to Homer. It tells the story of the ten years' siege of Troy by Greek armies which sought to bring Helen, the most beautiful of mortal women, back to Sparta, from which she had been carried away by Paris, a Trojan prince. The epic tells of pitched battles; of individual combats; of the great Greek warrior, Achilles, sulking in his tent; of the fight between Achilles and Hector, during which Hector is slain. The poem is full of action and vivid descriptions of combat.

Il Penseroso (The thoughtful man) (1634). A poem by Milton (English) in which he describes the pleasures of meditative life, contrasting these with the pleasures of a less thoughtful, more mirthful life such as he described in a companion poem, *L'Allegro*.

In Memoriam (In memory) (1850). A collection of over a hundred short poems by Tennyson (English), all in the same meter, and all associated with the death of Hallam, the author's best friend. The various poems were written at intervals through a number of years, and record the varying moods and thoughts of his sorrow. They are described by the poet himself as,

"Short swallow-flights of song, that dip
Their wings in tears, and skim away."

The whole group of poems constitutes one of the noblest elegies in the language.

Inland Voyage, An (1878). Chapters of travel by Stevenson, (Scottish), recording, with humor and fancy, a canoe-trip through France and Belgium. Throughout the work one finds that gay cheerfulness which made the author so charming a companion, and an abundance of that lively sense of the drama of life which transforms trivial incident into great adventure.

Ivanhoe. A novel by Sir Walter Scott (Scottish), published in 1819. Its scene is laid in England in the twelfth century, a period of adjustment between the Normans and the Saxons. The Saxon hero, Ivanhoe, a retainer of Richard Coeur de Leon, has been disinherited by his father because of his love for his father's ward, Rowena. His successive adventures, as victor in a brilliant Norman tournament, wounded prisoner in Front-de-Boeuf's burning castle, and champion of his noble Jewish benefactress, Rebecca, in her trial for witchcraft, end with his marriage to Rowena. Cedric, Athlestane and Rowena; Gurth the swineherd and Wamba the jester, serfs of Cedric; Isaac and Rebecca, the Jews; Locksley, or Robin Hood, and his band of outlaws; the Norman nobles, De Bracy, Front-de-Boeuf, and Bois Guilbert; Prince John and King Richard himself, are chief among the groups of characters which figure in this romance, of which Wilfred of Ivanhoe is the hero.

Jackson, Helen Hunt (1831-85). American. Author of *Ramona* and *A Century of Dishonor*, both of which deal with the treatment the American Indian has received.

Jacobs, W. W. (1863-). English writer of stories, humorous and terrible, dealing chiefly with sailors and longshoremen.

James, Henry (1843-1916). American novelist who made his home in England. Author of novels full of subtleties. Many of his novels describe the experiences of Americans in Europe. *Daisy Miller; The Portrait of a Lady.*

William James (1842-1910), the noted philosopher, was a brother of Henry James.

Jane Eyre (1847). Novel by Charlotte Bronte (English). This novel tells the story of an unfortunate heroine, of the indignities she suffered as a governess, of her strange wooing by Mr. Rochester, an impetuous gentleman with a mysterious past, of her discovery that he was the husband of an insane woman whom he kept under guard in a room of his house, of the burning of the house, the blinding of Rochester in an attempt to rescue his wife from the flames, and his subsequent marriage to the heroine. The novel had an extraordinary hold upon readers of its time because of the novelty of a heroine without physical charm, a mutilated hero, and stormy passions.

Jay, John. American statesman of the Revolutionary period. One of the contributors to the *Federalist*.

Jefferson, Thomas (1743-1826). A Virginian gentleman, third president of the United States, author of the *Declaration of Independence*, founder of Democratic principles in the nation.

Jeffrey, Francis (1773-1850). Editor of the *Edinburgh Review* which exercised considerable influence over public opinion concerning literary works a hundred years ago.

Jewett, Sarah Orne (1849-1909). Writer of stories about New England village life. *The White Heron, A Winter Courtship.*

John Gilpin, The Diverting History of. A rollicking ballad by William Cowper (English) which recounts a wild ride taken by an awkward and unwilling gentleman upon a runaway horse.

Johnson, Samuel (1709-84). A remarkable figure in English letters, famous for his sayings more than for his writings. Because of his interesting conversation and personality he drew a circle of famous men about him. Boswell became his biographer, composing the best biography in any language. Macaulay's *Essay on Johnson* gives a vivid but somewhat exaggerated account of Johnson. His greatest literary work was the *Dictionary of the English Language*.

Johns, Henry Arthur (1851-). English dramatist. *Michael and His Lost Angel.*

Jonson, Ben (1573-1637). English poet and dramatist, best known as the author of the English version of a song, "Drink to me only with thine eyes."

Joseph Andrews (1742). A novel by Henry Feilding (English). This novel tells the story of a virtuous servingman, Joseph Andrews. It gives an entertaining and true picture of life in the eighteenth century. Its most famous character is Parson Adams, one of the most lovable of country clergymen. The book was begun as a parody of Richardson's story of the virtuous servingmaid, *Pamela*.

Julius Caesar. A tragedy by Shakespeare dealing with the assassination of Caesar and the subsequent struggles between his friends, led by Octavius and Antony, and his enemies, led by Brutus and Cassius. Caesar, at the height of his power in 44 B.C., is warned to beware the ides of March, but proceeds to the senate house where he is stabbed by the conspirators. The mob hears Brutus deliver a speech justifying the murder of Caesar, but turns to Antony when he appeals to Caesar's love for them and reads his will. Civil war follows in which Antony and Octavius finally defeat Brutus and Cassius at Philippi. Thus imperialism triumphs in the end over republican ideals.

Because Shakespeare chose to make Brutus the hero of his play, he was forced to degrade somewhat the historical character of Caesar. Caesar is here represented as vacillating, suspicious, and easily flattered. He is persuaded to stay at home from the senate because his wife has a dream, but decides to go when the dream is interpreted favorably. He brags about his courage. He swoons in a public place. In many ways he is far from being the triumphant conqueror of history.

It is Brutus, then, with the rise and fall of whose fortunes we are chiefly concerned. He is not easily influenced, but joins the conspiracy only after mature reflection has convinced him that Rome must be rid of Caesar. Even Antony shows his belief in Brutus's integrity of purpose when he says,

"He only in a general honest thought
And common good to all, made one of them."

Junius Letters (1769-1772). A series of letters criticizing George III. and his government. Their authorship is one of the great literary mysteries.

Katharina, the heroine of *The Taming of the Shrew*, a play by Shakespeare. Speaking to a young man, she threatens "to comb his noddle with a three-legg'd stool, And paint his face and use him like a fool." From such talk her reputation becomes so terrible that only a bold man, like Petruchio, dares attempt to tame her, and show the real womanliness under her bravado.

Kenilworth (1819). An historical romance by Sir Walter Scott (Scottish). Its scene is laid in Elizabethan England. Queen Elizabeth, courted by Leicester, in the midst of a brilliant pageant at Kenilworth Castle, forms a striking contrast with Amy Robsart, his unacknowledged bride, who is imprisoned and murdered by Leicester's minion, Varney.

Kidnapped (1886). A lively story of fighting, wandering, and family treachery, by R. L. Stevenson (Scottish). The hero of the book, David Balfour, is sent to sea by a treacherous and cruel uncle. There he meets Alan Breck, a spirited and hard-fighting Jacobite. They have wonderful adventures on sea and shore, till with courage, persistence, and good fortune they win their way to happiness at the end of the book.

King Henry V. One of three historical plays by Shakespeare, dealing with the character of Henry V. In King Henry IV., part 1, the gay life of young Prince Hal is described; in part 2 his reflections upon his manner of life are given; and in Henry V. the patriotism and wisdom of his character as king are set before us. The action of Henry V. covers the years from 1414 to 1420, including a treacherous plot upon the king's life by three of his nobles, a campaign in France, the battle of Agincourt, and the king's courtship of the French princess, Katherine. The play is remarkable for its patriotic passages (e.g., Act III, Scene 1), and its delineation of typical soldiers, some, like Fluellen the Welshman, Macmorris the Irishman, and Jamy the Scot, from different parts of Henry's kingdom; others, like, Pistol, Nym, and Bardolph, from the scum of the army. King Henry VI. carries on the history into the next reign.

King John. One of Shakespeare's historical or chronical plays. It gives hints of the patriotic enthusiasm shown more strongly in Richard II. and in Henry V. The scene is laid in England and in France in the early part of the thirteenth century. The play describes some of the plots and intrigues of John's cruel reign, the wars with France, and the pitiful death of Prince Arthur. It will be noticed that the chronical plays are constructed loosely, without the careful attention which is given to unity in the tragedies.

King Lear. One of the most powerful of Shakespeare's tragedies. The plot deals with the ingratitude of King Lear's daughters, Goneril and Regan, and the fidelity of his daughter Cordelia. The ungrateful daughters rob the old king of his power, prejudice him against Cordelia, and deprive him of all but the bare necessities of life. Their cruelty drives him out into a violent storm one night, with a few faithful servants. The weight of troubles leaves him insane and raving. Cordelia, however, comes to his aid with an army. Then follow in rapid succession the violent deaths of Goneril and Regan, the death of Lear, the death of Cordelia, and the curtain falls upon a desolate kingdom, over which, however, a virtuous soverign is to rule.

King of the Golden River, The. A fairy story by John Ruskin (English) in which cruelty and selfishness are fittingly punished, and unselfish kindness wins a great reward.

King Richard II. Like many of Shakespeare's historical plays this is based upon Holinshed's *Chronicles*, a popular history published in 1577. The play covers the time from 1398 to 1400, and describes the deposition and death of the unpopular Richard II. His downfall is due to his intervention in a quarrel between Bolingbroke and Norfolk, two of his noblemen, and his banishment of them both. Bolingbroke returns with an army, and, supplanting Richard on the throne, becomes Henry IV. The play is remarkable for the patriotic speeches of old John of Gaunt and the pathetic philosophic utterances of the deposed Richard.

King Richard III. This is an historical play by William Shakespeare. The character of the king is one which many distinguished actors, such as Garrick, Kean, Edwin Booth, and Mansfield, have portrayed upon the stage. The title page of the first known edition speaks of the play as "containing his treacherous plots against his brother Clarence; the pittieful murther of his innocent nephews; his tyrannical usurpation; with the whole course of his detested life and most deserved death." The character of King Richard is thus sketched by the critic Hazlitt: "The Richard of Shakespeare is towering and lofty; equally impetuous and commanding; haughty, violent, and subtle; bold and treacherous; confident in his strength as well as his cunning; raised high by his birth and, higher by his genius and crimes; a royal usurper, a princely hypocrite, a tyrant, and a murderer of the house of Plantagenet".

Kingsley, Charles (1819-75). Church of England clergyman, poet and novelist. *Hypatia; Water Babies.*

Kipling, Rudyard (1865-). English author of stories and poems, dealing chiefly with life in India, children, and the glory of the Empire. His wide knowledge of the world and men, and his insistence on the simple and elemental virtues regardless of convention have attracted to him a large audience *Barrack Room Ballads* (verse); *Plain Tales From the Hills* (stories of Indian life); *Stalky and Co.* (story of boys).

Kubla Khan. A poem by Coleridge (English), written in very musical verse. The poem describes a fantastic vision of royal splendor.

Lady or the Tiger, The. A famous hoax story by Frank Stockton (American) in which readers are left puzzled by the ending.

L'Allegro (1645). A poem by John Milton (English) describing the pleasures of innocent mirth.

Lamb, Charles (1775-1834). English humorist, author of *Essays of Elia*. His work combines humor with sentiment, and mingles pathos with both.

Lamb, Mary (1764-1847). Sister of Charles Lamb and author with him of *Tales From Shakespeare*.

Landor, Walter Savage (1775-1864). English poet, author of imaginary conversations between famous

characters in fiction and history, such as *Pericles and Aspasia.*

Langland, William (14th century). Englishman; author of *Piers Plowman*, an allegorical poem showing the unrest of the laboring classes.

Lanier, Sidney (1842-81). An American musician, poet, and critic. *Marshes of Glynn.*

Larcom, Lucy (1826-93). New England poet; author of *Childhood Songs, Wild Roses from Cape Ann.*

Last of the Mohicans, The (1826). A romance by James Fennimore Cooper (American). The subject of this story is the warfare of the French and Indian forces against the British in Northern New York during the early history of the American colonies. The hero is Hawkeye, a woodsman whose knowledge of the forest and of Indian character is complete, and whose skill with the rifle is unmatched. Indian treachery, bloody fighting, heroic rescues and hairbreadth escapes follow one another in rapid succession. The hush and gloom of the primeval forest with its skulking savages gives the story a setting which is highly effective.

Last Days of Pompeii, The (1834). An historical romance by Bulwer-Lytton (English) which tells a thrilling story of the ancient city of Pompeii as it was in the days before it was buried by the great eruption of Vesuvius. Gladiatorial contests, banquets, plots, and counterplots make the story instructive and exciting. The characters are wholly fictitious and the whole conception of life in Pompeii is pure fiction, but the author has studied the ruins and relics of the buried city to good purpose.

Lay of the Last Minstrel, The (1805). A narrative poem by Scott, the chief interest of which is in its description of scenes and customs of the borderland of Scotland, and an occasional burst of poetical declamation.

Lays of Ancient Rome (1842). Dramatic and popular stories told in verse, concerning heroic deeds of Roman men and women. Thomas Babington Macaulay (English) was the author.

Legend of Sleepy Hollow, The (1819). A short story by Washington Irving (American). The story narrates the midnight adventures of Ichabod Crane—an ungainly schoolmaster of timorous heart—with a spectral, headless horseman whom he encountered while returning home from a party at the home of Katrina Van Tassel, to whom he was paying suit. After his wild race with the headless horseman Ichabod disappeared from the community. Katrina soon afterwards married Brom Bones, a daredevil horseman who "looked exceedingly knowing" whenever the story of Ichabod was mentioned.

IRVING'S LEGEND OF SLEEPY HOLLOW

Lincoln, Abraham (1809-65). Farmer, storekeeper, lawyer, president of the United States. The author of letters and addresses which are among the masterpieces of the language. *Letter to Mrs. Bixby, Gettysburg Address.*

Lindsay, Vachel (1879-). A contemporary American poet who deals with unusual subjects in unusual ways. *The Congo.*

Little Dorrit (1855-58). A novel by Charles Dickens (English). The story concerns the experiences of the Dorrit family in the Marhalsea debtor's prison, and their subsequent release and life of affluence. Governmental red tape is satirized.

Little Minister, The (1891). A well-known novel by Sir James Barrie (English). As a play, with Maude Adams taking the part of Babbie, it won great success. It describes the romance of the young minister, Gavin Dishart, and the fascinating but mysterious Babbie, in a village of stern, orthodox Scotch weavers.

Little Women (1868). A story for children written by Louisa M. Alcott (American). It is a genteel narrative of a New England girlhood.

Locke, John (1632-1704). An English philosopher. Author of *Essay Concerning Human Understanding.*

Locke, William J. (1863-). English novelist. Author of *The Beloved Vagabond, Septimus.*

Lockhart, John Gibson (1794-1854). (English.) Literary critic and biographer. Best known for his *Life of Sir Walter Scott.* Lockhart was Scott's son in-law.

London, Jack (1876-1916). An American, author of novels and short stories of adventure in remote places and outposts of civilization. *The Call of the Wild.*

Longfellow, Henry Wadsworth (1807-1882). Scholar, teacher, best known American poet of his generation. His prevailing sentiments have a very general appeal. His translations helped to bring European culture to America. England honored him by placing his bust in the Poet's Corner of Westminster Abbey. *The Children's Hour, Evangeline, Hiawatha, Tales of a Wayside Inn.*

EVANGELINE

Looking Backward (1888). A Romance by Edward Bellamy (American). A fantastic romance which relates the strange experiences and impressions of the Bostonian, Julian West, who awakens from a trance in the year 2000, and sees great changes in economic and social conditions.

Lorna Doone (1869). A stirring romance by R. D. Blackmore (English). Its scene is Exmoor, a county in southwestern England; its heroine, Lorna Doone, is the daughter of a family of aristocratic robbers and smugglers; its hero, John Ridd, has many exciting adventures among the outlaws, and at last becomes the protector of Lorna against her own kin. Passionate human beings doing deeds of physical prowess in a wild and beautiful country furnish forth a model romance.

Lovelace, Richard (1618-58). A Cavalier lyric poet (English). His best known lines are:

"Stone walls do not a prison make,
Nor iron bars a cage."

Lowell, Amy (1875-). A member of the famous Lowell family; a leader among American writers of free verse.

Lowell, James Russell (1819-91). American scholar, literary critic, essayist, and poet. Prominent among the Abolitionists; first editor of the *Atlantic Monthly*; minister to Spain and to England. *A Fable for Critics; The Vision of Sir Launfal; Harvard Commemoration Ode.*

Lycidas (1638). A poem by John Milton (English) in the form of a pastoral elegy, in which he commemorates his friend Edward King. An elegy is a lament for the dead; a pastoral elegy is such a lament with simple country scenery for a background and shepherds and shepherdesses for characters.

Macaulay, Thomas Babington, Lord (1800-59). English orator, poet, essayist, and historian. Very precocious as a child. *Lays of Ancient Rome, History of England.*

Macbeth. A tragedy by Shakespeare. The weird sisters, or fates, prophesy that Macbeth shall become king. This enlivens his ambitions to such an extent that he murders King Duncan and by violence gains the crown of Scotland. Lady Macbeth urges him on to do the deed and tries to keep him from remorse after it is done. His way is not easy, however. He finds it necessary to conceal his first crime. He is plagued by remorseful visions. Then suspicion begins to awaken against him; Lady Macbeth talks of the crime in sleep-walking delirium; Macduff, an honest nobleman, with strong forces takes the field against him. Meanwhile, the weird sisters prophesy again in ambiguous words which seem to shadow forth security for Macbeth, but which really foretell doom. Their prophecy is fulfilled in his violent death. The play is notable for the energy and consistency of its plot and for marvelous depiction of mental apprehension and distress.

Machiavelli, Niccolo (1469-1527). Italian writer on history and politics. He advocated the unscrupulous employment of any means to further the good of the state. *The Prince.*

MacKaye, Percy (1875-). American writer of plays and pageants. *The Scarecrow, Caliban and the Yellow Sands.*

Malaprop, Mrs. The pompous old aunt of Lydia Languish in Sheridan's comedy, *The Rivals.* She uses words so incorrectly that her name has become proverbial for such mistakes as the following: "Headstrong as an allegory on the banks of the Nile"; "precipitate one down the prejudice."

Malory, Sir Thomas (1400-78). Author of *Morte d'Arthur,* a prose translation of various stories concerning King Arthur and the Round Table.

Mandeville, Sir John. To him is attributed the fourteenth century prose work. *Voyages and Travels of Sir John Mandeville.* This is a record of impossibilities, told with an air of truth.

Marble Faun, The (1860). A romance of four artists in modern Rome, by Nathaniel Hawthorne (American). The murder of a monk by the thoughtless Donatello, at the suggestion of a glance from the persecuted Miriam is witnessed by their New England friend, Hilda. The effect of this crime upon the characters of these three people forms the theme of a tragic story in a brilliant setting.

Marjorie Daw. A clever story by Thomas Bailey Aldrich (American), told in the form of a series of letters. Marjorie Daw is a totally imaginary girl created for the pleasure of an invalid, John Flemming, by his friend, Edward Delaney.

Markham, Edwin (1852-). American poet. Author of *The Man With the Hoe.*

Marlowe, Christopher (1564-93). English dramatist, contemporary of Shakespeare, author of *Dr. Faustus* and *Tamburlaine.* He is sometimes called the father of the English drama, because he popularized the use of blank verse and disregarded the old dramatic unities. According to tradition he was killed at the age of twenty-nine in a tavern brawl.

Marmion (1808). A poem which "turns upon the private adventures of a fictitious character," but has a background of important historical events. It paints the manners of feudal times in the heroic manner. The poem opens in August in the year 1513, and ends with the battle of Flodden Field, about a month later. There are six cantos, which introduce us to the clangor of arms, troops on the march, drawbridge, portcullis, and the other appurtenances of a mediaeval castle, to the intrigues of guilty love and the brutality of mediaeval punishment. The poem ends with the battlefield and its deeds of valor. As is customary in Scott's work the action is stirring, the verse spirited.

Masefield, John (1874-). English poet and dramatist. *The Tragedy of Nan.*

Masters, Edgar Lee (1868-). American writer of free verse. *The Spoon River Anthology.*

Mather, Cotton (1663-1728). Bigoted preacher of the colonial period of America. Author of *Magnalia Christi Americana,* intended for a church history of New England. He was one of the chief men concerned in the Salem witchcraft persecution.

Maud Muller. A popular poem by J. G. Whittier (American) recounting the unfulfilled romance of the judge and Maud Muller, whom he sees and admires as she rakes the hay. Its most famous lines are:

"For all sad words of tongue or pen
The saddest are these: 'It might have been!'"

Maupassant, Guy de (1850-93). French writer of short stories. Sometimes called the greatest master of that form of literature.

Merchant of Venice, The. This is one of Shakespeare's early comedies. It tells the story of Bassanio, who borrows money from his friend Antonio, the merchant of Venice, to court Portia, a rich heiress of Belmont. Antonio, in turn, has borrowed three thousand ducats from Shylock, the Jewish money-lender, agreeing to forfeit a pound of his flesh if he does not return it on time. Antonio's payment is delayed, and Shylock demands the pound of flesh nearest Antonio's heart. This means a demand for his life. Portia, disguised as a lawyer, frees Antonio and disgraces Shylock through a legal quibble. He may have the flesh but can shed no blood in taking it. Shylock's goods are declared forfeit for plotting against a citizen of Venice. The minor episodes in the play include the elopment of Shylock's daughter with a Christian, the selection of Bassanio as a husband for Portia by his choice of a certain casket, and the joke played upon Bassanio and his attendant, Gratiano, by Portia and her maid Nerissa, who pretended to part with their bethrothal rings.

Meredith, George (1828-1909). A distinguished English novelist and poet, famous for the brilliance of his ability in dialogue and characterization. *The Ordeal of Richard Feveral, Diana of the Crossways, The Egoist.*

Merrick, Leonard (1864-). English novelist and short story writer who has been much influenced by French life and art.

Midsummer Night's Dream, A, A play by Shakespeare (English). It is the most delightful fairy play that has ever been written. The scenes are laid chiefly in a wood near Athens in the legendary days of King Theseus. The king's courtiers mingle incongruously in the play with the fairies and a group of clownish artisans. The plot is concerned with two pairs of lovers whose tangled affairs are finally straightened out by fairy intervention. The dignified court scenes, the clumsy attempts of the artisans to present a play, the pranks of Puck, and the songs and dainty fancies of the fairies combine to make a very novel and attractive fantasy.

Miller, C. H. (Joaquin) (1841-1913). An American poet, the "Poet of the Sierras". A traveller and a hermit in the California mountains. *Songs of the Sierras.*

Milton, John (1608-74). Usually ranked as the second greatest English poet. He spent his youth and early manhood in study. Aiming deliberately to be a poet, he retired to a beautiful country place, Horton, near Windsor. There he composed *Comus L'Allegro, Il Penseroso,* and *Lycidas.* When civil war broke out, he took the side of the Puritans against the king. After the Commonwealth was established, he served as secretary under Cromwell, and became blind by using his eyes excessively in preparing pamphlets for the government. *Paradise Lost,* his greatest work, was dictated to relatives and friends after he became blind.

Mitchell, S. Weir (1829-1914). An American physician; author of novels and sketches. *Hugh Wynne.*

Moody, William Vaughan (1869-1910). American poet and dramatist. Author of *An Ode in Time of Hesitation,* and *The Great Divide.*

Moonstone, The (1868). A novel by Wilkie Collins (English). The story tells of a diamond taken from the forehead of an Indian idol, cursed by its Brahmin custodians to give it evil influence, bequeathed to an English girl, and finally restored to its place after being instrumental in mystery and murder.

Moore, Thomas (1779-1852). An Irish poet. Author of *Irish Melodies* and *Lalla Rookh.*

More, Sir Thomas (1478-1535). An English scholar prominent in the renaissance, beheaded by order of Henry VIII. He was the author of *Utopia,* a prose work describing an ideal state.

Morte D'Arthur. A romance by Sir Thomas Malory (English) written and published in the fifteenth century. From various romances in French Malory selected most of the stories of Arthur and his Round Table which are here translated into English. Merlin, Launcelot, Gawain, Guenevere and Arthur, Tristram and Isolt, Galahad, Percival, and many names less known to fame appear in various parts of the rambling narrative. It is marked by the spirit of chivalry which characterizes such romances, emphasizing troth, faith, generosity, humility, and other knightly ideals. Tennyson relied chiefly upon this work when writing the Idylls of the King.

Morris, William (1834-96). (English.) A member of the Pre-Raphaelite school, poet, versatile artist, social reformer. *The Defense of Guenevere, The Earthly Paradise.*

Motley, John Lothrop (1814-77). American historian. Author of *The Rise of the Dutch Republic.*

Murfree, Mary N., see **Craddock.**

Newman, John Henry (1901-90). A Roman Catholic cardinal. Author of the hymn, *Lead Kindly Light,* and of essays famous for their literary style. Some of the best of these are in a volume called *The Idea of a University.* Newman was an Englishman.

Nibelungenlied. An old German epic which tells the stories of wrathful and violent old heroes and heroines—Sigurd, Brunhild, Gudrun, and others. The work is full of supernatural events and pagan sentiments. It has inspired many operatic and literary works of later times.

Ninety-three (1874). An historical romance by Victor Hugo (French) which gives vivid pictures of warfare.

Norris, Frank (1870-1902). American novelist of great promise whose early death left unfinished a series of three novels in which he planned to tell the history of wheat and the human tragedy and comedy in which it plays an important part. The two completed novels are *The Octopus* and *The Pit.*

North, Christopher. The pen-name of John Wilson (1785-1854). He was a Scotchman, professor in Edinburgh University, and for many years connected with *Blackwood's Magazines.* He was a friend of De Quincey and Wordsworth. Author of *Noctes Ambrosianae,* a medley of prose and verse.

Norton, Charles Eliot (1827-1908). A professor at Harvard University, translator of Dante, friend of many literary men in England and America.

Notre Dame (1831). An historical romance by Victor Hugo (French) telling a story of Paris in the fifteenth century. Very vividly it brings before us the ancient city with its people of high and low degree, clerical and lay, and especially its great cathedral, which gives the romance its name. For its exciting action and tense scenes the book has been widely read, both in French and in the English translation.

Noyes, Alfred (1880-). English poet. Author of musical lyrics such as *The Barrel-Organ,* and narrative pieces such as *Tales of the Mermaid Tavern.*

Nym. A cowardly rogue who appears in several of Shakespeare's historical plays. He is hanged for pillage after the battle of Agincourt. He conceals his cowardice by never smiling and by speaking with deadly insinuation.

Odyssey. A Greek epic poem by Homer. The poem tells the story of the adventures of Odysseus, or Ulysses, who is condemned to wander over the ocean because of having displeased the god, Poseidon. Before he finally reaches his home in the island of Ithaca, he does many deeds, both crafty and brave, and encounters strange personages. He escapes the dangers of Polyphemus, the savage one-eyed giant; Calypso, the nymph; Circe, the sorceress; Scylla and Charybdis; and the singing Sirens who lure sailors to destruction. He lives happily for a time among the fortunate Phoenicians, whose orchards bear fruit all the year. Such marvelous incidents as these have kept men reading the work through many centuries.

O. Henry. The pen-name of Sidney Porter (1867-1910). An American author of ingenious short stories. His characteristic style is flippant and slangy, but very clever. His favorite trick is that of surprising readers with an unexpected ending. *The Four Million.*

Oliver Twist (1841). A melodramatic novel by Charles Dickens (English). Its hero is Oliver Twist, a workhouse waif who is brought to the school for pickpockets kept by a crafty old Jew, Fagin. Associated with Fagin are the brutal robber, Bill Sykes, and the kind-hearted but disreputable Nancy. Oliver is not corrupted by his surroundings, and finally escapes from the slums, and is decently established in life by the aid of charitable friends. Bill Sykes and Fagin get their just deserts at the end of the story.

Omar Khayyam, see **Rubaiyat.**

Origin of Species, The (1859). A volume by Charles Darwin (English) in which he records the results of years of scientific observation in all parts of the world, and argues that his observations establish that theory of the development of man from lower forms of animal life which is known as the theory of evolution. The book is regarded as an epoch-making work. It aroused a controversy which has not yet ceased.

Our Mutual Friend (1864-5). A novel by Charles Dickens. (English). John Harmon's father has left him a large estate on condition that he marry Bella Wilfer, who is unknown to him. Harmon disappears and is thought dead, and the estate goes to Mr. and Mrs. Boffin, who take Bella Wilfer into their family. Harmon becomes their secretary, under an assumed name, to test the character of Bella. Her apparently frivolous and mercenary nature develops into womanliness through the kindly plot of Mr. Boffin. She and John are married, and in time she is told of their wealth. Minor plots introduce Jenny Wren, Lizzie Hexam, Bradley Headstone, Silas Wegg, and others.

Page, Thomas Nelson (1853-1922). American author of novels and stories some of which describe life in Virginia. *Red Rock.*

Paine, Thomas (1737-1808). An English defender of the American Revolution in the pamphlet *Common Sense* (1776).

Pamela (1740). An early novel by Samuel Richardson (English). The story is told in a series of letters which pass between Pamela Andrews, a serving girl, and her friends. The letters tell of her difficulties in repelling the advances of her master, and of her final agreement to marry him. Thus the cause of virtue is upheld. To illustrate virtuous conduct was, indeed, Richardson's frank purpose. The story is too long for the reading public of the present day, too prudentially moral, and too smugly self-satisfied.

Paradise Lost (1667). A long poem by John Milton, the English poet of the Puritan period. The purpose of the poem is "to justify the ways of God to man". First, the poem relates how some of the angels revolted against God and were cast out of Heaven into Hell, to punish their rebellion. Afterward it tells of their deliberations and final decision to revenge themselves upon the Almighty by invading the earth and leading man to sin. The poem continues the story of the success of Satan, chief of the fallen angels, in corrupting Adam and Eve, the first human beings, and bringing about their expulsion from the garden of Eden. This expulsion is the "loss of Paradise", which gives the poem its title. *Paradise Lost* is regarded as the best epic in the language.

Parker, Theodore (1810-60). An eloquent Unitarian clergyman, prominent as a writer and speaker upon abolition. American.

Parkman, Francis (1823-93). American writer of historical narratives concerning French and Indian wars, and the life of the pioneers. *The Oregon Trail.*

Pater, Walter (1839-94). A scholarly English essayist; author of melodious, highly finished prose. *The Renaissance; Marius the Epicurean.*

Patterne, Sir Willoughby. The hero of Meredith's novel, *The Egoist.* His unsufferable conceit and self-satisfaction are displayed in a series of love affairs.

Pepys, Samuel (1633-1703). An Englishman of the time of Charles II. who kept a diary in cipher. This has been translated. It is one of the most curious books in existence.

Percy, Bishop Thomas (1729-1811). Compiler of *Reliques of Ancient English Poetry* (1765), which preserved for us many specimens of early ballads and songs which might otherwise have been lost.

Petruchio. The husband of Katharina in Shakespeare's *The Taming of the Shrew*. It is he who conceives and carries out the plan of making a gentle, obedient wife out of a notorious shrew by bullying her shamefully, all the time pretending everything is as she wishes it and for her own good.

Phillips, Stephen (1864-1915). An Englishman who revived the poetic drama. *Paolo and Francesca; Ulysses.*

Phillips, Wendell (1811-84). A brilliant American orator; a strong Abolitionist.

Phillpotts, Eden (1862-). An English novelist who has written many novels with scenes laid on Dartmoor, Devonshire. *Children of the Mist.*

Pickwick Papers (1836). A novel by Charles Dickens (English) depicting the droll adventures of a benevolent gentleman, Mr. Pickwick, and his ludicrous friends. So funny are many of the situations and so true the characters, in spite of their caricature, that much of the *Pickwick Papers* has passed into popular knowledge. Sam Weller and his sayings, and the trial of Bardell vs. Pickwick are perhaps the best known features of the book. The illustrations by "Phiz" exactly suited the text.

Pilgrim's Progress (1678). A religious allegory by John Bunyan (English). In this work the Christian life is revealed by means of a story recounting the experiences of Christian on his way to the City of God. The Slough of Despond, Vanity Fair, the Hill of Difficulty, and the Valley of the Shadow of Death are but a few of the places invented by Bunyan to represent the trials and temptations to which mankind is liable. At last, through faith, hope, and charity the hero surmounts all obstacles and wins eternal bliss. So simple is the narrative and so vivid are its pictures that the book has been a favorite in Protestant households for the edification of young and old.

Pinero, Sir Arthur Wing (1855-). A popular English dramatist. Author of *The Second Mrs. Tanqueray.*

Pistol. A character in several of Shakespeare's plays. He is a London ruffian, boastful, noisy, avaricious, cowardly—"with a killing tongue and a quiet sword."

Poe, Edgar Allan (1819-49). American poet and writer of fantastic and highly finished short stories. Among his more famous poems are *Annabel Lee* and *The Raven*. Well known stories by him are detective stories, like *The Gold Bug* and *Murders in the Rue Morgue;* stories of horror, like *The Black Cat* and *The Masque of the Red Death.*

Poor Richard's Almanac (1732-58). A yearly collection of pithy sayings into which is condensed, shrewd advice for the conduct of life. The work was written by Benjamin Franklin (American). The best known saying from the work is, "Honesty is the best policy." The work did much in establishing habits of thrift and common sense among the colonists.

Pope, Alexander (1688-1744). English poet; best representative of the classical spirit of the eighteenth century. His poems were chiefly in polished couplets upon didactic subjects. *An Essay on Criticism; An Essay on Man; The Rape of the Lock.*

Porter, Sidney, see **O. Henry.**

Portia. An heiress of Belmont, the heroine of Shakespeare's play, *The Merchant of Venice*. She is represented as a very resourceful and attractive woman. Her remarks about her unsuccessful suitors show discernment and wit, and her reception of the successful suitor, Bassanio, modesty and capacity for emotion. Her independence and power of initiative in evolving the scheme for Antonio's release, her eloquence in the court-room, her patience and justice to Shylock, combine to make her one of the best of Shakespeare's heroines.

Prescott, William H. (1796-1859). American historian; author of *The Conquest of Peru* and *The Conquest of Mexico*. As he had been almost blinded in his college days by a piece of bread thrown by a boisterous student, he worked against terrible odds in writing of history.

Pride and Prejudice. This novel was written by Jane Austen (English) in the year 1796, when she was twenty-one years old. Like her other novels it deals with the love affairs of young women in the upper middle class of English society, in the latter part of the eighteenth century. The characterization of Mrs. Bennet, the foolish and complaining mother, of Mr. Bennet, the peace-loving father, and of Elizabeth, the heroine, proud but admirable, is surprisingly capable, considering the youth of the author.

Prince and the Pauper, The (1881). A fascinating romance by Mark Twain (American) telling the story of a pauper boy who changes places with the prince, later King Edward VI. of England. The experiences of the pauper, transported from the slums to the palace, and of the young prince, plunged suddenly into the life of the streets in mediaeval London, afford Mark Twain the sort of opportunity which he enjoys. He gives a vivid picture of the life of the times; he rouses our anger against cruelty; he stirs our sympathy for the poor.

Quentin Durward (1823). A novel by Sir Walter Scott (Scottish) with its scene laid in France during the fifteenth century. Quentin Durward, a valorous young Scot, is sent by Louis XI. ostensibly to escort Isabelle of Croye to the Bishop of Liege. Actually, Louis intends to have her seized by the outlaw, William de la Marck. After protecting her through sieges and plots, the hero wins the lady's hand with the approval of Louis and her rightful sovereign, Charles the Bold, of Burgundy.

Quickly, Mistress Nell. Dame Quickly is one of Falstaff's friends appearing in several of Shakespeare's plays. She is the hostess of a tavern in Fastcheap, London. In Henry V. she has become the wife of Pistol. That Shakespeare could depict a coarse, garrulous woman so truly is a proof of the width of his sympathy and of his understanding of human nature.

Radcliffe, Mrs. Anne (1764-1823). English writer of Gothic romances—romantic novels full of mysteries and horrors. *The Mysteries of Udolpho.*

Raleigh, Sir Walter (1552-1618). An explorer and a favorite of Queen Elizabeth; the man who dreamed the colonial empire of Great Britain. He was imprisoned in the tower by James I. for thirteen years, and during this imprisonment wrote a *History of the World.*

Ramona (1885). This novel, by Helen Hunt Jackson, is an appeal for just treatment of the American Indian. The scene is in California.

Reade, Charles (1814-84). English novelist; author of *The Cloister and the Hearth, Peg Woffington, It is Never Too Late to Mend.*

Rebecca. Rebecca, daughter of Isaac of York, the Jew, is the most interesting female character in Scott's *Ivanhoe*. Her charity in nursing the sick, devotion to her old father, bravery and dignity before a court of unjust accusers, determined resistance to the advances of Brian de Bois Guilbert, and generous renunciation of any possible claims upon Ivanhoe, the man she loves, make her a memorable character.

Repplier, Agnes (1857-). A highly intelligent American essayist.

Richardson, Samuel (1689-1761). The first important English novelist. He wrote exceedingly long novels in the form of series of letters. *Pamela; Clarissa Harlow.*

Riley, James Whitcomb (1849-1916). (The Hoosier Poet). An American poet and lecturer. *The Raggedy Man.*

Rip Van Winkle (1819). A short story by Washington Irving (American). Rip wanders into the Catskill Mountains one day on a hunting trip, gets lost, encounters a party of noisy dwarfs, drinks a cup of their liquor, and falls asleep. Upon awakening twenty years later he returns in great perplexity to his native village, where many of his old friends are now dead, where customs have changed, and where his very relatives do not recognize him. With his mellow old age as a village notoriety the story ends. The whole idea of a long sleep and innocent awakening into a new world is so whimsical and attractive that the story has been widely popular. Joseph Jefferson's chief success on the stage was in the character of Rip, the ne'er-do-well.

Robinson Crusoe (1719). This work was written by Daniel Defoe (English). It is the most famous story for boys ever written. Early in the story Robinson Crusoe, sole survivor from a wreck, crawls out upon the beach of a deserted island, with only his native wits and the gifts of fortune to save him from starvation. He first rescues from the wrecked vessel tools and provisions which will be of use to him; next he organizes his time and energy, builds a home, plants crops, and tames wild creatures with industry. With great detail Defoe tells of the marooned man's experiences, carrying the account through several years. When at last Crusoe sees the print of a human foot on the sand of his shore one day, the reader shares his amazement and suspense. The footprint is that of a savage whom Crusoe names Friday, and adopts as a servant. At last the island is invaded by savages, and later by European sailors. All Crusoe's resourcefulness is needed to save his life, but he eventually masters the situation, and sails back to England in prosperity. The secret of the book's success lies chiefly in two features: (1) the minute details which make it seem like a record of actual experience, and (2) the ingenuity of Crusoe in fighting a battle for life, alone, under primitive conditions.

Rochester, Edward. The hero of *Jane Eyre*, a novel by Charlotte Bronte. He is wealthy, accomplished, brave and generous, but "proud, sardonic, harsh to inferiority". His youth was dissipated. An insane wife lives under guard in a remote room of his mansion. He is not deterred, however, from attempting to marry Jane Eyre. The facts are revealed just in time to stop the wedding, but later, after his wife's death and his own mutilation in an attempt to rescue her from a fire, Jane thinks well enough of him to become his wife. The unusual plot and the paradoxical characters gave the novel a wide public interest.

Romola (1863). A novel of Florentine life in the fifteenth century written by George Eliot (English). In spite of the great amount of historical detail which the author wrought into the book, her interest centers not in Florentine history but in the moral degradation of one of her characters. This character is Tito Melema, a Greek who wanders

IRVING'S RIP VAN WINKLE

into the city one morning, a shipwrecked and friendless stranger, but who establishes himself in the favor of influential persons by his cleverness and becomes a man of importance. His rise in importance, however, is accompanied by a gradual moral deterioration, until at the end of the story he is utterly unscrupulous, all because of seeking his own interest and taking the easiest way, whether right or wrong. In tracing Tito's debasement through his own actions, George Eliot is illustrating a favorite theory of hers: "Our deeds determine us as much as we determine our deeds."

Romeo and Juliet. An early romantic tragedy by Shakespeare (English). Its scene is laid chiefly in Verona in the fourteenth century. Romeo, a Montague, falls in love with Juliet, of the house of Capulet. Despite the bitter feud between their families they are secretly married by Friar Laurence, but unfortunately just after the wedding Romeo becomes involved in a brawl with the Capulets and slays Tybalt, the cousin of Juliet. He is sentenced to banishment, and goes to Mantua. Juliet's parents, unaware of her marriage, insist upon her wedding Count Paris. To escape this second marriage Juliet, on the advice of Friar Laurence, takes a potion which will make her appear dead for forty-two hours. She is buried in the Capulet vault. Friar Laurence sends a message to Romeo calling him to her rescue, but the message miscarries, and when Romeo hears that Juliet is dead, he comes to her tomb, takes poison, and dies just before she awakens. She finds him dead and stabs herself. Friar Laurence tells the story of the tragedy to their assembled families, who decide to become reconciled.

Roosevelt, Theodore (1858-1919). An American who is considered one of the best representatives of his time. He was a soldier, a hunter of big game, an historian, and President of the United States. *The Winning of the West; Ranch Life and the Hunting Trail.*

Rosalind is the delightful heroine of *As You Like It.* Brave and adventurous when she dresses as a boy and goes to the forest of Arden, mischievous when she teases Orlando about his love, and always witty, gay, and captivating, she is, as Professor Dowden says, "a figure which quickens and restores our spirit as music does".

Rossetti, Dante Gabriel (1828-1882). Pre-Raphaelite painter and author of many beautiful ballads and sonnets. (English.) *House of Life* (a series of sonnets); *The Blessed Damozel.*

Rubaiyat (1859). An English version by Edward Fitzgerald (English), of the verses of an ancient Persian philosopher and poet. The verses record melancholy reflections upon life in vivid and simple figures, likening existence to a day's rest in a journey, or man to a clay pot. The prevailing reflection is that since life is brief and the future uncertain, one should enjoy the present with feast and song.

Ruskin, John (1819-1900). A famous English prose writer, critic of art and of social conditions. He is famous for his application of moral ideas in the criticism of art. *Modern Painters; The Seven Lamps of Architecture: Praeterita* (his autobiography).

Saxe, John G. (1816-87). A humorous American poet. *The Proud Miss McBride.*

Scott, Sir Walter (1771-1832). Scottish poet and novelist; author of *Marmion* and *The Lady of the Lake* (poems); *The Heart of Midlothian, Ivanhoe The Bride of Lammermoor* (novels). Scott attempted to live like a feudal baron. His estate, Abbotsford, near Melrose, furnished background for such a life; horses, dogs, a retinue of servants, and lavish entertainments were but a part of it. Through his poems and novels he wrote under the inspiration of that which was best in the spirit of the Middle Ages—the sense of honor, faith, physical bravery, chivalry toward woman, the love of king and country.

Seton-Thompson, Ernest (1860-). Naturalist and writer of books about animals. *Wild Animals I Have Known.*

Shakespeare, William (1564-1616). Greatest of English dramatists. Very little is known of his life. He was born and died in Stratford-on-Avon; he had slight formal education; he learned the craft of the playwright as an actor and manager in London theatres; he became prosperous and moderately famous in his own life-time; he was buried in the church at Stratford. Shakespeare's plays fall into three large groups; historical or chronicle plays comedies, and tragedies. The best examples of these respectively are: for the chronicle play, *Henry V.*; for tragedy, *Macbeth, Romeo and Juliet, Hamlet, Othello, King Lear;* for comedy, *Twelfth Night, The Merchant of Venice, Midsummer Night's Dream, As You Like It.* Shakespeare's greatness is in (1) his complete and sympathetic understanding of men and women of all types, (2) his conception of what is noble and what is base, (3) his mastery of the problems of dramatic representation, (4) his master of vocabulary and metre.

Sharp, Dallas Lore (1870-). American naturalist and professor of English at Boston University. Author of interesting essays about nature. *A Watcher in the Woods.*

Shaw, George Bernard (1856-). An Irishman; author of witty and entertaining plays. *You Never Can Tell; Man and Superman.*

Shelley, Percy Bysshe (1792-1822). English poet of radical ideas. Author of poems which have strange and beautiful imagery, and express noble but impractical ideals. Best known and most readable poems: *To Night, The Cloud, To the West Wind, To a Skylark, Adonais.*

Shelley, Mary Wollstonecraft Godwin (1797-1851). Second wife of Percy Bysshe Shelley, the poet, and herself the author of a remarkable scientific romance, *Frankenstein.*

Sheridan, Richard Brinsley (1751-1816). English dramatist, author of *The School for Scandal; The Rivals.*

Sherlock Holmes, The Adventures Of. Detective stories by Sir Arthur Conan Doyle (English) with two characters which closely resemble characters in Poe's detective stories. The quick-witted and imperturbable Holmes and his slow-minded friend, Watson, make an effective pair. The stories are varied in subject-matter, but in almost all the mystery of some crime is solved by Holmes's minute observation and agile reasoning.

Shylock. Shylock, the Jewish money-lender in the *Merchant of Venice,* may be viewed as an "inexorable dog" who hates all Christians and plots against their lives, loves his money and oppresses his young daughter Jessica; or he may be pitied because he belongs to an abused race and stands alone in the play, opposed to all the other characters and deserted even by his daughter.

Sidney Carton. Carton is a character in Dickens's *A Tale of Two Cities.* He is a dissipated man but is in love with Lucie, the heroine. The striking resemblance which he bears to Charles Darnay, the husband of Lucie, enables him to change places, with Darnay, and go to the scaffold in his stead, purified and exalted by the sacrifice.

Sidney, Sir Philip (1554-86). English courtier, soldier, and author, of the age of Elizabeth, in England. *Arcadia.*

Silas Marner. This is a novel by George Eliot (English), published in 1861. "In the old days there were angels who came and took men by the hand and led them away from the city of destruction. We see no white-winged angels now. But yet men are led away from threatening destruction; a hand is put into theirs; . . and the hand may be a little child's". This is the theme of the novel, which shows the redemption of Marner, a miserly weaver, by his love for a little child. He has been robbed of his hoard of gold, but is recompensed by finding a little child, Eppie, upon his threshold. Eppie turns out to be the unacknowledged daughter of Godfrey Cass, the village squire, by an unfortunate first marriage.

Sinclair, May A. A contemporary English novelist. Author of *The Divine Fire.*

Smith, F. Hopkinson (1838-1915). An American painter, lighthouse engineer, and author of novels and short stories written with a good deal of vigor. *Colonel Carter of Cartersville; Caleb West, Master Diver.*

Smollett, Tobias (1721-71). English novelist; author of rather coarse narratives which give a graphic and true picture of English life in the eighteenth century. *Roderick Random; The Expedition of Humphrey Clinker.*

Sohrab and Rostum. A narrative poem by Matthew Arnold (English). It tells the story of a Persian warrior who unwittingly engages in personal combat with his own son and mortally wounds him before learning of their relation.

Southey, Robert (1774-1843). Poet laureate of England and one of the group of Lake Poets, though he wrote better prose than verse. *The Life of Nelson.*

Spectator, The (1711-14). A periodical founded by Addison and Steele, and contributed to by them and a group of their associates. It was devoted to narratives concerning Sir Roger De Coverley, to literary criticism, to satirical essays upon men and society. There were 555 papers in all, of which Addison wrote 274 and Steele 236. So popular was the work that it could be found upon every breakfast table and in every coffee-house. Its effects upon English thinking and English manners were considerable.

Spencer, Herbert (1820-1903). An Englishman who wrote concerning the application of the evolutionary theory to society. *Autobiography.*

Spenser, Edmund (1552-1599). A poet who employed allegory and classical allusion to excess, but who wrote with a remarkable poetic sense of words and a remarkable musical sense of sounds. *The Faery Queen.*

Stedman, Edmund Clarence (1833-1908). An American poet and literary critic. *Poets of America.*

Steele, Richard (1672-1729). English essayist; with Addison editor of the famous periodicals, *The Tatler* (1709-11) and *The Spectator* (1711-14).

Sterne, Lawrence (1713-68). English clergyman, author of the most whimsical novel in the language—*Tristram Shandy.* Two famous characters in this book are *Uncle Toby* and *Coporal Trim.*

Stevenson, Robert Louis (1850-94). Scottish writer. Because of ill health he travelled much and lived in many places, including California, Saranac Lake, N. Y., France, Switzerland, and the South Sea Islands. His ill health did not prevent his laboring constantly at literary tasks, producing romances like *Treasure Island,* perfect short stories like *Will o' The Mill,* and poems for children, chiefly in a volume called *The Child's Garden of Verses.*

Stockton, Frank R. (1834-1902). American writer of amusing short stories and novels. *The Casting Away of Mrs. Leeks and Mrs. Aleshine; The Lady or the Tiger.*

Stowe, Harriet Beecher (1812-96). American novelist; author of *Uncle Tom's Cabin* (1852) which was of great assistance to the anti-slavery cause.

Swift, Jonathan (1667-1745). English prose humorist and controversialist. Author of *A Tale of a Tub, The Battle of the Books, Gulliver's Travels.* He was Dean of St. Patrick's Cathedral, Dublin.

Swinburne, Algernon Charles (1837-1909). An English poet distinguished for his skill in the use of verse forms and the choice of words to produce musical effects. *Atalanta in Calydon.*

Synge, John Millington (1871-1909). Irish dramatist. Author of *Riders to the Sea; The Playboy of the Western World.*

Tale of Two Cities, A (1859). A novel of the French Revolution by Charles Dickens (English). Dr. Manette, a political prisoner, released from long imprisonment, rejoins his daughter, Lucie, and sees her happily married to Charles Darnay, who has just been tried and acquitted on a charge of treason. In the midst of their happiness, however, they become objects of suspicion in Paris. At last, through the maliciousness of a wine-seller named Defarge, and of his villainous wife, Darnay is imprisoned again and condemned to death; but Sydney Carton, an Englishman who loves Lucie, takes Darnay's place in prison and dies in his stead upon the guillotine. The scene of the execution, with the knitting-women calmly numbering the numerous victims as time and again the knife falls, is justly famous as a piece of rhetoric,—rather melodramatic, but effective.

Talisman, The (1825). A novel by Sir Walter Scott (English) telling a story of the third crusade. Palestine is the scene of its action, during an interlude in the fighting. Two noble adversaries, Richard the Lion-hearted and Saladin the Sultan, are the chief warriors. The reader's interest centers, however, in the soldierly exploits and the courtship of the Prince of Scotland, disguised as Sir Kenneth of the Couchant Leopard, who wins the hand of Lady Edith Plantagenet. The love story is in Scott's best romantic vein. The romantic effect is heightened by descriptions of the splendor of the armies, of a great sand-storm on the desert, of marvelous feats of swordsmanship,—descriptions which suitably develop the main action.

Tanglewood Tales (1853). A collection of tales by Nathaniel Hawthorne (American). Hawthorne draws his material from the ancient Greek myths but simplifies them and makes them less sombre, so that children may enjoy the stories. In this volume he tells such stories as those of the Minotaur, a monster who was killed by Theseus, of Circe's Palace, where men were turned to pigs, and of the Golden Fleece, wrested away from a dragon, which guarded it by Jason and his Argonauts.

Tarkington, Booth (1869-). An American writer, author of popular plays, novels, and short stories. *Penrod* describes the pranks of a small boy; *Seventeen,* the sentimental affairs of a youth; *The Magnificent Ambersons,* life in a Middle Western city.

Taylor, Bayard (1825-78). An American author, called by Professor Bronson "the man of letters in motion." He was a great traveler, and wrote and lectured upon his experiences. *Views Afoot; Poems of the Orient.*

Tempest, The. This is a romantic drama by Shakespeare (English). It has an impossible plot, and is written in the spirit of contentment which marked the author's old age. Its chief character, Prospero, a magician, is a model of magnanimity. Caliban, a beastly creature with something of human intelligence but no moral sense, contrasts with him most sharply. The plot opens with a tempest, caused by Prospero's magic. This tempest brings to Prospero's desert island the duke who had formerly usurped his throne. After a day of marvels Prospero regains his dukedom, and all sail away to Italy.

Tennyson, Alfred, 1st Lord (1809-92). Tennyson is the most representative and popular of English poets of the Victorian period. His first volume of poems, in 1832, was severely criticized, but the next volume, published in 1842, was a great success. In 1850 he published *In Memoriam,* an elegy in memory to Arthur Hallam. In 1859 came *Idylls of the King.* In 1850 he was made Poet Laureate, and in 1884 was created Baron. His poems are polished in style, fluent, and melodious. In thought they reflect the accepted standards of morals and behavior. *The Princess, Maud, Enoch Arden, The Charge of the Light Brigade, Crossing the Bar.*

Thackeray, William Makepeace (1811-63). English novelist, poet, and essayist; most noted for his novels. The most famous of these give pleasant, satirical pictures of English society. He had a very easy, urbane style, a moralizing vein of sentiment, and genial humor. His best known novels are: *Vanity Fair, Henry Esmond,* and *The Newcomes.*

Thanatopsis. A poem of consolation upon thought of death, written by William Cullen Bryant (American). He concludes with the exhortation that a man should so live that he may approach his grave,
"Like one who wraps the drapery of his couch
About him, and lies down to pleasant dreams."

Thaxter, Celia L. (1835-94). American poet. *The Sandpiper.*

Thomas, James (1834-82). Scotch poet; author of gloomy, pessimistic works, of which *The City of Dreadful Night* is best known.

Thompson, Francis (1859-1907). An English Roman Catholic poet. His best known poem is *The Hound of Heaven*, an interpretation of a passage in the psalms.

Thomson, James (1700-48). A Scotch romantic poet. Author of *The Castle of Indolence*, written in the Spenserian stanza, and of *The Seasons*, a poem in blank verse which showed an interest in nature not common in his day.

Thoreau, Henry David (1817-62). An American nature-lover who lived for two years in a hut which he built at Walden Pond, near Concord, Massachusetts. In a book, called *Walden*, he recorded his thoughts and observations upon nature and man.

Ticknor, George (1791-1871). First Professor of Modern Languages at Harvard University; one of the most influential people in establishing the Boston Public Library. He gave a great incentive to American scholarship. *History of Spanish Literature*; *The Life of Prescott.*

Tito, Melema. One of the leading characters in George Eliot's *Romola.* His great personal charm, which endears him to all whom he meets, is offset by the weakness of his character, which develops into positive cruelty and treachery. Failing to go in search of his shipwrecked benefactor is the beginning of his moral degradation. Later this first lapse leads to his denying his benefactor entirely, selling his wife's cherished library,—the legacy of her father,—and being false to his wife and his country. His characterization is one of the most detailed and convincing studies in moral deterioration to be found in English fiction.

Tom Brown's School Days (1856). This story, written by Thomas Hughes (English), is probably the best story of school life ever written. It relates the experiences of the hero at Rugby, including his acquaintance with the famous headmaster, Doctor Arnold. Cricket, football, fagging, bullying, and poaching receives more attention in the story than lessons do. *Tom Brown at Oxford* takes the hero to college.

Tom Jones (1749). A novel by Henry Fielding (English), said by Thackeray to be the last in which an English novelist was allowed to depict a man as he is. It is, indeed, very outspoken. The hero, Tom Jones, is a foundling who grows up into an impulsive, frank, and generous boy. He loves Sophia Western, daughter of the local squire, but has a rival, Blifil, a malicious hypocrite. Tom gets into scrapes, is disinherited, has several discreditable adventures with women; but through all his wanderings remains frank, well-intentioned, and kind of heart. At the end of the story he is discovered to be the rightful heir to a fortune, reforms, marries Sophia, and launches upon a virtuous and happy career.

Treasure Island (1883). A pirate story by Stevenson (Scottish), originally written for the entertainment of his stepson, Lloyd Osborne. The hero is Jim Hawkins, a boy whose father keeps a seaside tavern. At the tavern lives a terrible old seaman who guards the secret of the burial place of pirate treasure. A murderous gang is after this secret, but the old man dies without revealing it, and the map of Treasure Island passes into the possession of Hawkins. Friends of his proceed to fit out a vessel to seek the treasure, but their purpose leaks out, and some of the pirate gang enlist in the crew. Mutiny on board ship, cold-blooded murders, strategy and fighting, on sea and ashore, form the material of the remaining story, until the treasure is found. The book has all the best features of a good pirate yarn, including a diabolical villain, Long John Silver, the one-legged cook.

Trilby (1895). A novel by George Du Maurier (English), which attained great popularity a generation ago. It concerns the infatuation of three young English students of art, living in the Latin Quarter of Paris, with Trilby, an artist's model. Eventually, through the hypnotic influence of Svengali, a sinister Austrian Jew, she becomes a famous singer, but loses her power and dies when his influence is removed.

Trollope, Anthony (1815-82). An English novelist. He wrote about fifty novels, of which the best known is *Barchester Towers*, a story of life in a cathedral town.

Twain, Mark (1835-1910). (Penname of S. L. Clemens.) The greatest American humorist, known and honored abroad as well as in America. *The Adventures of Huckleberry Finn* and *The Adventures of Tom Sawyer* are fascinating stories concerning the adventures of boys living near the Mississippi River, in the middle years of the last century. *Innocents Abroad* is a whimsical account, full of characteristic buffoonery, of the author's European travels. *A Connecticut Yankee at King Arthur's Court* tells the remarkable adventures of a modern Yankee who finds himself living at the court of Arthur. These works represent the author at his best.

Twelfth Night. This is one of Shakespeare's romantic comedies, in keeping with the spirit of the festival which is celebrated in England on the twelfth night after Christmas. It was written to give amusement, but even while amusing us Shakespeare shows us characters which are so true to life that they instruct us as well. He satirizes the conceited and languishing Malvolio, at the same time winning our admiration for the whole-hearted and faithful Viola. The humor runs from vulgar but droll scenes showing Sir Andrew Aguecheek and Sir Toby Belch in their cups, to the scenes of refined comedy with witty dialogue, in which Viola has the leading part. The plot is one of mistaken identity in which four lovers are involved in ludicrous situations.

Ulysses. The Latin name for the Greek hero, Odysseus. He has a prominent place in the Iliad and is the chief character in *The Odyssey. The Odyssey*, indeed, concerns itself with his adventures after the fall of Troy. Ulysses is the most crafty of all the characters in Homeric epic. To him his comrades turn when a difficult situation arises, and by following his ingenious counsel extricate themselves from their troubles.

Uncle Tom's Cabin (1852). A novel by Harriet Beecher Stowe (American). Judged by the usual literary standards, this is an inferior book; but judged by its influence upon human life it must be rated one of the great books of all time. It was read very widely at the time of its publication and had a considerable effect in winning freedom for the negro race in America. The story depicts the horrors of slavery by tracing the history of Uncle Tom, a faithful old slave, who is sold because of his master's loss of fortune. First he goes to a kind master, and has a happy life; but after a few years he has the misfortune to be sold once more, this time to a cruel master, Simon Legree, who tyrannizes over him, and finally, in a burst of wrath, has him so severely flogged that he dies from his wounds. Famous passages in the book describe the escape of Eliza, a fugitive slave, from the blood-hounds; the death of Little Eva, daughter of one of Tom's masters; and a slave-auction of the most heartless sort.

Uriah Heep. A dishonest and repulsive clerk in Dicken's *David Copperfield.* He conceals his true character under a mask of fawning humility. His name has become almost a synonym for hypocrisy.

Van Dyke, Henry (1852-1933). Clergyman, professor, and minister to Holland. Author of poetry, essays, and stories. *Fisherman's Luck, The Other Wise Man.*

Vanity Fair (1847). A novel by William Makepeace Thackeray (English). In its sub-title this novel is called a story "without a hero." The complete title, accordingly, informs the reader that the world will be depicted as a mart like that in *Pilgrim's Progress*, where only baubles and trinkets are for sale and all at high prices, a place where no man is really heroic, no man without his folly. Becky Sharp, a clever adventuress, is the leading character. Although she had disreputable parents, she succeeds through her own efforts in getting well married, in living lavishly by evading creditors, and in winning her way into smart society. At last her husband, Rawdon Crawley, catches her in a compromising situation with Lord Steyne, an old rake, unmasks her, and leaves her. Thereafter she sinks into a cheap, vagrant life, trying more or less in vain, to seem respectable. The more admirable characters in the book are Amelia Sedley, sweet-natured but weak, and Dobbin, faithful and honest though a bit dull. Many readers consider *Vanity Fair* the greatest of English novels.

Vicar of Wakefield, The (1766). A novel by Oliver Goldsmith (English). The hero of this book is a benevolent, lovable, country clergyman, one who unites in his person, as Goldsmith says, "the three greatest characters upon earth: he is a priest, a husbandman, and the father of a family." The story tells of the misfortunes which fall upon the Vicar's family, of the follies of Moses, a blundering son, of the worldliness of the mother and daughters, of the family's loss of property, and worst of all, of the elopement of Olivia, one of the daughters, with a philandering squire of the neighborhood. Throughout the troubles which beset him, the Vicar maintains a steadfast, hopeful composure. At the end of the story, perhaps with some abuse of coincidence, misfortune gives way to prosperity and happiness. The character of the Vicar,—a smiling Job,—is the great feature of the work. He has been called one of the highest compliments ever paid to human nature.

Viola. She is the winsome heroine of Shakespeare's play, *Twelfth Night.* Disguised as a page, she enters the service of Orsino, the man she loves. To him she is loyal, even when he bids her help him to woo another woman, Olivia.

Walden (1854). In this book Henry D. Thoreau gives an account of an experiment in simple living. He tells how he went to live on the shore of Walden Pond, near Concord, Massachusetts. He built a hut with his own hands; he raised beans and other vegetables for his food. By simplifying his life he was able to support himself with a few hours' labor each day, and to have the major part of his time for reading, walking, writing, and the observation of birds, beasts, and flowers. Thoreau did not write the book with the idea of arguing that all men should live as hermits in the woods, but as an illustration of the fact that luxury is not essential to high-mindedness and quiet happiness.

Wallace, Lew (1827-1905). A general in the United States Army; author of historical novels. The best known, *Ben Hur*, has been exceedingly popular, and has had enormous sales. The stage version of the story has been equally successful.

Walpole, Horace (1717-97). Author of vivacious *Letters*, and of a Gothic romance, *The Castle of Otranto.* Walpole was an English nobleman, a dictator to society. The house where he lived, Strawberry Hill, near London, which held his private printing press and a remarkable collection of curios, is famous.

Walpole, Hugh (1884-). *The* English novelist. *Dark Forest*; *Fortitude.*

Walton, Izaak (1593-1683). A retired English shopkeeper who immortalized his love for fishing in *The Complete Angler.* Also the author of excellent biographies of men of his time.

"Ward, Artemus" (1834-67). Penname of Charles F. Browne, and American humorist, lecturer as well as writer. His humor was broad and full of common sense. *His Book.*

Ward, Mrs. Humphrey (1851-1920). An English novelist; niece of Matthew Arnold; wife of the editor of Ward's English Poets. Her novels deal with problems of English social, economic, and religious life. *The Testing of Diana Mallory*; *Marcella.*

Warner, Charles Dudley (1829-1900). American essayist and editor. Author of *My Summer in a Garden*; *Being a Boy.*

Washington, George (1732-99). Best known as patriot and first president of the United States. Author of the *Farewell Address*, and other state papers.

Washington's Farewell Address. This address was delivered in 1796 at the close of his last administration. It was written with the assistance of Madison and Hamilton. Washington states his intention to retire now that no urgent affairs demand his attention, and thanks the people for their support. He then makes suggestions for their conduct in the future, especially regarding domestic unity and foreign neutrality. (1) Unity of government must be preserved; to this end America has inducements of common interest, descent, and so forth. A tendency to change the Constitution frequently and excessive party spirit are dangerous to unity. (2) Harmony with all nations and partiality or dislike for none is the best policy. Phrases from this address are frequently quoted in addresses and articles upon political subjects.

Webster, Daniel (1782-1852). Great American orator. Born on a New Hampshire farm, he studied law, became United States Senator, and later Secretary of State. He was an opponent of State Rights. *Bunker Hill Orations*; *Reply to Hayne.*

Wegg, Silas. A character in Dicken's *Our Mutual Friend.* He is a one-legged man who keeps a street still. He is hired by Mr. Boffin to read to him *The Decline and Fall of the Roman Empire.* Wegg occasionally "drops into poetry." He is a deceitful but amusing rogue.

Wells, Herbert George (1866-). The foremost English novelist of his generation. He has written upon a great variety of themes, but usually shows a keen interest in social problems, science, and religion even in books dealing with other materials chiefly. *The Research Magnificent*; *Mr. Britling Sees It Through.*

Westward Ho (1855). A novel by Charles Kingsley (English). The story tells the adventures of Amyas Leigh, a sailor in the days of Queen Elizabeth. His first voyage was around the world with Sir Francis Drake. Afterward he went to the continent of South America, to find Rose Salterne, an English girl who had married a Spaniard. After some fighting he and his men have to abandon their ship, and strike inland. For many months they tramp over the continent, fighting, accumulating gold, and rescuing a white girl from the Indians. They return to England at last, taking Ayanacora, the white girl, with them. Amyas goes out again soon afterwards to fight against the Spanish Armada, and loses his eyesight from being struck by lightning, just after the fight is won. He then returns home and marries Ayanacora. The book gives a good picture of the seafaring of the period. Famous persons introduced include Sir Walter Raleigh, Sir Richard Grenvil, and Edmund Spenser.

White, Gilbert (1720-93). An Englishman who observed very minutely the things which lay about him in a small village and recorded his observations in a book called *The Natural History and Antiquities of Selborne.*

White, William Allen (1868-). American author of novels and short stories. *The Court of Boyville.*

Whitman, Walt (1819-92). An American poet of radical democratic ideas. His verse forms were as unconventional as his ideas. He has a high reputation in Europe as well as in America. *Leaves of Grass*: *Oh Captain! My Captain* (Upon the death of Lincoln).

Whittier, John Greenleaf (1807-92). An American poet. A Quaker, a native of Massachusetts. An ardent advocate of abolition, as in the lyrics, *Voices of Freedom;* the author of religious poetry (*Laus Deo*), and poems (*Snow Bound*) describing life in rural New England, with close attention to nature.

Wiggin, Kate Douglas (1859-1923). (Penname of Mrs. George Christopher Riggs.) American author of clever novels and short stories, many of them intended for children. *Penelope's Progress; The Bird's Christmas Carol.*

Wigglesworth, Michae (1631-1705). A minister in colonial Massachusetts who expressed his stern theology in *The Day of Doom*, a rhymed narrative which influenced New England for a century.

Wilde, Oscar (1856-1900). Brilliant Irish poet and playwright. One of the group of young men who founded the "aesthetic movement," an artificial following of "art for art's sake." His experiences in prison led to his writing *The Ballad of Reading Gaol. Lady Windermere's Fan* is one of his cleverest plays.

Wilkins, Mary E., see **Freeman.**

Willis, Nathaniel Parker (1806-67). A journalist of the Knickerbocker School whose works were esteemed in his time. Little read to-day.

Wilson, John, see **North, Christopher.**

Winthrop, John (1588-1649). First Governor of Massachusetts Bay Colony, and author of the annals of the colony (1630-49), called *The History of New England.* This has served as a source of material for later writers.

Wister, Owen (1860-). American novelist. *The Virginian.*

Woolman, John (1720-72). A New Jersey Quaker preacher, an early opponent of slavery. His *Journal* attracted the attention of Charles Lamb.

Wordsworth, William (1770-1850). A great English poet. In his youth he was in sympathy with the French Revolution, but later became a conservative. He spent most of his long and peaceful life in the Lake Country in the northwestern part of England, enjoying the beautiful scenery of that region, and devoting himself to poetry. About him and his sister Dorothy gathered Southey, Coleridge, and others, known as the Lake Poets. Wordsworth finds the same inspiration in nature that many people find in religion.

"But he was a priest to us all
Of the wonder and bloom of the world."

The Prelude; Michael; Ode on the Intimations of Immortality; sonnets.

Wuthering Heights (1848). A novel by Emily Bronte (English). The scene is laid in Yorkshire, where the author lived. The story is concerned with the almost superhuman hate of Heathcliff, for his neighbors and friends. He hates even his own wife and child, and vents his wrath upon them cruelly. Death after death ensues as the story proceeds, until at last Heathcliff himself dies and the family which remains is at peace. Few if any stories have so concentrated a passion of wrath within them as this has. "Beyond the madness and terror of 'Wuthering Heights' romantic fiction has never gone."

Wycliffe, John (1324?-84). A religious reformer who conceived the idea of translating the Bible into English. The style of the translation made the scripture intelligible to the common folk of England. Wycliffe suffered much persecution for his work. He was one of the chief forerunners of the Reformation.

Yeats, William Butler (1865-). A contemporary Irish poet, who, like other poets of the Irish renaissance, derives his inspiration from the old legends and folk-lore of his country. *The Land of Heart's Desire.*

Young, Edward (1683-1765). An English clergyman, author of a religious poem, *Night Thoughts.*

SHAKESPEARE'S "AS YOU LIKE IT"

DUKE FREDERICK. ' Mistress. despatch you with your safest haste."—*Act I., Scene III.*

DICTIONARY OF PSEUDONYMS AND SOBRIQUETS

PEN NAME OR SOBRIQUET	REAL NAME
Abbott, Madeline Vaughan	Mrs. Charles E. Bushnell.
Achitophel, "Achitophel and Absalom"	Earl of Shaftesbury (1621-1638).
Ackermann, Gottlieb	Franz Xavier Mayer.
Ackworth, John	Rev. F. R. Smith.
Adam, Madame (Edmond)	Juliette Lamber.
Adams, Moses	Geo. Wm. Bagley.
Adams, Stephen	Michael Maybrick.
Addison of the North, "The Man of Feeling"	Henry Mackenzie.
Adeler, Max	Charles Heber Clark.
Admirable Doctor	Roger Bacon.
Adonais, "Adonais"	Keats (name given by Shelley).
Agate	Whitelaw Reid.
Aglaus	Henry Timrod.
Akers, Elizabeth	Mrs. E. M. Allen.
A. K. H. B.	Rev. A. K. H. Boyd.
Alcaeus	James Montgomery.
Alcibiades, *Punch*, 1846	Lord Tennyson.
Alexander, Mrs.	Mrs. Annie Alexander Hector.
Alexander of the North, The	Charles XII of Sweden.
Alexander, Sir Drawcansir	Tobias George Smollett.
Alexander the Coppersmith, LL. D.	Thomas Erskine, Baron Erskine.
Alexander the Corrector	Alexander Cruden.
Allen, F. M.	Edmund Downey.
Alte Fritz, Der	Frederick the Great.
Americus	Francis Lieber.
Ames, Lucia True	Mrs. Lucia Ames Mead.
Amyand, Arthur	Capt. E. A. Haggard.
Anacreon Moore	Thomas Moore.

Pen Name or Sobriquet	Real Name
Anacreon of Painters	Francesco Albani.
Anacreon of Persia	Hafiz.
Andrews, Annulet	Mrs. J. Kingsley Ohl.
Ane of that Ilk	Prof. W. E. Aytoun.
Angelical Doctor	Thomas Aquinas.
Angler, An, "Salmonia."	Sir Humphry Davy.
Anstey, F	T. Anstey Guthrie.
Apostate, Julian the	Roman Emperor Julian.
Apostle of Germany	St. Boniface.
Apostle of Ireland	St. Patrick.
Apostle of Temperance	Rev. Theobald Mathew.
Apostle of the English	St. Augustine.
Apostle of the French	St. Denis.
Apostle of the Frisians	St. Willibrord or Wilbrod.

Zadkiel	Capt. R. J. Morrison, R. N.
Zeta	J. A. Froude.
Z. Z.	Louis Zangwill.

MYTHOLOGY—The word myth originally signified speech or discourse, and was identical with the word logos. After the age of Pindar and Herodotus, however, it came to be synonymous with the Latin word *fabula*, fable or legend. According to the present use of our language, a myth is an idea or fancy presented in the historical form; and though, of course, any fiction at any time, in this shape, might be called a myth, yet by usage the word is confined to those fictions made in the early periods of a people's existence—particularly of the Greeks and Romans—for the purpose of presenting their religious belief, and generally their oldest traditions, in an attractive form. The tendency to create myths in this way seems inherent in every people; there is no people so uncivilized as to be without them.

A myth is not to be confounded with an allegory; the one being an unconscious act of the popular mind at an early stage of society, the other a conscious act of the individual mind at any stage of social progress. Even myths of which the allegorical significance is pretty plain, such as the well-known Greek myth of Prometheus and Epimetheus, were received as facts of early tradition by the Greeks.

The ancient Greeks believed their gods to be of the same shape and form as themselves, but of far greater beauty, strength, and dignity. They also regarded them as being of much larger size than men, for in those times great size was esteemed a perfection, supposed to be an attribute of divinities, to whom they ascribed all perfections. A fluid named *ichor* supplied the place of blood in the veins of the gods. They were immortal, but they might be wounded or otherwise injured. They could make themselves visible or invisible to men, and assume the forms of men or of animals. Like men they stood in daily need of food and sleep. The meat of the gods was called *ambrosia*, their drink *nectar*. The gods, when they came among men, often partook of their food and hospitality.

Like mankind, the gods were divided into two sexes; namely, gods and goddesses. They married and had children. Often a god became enamored of a mortal woman, or a goddess was smitten with the charms of a handsome youth, and these love-tales form a large portion of Grecian mythology.

To make the resemblance between gods and men more complete, the Greeks ascribed to their deities all human passions, both good and evil. They were capable of love, friendship, gratitude, and all affections; on the other hand, they were frequently envious, jealous, and revengeful. They were particularly careful to exact all due respect and attention from mankind, whom they required to honor them with temples, prayers, costly sacrifices, splendid processions, and rich gifts; and they severely punished insult or neglect.

The most important classes of myths are the religious and moral. The usual classification is as follows:

Superior Gods.—Jupiter, Neptune, Apollo, Mars, Mercury, Vulcan, Janus, Saturn, Pluto, Bacchus, Juno, Minerva, Diana, Venus, Vesta, Ceres, Rhea.

Inferior Gods.—Cœlus, Sol, Æolus, Plutus, Æsculapius, Pan, Luna, Aurora, Nox, Iris, Latona, Themis, Nemesis, Fortuna, Fama. Several gods peculiar to the Greeks: Enyo, Ergane, Cotytto, etc. Several gods peculiar to the Romans. Priapus, Terminus, Vertumnus, Pomona, Flora, Feronia, Pales, etc.

Mythical Beings.—Titans, Giants, Pygmies, Tritons, Sirens, Nymphs, Muses, Graces, Hours, Seasons, Fates, Furies, Harpies, Winds, Genii, Somnus, Mors, Manes, Lares, Penates, Satyrs, Fauns, Gorgons, Amazons, Centaurs, Minotaur, Chimæra, Geryon, Hydra, Pegasus, Scylla, Charybdis, Sphinx, Typhon.

Deified Heroes.—Inachus, Phoroneus, Ogyges, Cecrops, Deucalion, Amphictyon, Cadmus, Danaus, Pelops, Minos, Perseus, Hercules, Theseus, Jason, Castor, Pollux, and heroes of the Theban and the Trojan wars, etc.

Most of the heroes were at last viewed as sons of gods, and often of Jupiter himself. The veneration for the heroes was, however, less sacred and less universal than the worship of the gods. The heroes received only an annual commemoration at their tombs, or in the vicinity, when offerings and libations were presented to them. Sometimes the respect paid them exceeded these limits, and they were exalted to the rank and honors of the gods. The introduction of solemnities in memory of heroes is ascribed to Cadmus.

Many also are known under a variety of names, for as example:

Apollo, Canoba, Cynthius, Delius, Delphicus, Demarus, Horus, Khrishna, Mythras, Numius, Oros, Pæan, Phœbus, Pythius, Sol.
Aurora, Eos.
Bacchus, Biformis, Brisæus, Dionysus, Nyctelius, Nyseus.
Buddha, Gautama.
Ceres, Cybele, Hestia, Ops, Prisca, Rhea, Vesta.
Cupid, Eros, Kama.
Diana, Artemis, Dyctinna, Hecate, Luna, Phœbe, Proserpine, Tergemina.
Flora, Chloris.

Hercules, Alcides, Sem.
Juno, Hada, Hera, Moneta, Nuptialis, Parthenos, Sospita.
Jupiter, Ammon, Apis, Assabinus, Belus, Capitolinus, Ceraunius, Demarus, Dies Pater, Dodonæus, Genitor, Gragus, Grapsios, Hemphta, Imperator, Indra, Jove, Maximus, Muscarius, Olympius, Osiris, Pluvius, Saturnius, Scter, Zeus.
Mars, Corythaix, Gradivus, Quirinus, Papremis, Silvester.
Mercury, Camillus, Caresa, Hermes, Quadratus, Thoth, Vialis
Minerva, Athena, Ergotis, Glaukopis, Pallas, Pylotis.
Neptune, Consus, Poseidon, Varuna.
Pan, Incubus, Innus, Mendes, Supersus.
Pluto, Dis, Februus, Hades, Shesa, Urgus.
Saturn, Chronos, Krodo.
Venus, Acidalia, Aphrodite, Armata, Astarte, Clucina, Cypria, Cythera, Dione, Erycina, Hortensis, Idalia, Onuva.
Vulcan, Hephæstos.

DICTIONARY OF MYTHS

Achates.—Æneas and Achates were friends. The devotion of Achates was so unselfish and exemplary that *Fidus Achates* became a proverb.

Achelous.—The son of Oceanus and Terra, or Tethys, god of the river of the same name in Epirus. As one of the numerous suitors of Dejanira, he entered the lists against Hercules, and, being inferior, changed himself into a serpent and afterward into an ox. Hercules broke off one of his horns and defeated him, after which, according to some, he was changed into a river.

Acheron.—To separate that portion of hades reserved for the punishment of the wicked, Pluto surrounded it with Phlegethon, a river of fire, while the Acheron, a deep and black stream, had to be passed by all souls before they reached Pluto's throne and heard his decree. Acheron is also used to signify hades or hell itself.

Achilles, the son of Peleus and Thetis, was the bravest of all the Greeks in the Trojan war. During his infancy, Thetis plunged him in the Styx, thus making every part of his body invulnerable except the heel by which she held him. To prevent him from going to the Trojan war, Thetis sent him privately to the court of Lycomedes, where he was disguised in a female dress. As Troy could not be taken without his aid, Ulysses went to the court of Lycomedes in the habit of a merchant, and exposed jewels and arms for sale. Achilles, choosing the arms, discovered his sex, and went to the war. Vulcan made him a strong suit of armor, which was proof against all weapons. He was deprived by Agamemnon of his favorite Briseis, and for this affront he would not appear on the field till the death of Patroclus impelled him to vengeance. He slew Hector, who had killed Patroclus, and tying his corpse to his war car, dragged it three times around Troy. He is said to have been killed by Paris, who inflicted a mortal wound in his vulnerable heel with an arrow.

Actæon.—A famous hunter, who, having surprised Diana as she was bathing, was turned by her into a stag, and killed by his own dogs.

Adissechen.—In Indian mythology the serpent of a thousand heads which hold the universe in place.

Admetus.—A king of Thessaly, and husband of Alcestis, famous for his misfortunes and his piety. Apollo tended the flocks of Admetus for nine years, when he was obliged to serve a mortal for having slain the Cyclops.

Adonis.—A beautiful youth, loved by Venus, and slain by a wild boar which he was hunting. Venus was inconsolable at his loss, and at last obtained permission from Proserpine that Adonis should spend six months on earth with her and six months among the shades. Adonis is also the name given to a Syrian god, supposed to be slain by a wild boar in Lebanon, and to revive every year. He is identified with the Greek Adonis, beloved by Venus.

Adrammelech.—God of the people of Sepharvaim, to whom infants were burned in sacrifice (II. Kings xvii, 31). Adar was the sun worshiped under a particular attribute.

Ægæon.—One of three brothers, huge monsters, with fifty heads and a hundred arms. According to the most ancient tradition, Ægæon and his brothers conquered the Titans when they made war upon the gods, and secured the victory to Zeus, who thrust the Titans into Tartarus, and placed Ægæon and his brothers to guard them.

Ægeus.—King of Athens, and father of Theseus.

Ægis.—The shield of Jupiter, made by Vulcan, was so called and symbolized "divine protection." The shield of Minerva was called an ægis also.

Ægle.—A nymph; a daughter of Æsculapius; one of the Hesperides; also the name of one of the sisters of Phaëton.

Ælurus.—The cat. An Egyptian deity held in the greatest veneration. Herodotus tells us that Diana, to avoid being molested by the giants, changed herself into a cat. The deity used to be represented with a cat's head on a human body.

Æneas.—A Trojan prince, son of Anchises and Venus. He married Creusa, the daughter of Priam, and they had a son named Ascanius. During the Trojan war Æneas behaved with great valor in defense of Troy. When the city was in flames he is said to have carried away his father, Anchises, on his shoulders, leading his son, Ascanius, by the hand, his wife following them. Subsequently he built a fleet of twenty ships, with which he set sail in quest of a settlement. He was driven on the coast of Africa, and was kindly received by Dido, queen of Carthage, who became enamored of him; but he left Carthage by the order of the gods. He has been praised for his piety and his submission to the will of the gods; the term "Pius" is generally appended to his name.

Æolus, the ruler of storms and winds, was the son of Hippotas. He reigned over Æolia, was the inventor of sails, and a great astronomer. The poets have called him the god of the wind.

Æsculapius.—The son of Apollo and Coronis, the daughter of a Thessalian king. By his father he was committed to the care of the wise centaur, Chiron, who taught him botany, together with the secret efficacy of plants. By means of this information, Æsculapius became the benefactor of mankind. In tradition he is noted as having awakened the dead.

Æsir, plural of As or Asa, the celestial gods of Scandinavia, who lived in Asgard (god's ward), situate on the heavenly hills between earth and the rainbow. The chief was Odin.

Æson.—The father of Jason and brother of Pelias, who seized the kingdom rightfully belonging to Æson.

Æstas.—The god of summer; he is crowned with corn and generally holds a sickle in his hand. By poets and artists the seasons are all personified. They are frequently seen together on relievi, medals, and gems. The artists have also followed the poets in representing the four ages of life by depicting Ver (spring) as infantile and tender; Æstas (summer) as young and sprightly; Autumnus (autumn) mature and manly; and Hiems (winter) as old and decrepit.

Agamemnon, king of Mycenæ and Argos, was brother to Menelaus, and son of Plisthenes, the son of Atreus. He married Clytemnestra, and Menelaus Helen, both daughters of Tyndarus, king of Sparta. When Helen eloped with Paris, Agamemnon was elected commander-in-chief of the Grecian forces invading Troy.

Ahriman.—Most malevolent of all the Persian gods.

Ajax, son of Telamon and Peribœa, or Eribœa, was one of the bravest of the Greeks in the Trojan war. After the death of Achilles, Ajax and Ulysses both claimed the arms of the dead hero, which were given to Ulysses. Some say that Ajax was killed in battle by Paris, but others record that he was murdered by Ulysses.

Alastor.—A surname of Jupiter. Among the lesser gods the name Alastor is given to the unforgetting, revengeful spirit, who, in consequence of some crime perpetrated, persecuted a family from generation to generation.

Alcestis, or **Alceste.**—A daughter of Pelias, and the wife of Admetus. To save her husband's life, she died in his stead. By request of Apollo, the gods had granted eternal life to Admetus but on the condition that when the appointed time came for the good king's death, some one should be found willing to die in his stead. This decree was reported to Alcestis, Admetus' beautiful young wife, who offered herself as substitute, and cheerfully gave her life for her husband. But immortality was too dearly bought at such a price; and Admetus mourned until Hercules, pitying his grief, descended into hades and brought her back.

Alecto.—One of the Furies. She is represented with her head covered with serpents, and breathing vengence, war, and pestilence.

Alectryon.—A servant of Mars, who was changed by him into a cock because he did not warn his master of the rising of the sun.

Alfadur.—In Scandinavian mythology the Supreme Being—Father of All.

Alpheus and Arethusa.—The Greek fable says that Alpheus, the river-god, fell in love with the nymph Arethusa, who fled from him in affright. Diana came to her rescue.

Al Sirat.—A narrow bridge extending from this world to the next over the abyss of hell, which must be passed by every one who would enter paradise.

Althæa.—The mother of Meleager. She caused the death of her son and killed herself in remorse.

Amacitia.—The goddess of friendship. In Greek mythology she was represented with her head bare, her dress open near the heart, holding in her left hand an elm, around which a vine clung, filled with clusters of grapes.

Amazons.—A nation of women-soldiers who lived in Scythia. Hercules defeated them, and gave Hippolyte, their queen, to Theseus for a wife.

Ambrosia.—The food of the gods; so called because it made them not mortal, *i. e.*, immortal.

Ammon.—One of the names bestowed on Jupiter. As Jupiter Ammon, he was represented as having the horns of a ram.

Amphion.—Son of Jupiter and Antiope. He cultivated poetry, and made such progress in music that he is said to have been the inventor of it, and to have built the walls of Thebes by the sound of his lyre.

Ancæus.—A son of Neptune, who, having left a cup of wine untasted to pursue a wild boar, was killed by it, which gave rise to the proverb, There's many a slip twixt the cup and the lip."

Anchises.—A son of Capys and Themis. He was so beautiful that Venus came down from heaven on Mount Ida to enjoy his company. Æneas was the son of Anchises and Venus, and was intrusted to the care of Chiron the Centaur. When Troy was taken, Anchises had become so infirm that Æneas had to carry him through the flames upon his shoulders, and thus saved his life.

Andromache.—Daughter of Ëetion, king of Thebes. She married Hector, son of Priam, and was the mother of Astyanax. Her parting with Hector, who was going to battle, is described in the *Iliad* and has been deemed one of the most beautiful passages in that great work. Pope's translation of the *Iliad* (book 6) describes with great pathos and beauty the parting of Hector from his wife and child. The passage is too long for quotation, but this quatrain from it shows the style:

> Thus having spoke, th' illustrious chief of Troy
> Stretch'd his fond arms to clasp the lovely boy;
> The babe clung crying to his nurse's breast,
> Scared at the dazzling helm and nodding crest.

Andromeda.—Andromeda, to atone for a crime of which she was guiltless, was to have become the victim of divine anger. The whole country was laid waste with plagues, which, according to the oracle of Jupiter Ammon, were not to cease until Andromeda, swallowed up by a sea-monster, should, by her death, expiate the crime of her mother. Perseus beheld the maiden fastened with chains to a rock, and a monster rising out of the sea ready to devour her; while her parents stood on the shore in despair. Perseus rushed down upon the monster, struck a deadly blow, delivered the fair maiden and obtained her as his wife. After her death she was placed among the stars.

Angurvadel.—Frithiof's sword, inscribed with Runic letters, which blazed in time of war, but gleamed with a dim light in time of peace.

Antæus.—One of the giant sons of Neptune whose home was in Libya. His strength was invincible so long as he remained in contact with his mother earth. Once lifted from the earth and allowed again to touch it his strength increased. One of the exploits ascribed to Hercules was the exhibition of his strength in overcoming Antæus.

Antigone.—In the story of Œdipus, Antigone appears as a noble maiden, with a truly heroic attachment to her father and brothers. When Œdipus had put out his eyes, and was obliged to quit Thebes, he was accompanied by Antigone, who remained with him till he died at Colonus, and then returned to Thebes. After her two brothers had killed each other in battle, and Creon, the king of Thebes, would not allow Polynices to be buried, Antigone buried him by night, against the orders of Creon, for which offense he ordered her to be buried alive. She, however, killed herself on hearing of the sentence. The death of Antigone is the subject of a tragedy written by Sophocles.

Aphrodite.—One of the names under which Venus was worshiped. She was said to be the daughter of Zeus, but later poets frequently relate that she was sprung from the foam of the sea, whence they derive her name.

Apis.—One of the Egyptian gods worshiped under the form of an ox.

Apollo.—Son of Jupiter and Latona; called also Phœbus. He was the god of the fine arts and the reputed originator of music, poetry, and eloquence. He had received from Jupiter the power of knowing futurity, and his oracles were in repute everywhere. As soon as he was born he destroyed with his arrows the serpent Python, which Juno had sent to persecute Latona; hence he was called Pythius. He was not the inventor of the lyre, as some have supposed, but it was given to him by Mercury, who received in return the famous Caduceus. He received the surnames of Phœbus, Delius, Cynthius, Pæan, Delphicus, etc. He is in sculpture generally represented as a handsome young man with a bow in his hand, from which an arrow has just been discharged.

Arachne.—A Mæonian maid, named Arachne, proud of her skill in weaving and embroidery, in which arts the goddess of wisdom had instructed her, ventured to deny her obligation, and challenged her patroness to a trial of skill. Minerva accepted the challenge and they met to try their skill. Arachne produced a piece of cloth in which the amours of the gods were woven, and as the goddess could find no fault with it, she tore the work to pieces. Arachne, in despair, hung herself. Athena loosened the rope and saved her life, but the rope was changed into a cobweb, and Arachne herself into a spider.

Ares.—The Greek god of war, known as Mars by the Romans.

Arethusa.—A wood nymph of Elis, in Greece, who, pursued by the River Alpheus, was changed into a fountain and ran under the sea. The waters of the fountain, mingled with the river, rose again in the fountain of Arethusa in the island of Ortygia.

near Syracuse. According to another version of the same legend, it was Diana herself, and not Arethusa, whom the river-god of the Alpheus pursued; and when this pursuit ended in the island of Ortygia, there arose the fountain Arethusa.

Argo.—A fifty-oared ship in which Jason and his companions made their voyage to Colchis in search of the golden fleece. This ship was built of pines cut from Mount Pelion, and, although larger than any other previously constructed, moved lightly and easily, and was therefore called the *Argo* (swift-sailing). From her name those who embarked in her were called Argonauts. The mast of the *Argo* was taken from the forest of Dodona, where the oaks were endowed with the power of making predictions; therefore the ship was regarded as an animated being, in accord with fate, to which a man might commit himself with confidence.

Argonauts.—One of the most celebrated enterprises of the heroic ages, one which forms a memorable epoch in Grecian history, a sort of separation-point between the fabulous and the authentic, was the Argonautic expedition. This was a voyage from Greece to Colchis in order to obtain the golden fleece, conducted by Jason, the son of Æson, king of Thessaly. The undertaking was imposed upon him by his uncle Pelias. He invited the most illustrious heroes of Greece to unite in the expedition, and among those who joined were Hercules, Castor and Pollux, Peleus, Pirithous, and Theseus. The vessel built for the purpose was named *Argo*, which after various adverse events arrived at Æa, the capital of Colchis.

Argus.—A son of Arestor, whence he is sometimes called Arestorides. He had a hundred eyes, of which only two were asleep at one time. Juno set him to watch Io, whom Jupiter had changed into a heifer, but Mercury, by order of Jupiter, slew him, by lulling all his eyes to sleep with the notes of the lyre. Juno put the eyes of Argus in the tail of the peacock, a bird sacred to her.

Ariadne.—Daughter of Minos and Pasiphæ. She fell in love with Theseus, when sent by Ægeus with of the Athenian youths and maidens as tribute, to be devoured by the Minotaur. She gave him the clew of thread by which he found his way out of the labyrinth, and accompanied him on his return to Athens as far as Naxos, where he deserted her. Bacchus found her there, made her his wife, and set in the stars the crown which he gave her at their marriage.

Arion.—A Greek bard, who, having thrown himself into the sea to escape from pirates, was taken up by dolphins, and carried on their backs safe to land.

Aristæus.—Protector of vines and olives, huntsmen and herdsmen. He instructed man also in the management of bees, taught him by his mother Cyrene. He was the father of the famous Actæon.

Artemis.—The daughter of Zeus and Leto, or Latona, and twin sister of Apollo, was the goddess of chastity, of the chase and the woods.

Asgard.—In Scandinavian mythology Asgard represents the city of the gods, situated at the center of the universe, and accessible only by the bridge Bifrost, *i. e.*, the rainbow.

Asir.—In northern mythology the most powerful, though not the oldest, of the deities; usually reckoned as twelve gods and twelve goddesses The gods are Odin, Thor, Baldur, Niörd, Frey, Tyr. Bragi, Heimdall, Vidar, Vali, Üllur, and Forseti; the best-known of the goddesses Frigga, Freyja, Iduna, and Saga.

Astarte.—Noticed in the Old Testament under the name Ashtaroth, an ancient Syrian deity, who was adored as the goddess of the moon; hence Jeremiah calls her "the queen of heaven." Solomon built her a temple on the Mount of Olives.

Astræa.—Daughter of Zeus and Themis, and the last of the immortals to quit the earth as the wickedness of mortals increased.

Astyanax.—Son of Hector and Andromache, was hurled from the walls of Troy on its capture.

Atalanta.—Daughter of Iasus and Clymene. She took part in the Calydonian hunt. She required every suitor to run a race under penalty of death if she defeated them. Hippomenes defeated her by throwing in her path three golden apples given him by Aphrodite, which Atalanta turned aside to pick up. They were both turned into lions for profaning the sacred grove of Zeus.

Ate.—Daughter of Zeus. She led both gods and men into rash actions. Zeus banished her from Olympus.

Athena.—One of the twelve great Greek divinities. She sprang, full armed, from the head of Zeus. She was the virgin goddess of wisdom, agriculture, and art, and was also a warlike divinity.

Atlas.—A Titan, son of Iapetus and Clymene. Being defeated in the war of the Titans against the gods, he was condemned to bear the heavens upon his shoulders.

Atreus.—A king of Mycenæ, son of Pelops and Hippodamia, and father of Agamemnon and Menelaus, who, from him, were called the *Atridæ*. The crimes and calamities of Atreus and his family afforded a prolific subject for the Greek poets.

Atropos.—One of the three Parcæ, or Fates; the one that cut the thread of life. As wife of Pluto, and queen of hell, Proserpine presided over the death of mankind; and, according to the opinion of the ancients, no one could die if the goddess herself, or Atropos, the minister, did not cut off one of the hairs from the head.

Augean Stables.—The stables of Augeas, king of Elis, in Greece. In these stables he had kept 3,000 oxen, and the stalls had not been cleansed for thirty years. When Hercules was appointed to cleanse these stables, he turned the course of the river Alpheus through them.

Augurs.—Their principal business was to observe the flight and cry of birds, from which they predicted future events. They also explained other omens and signs.

Auræ.—The auræ, or sylphs, nymphs of the air, a species of sportive, happy beings, and well-wishers to mankind; they were winged and represented as flying.

Aurora.—The goddess of the morning, or of the dawn; sometimes described as the goddess of day. She is represented as standing in a magnificent chariot, sometimes drawn by winged steeds. A brilliant star sparkles upon her forehead, and, while with one hand she grasps the reins, she holds in the other a lighted torch.

Avatar.—The incarnation or descent of the deity Vishnu, of which nine are believed to be past, and the tenth is yet to come, when Vishnu will descend from heaven on a white-winged horse, and introduce on earth a golden age of virtue and peace.

Avernus.—Properly, a small, deep lake in Campania, occupying the crater of an extinct volcano, and almost completely shut in by steep and wooded heights. The entrance to the infernal regions, called Avernus, is described as having around it a host of dreadful forms—Disease, Old Age, Terror, Hunger, Death, War, Discord, and the Furies, the avengers of guilt.

Azazel.—Ewald considers Azazel to have been a demon belonging to the pre-Mosaic religion. Another opinion identifies him with Satan, or the devil. Milton makes him Satan's standard bearer.

Azrael.—Meaning in Hebrew "help of God." In the Jewish and the Mohammedan mythology, the name of an angel who watches over the dying, and separates the soul from the body.

Baal.—A sun god, the center of whose worship was Phenicia, whence it spread to neighboring countries

Bacchus.—Called also Dionysus, son of Zeus and Semele, god of wine. He married Ariadne after her desertion by Theseus.

Baimwawa.—In American Indian folk-lore, the sound of thunder.

Balder.—The god of peace, son of Odin and Frigga. He was killed by the blind war-god, but was restored to life at the general request of the gods.

Ballos.—A famous horse given by Neptune to Peleus as a wedding present, and afterward given to Achilles.

Balmung.—In Norse mythology, the sword of Siegfried forged by Vulcan.

Banshee.—The domestic spirit of certain Irish or Scottish families, supposed to wail shortly before the death of one of the family. The banshee is allowed only to families of pure stock.

Barguest.—A frightful goblin among fairies, armed with teeth and claws. An object of terror in the north of England.

Bay-tree.—The tree of Apollo, hence a shield against lightning. A wreath of bay-leaves was worn as protection during thunder-storms. The withering of a bay-tree was dreaded as an omen of death.

Beelzebub.—A heathen god of evil at the head of nine ranks of demons and second only to Satan. Also the god of flies.

Befana, La.—The fairy of Italian children, who is supposed to fill their stockings with toys on Twelfth Night.

Bellerophon.—Son of Glaucus, king of Corinth, and Eurymede. Having killed Bellerus, he fled to Prœtus for protection. Antea, Prœtus' wife, became enamored of Bellerophon, and on his rejecting her advances, she accused him to her husband, who thereupon sent him to Iobates, king of Lycia, with a letter requesting that he be put to death. Iobates accordingly sent him to kill the Chimæra, which Bellerophon did with the aid of the winged horse Pegasus. After other trials, in which he was successful, Iobates gave him his daughter in marriage.

Bellona.—Goddess of war. She prepared the chariot of Mars when he was going to war, and appeared in battles armed with a whip and holding a torch.

Belphegor.—A god of evil, worshiped by the Moabites. An archfiend who had been an archangel.

Belus.—The name of the Chaldean sun-god.

Berenice.—A princess who vowed to sacrifice her hair to the gods, if her husband returned in safety. She suspended her hair in the temple of Venus. After her husband's safe return the locks disappeared, and the astronomer Conon reported that Jupiter had placed the queen's locks among the stars, and pointed out the constellation since called Berenice's hair.

Berg Folk.—Pagan spirits doomed to live on the Scandinavian hills till the day of redemption.

Bertha.—The white lady who guards good German children, but is the terror of the bad, who fear her iron nose and big feet. Corresponds to the Italian La Befana.

Bheem.—One of the five brotherhoods of Indian demi-gods, famous for his strength.

Bifrost.—In Norse mythology, a bridge between earth and heaven, over which none but the gods could travel It leads to the palace of the Fates.

Bilskirnir.—A wonderful palace built by Thor for the use of peasants after death.

Bona Dea.—A Roman divinity, worshiped by women as a chaste and prophetic goddess.

Boreas.—The name of the north wind blowing from the Hyperborean mountains. According to the poets, he was son of Astræus and Aurora. He was passionately fond of Hyacinthus.

Bragi.—The son of Odin and Frigga and the god of poetry and eloquence. He is represented as an old man with flowing white beard.

Brahma.—The supreme god of the Hindus, represented with four heads and four arms. He is regarded as the creator of the universe, and forms, with Vishnu the preserver, and Siva the destroyer, the Hindu trinity.

Briareus.—A giant with fifty heads and a hundred hands. He hurled a hundred rocks at Jupiter in a single throw and Jupiter bound him under Mount Ætna with a hundred chains.

Bukadawin.—The god of famine among American Indians.

Butes.—An Argonaut beloved by Aphrodite, who snatched him away as he was swimming toward the Sirens.

Byblis.—According to Ovid, the daughter of Miletus, sister of Caunus, and niece of Sol. From her tears arose the fountain of Byblis.

Cacus.—A giant, son of Hephæstus, living on Mt. Aventine, who plundered the neighboring country. He stole from Hercules some of the cattle of Geryon, dragging them by their tails to his cave that their tracks might not be discovered. He was, however, detected and slain by Hercules.

Cadmus.—Son of Agenor, king of Phenicia. When his sister Europa was carried off by Zeus, Agenor sent Cadmus to find her. Unable to do this he settled in Bœotia and built Thebes, having followed a cow to that place from Thrace by direction of the oracle of Delphi. He slew a dragon which guarded the well of Ares at that place, and sowed the teeth, from which armed men sprung, the ancestors of the Thebans. He married Harmonia, and the two were changed to serpents. Cadmus is said to have introduced or invented the alphabet.

Cæneus.—Originally a maiden, beloved by Poseidon, she was by him changed to a man, and took part in the Argonautic expedition and Calydonian hunt. He was buried under a mass of trees by the Centaurs, and changed into a bird He recovered his female form in the lower world.

Calliope.—The Muse who presided over epic poetry and rhetoric. She is generally depicted using a stylus and wax tablets, the ancient writing materials.

Callisto.—In Greek mythology an Arcadian huntress, a companion of Artemis, beloved of Zeus and transformed by him into a she-bear. In this form she was slain by Artemis in the chase. She was placed among the stars as the constellation Arctos (bear).

Calpe.—One of the two pillars of Hercules, the other named Abyla. These two were originally only one mountain, which Hercules tore asunder, pouring the sea between them.

Calypso.—One of the daughters of Atlas. When Ulysses was shipwrecked on her coasts she received him with hospitality, and offered him immortality if he would remain with her, which he refused to do. After seven years' delay he was permitted to depart from the island.

Camdeo.—The Hindu god of love.

Camilla.—Virgin princess of the Volscians. She was so swift that she could run over a field of corn without bending a blade, or make her way over the sea without wetting her feet.

Canopus.—The Egyptian god of water. The Chaldeans worshiped fire, and sent all the other gods a challenge, which was accepted by a priest of Canopus. The Chaldeans lighted a vast fire, when the Egyptian deity spouted out torrents of water and quenched it.

Capitolium.—The temple of Jupiter Optimus Maximus at Rome, was situated on the south summit of the Mons Capitolinus, so called on account of the temple.

Capys.—(1) Son of Assaracus, and father of Anchises. (2) A companion of Æneas, from whom Capua was said to have derived its name.

Cassandra.—Daughter of Priam and Hecuba. She was left when young asleep in the temple of Apollo, where her ears were purified by serpents so that she could understand the voices of nature. Apollo, becoming enamored, conferred upon her the gift of prophecy, but upon her refusing to grant his desires, ordained that no one should believe her prophecies. Upon the capture of Troy she fell to the lot of Agamemnon and was killed by Clytemnestra.

Cassiopeia.—The chief stars of this constellation form the outline of a chair. Cassiopeia boasted that the beauty of her daughter Andromeda surpassed that of the sea-nymphs. The sea-nymphs complained to the sea-god of this affront, and Andromeda was chained to a rock to be devoured by sea-monsters. Perseus delivered her and made her his wife. The mother was taken to heaven and placed among the stars.

Castor and Pollux.—Twin brothers, called the Dioscuri, sons, according to some, of Zeus and Leda. They took part in the Argonautic expe-

dition. Castor was famous for his skill in managing horses, and Pollux for his boxing.

Cauther.—In Mohammedan mythology the lake of paradise, whose waters are as sweet as honey, as cold as snow, and as clear as crystal; and any believer who tastes thereof is said to thirst no more.

Cecrops.—In mythology is represented with upper part of his body human, the lower part that of a dragon. Cecrops is said to have founded Athens, and to have divided Attica into twelve communities, and to have introduced the first elements of civilized life; he instituted marriage, abolished bloody sacrifices, and taught his subjects how to worship the gods.

Centaurs.—Monsters, half horse, half human. They are especially celebrated for their contest with the Lapithæ in the mountains of Thessaly.

Cephalus.—Husband of Procris, loved by Eos, who advised him, when he rejected her advances, to try his wife's fidelity. Disguising himself as a lover, he returned to Procris, but she received his advances with disdain. He made himself known, loaded her with reproaches, and left her in a rage. Procris then fled to Crete, where Artemis gave her a dog and an unerring spear and sent her back. To obtain the dog and spear, Cephalus pretended to love her, and a reconciliation followed. He killed her accidentally with the spear.

Cerberus.—The three-headed dog that keeps the entrance of the infernal regions. He prevents the living from entering and the shades from escaping. Orpheus lulled Cerberus to sleep with his lyre; and the sibyl who conducted Æneas through the inferno, also threw the dog into a sleep with cake seasoned with poppies.

Ceres.—The daughter of Saturn, sister of Jupiter and Neptune. She was the goddess of corn, flowers, and harvest. She is represented as riding in a chariot drawn by dragons, and crowned with poppies. She was the mother of Proserpine, who was seized by Pluto while she was gathering flowers. Ceres was the Roman name for mother-earth.

Chaos.—The vacant space which existed before the creation of the world, and out of which the gods, men, and all things arose. Chaos was called the mother of Erebus and Night.

Charon.—A god of the infernal regions, son of Nox and Erebus, who conducted the souls of the dead in a boat over the rivers Styx and Acheron.

Charybdis.—A woman who robbed travelers and was turned by Jupiter into a dangerous whirlpool on the coast of Sicily, opposite Scylla. Scylla and Charybdis are generally mentioned together to represent alternative dangers.

Chibiabos.—A musician, ruler in the land of spirits, and friend of Hiawatha. Personification of harmony in nature.

Chimæra.—A celebrated monster goat, lion, and dragon, which continually vomited flames. It was destroyed by Bellerophon.

Chiron.—A centaur, son of Philyra and Saturn. He was famous for his knowledge of medicine, and taught mankind the use of plants and herbs. He was placed among the stars, and is known as Sagittarius.

Chloris.—The goddess of flowers, known as Flora in Greek mythology.

Chou.—An Egyptian god corresponding to the Roman Hercules.

Cimmerians.—People living in a land of perpetual darkness.

Circe.—A sorceress, daughter of Sol and Perseis, celebrated for her knowledge of magic and venomous herbs. Ulysses, on his return from the Trojan war, visited her coasts, and his companions were changed by her potions into swine.

Clio.—The muse who presided over history.

Clotho.—The youngest of the Fates, three daughters of Jupiter and Themis, supposed to preside over the moment of birth. She held the distaff and Lachesis spun the thread of life.

Cluricaune.—An Irish elf, who guards a hidden treasure. He has an evil disposition, and appears as a wrinkled old man.

Clytemnestra.—Daughter of Tyndareus and Leda, sister of Castor, Pollux, and Helena; wife of Agamemnon; and mother of Orestes, Iphigenia, and Electra. During her husband's absence at Troy she lived in adultery with Ægisthus, and on his return to Mycenæ she murdered him with the help of Ægisthus. She was subsequently put to death by her son Orestes, to revenge the murder of his father.

Clytie.—A water-nymph who loved the sun-god, Apollo, and was changed into a sunflower. In this form, she turns always toward the sun.

Cocytus.—A river of the infernal regions. The unburied dead wander on its banks for 100 years, and it is known as the river of lamentation.

Colchis.—A country of Asia famous for the expedition of the Argonauts, and the birthplace of Medea.

Comus.—The god of revelry, presiding over feasts.

Concordia.—The goddess of peace and concord, one of the oldest at Rome. She is represented holding a scepter budding with fruit, and a horn of plenty. Camillus raised a temple to this goddess, in the capital.

Consentes Dii.—The twelve Etruscan gods who formed the council of Jupiter, consisting of six male and six female divinities—Jupiter, Neptune, Mercury, Apollo, Mars and Vulcan; Juno, Ceres, Vesta, Minerva, Diana and Venus.

Cophetua or **Copethua.**—A mythical king of Africa, of great wealth, who fell in love with a beggar-girl, and married her. Her name was Penelophon, but Shakespeare writes it Zenelophon in *Love's Labor's Lost.*

Corybantes.—Priests who served at the worship of the mother of the gods. The name came from their habit of striking themselves in their religious dances.

Cressida.—Daughter of Calchas the Greek, beloved by Troilus, son of Priam. They vowed eternal fidelity, and as pledges Troilus gave the maiden a sleeve, and Cressida gave the Trojan prince a glove.

Creusa.—Daughter of Priam and wife of Æneas. She was lost in the city of Troy when her husband escaped from its flames.

Cronos.—The youngest of the Titans. Cronos was also known as the father of Jupiter.

Cupid.—God of love, son of Jupiter and Venus, represented as a winged boy, naked, armed with a bow and arrows, and often with a bandage covering his eyes. He shot his arrows into the hearts of both gods and men. Like all the gods, he put on different forms to suit his plans. He became the husband of Psyche.

Cybele.—A goddess, daughter of Cœlus and Terra, and wife of Saturn. On her birth she was exposed on a mountain, where she was tended and fed by wild beasts, receiving the name of Cybele from the mountain. She is represented on a throne with lions at her side.

Cyclops.—One-eyed giants who forged the thunderbolts of Jove. Homer describes them as wild, insolent, lawless shepherds, who devoured human beings. A later tradition represents them as Vulcan's assistants.

Cyparissus.—A beautiful youth, beloved by Apollo, whose favorite stag he inadvertently killed, and who was metamorphosed into a cypress because of his grief.

Cythera.—A name given to Venus from the island Cytheræa, where she first rose from the foam of the sea.

Dag.—In mythology of the north this name is given to the "radiant son of night." The name is also applied to the last of a treacherous race, the Hundings.

Dagon.—A national god of the Philistines, formed in human shape upward from the waist, and resembling a fish downward, with a finny tail.

Dagun.—In Indian mythology a god who reconstructed the world when it had been destroyed after creation.

Dahak.—In mythology of Persia the ages of the world are divided into periods of 1,000 years. When the cycle is complete, the reign of Ormuzd will begin, and men will be good and happy; but this event will be preceded by the loosing of Dahak, who will break his chain and fall upon the world, and bring on man the most dreadful calamities.

Daikoku.—A mythical god invoked by Japanese workers. He is represented as holding a full sack, which he beats to bring from it all useful articles, and the sack never becomes empty.

Daityas.—Among Hindu gods these are powerful to work evil.

Danaë.—The daughter of Acrisus, king of Argos, who became the mother of Perseus. An Italian legend related that Danaë came to Italy, built the town of Ardea, and married Pilumnus, by whom she became the mother of Daunus, the ancestor of Turnus.

Danaides.—The fifty daughters of Danaus, king of Argos, who married the fifty sons of their uncle Ægyptus.

Daphne.—A nymph, daughter of Penios. Apollo courted her, but she fled from him, and was, at her own request, turned into a laurel tree.

Daphnis.—A Sicilian shepherd, son of Hermes (Mercury), by a nymph, was taught by Pan to play on the flute, and was regarded as the inventor of bucolic poetry. A naiad to whom he proved faithless punished him with blindness, whereupon his father, Hermes, translated him to heaven.

Deiphobus.—A son of Priam and Hecuba, and, next to Hector, the bravest among the Trojans. After the death of Paris, he married Helen, but was betrayed by her to Menelaus, by whom he was slain and fearfully mangled on the capture of Troy by the Greeks.

Delius.—A name of Apollo, from Delos, the island in which he was born. The name Delia, of his sister Diana, has the same origin.

Delphi.—A town on Mount Parnassus, famous for the oracle and the temple of Apollo. Over the cleft of a cavern was placed the tripod on which sat the priestess through whose mouth he was thought to reveal the future.

Demeter.—The mother of Persephone, who was evidently a goddess of the earth, whom some ancient system married to Zeus, the god of the heavens.

Demogorgon.—The genius of the soil or earth, the life and support of plants. He was depicted as an old man covered with moss, and was said to live underground.

Deucalion.—The son of Prometheus, who, according to the legend, was, with his wife Pyrrha, the sole survivor of the Thessalian deluge.

Diana.—An ancient Italian divinity, whom the Romans identified with the Greek Artemis. At Rome Diana was the goddess of light. She was a daughter of Jupiter, and was born of Latona, or Leto, on the island Delos, at the same time with Apollo. As in Apollo the sun was deified and adored, so was the moon in Diana.

Dido.—Daughter of Belus, King of Tyre. She was married to Sychaeus, who was murdered for the sake of his wealth by Pygmalion. Dido then fled with some followers and founded Carthage. A neighboring king, Hiarbas, sought her hand in marriage; but she refused, and, erecting a funeral pile, ascended it and stabbed herself. Vergil, in the *Æneid*, makes Æneas visit her, and her death the consequence of his desertion.

Diomed.—A Greek hero of the Trojan war, a son of Tydeus, and a king of Argos. He was a favorite of Minerva, who, according to Homer, encouraged him to attack and wound both Mars and Venus, who were engaged on the side of the Trojans.

Diomedes.—The cruel tyrant of Thrace, who fed his mares on the flesh of his guests, was overcome by Hercules, and was given to the same horses as food.

Dione.—The youngest of the Titan sisters and reputed mother of Venus. The name has also been poetically applied to Venus herself.

Dionysus (Bacchus).—Son of Jupiter and Semele, the daughter of Cadmus. He was the god of wine, and is generally represented crowned with vine leaves.

Diræ.—The avenging goddesses, or Furies.

Dis.—A name sometimes given to Pluto, and hence also to the lower world.

Discordia.—A malevolent deity corresponding with the Greek Eris, the goddess of contention. She was driven from heaven by Jupiter because she sowed dissensions among the gods. At the nuptials of Peleus and Thetis she threw an apple among the gods, which was the primary cause of the ruin of Troy, and of infinite misfortunes to the Greeks.

Dives.—Demons of Persian mythology. According to the Koran, they are ferocious and gigantic spirits under the sovereignty of Eblis.

Dodona.—The most ancient oracle was that of Jupiter at Dodona, a city of the Molossi, said to have been built by Deucalion.

Donar.—A name given, sometimes, to Thor, the thunder-god, in Norse mythology.

Doris.—Daughter of Oceanus and Tethys, wife of Nereus, and mother of the Nereides.

Draupnir.—The marvelous ring belonging to Odin, with which he worked magic. It was burned on the funeral pyre of his son Balder.

Droma.—The chain forged for the purpose of binding the Fenris wolf, but which he broke. Hence the proverb, "to dash out of Droma."

Dryads.—Wood nymphs, believed to be sent from heaven. The dryads were distinguished from the hamadryads in this, that the latter were supposed to be attached to some particular tree, with which they came into being, lived and died; while the former had the care of the woods and trees in general.

Duergar.—Dwarfs who dwell in rocks and hills; noted for their strength, subtlety, magical powers, and skill in metallurgy. They are the personification of the subterranean powers of nature.

Durga.—A goddess worshiped among the Hindus.

Echidna.—A monster, half woman, half serpent, mother of the Chimæra, the Sphinx, Cerberus, the Hydra, etc.

Echo.—A nymph who by her incessant talking engaged the attention of Hera while Zeus sported with the nymphs. Hera punished her by changing her into an echo; she pined away in consequence of an unrequited love for Narcissus, until nothing remained but her voice.

Egia.—One of the nine beautiful giantesses seen by Odin along the seashore, known as wave-maidens. Her son became guardian of Bifrost, the rainbow bridge.

Egil.—The Vulcan of northern mythology, one of the three brothers who married the swan-maidens. He was a great archer, killed his brother. Völund by command of the king, and himself later became a peasant.

Egipans.—Rural deities who inhabited the forests and mountains, the upper half of the body being like that of a man, and the lower half like that of a goat.

Egis.—Part of the armor of Jupiter used by Minerva as a shield.

Eira.—An attendant of the goddess Frigga, and a skillful nurse. She gathered herbs and plants for the cure of both sickness and wounds and taught the science to women.

Elatus.—A prominent warrior among the mythical people of Thessaly and the father of Caneus, whom Neptune changed into the form of a man.

Elbegast.—One of the dwarfs of Scandinavian mythology who dwelt in a magnificent palace underground, and drew their servants from the bosom of the earth.

Elberich.—In the German hero legends a dwarf who aided the Lombard Emperor Otnit to win the daughter of the soldan of Syria. He is identical with the Oberon of French and English fairy mythology.

Electra.—The bright or brilliant one. A daughter of Agamemnon and Clytemnestra, and the sister of Iphigenia. She became the accomplice of Orestes in the murder of their mother.

Elf.—The water sprite, known also as Elb, from which the name of the river Elbe is said to be derived. Elves are more properly known as mountain fairies, or those airy creatures that dance on the grass or sit in the leaves of trees and delight in the full moon.

Elivagar.—In Norse mythology the name of a great stream in Chaos, flowing from a fountain in the land of mist. This stream was much frequented by the elves at their creation.

Elysium.—The paradise of the Greeks, known also as the Happyland. Departed mortals were adjudged to Elysium or to Tartarus by the sentence of Minos and his fellow judges in the "Field of Truth." Elysium is described as adorned with beautiful gardens, meadows, and groves; where birds ever warble; where the river Eridanus winds between banks fringed with laurel, and "divine Lethe" glides in a quiet valley; where the air is always pure, and the day serene; where the blessed have their delightful abode.

Embla.—An elm tree found in human form, by the gods, according to northern mythology.

Empyrean.—A term used by the ancients to express the highest heaven, where the blessed enjoy the beatific vision. Its name is derived from its having been supposed to be the region of fire.

Enceladus.—A Titan, son of Terra, and the most powerful of all the giants who conspired against Jupiter, and attempted to scale heaven. He was struck by Jupiter's thunderbolts, and chained beneath Mount Ætna.

Endymion.—In Greek mythology the setting sun, with which the moon is in love. One of the many renderings of his story is that Endymion was a beautiful youth who fed his flock on Mount Latmos. One clear night, Diana, the moon, looked down and saw him sleeping. The cold heart of the goddess was warmed by his beauty, and she came down to him, kissed him, and watched over him while he slept. Another story was that Jupiter bestowed on him the gift of perpetual youth united with perpetual sleep. One version of this myth made sleep a reward for piety, while another version made it a punishment for presuming to fall in love with Hera.

Enipeus.—A fabled river in Thessaly. Poseidon assumed the form of the god of this river in order to obtain possession of Tyro, who was in love with Enipeus. She became the mother of Pelias and Neleus.

Enyo.—One of the gray maidens who became the goddess of war, and who delights in bloodshed and the destruction of towns, and accompanies Ares in battles.

Eolus.—Known in Roman mythology as the god of the winds.

Eos.—Goddess of the morning, known as Aurora among the Romans. Every morning she arose from the couch of Tithonus to announce the coming of the day to gods and mortals.

Epaphus.—The son of Zeus and Io, born on the river Nile, after the long wanderings of his mother. He became king of Egypt, and built Memphis.

Erebus.—Son of Chaos. The name is used by the poets to signify the dark spaces under the earth through which the shades passed on their way to hades.

Ergatis.—A name given to Minerva. It means the work-woman, and was given to the goddess because she was credited with having invented spinning and weaving.

Eris.—The goddess of discord; a sister of Mars, and a daughter of Night; the same as the Roman "Discordia."

Erl-king.—Name given to the king of the elves, or a spirit of the air. According to tradition, its home is in the Black forest of Germany, and it appears as a goblin, working harm and ruin, especially among children.

Eros.—The Greek name of the deity called Cupido (Eng. *Cupid*) by the Romans. He is said to have come forth from the egg of Night, floated on Chaos, and to have inherited arrows with which he pierced all things, thereby giving new life, and a torch with which he lighted the world. See *Cupid*.

Erythela.—One of the daughters of Night, appointed to guard the golden apples in the gardens of the Hesperides.

Eumenides or **Erinyes.**—The three furies, Tisiphone, Alecto and Megære, the avenging goddesses, originally the personification of the curses pronounced upon a criminal.

Eumolpus.—A Thracian bard, son of Poseidon and Chione, was regarded as the founder of the Eleusinian mysteries, and the first priest of Demeter. His descendants continued to be her priests at Eleusis.

Euphorbus.—The son of Pantheus, one of the bravest of the Trojans, slain by Menelaus, who dedicated his shield in the temple of Hera (Juno), near Mycenæ. Pythagoras asserted that he had once been Euphorbus, and in proof of his assertion took down at first sight the shield from the temple of Hera.

Euphrosyne.—One of the three Graces. She specially represented joy, as her sisters stood for splendor and pleasure.

Europa.—A daughter of Agenor, king of Phenicia, and Telephassa. Her beauty attracted Jupiter, and to become possessed of her he assumed the shape of a handsome bull, and mingled with the herds of Agenor while Europa was gathering flowers in the meadows. She caressed the animal and mounted on his back The god crossed the sea with her, and arrived in Crete, where he assumed his proper form and declared his love. She became the mother of Minos, Sarpedon, and Rhadamanthus.

Eurydice.—Wife of Orpheus. After her death, her husband ventured to go to hell, where by the melody of his lyre he obtained from Pluto the restoration of his wife provided he did not look behind on their journey back to earth. Eager to see his wife, he looked behind, and so lost her forever.

Eurylochus.—One of the companions of Ulysses in his wanderings, and the only one of them who was not changed by Circe into a hog.

Eurystheus.—King of Argos and Mycenæ, who appointed the twelve labors of Hercules.

Eurytos.—The god made tutor to Hercules, by Mercury, who taught him the use of the bow and arrows.

Evadne.—Wife of Capaneus, and mother of Sthenelus. Her husband having been killed at the siege of Thebes, she threw herself upon the funeral pile, and was consumed with him.

Excalibur.—(Written also Excalibor, Escalibar, etc.) The name of King Arthur's sword. When about to die, he sent Sir Bedivere to throw the weapon into a lake near by. Twice eluding the request, the knight at last complied. A hand and arm rose from the water, clutched the sword, and brandished it three times; then both sank.

Fada.—A fée or kobold of the south of France, sometimes called "Hada." These house-spirits, of which, strictly speaking, there are but three, bring good luck in their right hand and ill luck in their left.

Fafnir.—In northern mythology the eldest son of the dwarf king, Hreidmar. The slaying of Fafnir is the destruction of the demon of cold or darkness who had stolen the golden light of the sun.

Fahfah.—Name given to one of the rivers of Paradise in the mythology of the east.

Fates.—In Greek and Roman mythology the Fates are identical with the Parcæ. They were three sisters, daughters of Night, whom Jupiter permitted to decide the fortune and especially the duration of mortal life. One of them, Clotho, attached the thread; the second, Lachesis, spun it; and the third, Atropos, cut it off when the end of life arrived. They were viewed as inexorable, and ranked among the inferior divinities of the lower world. Their worship was not very general. The Parcæ were usually represented as three old women, with chaplets made of wool interwoven with the flowers of the narcissus, and wearing long robes—Clotho with a distaff; Lachesis sometimes having near her several spindles; and Atropos holding a pair of scissors.

Fauni.—The fauns differ from the satyrs. They are represented in human form, but with erect and pointed ears and the tail of a goat. Ease and freedom from care are their chief characteristics. Their festival was celebrated at Rome on the 5th of December.

Faunus.—Son of Picus; who was the son of Saturnus, mythical king of Italy. Picus was a fabulous king of Latium, and a prophetic divinity. Faunus was king of the Latins, and father of Latinus. He was warshiped as the god of fields and shepherds, was sometimes identical with the Arcadian Pan of the Greeks, and was regarded as one of the founders of the religion of Latinum.

Fay.—(Fr. *fée*). A fairy; an elf.

Felicitas.—A symbolical, moral deity of the Greeks and Romans. She was the goddess of happiness and prosperity, and is frequently seen on Roman medals, in the form of a matron, with the staff of Mercury and a cornucopia.

Feng.—The name taken by Odin in the capacity of wave-stiller. Under this name he teaches mortals to distinguish between good and bad omens and to know the moods of the winds.

Flora.—The Romans had a particular goddess of blossoms and flowers, whom they worshiped under the name of Flora. She is said to have been the same as the Grecian nymph Chloris.

Fortitudo.—A deification of courage and bravery was one of the moral deities of the Romans.

Fortuna.—Known also as Fortune and sometimes as the goddess of chance, to whom was ascribed the distribution and the superintendence of prosperity and adversity in general.

Fortunatæ Insulæ.—The Isles of the Blessed, mythical islands in the Atlantic where Elysium was supposed to be placed.

Fraud.—An evil god seen by Dante between the sixth and seventh circles of the Inferno.

Freki and Geri.—The two wolves of Odin. When Odin, seated on his throne, overlooks heaven and earth, his two wolves lie at his feet.

Frey.—Scandinavian god of the sun and of rain, and hence of fertility and peace. He was one of the most popular of the northern divinities. No weapons were ever allowed in Frey's temple, although oxen and horses were sacrificed to him. His name was connected with the taking of any solemn oath, a heavy gold ring being dipped in the blood of the sacrifice and the oath sworn upon the ring. One of the most celebrated of the temples built to Frey was at Therva, in Iceland.

Freyja.—She was the sister of Frey, and the wife of Odur, who abandoned her on her loss of youth and beauty, and was changed into a statue by Odin, as a punishment. She is known as the northern goddess of beauty and love; plants were called Freyja's hair, and the butterfly, Freyja's hen.

Frigga.—In Scandinavian mythology the wife of Odin, the queen of the gods, and the mother of Baldur, Thor, etc. She sometimes typifies the earth, as Odin does the heavens. The Anglo-Saxons worshiped her as Frea. The name survives in Friday.

Frodi.—The son of Frey, a god of peace. Under his direction two giantesses turned a pair of magic millstones which ground out gold according to his wish and filled his coffers. Excited by greed he forced them to labor, allowing rest only long enough for the singing of one verse. When Frodi himself slept, the giantesses changed their song and proceeded to grind out an army of troops to invade the land. These troops represent the vikings.

Furies.—Among the divinities of the lower world were three daughters of Acheron and Night, or of Pluto and Proserpine, whose office it was to torment the guilty in Tartarus, and often to inflict vengeance upon the living. The Greeks called them "Furies."

Fylgie.—Guardian spirits in Norse mythology. Besides the Norns or Dises, who were regarded as protective deities, the Norsemen ascribed to each human being a guardian spirit named Fylgie, which attended him through life.

Gabriel.—Is called "chief of the angelic guards" in *Paradise Lost*; but in another place Michael is said to be "of celestial armies prince," and Gabriel "in military prowess next."

Gæa (Ge).—The personification of the earth among the Greeks. Among the Romans she was worshiped as Tellus.

Galatea.—A sea-nymph, beloved by Polypheme. She herself had a heartache for Acis. The jealous giant crushed his rival under a huge rock, and Galatea, inconsolable at the loss of her lover, was changed into a fountain.

Ganesa.—Goddess of wisdom, in Hindu mythology.

Gangler.—The gate-keeper in Odin's palace who gave the explanation of the northern mythology that it might be recorded.

Ganymede.—A Phrygian youth, son of Tros, king of Troy, according to Homer, and the most beautiful of all mortals, was carried off by the gods that he might fill the cup of Zeus (Jupiter), and live among the immortal gods. Later writers state that Zeus himself carried him off, in the form of an eagle, or by means of his eagle, from Mount Ida; and he is generally represented sitting on the back of a flying eagle.

Garm.—A fierce dog that kept guard at the entrance of Hel's kingdom, the realm of the dead. He could be appeased by the offering of a Hel-cake which always appeared in the hand of one who, on earth, had given bread to the needy.

Gemini.—One of the names given to the twins, Castor and Pollux, under which they were transported to dwell among the stars.

Genii or **Ginn.**—An intermediate race between angels and men. They ruled on earth before the creation of Adam.

Gerda.—Wife of Frey, and daughter of the frost giant Gymir. She is so beautiful that the brightness of her naked arms illuminates both air and sea.

Geryon.—Was a monster, said to be the offspring of Chrysaor and Callirhoë, and to have three bodies and three heads. He was monarch of three islands in the dusky west, where his numerous flocks were kept by the herdsman Eurytion, and guarded by a two-headed dog called Orthrus. The destruction of this monster formed one of the twelve labors of Hercules.

Giallar Bridge.—The bridge of death, over which all must pass.

Giallar Horn, The.—Heimdall's horn, which went out into all worlds whenever he chose to blow it. According to northern mythology, he blew a long-expected blast as a rallying call to the battle which ended the reign of the gods Odin, Frey, and Tyr.

Gian ben Gian.—In Arabia, King of the Ginns or Genii, and founder of the Pyramids. He was overthrown by Azazel or Lucifer.

Gigantes.—The Giants, sprung from the blood that dropped from Uranus upon Gæa. They fought against the gods, but were conquered with the aid of Hercules. They personified the great powers of nature—as their names signify: Cottos (eruption), Briareos (hurricane), and Gyes (earthquake). In fables the giants are beings of monstrous size, with dragons' tails and fearful countenances. They attempted to storm heaven, being armed with huge rocks and the trunks of trees, but were killed by the gods with the assistance of Hercules, and were buried under Mount Ætna and other volcanoes. In Scandinavian mythology they are described as evil genii of various forms and races, enemies of the gods. They dwelt in a territory of their own, called Giant-land. They had the power of assuming divers shapes, and of increasing or diminishing their stature at will.

Gill.—The infernal river of Scandinavian mythology.

Ginungagap.—In Norse mythology the vast chaotic gulf of perpetual twilight which existed

before the present world, and separated the region of fog from the region of heat. Giants were the first beings who came to life among the icebergs that filled this vast abyss.

Gladsheim.—The palace of Odin, in which were the great hall Valhalla (the hall of the slain) and the twelve seats occupied by the gods when holding council.

Glasir.—A marvelous grove in Asgard, in which the leaves were all of shimmering red gold.

Glendoveer.—In Hindu mythology is a kind of sylph, the most lovely of the good spirits.

Gnome.—One of a class of spirits or imaginary beings which were supposed to tenant the interior parts of the earth, and in whose charge mines, quarries, etc., were left. Rübezahl, of the German legends, is often cited as a representative of the class.

Goblins and Bogies.—Familiar demons of popular superstition, a spirit which lurks about houses. It is also called hobgoblin. Goblin is used in a serious sense by Shakespeare in *Hamlet*, where the ghost is supposed to be a "spirit of health or goblin damned."

Golden Apples, The.—The golden apples in the gardens of the Hesperides were a great treasure which was thought to be altogether unattainable. The gardens were watched by a monstrous dragon, and to bring the golden fruit to Eurystheus was one of the tasks imposed upon Hercules.

Golden Fleece.—Ino persuaded her husband, Athamas, that his son Phryxos was the cause of a famine which desolated the land, and he ordered him to be sacrificed to the angry gods. Phryxos made his escape over sea on a "ram which had a golden fleece." When he arrived at Colchis, he sacrificed the ram to Zeus, and gave the fleece to King Æetes, who hung it on a sacred oak. It was afterward stolen by Jason in his celebrated Argonautic expedition.

Gorgons, The.—Three sisters, with heads covered with serpents. Two of them, Stheno and Euryale, were immortal, while Medusa was mortal. Originally a beautiful maiden, she was transformed into a gorgon by Athena for profaning her temple, and her appearance was so terrible that those who gazed upon her were changed into stone. She was killed by Perseus, and Athena placed her head in the center of her shield.

Graces.—To the retinue of Venus belonged the Graces, servants and companions of the goddess. They were said to be daughters of Jupiter and Eurynome, or, according to others, of Bacchus and Venus herself, and were three in number—Splendor, Pleasure, and Joy. They were honored, especially in Greece, and had temples in the principal cities. Altars were often erected to them in the temples of other gods, especially in those of Mercury, Venus, and the Muses.

Grida.—Wife of Odin and mother of Vidar. She lent Thor her girdle, staff, and glove, warning him to beware of treachery.

Gripir.—A horse-trainer, servant of Odin, who could foretell events of the future. He could teach a young hero all that he might need to know. He is compared to Chiron the Centaur.

Hades or Pluto.—Brother of Zeus and Poseidon, obtained the kingdom of the lower world in the division of the world among the three brothers, and his name was often used as synonymous with the abode of the shades. He carried off and married Persephone, or Proserpine.

Hamadryades.—Nymphs, each of whom was born and died with the tree in which she lived.

Harmonia.—A daughter of Menelaus and Helen. She was privately promised in marriage to Orestes, the son of Agamemnon; but her father, ignorant of the engagement, gave her hand to Pyrrhus, the son of Achilles, whose services in the Trojan war he had valued.

Harpies.—Winged monsters who had the face of a woman, the body of a vulture, and feet and angers armed with claws. They were three in number—Aëllo, Ocypete, and Cæleno—and were daughters of Pontus and Terra.

Hebe.—Daughter of Zeus and Hera. She served as cupbearer to the gods until Hercules was received among them, when she was given to him in marriage.

Hecate.—A mysterious threefold goddess, daughter of Perses and Asteria, sometimes identified with Selene in heaven, Artemis on earth, and Proserpine in the lower world.

Hector.—Son of Priam and Hecuba, the bravest of the Trojan heroes. He married Andromache. Upon his killing Patroclus, friend of Achilles, the latter was roused to vengeance. He pursued Hector and slew him, and then dragged his body at his chariot wheels into the camp of the Greeks.

Hecuba.—Daughter either of Dymas of Phrygia, or of Cissius king of Thrace, wife of Priam. She was carried away as a slave by the Greeks, and was either transformed into a dog or threw herself into the sea.

Heimdall.—In northern tales a god who lived in the celestial fort Himinsbjorg, under the farther extremity of the bridge Bifrost, and kept the keys of heaven. He is the watchman or sentinel of Asgard, sees even in sleep, can hear the grass grow, and even the wool on a lamb's back. Heimdall, at the end of the world, will wake the gods with his trumpet.

Helena.—Daughter of Zeus and Leda, the most beautiful woman of Greece. In her youth she was carried off by Theseus, but was rescued by her brothers Castor and Pollux. She married Menelaus, but was seduced and carried to Troy by Paris. The Greek chiefs who had been her suitors resolved to take vengeance, and accordingly sailed against Troy. After the death of Paris she married his brother Deiphobus. When Troy was captured Helena betrayed Deiphobus to the Greeks, and became reconciled to Menelaus, with whom she lived until his death. The accounts of her death differ.

Helicon.—A range of mountains in Bœotia, sacred to Apollo and the Muses, from which sprung the fountains of the Muses—Aganippe and Hippocrene.

Helios.—The god of the sun, called Sol by the Romans.

Helle.—Daughter of Athamas and Nephele and sister of Phryxus. When his stepmother Ino was about to sacrifice Phryxus to Zeus, Nephele rescued her two children, who rode away through the air on a ram with the golden fleece, which Hermes gave. Between Sigeum and the Chersonesus, Helle fell into the sea, which received the name of Hellespontus in consequence.

Hellen.—Son of Deucalion and Pyrrha, mythical ancestor of all the Greeks.

Hell Shoon.—In Icelandic mythology indispensable for the journey to Valhalla as the obolus for crossing the Styx.

Helmet of Hades.—A helmet borrowed from Pluto and worn by Perseus, rendering him invisible. Minerva lent him her buckler; and Mercury, wings, winged shoes, and a short curved sword. After he had slain Medusa he restored them again, and presented the gorgon's head to Minerva, who placed it in the middle of her shield.

Hera.—Greek name for the wife of Jupiter, known among the Romans as Juno. Hera was worshiped in many parts of Greece, but more especially at Argos, in the neighborhood of which she had a splendid temple, on the road to Mycenæ. She had also a temple in Samos. Hera was usually represented as a majestic woman of mature age.

Heraclidæ.—Name given to the descendants of Hercules, who, in conjunction with the Dorians, conquered the Peloponnesus eighty years after the destruction of Troy, or B. C. 1104, according to mythical chronology. This legend represents the conquest of the Achæan population by Dorian invaders, who henceforward appear as the ruling race in the Peloponnesus.

Hercules.—The most celebrated of the Grecian heroes. He was the son of Jupiter and Alcmena. The birth of Hercules was attended with many miraculous events. Before he was eight months old Juno sent two snakes to devour him, which he seized, and crushed to death. He achieved a series of enterprises known as the "Twelve Labors of Hercules." These were: (1) To slay the Nemean lion; (2) To destroy the hydra which infested the marshes of Lerna; (3) to bring to Eurystheus the Arcadian stag with the golden horns and brazen hoofs; (4) to bring to his master the boar of Erymanthus; (5) to cleanse the stable of King Augeas, in which 3,000 oxen had been kept for thirty years, and which had never been cleaned out; (6) to destroy the Stymphalides, terrible carnivorous birds; (7) to capture the bull that was desolating Crete; (8) to capture the mares of Diomedes, which breathed fire from their nostrils, and ate human flesh; (9) to procure the girdle of Hippolyte, queen of the Amazons; (10) to bring to Eurystheus the flesh-eating oxen of Geryon, from the island of Erythea; (11) to bring away some of the golden apples from the gardens of the Hesperides; (12) to bring up from hades the three-headed dog Cerberus. Besides these labors he performed numerous other difficult feats. He was conducted by Mercury to Omphale, queen of Lydia, became her slave, and he permitted her to dress in his armor while he was sitting to spin with her female servants. He delivered Dejanira from the Centaur Nessus, whom he killed. The Centaur, as he expired, gave Dejanira a mystic tunic, which, in a jealous paroxysm, she gave to Hercules to put on, which he had no sooner done than he was seized with a desperate distemper which was incurable. He erected a burning pile on Mount Œta, on which he cast himself. Jupiter surrounded the burning pile with smoke, amidst which Hercules, after his mortal parts were consumed, was carried to heaven in a chariot drawn by four horses.

Hermes.—One of the twelve great Greek divinities, son of Zeus and Maia. He was the herald of the gods and the god of eloquence, prudence and skill, and conducted the shades of the dead from the upper to the lower world. He also was the patron of commerce and riches, and inventor of the lyre. The Romans identified their god Mercurius with Hermes.

Hermione.—A daughter of Mars and Venus, who married Cadmus. She was changed into a serpent, and placed in the Elysian fields.

Hero.—A beautiful priestess of Venus, greatly enamored of Leander, who used to swim across the Hellespont to see her, while she directed his course by holding a burning torch on the top of a high tower. One stormy night Leander was drowned, whereupon Hero threw herself into the sea and perished also.

Hesperides.—The Hesperides are called daughters of Night, because their origin and existence are veiled in darkness. Their names were Ægle, Erytheia, and Arethusa; and they were appointed to guard the golden apples, which were the gift of Earth to Juno on her wedding day. The celebrated gardens of the Hesperides abounded with fruits and were carefully guarded by a dragon which never slept.

Hesperus.—A supposed son or brother of Atlas enrolled among the deities after death, and made identical with the evening star.

Hestia.—The Greek name for Vesta. She was the goddess of the domestic hearth.

Hippocrene.—A fountain of the Muses, on Mount Helicon, in which they bathed. "The whole mountain was celebrated for its fresh rills, and cool groves, and flowery slopes"; and the legends of the locality, as if in sympathy with its natural features, were free from the harshness characterizing those of other mountains more wild and rugged.

Hippolyte.—A queen of the Amazons, given in marriage to Theseus by Hercules. Hippolytus was their son.

Hippolytus.—Son of Theseus and Hippolyte. His stepmother, Phædra, fell in love with him. He fled to the seashore, where, his horses taking fright and rushing among the rocks, his chariot was broken into pieces, and he was killed. According to some accounts, he was restored to life by Diana.

Hippomenes.—Son of Megareus, and great-grandson of Poseidon (Neptune). He conquered Atalanta in a foot-race by dropping three golden apples, one by one, which she stopped to pick up. By this delay she lost the race.

Hobomoko.—An evil spirit known among American Indians.

Hödeken.—A famous German kobold, or domestic fairy servant; so called from wearing a little felt hat pulled down over his face.

Hoder.—In Norse mythology a blind god who destroyed his brother Balder, at the instigation of Loki, without meaning to do so. He is the type of night and darkness, as Balder is of light and day.

Hofvarpnir.—The fleet steed of Ina, in Scandinavian legend, which traveled through fire and air and enabled his messenger of the gods to see all that was happening on the earth.

Honir.—In Asgard tales, name given to the god of mind or thought.

Horæ.—Daughters of Zeus and Themis, the goddesses of the order of nature and of the seasons. They guarded the doors of Olympus, and promoted the fertility of the earth.

Horus.—The Egyptian god of the sun, son of Osiris and Isis, who was also worshiped in Greece and at Rome.

Hugin.—One of Odin's two ravens, which carried him news from earth, and, when not thus employed, perched upon his shoulders. The personification of thought or intellect.

Hugon.—A kind of evil spirit in the popular superstition of France—a sort of ogre made use of to frighten children.

Hundred-eyed.—Argus, in Greek and Latin fable. Juno appointed him guardian of Io, but Hermes killed him with a stone; whereupon Juno transplanted his eyes into the tail of her peacock.

Hyacinthus.—A youth beloved by Apollo, and accidentally slain by him while playing at quoits. From his ashes sprang the flower which bears his name.

Hyades.—Daughters of Atlas and one of the Oceanides. They were five in number, and were changed into a constellation called the Hyades.

Hydra.—A celebrated monster which infested the neighborhood of Lake Lerna, in the Peloponnesus. It was one of the labors of Hercules to destroy the monster, which he accomplished with the aid of Iolas.

Hygeia.—The goddess of health, daughter of Æsculapius. She was held in great veneration among the ancients.

Hymenæus or Hymen.—The god of marriage among the Greeks. He was the son of Bacchus and Venus, or, according to some, of Apollo and one of the Muses.

Hyperboreans.—A fabulous people, supposed to live beyond the north wind, in a land of perpetual sunshine.

Hyperion.—A son of Cœlus and Terra, who married Thea. Aurora was their daughter. The name Hyperion is often used by the poets to signify the sun; as, for instance, by Shakespeare in *Titus Andronicus*.

> Even from Hyperion's rising in the east.
> Until his very downfall in the sea.

Also in *Troilus and Cressida* and other of Shakespeare's plays, the same license is used.

Hypermnestra.—One of the Danaides, who were the fifty daughters of Danaus. She was ordered by her father to murder her husband Lynceus on the night of their marriage, which she refused to do. Danaus wished to punish her for her disobedience, but afterward forgave her, and left his kingdom at his death to Lynceus.

Hypsipyle.—A queen of Lemnos, daughter of Thoas. During her reign, Venus, whose altars had been slighted, punished the Lemnian women by causing their husbands' affections to be estranged from them. This enraged the women, and they put to death their male relatives, except

in the case of Hypsipyle, who spared her father Thoas.

Iacchus.—The solemn name of Bacchus in the Eleusinian mysteries, whose name was derived from the boisterous song called *Iacchus*. In these mysteries Iacchus was regarded as the son of Zeus and Ceres, and was distinguished from the Theban Bacchus (Dionysus), the son of Zeus and Semele.

Iapetos.—The father of Atlas and ancestor of the human race, called the progeny of Iapetes. By many considered the same as Japheth.

Icarius.—An Athenian who hospitably received Dionysus in Attica, and was taught the cultivation of the vine.

Icaros.—Son of Dædalos, who flew with his father from Crete; but the sun melted the wax with which his wings were fastened on, and he fell into the sea, hence called the Icarian.

Ida.—A mountain range of Mysia, in Asia Minor, celebrated in mythology as the scene of the rape of Ganymede and of the judgment of Paris. In Homer the summit of Ida is the place from which the gods watch the battles in the plain of Troy. It is an ancient seat of the worship of Cybele. A mountain in Crete, known as Mount Ida, was closely connected with the worship of Jupiter.

Idæan Mother.—Cybele, who had a temple on Mount Ida, in Asia Minor.

Idomeneus.—Son of Deucalion. He led the Cretan forces against Troy, and was one of the bravest of the Greek heroes of the Trojan war. On his return, being overtaken by a storm, he vowed to sacrifice to Poseidon the first object he met on landing. This was his son, whom he accordingly sacrificed. A plague was sent upon Crete in consequence, and Idomeneus was banished.

Iduna or **Idun.**—Daughter of the dwarf Svald, and wife of Bragi. She kept in a box the golden apples which the gods tasted as often as they wished to renew their youth. Loki on one occasion stole the box, but the gods compelled him to restore it. Iduna seems to personify that part of the year when the sun is north of the equator. Her apples indicate fruits generally. Loki carries her off to Giant-land when the sun descends below the equator, and he steals her apples. In time, Iduna makes her escape, in the form of a sparrow, when the sun again rises above the equator; and both gods and men rejoice in her return.

Ifing.—In Scandinavian mythology the great stream between the earth and the sacred lands, whose waters never froze.

Ilus.—Son of Tros and Callirrhoë the founder of Ilium, called also Troy after his father.

Inachus.—One of the river-gods, a son of Oceanus and Tethys, and father of Phoroneus and Io. He was the first king of Argos, and is said to have given his name to the river Inachus.

Indra.—In Hindu mythology the ever-youthful god of the firmament, and the omnipotent ruler of the elements. He is a most important personage in Indian fable. In the Vedic period of the Hindu religion, he occupied a foremost rank, and, though degraded to an inferior position in the Epic, he long enjoyed a great legendary popularity. In works of art he is represented as riding on an elephant.

Ino.—Daughter of Cadmus and Harmonia, married to Athamas after the death of Nephele.

Io.—Daughter of Inachus, and beloved by Zeus, who changed her into a white heifer to escape Hera's jealousy. Hera set Argus to watch her, and Zeus directed Hermes to steal her away. Finally Hermes killed Argus. Hera then sent a gadfly to torment Io, who wandered from land to land over all the earth, finding rest at last on the Nile, where she was restored to her natural form. She was afterward identified with Isis.

Iolaus.—Son of Iphicles, relative and faithful companion of Hercules.

Ion.—Son of Apollo and Creusa, fabulous ancestor of the Ionians.

Iphicles.—Son of Amphitryon and Alcmene, and brother of Hercules.

Iphigenia.—A daughter of Agamemnon and Clytemnestra. When the Greeks, going to the Trojan war, were detained at Aulis by contrary winds, they were informed by a soothsayer that, to appease the gods, they must sacrifice Iphigenia to Diana. As the fatal knife was about to be plunged into her, Iphigenia suddenly disappeared, and a goat of great beauty was found in the place where she had stood ready for the sacrifice.

Irene.—The Roman goddess of peace, and daughter of Zeus and Themis, and one of the Horæ.

Iris.—Daughter of Thaumas and Electra, messenger of the gods, especially of Hera. The rainbow was considered the road on which she traveled, and she was therefore identified with it.

Irus.—The beggar of gigantic stature who kept watch over the suitors of Penelope. His real name was Arneos, but the suitors nicknamed him Irus because he carried their messages for them. Ulysses, on his return, felled him to the ground.

Isis.—The Egyptian goddess of the earth, also identified with the moon. Her worship prevailed extensively in Greece, and also in Rome under the emperors.

Israfil.—Known among Arabians as the angel of music, who possessed the most melodious voice of all God's creatures. This is the angel who is to sound the resurrection trump, and make music for the saints in paradise. Israfil, Gabriel and Michael were the three angels that warned Abraham of Sodom's destruction.

Ithaca.—In mythology the island-kingdom of Ulysses. The city of Ithaca, the residence of Ulysses, was situated on a precipitous, conical hill, now called "eagle's cliff," occupying the whole breadth of the isthmus. Ithaca was also the home of Penelope.

Ithuriel.—One of the angels commissioned by Gabriel to search for Satan, who had effected his entrance into paradise.

Ixion.—King of the Lapithæ, treacherously killed Deioneus. Zeus purified him, and carried him to heaven, giving him a seat at the table of the gods.

Jamshid.—King of the genii, famous for a golden cup full of the elixir of life. This cup, hidden by the genii, was discovered while digging the foundations of Persepolis.

Janus.—An ancient king who reigned in Italy. He was a native of Thessaly, and, according to some writers, a son of Apollo. He built a town which he called Janiculum. Some authors make him to have been son of Cœlus and Hecate. He is represented with two faces, because he was acquainted with the past and future. His temple was always open in time of war, and was shut when peace existed.

Jason.—In Greek legend, king of Iolchos in Thessaly, celebrated for his share in the Argonautic expedition. On his return to Iolchos with Medea as his wife, he avenged the murder of his parents and his brother by putting Pelias to death. Unable to retain possession of his throne, however, he fled to Corinth, where, after some time, he married Glauce (or Creusa), daughter of the king, and put away Medea and her children. Different accounts are given of his death.

Jinn.—A sort of fairies in Arabian mythology, the offspring of fire. They are governed by a race of kings named Suleyman, one of whom "built the pyramids." Their chief abode is the mountain Kâf, and they appear to men under the forms of serpents, dogs, cats, monsters, or even human beings, and become invisible at pleasure. The evil jinn are ugly, but the good are beautiful. According to fable, they were created from fire two thousand years before Adam was made of earth.

Jord.—Daughter of Night and mother of Thor. In Scandinavian mythology the name given to primitive earth.

Jove.—Known in classical mythology as the god of thunder. The name Jove is but another appellation, rarely given to Zeus or Jupiter.

Juggernaut or **Jaggernaut.**—A Hindu god. The temple of this god is in a town of the same name in Orissa.

Juno.—A celebrated deity among the ancients, daughter of Saturn and Ops. Jupiter married her, and the nuptials were celebrated with the greatest solemnity in the presence of all the gods. By her marriage with Jupiter, Juno became the queen of all the gods, and mistress of heaven and earth. She presided over marriage, and patronized those of her sex who were distinguished for virtuous conduct. Paris gave her great offense by giving the golden apple, as an award to beauty, to Venus instead of herself.

Jupiter.—The chief of all the gods of the ancients. According to Varro, there were three hundred persons of that name. To him of Crete, who passed for the son of Saturn and Ops, the actions of the rest have been attributed. Jupiter was educated in a cave on Mount Ida, in Crete, and fed with the milk of the goat Amalthæa. While he was very young he made war on the Titans, whom he conquered. The beginning of his reign in the supernal regions was interrupted by the rebellion of the giants who were sons of the earth, and who were desirous of revenging the death of the Titans; but by the aid of Hercules Jupiter overpowered them. Jupiter married Metis, Themis, Ceres, Euronyme, Mnemosyne, Latona, and Juno. His worship was universal: he was the Ammon of the Africans, the Belus of Babylon, and the Osiris of Egypt.

Kama.—The Hindu god of love. His wife is Rati (pleasure). He is shown riding on a parrot or a sparrow, holding in his hand a bow of flowers and five arrows, each tipped with the bloom of a flower supposed to conquer one of the senses. His power is so much exalted that even the god Brahma is said to succumb to it.

Kami.—The gods of ancient Japan. The name, in modern times, designates any spiritual saint, and may also be applied to a prince.

Kaswa.—The camel admitted into Moslem paradise, the favorite camel of Mohammed which fell on its knees in adoration when "the prophet" delivered the last clause of the Koran to the assembled multitude at Mecca.

Kederli.—In Mohammedan mythology is a god corresponding to the English St. George, and is still invoked by the Turks when they go to war.

Kelpie.—In mythology of Scotland a spirit of the water seen in the form of a horse. Each lake has its kelpie.

Kobold.—A house-spirit in German superstition. In northern lands the name is sometimes used in place of elf or dwarf, representing an underground spirit. Probably the same as the Scotch brownie.

Koppelberg.—The hill which miraculously opened to receive the children who followed the Pied Piper. This belongs to mythology, as people in the middle ages considered Odin as the leader of disembodied spirits, and from this came the Pied Piper. The rats were the restless souls of the dead, which the Pied Piper released by drowning.

Krishna.—In Hindu mythology the eighth incarnation of Vishnu. According to some authorities, he is considered distinct from all the Avatars, as these had only a portion of the divinity, and Krishna was Vishnu himself in form of "the Black One."

Kronos.—Kronos (Time) was the youngest of the Titans, and as the heavens measure out time to us, and earth is considered its beginning, he is said to be born of Uranos and Ge. He was generally worshiped under the name of Saturn.

Kuvera.—In Hindu mythology the god of riches, represented as frightfully deformed, and as riding in a car drawn by hobgoblins.

Lab.—The sorceress-queen in *Arabian Nights*. She tried to change Beder, the young king of Persia, into a halting, one-eyed hack; but Beder was forewarned, and changed Lab herself into a mare.

Lachesis.—One of the three Fates, or Parcæ. She spun the thread of life.

Ladon.—The dragon who guarded the apples of the Hesperides, and was slain by Hercules. Ladon is also the name of the father of Daphne and Metope.

Læding.—In Norse mythology the strong chain with which the wolf Fenris was bound. He easily broke the chain, and from this legend has grown the saying, "to get loose out of Læding." A stronger chain was known as Droma.

Laërtes.—A king of Ithaca who married Anticlea, daughter of Autolycus. Ulysses was their son, and succeeded him on the throne, Laërtes retiring to the country, and devoting his time to gardening, in which employment he was found by Ulysses on his return from the Trojan war, after twenty years' absence.

Laocoon.—A priest of Apollo who, in the Trojan war, was opposed to the admission of the wooden horse to the city. For this, as a punishment, two enormous serpents were sent to attack him, which they did while, accompanied by his two sons, he was offering a sacrifice to Neptune. The serpents coiled round him and his sons, and crushed them to death.

Laodamia.—The wife of Protesilaus, who was slain before Troy. She begged to be allowed to converse with her dead husband for only three hours, and her request was granted. Hermes (Mercury) led Protesilaus back to the upper world; and, when Protesilaus died a second time, Laodamia died with him.

Laomedon.—The king who built the walls of Troy, assisted by Neptune and Apollo, who had displeased Jupiter, and were sent to work for wages. Neptune built the walls of Troy, while Apollo tended the king's flocks on Mount Ida. When the two gods had done their work, Laomedon refused the reward he had promised, and expelled them from his dominions. Neptune sent a sea-monster to ravage the country; and a maiden, chosen by lot, was from time to time sacrificed to propitiate it.

Lapithæ.—A mythical people of Thessaly, noted for their defeat of the Centaurs.

Lares.—Gods of inferior power at Rome, who presided over houses and families. They were two in number, sons of Mercury and Lara.

Latinus.—A son of Faunus and Marica, king of the Aborigines in Italy, who from him were called Latini.

Latona.—A daughter of Cœus the Titan and Phœbe. She was admired for her beauty by Jupiter. Juno made Latona the object of her vengeance, and sent the serpent Python to persecute her.

Leander.—A youth of Abydos. He was passionately in love with Hero, a young girl of Sestos. He was in the habit of swimming across the Hellespont to visit her, in doing which, on a tempestuous night, he was drowned. Lord Byron performed the same feat in 1810, an exploit which he has celebrated in verse in his occasional pieces. He expresses surprise that, as the truth of Leander's story had been questioned, no one had hitherto tested its practicability.

Leda.—A daughter of King Thespius and Eurythemis, who married Tyndarus, king of Sparta. She is famous for her intrigue with Jupiter. She was the mother of Pollux, Helena, Castor, and Clytemnestra. She is said to have received the name of Nemesis after death.

Lemures.—The specters or spirits of the dead. They were said to wander about at night as specters, and to torment and frighten the living. In order to propitiate them the Romans celebrated the festival of the *Lemuralia* or *Lemuria*.

Lethe.—The river that separates hades from the Elysian fields. The Greeks believed in a magical power of the waters of this river, which the souls of all the dead are obliged to taste, that they may forget everything said and done in the earth.

Liber.—An ancient Roman divinity of wines, identified afterward with Bacchus.

Libertas.—The goddess of liberty, to whom several temples were erected at Rome. Libertas is represented in works of art as a matron, with the pileus, the symbol of liberty, or a wreath of laurel.

Sometimes she appears holding the Phrygian cap in her hand.

Libissa.—Queen of fays and fairies.

Libitina.—An ancient goddess of Rome, who presided over the burial of the dead. At her temple at Rome everything necessary for funerals was kept, and persons might there either buy or hire such things. Hence a person undertaking the burial of a person (an undertaker) was called "libitinarius," and his business "libitina."

Lidskialf.—The throne of Alfadir, whence he can view the whole universe.

Lif.—In Norse mythology the name given to man who is to occupy the purified earth when goodness resumes its sway.

Lilinau.—In American Indian folk-lore Lilinau was wooed by a phantom. She followed his green waving plume through the forest, and was never seen again.

Lilith.—In Hebrew mythology a female specter who lies in wait for children in order to destroy them. The older traditions tell of Lilith as a former wife of Adam and the mother of demons. Amulets were worn as protection from her powers.

Lobaircin.—In Irish mythical tales a fairy shoemaker resembling an old man, who resorts to out-of-the-way places, where he is discovered by the noise of his hammer. He is rich, and, while any one keeps his eye fixed upon him, cannot escape, but the moment the eye is withdrawn he vanishes.

Lofn.—The Scandinavian god who guards friendship.

Lofua.—The Scandinavian goddess who reconciles lovers.

Loki.—The great god of fire in Norse mythology.

Lorelei.—In German legend a siren who haunted a rock of the same name on the right bank of the Rhine. She combed her hair with a golden comb, and sang a wild song which enticed fishermen and sailors to destruction on the rocks and rapids at the foot of the precipice. In northern mythology Lorelei is represented as immortal, a daughter of the Rhine, and dwelling in the river bed.

Lotis.—A nymph, who, to escape the embraces of Priapus, was metamorphosed into a tree, called, after her, Lotus.

Lubins.—A species of goblins in Normandy that take the form of wolves, and frequent churchyards. They are very timorous, and take flight at the slightest noise.

Lucifer.—The planet Venus when a morning star, called by the Greeks Phosphorus. The same star when seen in the evening was called Hesperus or Vesper.

Lucina.—The goddess who presides at the birth of children. She was a daughter of Jupiter and Juno.

Lud.—In ancient British mythology the king of the Britons.

Luna.—She was the daughter of Hyperion and Theia, and was distinct in name, descent, and story from Diana, who was taken as goddess of the moon. To Luna was ascribed great influence in relation to the birth of men. Luna seems to have been especially worshiped by the Atlantides.

Lycomedes.—A king in the island of Scyros, to whose court Achilles was sent, disguised as a maiden, by his mother, Thetis, who was anxious to prevent his going to the Trojan war. Some traditions say that Lycomedes treacherously killed Theseus by throwing him from a rock.

Mænalus.—A mountain in Arcadia, extending from Megalopolis to Tegea, celebrated as the favorite haunt of the god Pan. The Roman poets frequently use the adjectives "Mænalius" and "Mænalis" as equivalent to Arcadian.

Mæra.—The dog of Icarios. Icarios, having made wine, gave it to some shepherds, who, thinking themselves poisoned, killed him; recovering themselves, they buried him. His daughter, Erigone, being shown the spot by his faithful dog Mæra, hung herself through grief.

Mammon.—In demonology, placed at the head of nine ranks of demons. Also a Syriac word used in the scriptures to signify either riches or the god of riches. By poetic license, Milton makes Mammon one of the fallen angels.

Manes.—The name given by the Romans to the spirits of the departed. The god of funerals and tombs.

Mani.—Name given in ancient Norse mythology to the moon. Later known as the son of Mundilfori; taken to heaven by the gods to drive the moon-car. He is followed by a wolf, which, when time shall be no more, will devour both Mani and his sister Sol.

Manitou.—The great spirit of American Indians.

Mars.—The god of war, was the son of Jupiter and Juno, or of Juno alone, according to Ovid. The loves of Mars and Venus are greatly celebrated. On one occasion, while in each other's company, Vulcan spread a net around them, from which they could not escape without assistance. They were thus exposed to the ridicule of the gods till Neptune induced Vulcan to set them at liberty. During the Trojan war Mars interested himself on the side of the Trojans, and defended the favorites of Venus with great determination.

Marsyas.—A celebrated piper of Cœne in Phrygia. He challenged Apollo to a trial of skill in music, which challenge was accepted, the Muses being appointed umpires. The palm of victory was awarded to Apollo, who tied his antagonist to a tree and flayed him.

Medea.—A celebrated magician, daughter of Æetes, king of Colchis, and niece of Circe. When Jason came to Colchis in quest of the Golden Fleece, Medea fell in love with him, and they exchanged oaths of fidelity; and, when he had overcome all the difficulties which he had to encounter, Medea embarked with him for Greece. She lived in Corinth with her husband Jason for ten years, with much conjugal happiness, when he became enamored with Glauce, daughter of Creon, king of Corinth. To avenge herself on Jason she caused the destruction of Glauce, and killed her two children in his presence.

Medusa.—One of the three gorgons, daughter of Phorcys and Ceto. She was the only one of the gorgons subject to mortality. She was celebrated for her personal charms and the beauty of her hair, which Minerva changed into serpents. According to Apollodorus and others, the gorgons were born with snakes on their heads instead of hair, and with yellow wings and brazen hands. Perseus rendered himself famous by his conquest of Medusa. He cut off her head and placed it on the ægis of Minerva. The head had the power of changing those who looked at it into stone.

Megæra.—One of the furies; sometimes said to personify a guilty conscience.

Megin-giord.—A magic belt worn by the god Thor. He once proposed to show his strength by lifting great weights, but when challenged to pick up the giant's cat, he tugged and strained, only to succeed in raising one paw from the floor, although he had taken the precaution to enhance his strength as much as possible by tightening his belt Megin-giord.

Meleager.—A celebrated hero of antiquity who signalized himself in the Argonautic expedition, and especially by killing the Calydonian boar, a famous event in mythological history.

Melissa.—A nymph, said to have discovered the use of honey, and from whom bees were believed to have received their name. There can be no doubt, however, that the name really came from a Greek word meaning honey, and was hence given to nymphs.

Mellona.—One of the rural divinities, the goddess of bees.

Melpomene.—One of the Muses, daughter of Jupiter and Mnemosyne. She presided over tragedy. She is generally represented as a young woman wearing a buskin, and holding a dagger in her hand.

Melusina.—The most noted among French fairies. She was condemned to become every Saturday a serpent from the waist downward, as a punishment for having, by means of a charm, inclosed her father in a high mountain, in order to avenge an injury her mother had received from him. She married Raymond, count of Poitiers, and, having been seen by him during her loathsome transformation—in violation of his solemn promise never to visit her on a Saturday—was immured in a subterranean dungeon of the castle of Lusignan.

Memnon.—A king of Ethiopia, son of Tithonus and Aurora. He came with ten thousand men to assist Priam in the Trojan war, where he behaved with great courage, and killed Antilochus, Nestor's son, on which Nestor challenged Memnon to fight, but he refused on account of the great age of the challenger; but he fought Achilles, who killed him. A statue was erected in his honor which had the property of uttering a melodious sound every day at sunrise.

Mendes.—An Egyptian god like Pan. He was worshiped in the form of a goat.

Menelaus.—King of Lacedæmon, brother of Agamemnon and husband of Helena. After Helena's flight with Paris, Menelaus and Ulysses went to Troy to demand her restitution; on the failure of their attempt Menelaus and his brother organized the expedition against Troy. After the capture of the city he became reconciled to Helena, and they lived happily in Sparta.

Mentor.—A friend of Ulysses, to whom the latter confided the care of his house and the instruction of his son Telemachus on departing for the Trojan war.

Mephistopheles.—One of the seven chief devils in the old demonology, the second of the fallen archangels, and the most powerful of the infernal legionaries after Satan. He figures in the old legend of *Dr. Faustus* as the familiar spirit of that magician. To modern readers he is chiefly known as the cold, scoffing, relentless fiend of Goethe's *Faust* and the attendant demon in Marlowe's *Faustus*.

Mercury.—Has been identified with the Greek Hermes. The Romans of later times transferred all the attributes and myths of Hermes to their own god. The Fetiales, however, never recognized the identity; and, instead of the "caduceus," they used a sacred branch as the emblem of peace. The resemblance between Mercurius and Hermes is indeed very slight. The worship of Mercury was very common among Egyptians, Greeks, and Romans, and many temples were consecrated to him. At Rome there was a particular festival held for the expiation of merchants, in honor of Mercury.

Meriones.—A Cretan hero, son of Molus, who was one of the bravest heroes in the Trojan war, and usually fought along with his friend Idomeneus.

Mermaids.—Wave maidens of northern mythology, and classed with nymphs in Grecian and Roman. They were generally represented as young and beautiful virgins, partially covered with a veil or thin cloth, bearing in their hands vases of water, or shells, leaves, or grass, or having something as a symbol of their appropriate offices. They were attendants of the gods.

Merope.—One of the Pleiades, daughter of Atlas, and wife of Sisyphus.

Merops.—King of Cos, whose wife was killed by Artemis for neglecting to worship her. Merops tried to kill himself, but was changed to an eagle, and placed among the stars.

Meru.—In Hindu mythology a sacred mountain, 80,000 leagues high, situated in the center of the world. It is the abode of Indra, and abounds with every charm that can be imagined. The Olympus of the Indians.

Midas.—A king of Phrygia, son of Gordius or Gorgias. According to some traditions, in the early part of his life he found a treasure, to which he owed his greatness and opulence. He showed hospitality to Silenus, in return for which Bacchus permitted him to choose whatever recompense he pleased. He demanded of the god that whatever he touched might be turned into gold. His wish was granted; but, when the very food which he attempted to eat became gold in his mouth, he prayed Bacchus to revoke the favor, and he was ordered to wash himself in the river Pactolus, the sands of which were turned into gold by the touch of Midas. Afterward, in consequence of maintaining that Pan was superior to Apollo in singing and playing the flute, he had his ears changed into those of an ass by the god.

Midgard.—In Scandinavian mythology the name given to the earth. Out of the giant's flesh they fashioned Midgard (middle garden), as the earth was called, which was placed in the exact center of the vast space, and hedged all around with Ymir's eyebrows, which formed its bulwarks or ramparts. The solid portion of Midgard was surrounded by the giant's blood or sweat, which now formed the ocean, while his bones made the hills, his flat teeth the cliffs, and his curly hair the trees and all vegetation.

Midgardsormen (earth's monster).—The great serpent that lay in the abyss at the root of the celestial ash. Child of Loki.

Milo.—A celebrated Crotona athlete, who is said to have felled an ox with his fist, and to have eaten the beast in one day.

Mimir.—In Scandinavian mythology the god of wisdom. Also god of the ocean, which is called "Mirmir's well," in which wit and wisdom lay hidden, and of which he drank every morning from the horn Gjallar.

Minerva.—The goddess of wisdom, war, and all the liberal arts, sprang, full-grown and armed, from the head of Jupiter, and was immediately admitted to the assembly of the gods, and became one of the most faithful counselors of her father. Her power in heaven was great; she could hurl the thunders of Jupiter, prolong the life of men, and bestow the gift of prophecy. She was known among the ancients by many names. She was called Athena, Pallas, Parthenos, Tritonis, and Hippia, Sais, and other names. She is usually represented with a helmet on her head with a large plume on it, in one hand holding a spear, and in the other a shield with the head of Medusa on it. Temples were erected for her worship in different places, one of the most renowned of which was the Parthenon at Athens. She was the tutelar deity of the city of Athens.

Minos the Second.—Was a son of Lycastes, the son of Minos the first, and king of Crete. He married Pasiphæ, the daughter of Sol and Perseis.

Minotaur.—A celebrated monster, half a man and half a bull, for which a number of young Athenian men and maidens were yearly exacted to be devoured. The Minotaur was confined in a famous labyrinth, where at length it was slain by Theseus, who was guided out of the labyrinth by a clew of thread given to him by Ariadne, daughter of King Minos.

Mithras.—In Persian mythology one of the principal gods of the ancient Persians, a personification of the sun. He was regarded as a mediator between the two opposite deities, Ormuzd and Ahriman, or the principle of good and the principle of evil.

Mjolnir.—From mythology of northern lands. The name of Thor's celebrated hammer—a type of the thunderbolt—which, however far it might be cast, was never lost, as it always returned to his hand; and which, whenever he wished, became so small that he could put it in his pocket.

Mnemosyne.—A daughter of Cœlus and Terra, mother of the nine Muses. Jupiter assumed the form of a shepherd in order to enjoy her company.

Moloch.—A god of the Phenicians to whom human victims, principally children, were sacrificed. Moloch is figurative of the influence which impels us to sacrifice that which we ought to cherish most dearly.

Momus.—The god of mirth amongst the ancients according to Hesiod, was the son of Nox. He amused himself by satirizing the gods by turning into ridicule whatever they did.

Moakkibat.—A class of angels, according to the Mohammedan mythology. Two angels of this class attend every child of Adam from the cradle to the grave. At sunset they fly up with the record of the deeds done since sunrise. Every good deed is entered ten times by the recording angel on the credit or right side of his ledger, but when an evil deed is reported the angel waits seven hours, "if happily in that time the evil-doer may repent."

Moiræ.—The Greek name for Parcæ, or the Fates. These grave and mighty goddesses were represented by the earliest artists with staffs or scepters, the symbols of dominion. They received the same homage as the Furies.

Morpheus.—A minister of the god Somnus, who imitated very naturally the gestures, words, and manners of mankind. He is sometimes called the god of sleep. He is generally represented as a sleeping child of great corpulence, with wings.

Mowis.—The bridegroom of Snow, (who according to American Indian tradition) wooed and won a beautiful bride; but when morning dawned, Mowis left the wigwam, and melted into the sunshine. The bride hunted for him night and day in the forests, but never saw him more.

Musæ.—The Muses, certain goddesses who presided over poetry, music, dancing, and all the liberal arts. They were daughters of Jupiter and Mnemosyne, and were nine in number—Clio, Euterpe, Thalia, Melpomene, Terpsichore, Erato, Polyhymnia, Calliope, and Urania.

Myrmidons.—The trusty followers of Achilles. They are said to have inhabited originally the island of Ægina, and to have emigrated with Peleus into Thessaly. The Myrmidons disappear from history at a later period.

Mysterious Three, The.—In Scandinavian mythology were Har "the Mighty," the "Like-Mighty," and the "Third Person," who sat on three thrones above the rainbow. Then came the Æsir, of which Odin was chief, who lived in Asgard (between the rainbow and earth); next came the Vanir, or gods of the ocean, air, and clouds, of which deities Niörd was chief.

Naiads.—The nymphs of fresh water, whether of rivers, lakes, brooks, or springs. Many of these nymphs presided over springs which were believed to inspire those who drank of them.

Naraka.—The hell of the Hindus. It has twenty-eight divisions, in some of which the victims are mangled by ravens and owls; in others they are doomed to swallow cakes boiling hot, or walk over burning sands.

Narcissus.—A beautiful youth, who, for his unfeeling heart, was caused by Nemesis to see his own image reflected in a fountain and to become enamored of it. He gradually pined away and was changed into the flower which bears his name.

Nausicaa.—A daughter of Alcinous, king of the Peæacians, and Arete, who conducted Ulysses to the court of her father.

Nectar.—Wine conferring immortality, and drunk by the gods.

Neleus.—Son of Poseidon and Tyro, brother of Pelias. He was cast off by his mother and brought up by countrymen. He settled in Pylos, and became father of Nestor. He and all his sons except Nestor were killed by Hercules.

Nemean Lion.—A monstrous lion, near the forest of Nemea, which wasted the surrounding country and threatened destruction to the herds. Hercules promised to deliver the country of the monster, and Thespius rewarded Hercules by making him his guest so long as the chase lasted. Hercules slew the lion, and henceforth wore its skin as his ordinary garment, and its mouth and head as his helmet.

Nemesis.—One of the infernal deities, daughter of Nox. She was the goddess of vengeance. She is made one of the Parcæ by some mythologists, and is represented with a helm and a wheel. The term is sometimes used to signify vengeance itself.

Neoptolemus.—Called also Pyrrhus, son of Achilles and Deidamia; he was one of the Greek heroes concealed in the wooden horse, and killed Priam. Andromache fell to his lot, and he became by her father of several children. He married Hermione and was killed at Delphi.

Neptune.—In Roman mythology the divine monarch of the ocean. The principal exploits and merits ascribed to Neptune are the assistance to Jupiter against the Titans; the building of the walls and ramparts of Troy; the creation and taming of the horse; the raising of the Island Delos out of the sea; and the destruction of Hippolytus by a monster from the deep.

Nereus.—A son of Pontus and Gæa, and husband of Doris, by whom he became the father of the fifty nereides.

Nessus.—A centaur who attempted to carry off Dejanira but was shot by Hercules with a poisoned arrow. His poisoned blood was afterward the cause of Hercules' death.

Nestor.—King of Pylos, son of Neleus. He was spared by Hercules when his brothers and father were killed. In his youth he was a distinguished warrior, taking part in the Calydonian hunt and Argonautic expedition. At the siege of Troy he was of advanced age, and distinguished for his wisdom and eloquence.

Nickar or **Hnickar.**—The name assumed by Odin when he personated the destroying principle.

Nicneven.—A gigantic and malignant female spirit of the old popular Scottish mythology. The hag is represented as riding at the head of witches and fairies at Hallowe'en.

Nidhögg.—The dragon that gnaws at the root of Yggdrasil, the tree of the universe in Scandinavian mythology.

Nifiheim.—Mist-home of old Norse mythology. The region of endless cold and everlasting night, ruled over by Hela. It consists of nine worlds, to which are consigned those who die of disease or old age. This region existed "from the beginning" in the north, and in the middle thereof was the well Hvergelmir, from which flowed twelve rivers.

Ninus.—A son of Belus. He built Nineveh and founded the Assyrian monarchy, of which he was the first sovereign, B. C. 2059. He married Semiramis, whose husband had destroyed himself through fear of Ninus. He reigned fifty-two years.

Niobe.—A daughter of Tantalus, king of Lydia, and Euryanassa, or Dione. She married Amphion, and, according to Hesiod, they had ten sons and ten daughters. All the sons of Niobe expired by the darts of Apollo, and all the daughters, except Chloris, were destroyed by Diana. Niobe, overwhelmed with grief, was changed into a stone.

Niörd.—The Scandinavian sea-god. He was not one of the Æsir. Niörd's son was Frey (the fairy of the clouds), and his daughter was Freyja. His home was Noatun. Niörd was not a sea-god like Neptune, but the spirit of water and air. The Scandinavian Neptune was Ægir, whose wife was Skadi. His temples were near the seashore and all aquatic plants belonged to him.

Nisus.—A Trojan youth who accompanied Æneas to Italy, after the fall of Troy, and who is celebrated for his devoted attachment to Euryalus.

Nix.—Little creatures not unlike the Scotch brownie and German kobold. They wear a red cap, and are ever ready to lend a helping hand to the industrious and thrifty.

Nokomis.—Daughter of the moon, American Indian myths. Sporting one day with her maidens on a swing made of vine canes, a rival cut the swing, and Nokomis fell to earth, where she gave birth to a daughter named Wenonah.

Nornir or **Norns.**—The three fates of Scandinavian mythology, past, present, and future. They spin the events of human life, sitting under the ash-tree Yggdrasil which they carefully tend. Their names are Urda (the past), Verdandi (the present), and Skuld (the future). Besides these three Norns, every human creature has a personal Norn or fate. The home of the Norns is called in Scandinavian mythology Doomstead.

Nox.—Goddess of night, considered among the ancients as one of their oldest divinities, and was worshiped by them with great solemnity.

Nymphæ.—The nymphs, female divinities of a lower class. They were divided into: (1) Nymphs of the watery element, comprising the Oceanides, nymphs of the ocean; Nereides, nymphs of the Mediterranean; Naiades, the naiads or fresh water nymphs. (2) Nymphs of mountains and grottoes, called Oreades. (3) Nymphs of forests and groves, called by different names. (4) Nymphs of trees (supposed to die with the trees which had been their abode), known as Dryads and Hamadryads.

Oceanides and **Oceanitides.**—Sea nymphs, daughters of Oceanus, from whom they received their name. According to Apollodorus, they were 3,000 in number, while Hesiod speaks of them as consisting of forty-one.

Oceanus.—A powerful deity of the sea, son of Cœlus and Terra. He married Tethys, the Oceanides being their children.

Odhærir.—In Scandinavian mythology the mead or nectar made of Kvasir's blood, kept in three jars. The second of these jars is called "Sohn," and the third "Bohn." Probably the nectar is the "spirit of poetry."

Odin.—The king of gods and men, and the reputed progenitor of the Scandinavian kings. He corresponds both to the Jupiter and the Mars of classical mythology. As god of war, he holds his court in Valhalla, surrounded by all warriors who have fallen in battle, and attended by two wolves, to whom he gives his share of food; for he himself lives on wine alone. On his shoulders he carries two ravens, Hugin (mind) and Munin (memory), whom he dispatches every day to bring him news of all that is doing throughout the world. He has three great treasures, namely, Sleipnir, an eight-footed horse of marvelous swiftness; Gungnir, a spear, which never fails to strike what it is aimed at; and Draupnir, a magic ring, which every ninth night drops eight other rings of equal value. The German tribes worshiped Odin under the name of "Woden." The fourth day of the week, Wednesday, was sacred to him.

Odur.—In Scandinavian mythology, husband of Freyja, whom he deserted. He abandoned his wife on her loss of youth and beaty, and was punished.

Odysseus.—A Greek form of the name Ulysses.

Œdipus.—He was the son of Laius, king of Thebes and his wife Jocasta. Laius, having been warned by an oracle that his throne and life were in danger from this son, gave him to a hersdman to be killed. But his life was saved, and he was reared by a peasant. Afterward he ransomed Thebes from the Sphinx by answering her riddle, unwittingly killed his own father, married Jocasta, and became king of Thebes. Subsequently discovering his parentage, he destroyed his eyesight, and wandered away from Thebes, attended by his daughter Antigone, who remained with him till his death.

Ægir.—God of the ocean, whose wife is Ran. They had nine daughters, who wore white robes and veils. These daughters are the billows, etc.

Orges.—In nursery mythology giants of very malignant dispositions, who live on human flesh.

Olympia.—Celebrated games which received their name either from Olympia, where they were observed, or from Jupiter Olympus, to whom they were dedicated.

Olympus.—A mountain in Macedonia and Thessaly. The ancients supposed that it touched the heavens, and thus they have made it the residence of the gods, and the place where Jupiter held his court. On the top of the mountain, according to the poets, eternal spring reigned.

Omphale.—A queen of Lydia, daughter of Iardanus, and wife Tmolus, after whose death she reigned herself. The story is frequently told of Hercules serving her as a slave, and of his wearing her dress, while Omphale put on the skin and carried the club.

Ops.—A daughter of Cœlus and Terra, the same as the Rhea of the Grecks, who married Saturn, and became mother of Jupiter. She was known among the ancients by the different names of Cybele, Bona Dea, Magna Mater, Thya, Tellus, and Proserpina.

Orestes.—A son of Agamemnon and Clytemnestra. His father was slain by Clytemnestra and Ægisthus, but young Orestes was saved, and married a sister of Agamemnon. He was indulgently treated by Strophius, who educated him with his son Pylades. The two young princes formed the most inviolable friendship. When Orestes had arrived at years of manhood he avenged his father's death by killing his mother, Clytemnestra.

Orion.—A giant and hunter, who, when intoxicated, offered violence to Merope, and was in consequence deprived of his eyesight. His eyesight was restored, and he lived as a hunter with Artemis. He was placed among the stars after his death.

Orithyia.—A daughter of Erechtheus, beloved by Boreas, who carried her off as she was wandering near the river Ilissus.

Orlog.—A god of Norse fable personifying the eternal law of the universe, from whose decree there was no appeal.

Ormuzd.—The name of the supreme deity of the ancient Persians, and of their descendants, the Parsees and Ghebers. He is an embodiment of the principle of good, and was created by the will of the great eternal spirit, Zervan-Akharana, simultaneously with Ahriman, the principle of evil, with whom he is in perpetual conflict. Ormuzd is the creator of the earth, sun, moon, and stars, to each of which he originally assigned its proper place, and whose various movements he continues to regulate.

Orpheus.—A legendary character, son of Œagrus and Calliope. He was instructed by the Muses, and enchanted with his lyre not only wild animals but trees and rivers. He accompanied the Argonauts, and on his return married Eurydice, who died from a serpent's bite. To recover her, Orpheus visited the infernal regions, when Pluto promised him his wife on condition that he should not look back on her until he had reached the upper world. He turned around, however, to see if she was following, and she disappeared from his sight. His grief made him reject the advances of the Thracian women, who in revenge drowned the sound of his lyre with their shrieks, and tore him to pieces in a Bacchanalian orgy.

Osiris.—A great deity of the Egyptians, husband of Isis. The ancients differ in opinion concerning this celebrated god, but they all agree that as ruler of Egypt he took care to civilize his subjects, to improve their morals, to give them good and salutary laws, and to teach them agriculture. He was worshiped under the form of an ox.

Ossa.—A celebrated mountain in the north of Thessaly, connected with Pelion on the southeast, and divided from Olympus on the northwest by the vale of Tempe. It is mentioned in the legend of the war of the giants.

Pactolus.—The river whose sands turned to gold when Midas washed in the waters by order of Bacchus.

Paimosaid.—In American Indian myths a walking thief, especially one who walks through cornfields about harvest time to pluck the ears of maize or corn.

Palæmon.—Originally called Melicertes. Son of Ino; called Palæmon after he was made a sea-god. The Roman Portunus, the protecting god of harbors, is the same.

Palamedes.—Son of Nauplius and Clymene, a Greek warrior at the siege of Troy. Agamemnon, Diomedes, and Ulysses caused a Phrygian captive to write to Palamedes a letter in the name of Priam, which they concealed in his tent. They then accused him of treachery, and upon finding the letter, caused him to be stoned to death.

Pales.—The goddess of shepherds, presiding over cattle and pastures, whose festival, the Paliha was celebrated on the 21st of April, the day of which Rome was founded.

Palladium.—A sacred image of Athena, which was supposed to keep safe the city in which it was preserved. Zeus threw it from heaven as Ilus was beginning to build Troy, and Ilus built a sanctuary for it. Ulysses and Diomedes carried it away.

Pallas.—A name of Minerva. She is said to have received the name because she killed a noted giant bearing that name.

Pan.—The god of shepherds, huntsmen, and the inhabitants of the country. He was in appearance a monster; he had two small horns on his head, and his legs, thighs, tail, and feet were like those of the goat. He was the inventor of the syrinx or shepherd's flute. Sudden fright without visible cause, a panic, was ascribed to Pan. The Romans identified Faunus with him.

Pandarus.—A son of Lycaon, who aided the Trojans in their war with the Greeks. He broke the truce which had been agreed on by the contending armies, and wounded Menelaus and Diomedes. He was at last killed by Diomedes.

Pandion.—King of Athens, father of Procne and Philamola, in whose reign Bacchus and Demeter are said to have come to Attica.

Pandora.—The first woman on earth. When Prometheus stole fire from heaven Zeus bade Hephæotus to make a woman from earth. Aphrodite gave her beauty, Hermes boldness and cunning, and each god gave some gift. Hermes took her to Epimetheus, who married her. In his house was a jar which he had been forbidden to open. Pandora was tempted by curiosity to open the lid, when all the evils incident to humanity poured out, and she had only time to shut the lid, preventing the escape of Hope.

Pantheon.—A celebrated temple at Rome, built by Agrippa in the reign of Augustus, and dedicated to all the gods.

Parcæ.—The Fates, powerful goddesses who presided over the birth and life of mankind. They were three in number, Clotho, Lachesis, and Atropos, daughters of Nox and Erebus, according to Hesiod, or, according to what he says in another place, of Jupiter and Themis.

Paris.—In Greek mythology, the second son of Priam, king of Troy, by Hecuba. His mother dreamed before his birth that she had brought forth a firebrand, which was interpreted to mean that he would cause the destruction of Troy. To prevent this the child was exposed on Mount Ida, where he was discovered by a shepherd, who brought him up as his own son. Here his grace and courage commended him to the favor of Œnone, a nymph of Ida, whom he married. At the marriage of Peleus and Thetis a dispute arose whether Hera, Athena, or Aphrodite was the most beautiful, and as such entitled to the golden apple. Paris was chosen judge, and decided in favor of Aphrodite, who had promised him the fairest woman in the world for his wife. Subsequently he visited Sparta, the residence of Menelaus, who had married Helena (or Helen), the fairest woman of the age, whom he persuaded to elope with him. This led to the siege of Troy, at the capture of which he was killed by an arrow.

Parnassos or **Parnassus.**—A mountain near Delphi, in Greece. It contained numerous caves, glens, and romantic ravines. It has two summits, one of which was consecrated to Apollo and the Muses, the other to Bacchus. It was anciently called Larnassos, from larnax, an ark, because Deucalion's ark stranded there after the flood. After the oracle of Delphi was built at its foot it received the name of Parnassos. It is celebrated as one of the chief seats of Apollo and the Muses, and an inspiring source of poetry and song.

Parthenope.—One of the sirens, whose dead body was washed ashore on the present site of Naples. She threw herself into the sea out of love for Ulysses.

Patroclus.—The gentle and amiable friend of Achilles in Homer's *Illiad*.

Pauguk.—Name given to the great power, death, in American Indian mythology.

Pau-Puk-Keewis.—In American Indian folk-lore a mischievous magician, who is pursued by Hiawatha, goes through a series of wonderful transformations in his endeavors to escape, and finally becomes an eagle.

Pax.—The goddess of peace, worshiped in Greece under the name Irene. Pax wears a crown of laurel, and holds in her hand the branch of an olive tree.

Peboan.—In America Indian folk-lore the personification of winter in form of a great giant who shook the snow from his hair and turned water into stone by his breath.

Pegasus.—The winged horse which sprung from the blood of Medusa. He ascended to the immortals and was used by Zeus to carry thunder and lightning. He was also the horse of the Muses.

Peleus.—King of the Myrmidons at Phthia in Thessaly. Having in conjunction with his brother Telamon murdered his half-brother Phocus, he was expelled by Æacus from Ægina and went to Thessaly. He was purified from the murder by Eurytion who gave Peleus his daughter Antigone in marriage, and a third part of his kingdom.

Pelias.—The name of the spear of Achilles, which was so large that none could wield it but the hero himself.

Pelion.—A high mountain in Thessaly celebrated in mythology. Near its summit was the cave of the Centaur Chiron. The giants, in their war with the gods, are said to have attempted to heap Ossa and Olympus on Pelion, or Pelion and Ossa on Olympus, in order to scale heaven. On Pelion the timber was felled with which the ship Argo was built.

Pelops.—Son of Tantalus and Dione, husband of Hippodamia, king of Pisa in Elis; from him the southern peninsula of Greece, or the Peloponnesus, derived its name. His father once invited the gods to a banquet, and killed Pelops and served him; they refused to taste the dish, and he was restored to life.

Penates.—The household gods of the Romans, in which were included the Lares.

Penelope.—The faithful wife of Ulysses, who being importuned, during his long absence, by numerous suitors for her hand, postpones making a decision among them until she shall have finished weaving a funeral pall for her father-in-law, Laërtes. Every night she secretly unravels what she has woven by day, and thus puts off the suitors till Ulysses returns.

Peri.—Peris are delicate, gentle, fairy-like beings of eastern mythology, begotten by fallen spirits. They direct with a wand the pure in mind the way to heaven. These lovely creatures, according to the Koran, are under the sovereignty of Eblis; and Mohammed was sent for their conversion, as well as for that of man.

Persa or **Perseis.**—A daughter of Oceanus, and wife of Helios (the sun), by whom she became the mother of Æetes, Circe, Pasiphaë, and Perses.

Perseis.—A name given to Hecate, as the daughter of Perses by Asteria.

Persephone.—The Greek name of Proserpine. Homer describes her as the wife of Hades (Pluto), and the formidable, venerable, and majestic queen of the shades, who rules over the souls of the dead, along with her husband.

Perseus.—Son of Zeus and Danaë. Polydectes, the king of Seriphos, to which Danaë and Perseus were borne in the boat in which they were set afloat when Perseus was born, treated them kindly, but, falling in love with Danaë, he dispatched Perseus to fetch the head of the Gorgon Medusa. Under the guidance of Athena and Hermes, he obtained the winged sandals, the helmet of Pluto which rendered him invisible, the magic wallet, and buckler which served as a mirror. By help of the mirror he cut off Medusa's head and escaped and went to Æthiopia, where he discovered and saved Andromeda. He afterward returned to Argos with her, and accidentally killed Acrisius, his grandfather, by hitting him with a quoit.

Phædra.—A daughter of Minos and Pasiphaë, who married Theseus. She became the mother of Acamas and Demophoön. She brought an unjust accusation against Hippolytus (a son of Theseus before she married him), who was killed by the horses in his chariot taking fright, causing him to be thrown under the wheels and crushed to death. On hearing this, Phædra acknowledged the falseness of the charge she had brought against Hippolytus, and hanged herself in despair.

Phaëton.—Son of Helios and Olymene. He obtained from his father permission to drive the chariot of the sun for one day. He was unable to control the horses, and they rushed so near the earth as to set it on fire. Zeus killed him with a thunder bolt and flung him into the river Eridanus. His sisters, for their excessive grieving, were changed into poplars.

Phaon.—Originally an old and ugly boatman of Mitylene, who received youth and beauty from Aphrodite for carrying her across the sea without accepting pay. Sappho is said to have fallen in love with him and to have leaped from the Leucadian rock on his slighting her. But, while Sappho is a historical character, Phaon is purely mythical.

Philoctetes.—A celebrated archer, friend and armor-bearer of Hercules, whose bow and poisoned arrows he inherited. On his voyage to Troy he was wounded in the foot either by a snake or one of his own arrows. The wound produced an intolerable stench, and Philoctetes was left alone in Lemnos. Subsequently he was sent for, as Troy could not be taken without the arrows of Hercules. At Troy he was cured, and killed, among others, Paris.

Philomela.—A daughter of Pandion, king of Athens. Her sister Procne had married Tereus, king of Thrace, and, being separated from Philomela, spent her time in great melancholy. Tereus treated Philomela with great cruelty. In poetry we frequently find the nightingale alluded to as Philomela.

Phœbe.—The goddess of the moon, and sister of Phœbus; a name of Diana. See *Diana*.

Phœbus.—The god of archery, prophecy, and music. He was the son of Jupiter and Latona, and brother of Diana (Artemis). He was god of the sun, as Diana, his sister, was the goddess of the moon.

Phœnix.—A fabulous bird described as being as large as an eagle; its head finely crested with a beautiful plumage, its neck covered with gold-colored feathers, its tail white, and its body purple or crimson.

Phryxus.—Son of Athamas and Nephele and brother of Helle. He was to be sacrificed to Zeus in consequence of the intrigues of his stepmother Ino. Nephele rescued her children, who rode away on the ram with the golden fleece. He arrived safely in Colchis, married Chalciope, daughter of Æetes, and sacrificed the ram to Zeus.

Phyllis.—A daughter of Sithon, or, according to some authorities, of Lycurgus, king of Thrace. She received Demophoön, who landed on her coasts on his return from the Trojan war, and fell in love with him, and he reciprocated her affection; but afterward proving faithless, Phyllis hanged herself, and, according to an old tradition, was changed into an almond tree.

Picus.—King of Latium, son of Saturn, who married Venilia. As he was hunting he was met by Circe, who became enamored with him. She changed him into a woodpecker.

Pierides.—A name given to the Muses, because they were born in Pieria, or, as some say, because they were supposed to be the daughters of Pierus, a king of Macedonia, who settled in Bœotia.

Pirene.—A celebrated fountain of Corinth, at which Bellerophon is said to have caught the horse Pegasus. It gushed forth from the rock in the Acrocorinthus, was conveyed down the hill by subterraneous conduits, and fell into a marble basin, from which the greater part of the town was supplied with water. The poets frequently used Pirenis in the general sense of Corinthian.

Pleiades.—Means the "sailing stars," because the Greeks considered navigation safe at the return of the Pleiades, and never attempted it after those stars disappeared. The Pleiades were the seven daughters of Atlas and Pleione, named Electra, Alcyone, Celæno, Maia, Sterope, Taygete, and Merope. They were transformed into stars, one of which (Merope) is invisible, out of shame because she alone married a human being. Some call the invisible star "Electra," and say she hides herself from grief for the destruction of the city and royal race of Troy.

Pluto.—He was a second brother of Jupiter, and received, as his portion in the division of empire, the infernal regions, or the world of shades. The chief incident in the history of Pluto is his seizure and abduction of Proserpine, who thereby became his wife, and the queen of the lower world.

Plutus.—The god of riches; was probably of allegorical rather than mythical origin, since his name in Greek is but the common term for wealth.

Pluvius.—"The sender of rain," a surname of Jupiter among the Romans, to whom sacrifices were offered during long-protracted droughts.

Podalirius.—The son of Æsculapius, and brother of Machaon, with whom he led the Thessalians of Tricca against Troy. He was, like his brother, skilled in the medical art.

Pollas.—Meaning "the goddess protecting the city." A surname of Athena at Athens, where she was worshiped as the protecting divinity of the Acropolis.

Polites.—A son of Priam and Hecuba, and father of Priam the younger. He was slain by Pyrrhus.

Pollux.—A son of Jupiter and Leda, brother to Castor.

Polydorus.—(1) King of Thebes, son of Cadmus and Harmonia, husband of Nycteis, and father of Labdacus. (2) Son of Priam and Hecuba. When Ilium was on the point of falling into the hands of the Greeks, Priam intrusted Polydorus and a large sum of money to Polymnestor, king of the Thracian Chersonesus.

Polyhymnia.—Daughter of Jupiter and Mnemosyne. One of the Muses, who presided over singing and rhetoric.

Polyphemus.—A celebrated Cyclops, son of Neptune and Thoösa, the daughter of Phorcys. He is represented as a monster with one eye in the middle of his forehead. Ulysses was his captive, but escaped by putting a firebrand in the monster's eye.

Polyxena.—Daughter of Priam and Hecuba, beloved by Achilles, and whose treachery led to the latter's death. Neoptolemus slew her on the tomb of his father.

Pomona.—A nymph at Rome, who was supposed to preside over gardens and to be the goddess of fruit trees.

Ponemah.—In American Indian mythology the name of the land of the future life, or the spirit-land.

Poseidon.—Called Neptune by the Romans; was the god of the Mediterranean Sea. He was a brother of Zeus (Jupiter), and Hades (Pluto), and it was determined by lot that he should rule over the sea. The palace of Poseidon was in the depth of the sea, near Ægæ, where he kept his horses with brazen hoofs and golden manes. With these horses he rides in a chariot over the waves of the sea, which become smooth as he approaches, while the monsters of the deep play around his chariot. Poseidon, in conjunction with Apollo, is said to have built the walls of Troy for Laomedon.

Priamus.—The last king of Troy, was son of Laomedon, by Strymo, called Placia by some writers. He married Arisba, whom he divorced in order to marry Hecuba, by whom he had a number of children, the most celebrated of whom were Hector, Paris, Deiphobus, Helenus, Laodice, and Cassandra. After he had reigned some time, Priam was anxious to recover his sister Hesione, who had been carried into Greece by Hercules, and to achieve this, he manned a fleet, the command of which he gave to his son Paris, who instead of obeying the

paternal instructions, carried away Helen, the wife of Menelaus, king of Sparta. This caused the Trojan war, which lasted for ten years. At the end of the war Priam was slain by Neoptolemus, the son of Achilles.

Prometheus.—Son of the Titan Iapetus and Clymene, and brother of Atlas, Menœtius, and Epimetheus. He is represented as the great benefactor of men in spite of Zeus (Jupiter). He stole fire from heaven in a hollow tube, and taught mortals all useful arts. In order to punish men, Zeus gave Pandora as a present to Epimetheus, in consequence of which diseases and sufferings of every kind befell mortals. He also chained Prometheus to a rock on Mount Caucasus, where in the daytime an eagle consumed his liver, which was restored in each succeeding night. Prometheus was thus exposed to perpetual torture; but Hercules killed the eagle and delivered the sufferer, with the consent of Zeus, who in this way had an opportunity of allowing his son to gain immortal fame.

Proserpina.—A daughter of Ceres and Jupiter, called by the Greeks Persephone. As she was gathering flowers Pluto carried her off to the infernal regions, where he married her. Ceres, having learned that her daughter had been carried away by Pluto, demanded of Jupiter that Pluto should be punished. As queen of hell, Proserpine presided over the death of mankind. She was known by the names of Hecate, Juno Inferna, Libitina, and several others.

Proteus.—A sea deity, son of Oceanus and Tethys, or, according to some writers, of Neptune and Phœnice. He had received the gift of prophecy from Neptune, but when consulted he often refused to give answers, and puzzled those who consulted him by assuming different shapes.

Psyche.—A beautiful maiden who excited the envy of Venus, who bade her son Cupid to inspire her with a love for the basest of mortals. Cupid fell in love with her himself and conveyed her away to a lonely spot where, unseen and unknown, he visited her, bidding her never seek to know who he was. Her curiosity overcame her and she lighted a lamp to look upon him as he slept. A drop of oil fell from the lamp and woke him, and he left her with reproaches. She wandered about seeking her lover, and finally fell into the power of Venus, who forced her to perform the severest and most humiliating services, in which she was secretly aided by Cupid. She at length overcame Venus' enmity, was made immortal, and reunited to Cupid. The word Psyche means the soul.

Pukwana.—The smoke from the calumet or peace-pipe among American Indians. The pipe was made from stone found near the headwaters of the Mississippi. A quarry, located near the mountains, was famous among the Indians, who had made the adjacent territory neutral ground. Here they came and provided themselves with pipes. To apply the stone to any other use than that of pipe-making would have been sacrilege in their mind. From the color, they even fancied it to have been made, at the great deluge, out of the flesh of the perishing Indian.

Puk-Wudjies.—The pygmies of American Indian folk-lore; little wild men of the woods.

Pygmalion.—A grandson of Agenor. He made a beautiful statue, which he fell so deeply in love with, that Venus, at his earnest petition, gave it life.

Pythia.—The priestess of Apollo and Delphi. She is represented as crowned with laurels and seated on a tripod similarly adorned and placed over a chasm whence arose a peculiar vapor.

Pylades.—Son of Anaxibia, sister of Agamemnon. His father was king of Phocis; and after the death of Agamemnon, Orestes was secretly carried to his father's court. Here Pylades contracted that friendship with Orestes which became proverbial.

Pyramus.—The lover of Thisbe, who, on account of her supposed death, stabbed himself under a mulberry tree. Thisbe, afterward, finding the body of her lover, killed herself on the same spot with the same weapon; and the fruit of the mulberry has ever since been as red as blood. See *Thisbe.*

Pyrrhus.—Known also as Neoptolemus, a son of Achilles, remarkable for his cruelty at the siege of Troy. He was slain at Delphi, at the request of his own wife, by Orestes.

Python.—A celebrated serpent sprung from the mud and stagnated waters which remained on the surface of the earth after the deluge of Deucalion. Apollo killed the monster.

Quirinus.—An Italian divinity, identified with Romulus as assimilated to Mars.

Rachaders.—In Indian mythology the second tribe of giants or evil genii, who had frequently made the earth subject to their kings, but were ultimately punished by Shiva and Vishnu.

Radegaste.—In Slavonic mythology a tutelary god of the Slavi. The head was that of a cow, the breast was covered with an ægis, the left hand held a spear, and a cock surmounted its helmet.

Ragnarök (twilight of the gods).—The day of doom, when the present world and all its inhabitants will be annihilated. Vidar and Vali will survive the conflagration, and reconstruct the universe. In Scandinavian mythology the belief is taught that after this time the earth or realm will become imperishable and happiness sure.

Rahu.—In Hindu mythology the demon that causes eclipses. One day Rahu stole into Valhalla to quaff some of the nectar of immortality. He was discovered by the Sun and Moon, who informed against him, and Vishnu cut off his head. As he had already taken some of the nectar into his mouth, the head was immortal; and he ever afterward hunted the Sun and Moon, which he caught occasionally, causing eclipses.

Rakshas.—Evil spirits in Hindu myths, who guard the treasure of Kuvera, the god of riches. They haunt cemeteries and devour human beings; assume any shape at will, and their strength increases as the day declines. Some are hideously ugly, but others, especially the female spirits, allure by their beauty.

Ravana.—According to Indian mythology, was fastened down between heaven and earth for 10,000 years by Siva's leg, for attempting to move the hill of heaven to Ceylon. He is described as a demon giant with ten faces.

Ravens.—According to an oracle from the gods, delivered at ancient Athens, ravens prognosticate famine and death because they bear the characteristics of Saturn, the author of these calamities, and have a very early perception of the malign influence of that planet.

Remores.—Birds which retard the execution of a project.

Rhadamanthus.—A son of Jupiter and Europa, brother of Minos, and king of Lycia. He was so renowned for his justice and equity, that, after death, he was made one of the three judges in the underworld.

Rhamnus.—A daughter of Nox, and otherwise known as Nemesis. The city of Rhamnus was under her special patronage.

Rhea.—Daughter of Uranus and Gæa, a goddess of the earth. By Cronos she became mother of Hera, Pluto, Poseidon, Zeus, and other divinities.

Rhesus.—Marched to the assistance of Troy. An oracle had declared that the city could not be taken if his horses drank the water of the Xanthus and fed on Trojan grass. Ulysses and Diomedes slew Rhesus and carried off his horses.

Romulus.—According to tradition, the founder of Rome. He was a son of Mars and Ilia, and was twin brother of Remus. The twins were thrown into the Tiber, but were saved and suckled by a she-wolf till they were found by Faustulus, a shepherd, who brought them up. Disputes arising between the brothers in reference to the building of the city, Romulus caused Remus to be slain.

Saga.—Goddess of history in Scandinavian mythology.

Salamander.—A fabulous animal supposed by the ancients to live in and have the quality of eating fire.

Salmoneus.—King of Elis, who, wishing to be thought a god, used to imitate thunder and lightning by driving his chariot over a brazen bridge, and darting burning torches on every side.

Salus.—The Roman goddess of health and prosperity.

Sarpedon.—A Lycian prince, son of Zeus and Laodamia. He was killed at the siege of Troy by Patroclus.

Saturnus.—The son of Cœlus, or Uranus, by Terra. It was customary to offer human victims on his altars till this custom was abolished by Hercules. He is generally represented as an old man bent with age, and holding a scythe in his right hand.

Saturnalia.—Feasts in honor of Saturn. Slaves were reputed masters during the three days they lasted; were at liberty to say what they pleased; and were served at table by their owners. These festivities were held annually toward the end of December.

Satyr.—A sylvan deity, or demigod, represented as a monster, half man and half goat; having horns on his head, a hairy body, with the feet and tail of a goat. They belong in the train of Bacchus, and have been distinguished for lasciviousness and riot. Although mortal, they are superior to the cares and sorrows of mortal life.

Scylla.—A maiden whose body the enchantress Circe changed below the waist into frightful monsters always barking. The old Greek story is that Circe was jealous of Scylla, and so deformed her by pouring the juice of poisonous herbs into the water in which she bathed. This sudden metamorphosis so terrified Scylla that she threw herself into the sea, and became the rocks which bear her name.

Sedrat.—The lotus tree which stands on the right-hand side of the invisible throne of Allah. Its branches extent wider than the distance between heaven and earth. Its leaves resemble the ears of an elephant. Each seed of its fruit incloses an houri; and two rivers issue from its roots. Numberless birds sing among its branches, and numberless angels rest beneath its shade.

Segesta.—A rural divinity who protected corn during harvest time.

Semele.—Daughter of Cadmus and Harmonia, at Thebes, and accordingly sister of Ino, Agave, Autonoë, and Polydorus. She was beloved by Zeus (Jupiter). Hera (Juno), stimulated by jealousy, appeared to her in the form of her aged nurse Beroë, and induced her to ask Zeus to visit her in the same splendor and majesty with which he appeared to Hera. Zeus warned her of the danger of her request; but as he had sworn to grant whatever she desired, he was obliged to comply with her prayer. He accordingly appeared before her as the god of thunder, and Semele was consumed by the lightning; but Zeus saved her child Dionysus (Bacchus), with whom she was pregnant. Her son afterward carried her out of the lower world, and conducted her to Olympus, where she became immortal under the name of Thyone.

Serapis or Sarapis.—An Egyptian divinity whose worship was introduced into Greece in the time of the Ptolemies. His worship was introduced into Rome together with that of Isis.

Seriswattee.—The Janus of Hindu mythology.

Sex.—Milton says that spirits can assume either sex at pleasure, and Michael Psellus asserts that demons can take what sex, shape, and color they please, and can also contract or dilate their form at pleasure.

Silenus.—A demigod who is represented generally as a fat old man riding on an ass, with flowers crowning his head.

Silvanus or Sylvanus.—A deity presiding over woods, forests, and fields. He is also called the protector of the boundaries of fields.

Sirens.—They were a sort of sea goddesses, said by some to be two in number, by others, three, and even four. They lured to destruction those who listened to their songs. When Ulysses sailed past their island he stopped the ears of his companions with wax, and had himself tied to the mast of his ship. Thus he passed with safety, and the sirens, disappointed of their prey, drowned themselves.

Sirius.—Known in mythology as the faithful dog of Orion, and set in the heavens as a bright star by Diana when she mourned the display of her archery which caused Orion's death.

Sisyphus.—Son of Æolus and Enaretta. After death he was condemned, in the infernal regions, to roll a stone to the summit of a hill, which always rolled back, and rendered his punishment eternal.

Siva.—The third of the Hindu triad of divinities, who, among a thousand names, bears also that of Mahadeva. The greatest confusion exists as to his attributes; now he is said to be the destroyer, and now the creative principle.

Sol.—The Greeks and Romans worshipped Apollo as the god and dispenser of light, and in view of this attribute named him Phœbus; yet they conceived another distinct divinity, distinguished from Apollo under the literal name applied to designate the sun, *viz.*, Sol. This name, therefore, was employed to express not only the actual body in the heavens, but also a supposed being having a separate and personal existence.

Somnus.—Son of Nox and Erebus. He was one of the infernal deities, and presided over sleep.

Specter of the Brocken.—Among German myths, a singular colossal apparition seen in the clouds, at certain times of the day, by those who ascend the Brocken, or Blocksberg, the highest peak of the Hartz mountains.

Sphinx or Sphynx.—A fabulous monster who ravaged Thebes until answer should be found to her enigmas. On Œdipus having explained all the riddles, the monster immediately flung herself into the sea and perished. The form of the so-called Egyptian sphinxes is that of a winged lion with a human head and bust, always in a lying attitude, whereas the Greek sphinxes are represented in any attitude which might suit the fancy of the poet.

Stentor.—One of the Greeks who went to the Trojan war. He was noted for the loudness of his voice, and from him the term "stentorian" has become proverbial.

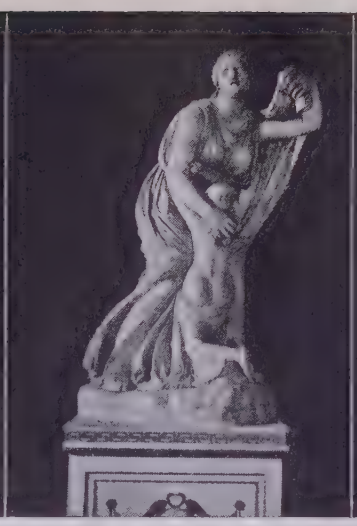
Styx.—A celebrated river of the infernal regions. The gods held it in such veneration that they always swore by it, the oath being inviolable.

Surya.—The sun-god, according to the Hindu *Veda*, whose car is drawn by seven green horses, the charioteer being Dawn.

Syrinx.—An Arcadian nymph, who, being pursued by Pan, fled into the river Ladon, and at her own prayer was metamorphosed into a reed, of which Pan then made his flute.

Tantalus.—Son of Zeus, father of Pelops and Niobe. For his crimes on earth (some say the murder of Pelops) he was punished in the lower world by being placed in a lake, the waters of which receded whenever he tried to drink, while overhead hung branches of fruit which also receded whenever he tried to reach them. The English verb "tantalize" comes from his name.

Tarpeia.—Daughter of Tarpeius, who admitted the Sabines to the fortress on the Capitoline hill, tempted by their gold bracelets. As they entered they threw their shields upon her, crushing her to death. Part of the hill was called the Tarpeian rock from her.



Tartarus.—A dark abyss under the earth in which the Titans were chained when their father feared their strength. The music of Orpheus penetrated its depths and caused the condemned to cease their toil. The name has come to signify an inner region of hell, to which the gods sent the exceptionally depraved.

Telemachus.—Son of Penelope and Ulysses. At the end of the Trojan war he went in search of his father, whom, with the aid of Minerva, he found. Aided by Ulysses, he delivered his mother from the suitors that beset her.

Terpsichore.—One of the Muses, daughter of Jupiter and Mnemosyne. She presided over dancing.

HERMES (MERCURY) OF THE BELVEDERE
Vatican, Rome

Themis.—The daughter of Cœlus and Terra, and the goddess of law; according to some legends, married to Jupiter.

Thenus.—The goddess of justice and one of the most celebrated of the Titanides, or daughters of Uranus and Titæa. To her is ascribed the first uttering of oracles, and also the first introduction of sacrifices.

Thersites.—The ugliest of the Greeks that came to the siege of Troy. He was chastised by Ulysses for reviling Agamemnon and killed by Achilles for ridiculing him.

Theseus.—Son of Ægeus and Æthra. He killed Procrustes and other robbers and monsters, and the Marathonian bull. He also went to Crete, volunteering as one of the seven youths sent as tribute to be devoured by the Minotaur, which by the help of Ariadne he killed. He deserted Ariadne at Naxos and defeated the Amazons, whose queen he married. He took part in many exploits and finally invaded the lower regions to assist his friend Pirithous in carrying off Persephone. Here he was imprisoned until delivered by Hercules.

Thespian Maids, The.—The nine Muses. So called from Thespis, in Bœotia, near Mount Helicon, often called Thespia Rupes.

Thetis.—A sea deity, daughter of Nereus and Doris. She married Peleus, their son being Achilles, whom she plunged into the Styx, thus rendering him invulnerable in every part of his body except the heel by which she held him.

Thisbe.—A beautiful girl of Babylon, beloved by Pyramus. They lived in adjoining houses and conversed through a crack in the wall. They agreed upon a rendezvous at the tomb of Ninus, and Thisbe, who arrived first, fled from a lioness, which smeared with blood the veil she dropped. When Pyramus arrived he slew himself, supposing her to have been devoured by the lioness, and Thisbe, when she found her lover's body, also killed herself.

Thor.—In Scandinavian mythology the eldest son of Odin and Frigga; strongest and bravest of the gods. He launched the thunder, presided over the air and the seasons, and protected man from lightning and evil spirits. His wife was Sif ("love"); his chariot was drawn by two he-goats; his mace or hammer was called Mjolner; his belt was Megin-giord, and whenever he put it on his strength was doubled; his palace, Thrudvangr, contained 540 halls; Thursday is Thor's day. The word means "refuge from terror."

Titans.—The children of Uranus and Gæa. They deposed their father and raised their brother Cronus to the throne of the gods. They were overcome by Zeus, who confined them in a cavity below Tartarus.

Tithonus.—A son of Laomedon, king of Troy. He was so beautiful that Aurora became enamored of him, and persuaded the gods to make him immortal; but, as she forgot to ask for eternal youth, he became decrepit and ugly, and was, therefore, changed by her into a cicada.

Tityus.—A famous giant, son of Jupiter and Trera. His body was so vast that it covered nine acres of ground. He had dared to offer an insult to Juno and in punishment was chained like Prometheus while a vulture feasted on his liver. He is mentioned by Vergil.

Tomalin.—A valiant fairy knight, kinsman of King Oberon. Tomalin is not the same as "Tom Thumb," as we are generally but erroneously told, for in the "mighty combat" Tomalin backed Pigwiggen, while Tom Thumb seconded King Oberon. This fairy battle was brought about by the jealousy of Oberon, who considered the attentions of Pigwiggen to Queen Mab were "far too nice."

Trimurti.—The name of the Hindu triad of deities; or Brahma, Vishnu, and Siva united in one godhead, and spoken of as an inseparable unity.

Triptolemus.—Son of Oceanus and Terra, or, according to some authorities, son of Celeus, king of Attica, and Neæra. He was in his youth cured of a severe illness by Ceres, with whom he became a great favorite. She taught him agriculture, and gave him her chariot drawn by dragons, in which he traveled over the earth, distributing corn to the inhabitants.

Triton.—Son of Neptune, who dwelt with his father and mother in a golden palace in the bottom of the sea, or, according to Homer, at Ægae. Later writers describe him as riding over the sea on sea-horses or other monsters.

Trolls.—Dwarfs of Northern mythology, living in hills or mounds; they are represented as stumpy, misshapen, and humpbacked, inclined to thieving, and fond of carrying off children or substituting one of their own offspring for that of a human mother. They are called hill-people, and are especially averse to noise, from a recollection of the time when Thor used to fling his hammer after them.

Tros.—Son of Erichthonius and Astyoche, and grandson of Dardanus. He was married to Callirrhoë, by whom he became the father of Ilus, Assaracus, and Ganymedes, and was king of Phrygia. The country and people of Troy derived their name from him. He gave up his son Ganymedes to Zeus (Jupiter) for a present of horses.

Troy.—The capital of Troas, in Asia Minor. A city whose fame belongs entirely to the heroic age, and the siege of which by the Greeks, for the recovery of Helen, which lasted for ten years, is the subject of Homer's grand epic, and the most renowned legend of all antiquity.

Typhœus or Typhon.—A famous giant, son of Tartarus and Terra, who had a hundred heads. He made war against the gods, and was put to flight by the thunderbolts of Jupiter, who crushed him under Mount Ætna.

Tyr.—In Norse mythology, a warrior deity, and the protector of champions and brave men; he was also noted for his sagacity. When the gods wished to bind the wolf Fenrir, Tyr put his hand into the demon's mouth as a pledge that the bonds should be removed again. But Fenrir found that the gods had no intention of keeping their word, and revenged himself in some degree by biting the hand off. Tyr was the son of Odin and brother of Thor.

Ulin.—An enchantress, who had no power over those who remained faithful to Allah and their duty; but if any fell into error or sin, she had full power to do as she liked. Thus, when Misnar (sultan of India) mistrusted the protection of Allah, she transformed him into a toad. When the Vizier Horam believed a false report, obviously untrue, she transformed him also into a toad. And when the Princess Hemjunah, to avoid a marriage projected by her father, ran away with a stranger, her indiscretion placed her in the power of the enchantress, who transformed her likewise into a toad. Ulin was ultimately killed by Misnar, sultan of Delhi, who felled her to the ground with a blow.

Ulysses.—The famous king of Ithaca, son of Anticlea and Laërtes, or, according to some, of Sisyphus. He married Penelope, daughter of Icarius, on which his father resigned to him the crown. He went to the Trojan war, where he was esteemed for his sagacity. On the conclusion of the war he embarked for Greece, but was exposed to numerous misfortunes on his journey. In his wanderings, he with some of his companions, was seized by the cyclops Polyphemus, from whom he made his escape. Afterward he was thrown on the island of Æae, where he was exposed to the wiles of the enchantress Circe. Eventually he was restored to his own country, after an absence of twenty years. The adventures of Ulysses on his return from the Trojan war form the subject of Homer's *Odyssey*.

Urania.—One of the Muses, daughter of Jupiter and Mnemosyne. She presided over astronomy.

Utgard-Loki.—The chief of the giants, in Norse mythology.

Valhalla.—In Scandinavian mythology the palace of immortality wherein are received the souls of heroes slain in battle.

Valkyrs.—The battle-maidens of Scandinavian mythology. They were mounted on swift horses and held drawn swords. They rushed into battle and selected those destined to death and conducted them to Valhalla. The number of Valkyrs differs greatly according to the various mythologists and ranges from three to sixteen, the greater part of them, however, naming only nine.

Varuna or Vrauna.—In Hindu mythology, the deity who presides over the waters of the ocean corresponding with *Neptune* of classic mythology.

Venus.—The goddess of beauty, and mother of love. She attained but little importance until she was identified with the Greek goddess Aphrodite. It is said that she sprang from the foam of the sea, and was carried to heaven, where all the gods admired her beauty. Jupiter gave her in marriage to Vulcan, but she intrigued with some of the gods, notably with Mars, their offspring being Hermoine, Cupid, and Anteros. She became enamored of Adonis, which caused her to abandon Olympus. Her contest for the golden apple, which she gained against her opponents Juno and Minerva, is a prominent episode in mythology. She had numerous names applied to her, conspicuous among which may be named Anadyomene, under which cognomen she is distinguished by the picture representing her as rising from the ocean, by Apelles. Sparrows and doves were customarily yoked to her chariot; her girdle inspired all hearts with passion for the wearer; and her son Cupid was her attendant and minister. The myrtle was sacred to her. Her favorite residence was at Cyprus.

Vesta.—The ancient goddess of fire. Æneas was believed to have brought the eternal fire of Vesta from Troy, along with the images of the Penates; and the prætors, consuls, and dictators, before entering upon their official functions, sacrificed, not only to the Penates, but also to Vesta at Lavinium. In the ancient Roman house, the hearth was the central part, and around it all the inmates daily assembled for their common meal (cœna); every meal thus taken was a fresh bond of union and affection among the members of a family, and at the same time an act of worship of Vesta, combined with a sacrifice to her and the Penates.

Vestal.—One of the virgin priestesses who, among the Romans, were consecrated to the service of Vesta. Their employment was to take care that the sacred fire of Vesta was not extinguished. The vestal took a solemn vow of chastity for the thirty years of her service; the dreadful punishment of a violation of which was that she should be buried alive in a subterranean vault near the Collina gate.

Victoria or Victorina.—The mother of Victorinus; after whose death she was hailed as the mother of camps; and coins were struck bearing her effigy.

Vidar.—The Scandinavian god of wisdom, noted for his thick shoes, and not infrequently called "The god with the thick shoes."

Virtus.—The Roman personification of manly valor. She was represented with a short tunic, her right breast uncovered, a helmet on her head, a spear in her left hand, a sword in the right, and standing with her right foot on a helmet.

Vishnu.—In Hindu mythology one of the great deities of the Hindu triad, ranking as the *Preserver*, after Brahma, the *Creator*, and before Siva, the *Destroyer*. It is believed that he has appeared on earth nine times, his tenth *avatar*, or incarnation, having yet to come.

Vulcan.—The son of Jupiter and Juno, who was lamed (according to some legends) by being kicked out of Olympus by Jupiter, and falling in Lemnos. He was the god of fire, and he forged the thunderbolts of his father in the forges of Ætna. Venus was married to him. But the legends differ very much in their account of him.

Wenonah.—Mother of Hiawatha and daughter of Nokomis. Nokomis was swinging in the moon, when some of her companions, out of jealousy, cut the ropes, and she fell to earth "like a falling star." That night was born her first child, a daughter, whom she named Wenonah. In due time, this lovely daughter was wooed and won by Mudjekeewis (the West Wind), and became the mother of Hiawatha. The false West Wind deserted her, and the young mother died.

Woden.—The Anglo-Saxon form of the Scandinavian god Odin; Wednesday is called after him.

Wooden Horse.—Vergil tells us that Ulysses had a monster wooden horse made by Epeos after the death of Hector, and gave out that it was an offering to the gods to secure a prosperous voyage back to Greece. By the advice of Sinon, the Trojans dragged the horse into Troy for a palladium; but at night the Grecian soldiers concealed therein were released by Sinon from their concealment, slew the Trojan guards, opened the city gates, and set fire to Troy.

Xanthos.—The marvelous, though mythical, horse of Achilles.

Yama.—In the *Rigveda*, the name of the god who rules in heaven over the blessed—the Manes, Fathers, or Pitris—and is therefore called king.

Yggdrasil.—In Scandinavian mythology the great ash tree which binds together heaven, earth, and hell. Its branches extend over the whole earth, its top reaches heaven, and its roots hell. The three nornas, or fates, sit under the tree, spinning the events of man's life.

Zem.—The sacred well of Mecca. According to Arab tradition, this is the very well that was shown to Hagar when with Ishmael in the desert. It is supposed to be in the heart of the city of Mecca.

Zephyr.—The personification of the west wind, described by Hesiod as a son of Astræus and Eos. Zephyrus and Boreas are frequently mentioned together by Homer, and both dwelt together in a palace in Thrace.

Zeus.—Called Jupiter by the Romans, the greatest of the Olympian gods, was a son of Cronus (Saturnus), and Rhea. When Zeus and his brothers distributed among themselves the government of the world by lot, Poseidon obtained the sea, Hades the lower world, and Zeus the heavens and the upper regions, but the earth became common to all. According to Homer, Zeus dwelt on Mount Olympus in Thessaly, which was believed to penetrate into heaven itself. He is called the father of gods and men. He is the supreme ruler, who with his counsel manages everything; the founder of law and order, whence Dice, Themis, and Nemesis are his assistants. Everything good, as well as bad, comes from Zeus; according to his own choice he assigned good or evil to mortals; fate itself was subordinate to him.

Zohak.—The giant of Persian mythology who keeps the "mouth of hell." He was the fifth of the Pischdadian dynasty, and was a lineal descendant of Shedâd, king of Ad. He murdered his predecessor, and invented both flaying men alive and killing them by crucifixion. The devil kissed him on the shoulders, and immediately two serpents grew out of his back and fed constantly upon him He was dethroned by the famous blacksmith of Ispahan, and appointed by the devil to keep hell-gate.

Zohara.—An oriental queen of love, and mother of mischief. When Harut and Marut were selected by the host of heaven to be judges on earth, they judged righteous judgment till Zohara, in the shape of a lovely woman, appeared before them with her complaint. They then both fell in love with her and tried to corrupt her, but she flew from them to heaven; and the two angel-judges were forever shut out.

Zosteria.—A surname of Minerva. She had two statues under that name in the city of Thebes, in Bœotia. The word signified girt, or armed for battle, words synonymous among the ancients.

Zulzul.—According to Chinese mythology the sage whose life was saved in the form of a rat by Gedy, the youngest of the four sons of Coreud. Zulzul gave him, in gratitude, two poniards, by the help of which he could climb the highest tree or most inaccessible castle.

FIRST AMERICAN FLAG IN BATTLE

BOOK IV

HISTORY

What History Is.—History is a chart of humanity and its development. It shows in broad lines the direction and conditions of human progress and degeneration; the possibilities and limitations, the growths and inhibitions of human life. It is not merely the record of battles and of the births and deaths of rulers. It is the biography, perhaps one might say the autobiography, of the human race. "It must include all the races and tribes of men within its scope," says Lord Bryce, "and it must bring all these races and tribes into a connection with each other such as to display their annals as an organic whole. . . It is also the task of Universal History so to trace the march of humanity as to display the relations which each part of it bears to the others; to fit each tribe and race and nation into the main narrative."

Importance of the Study of History.—A query of Coleridge was whether history is but the sternlight of a ship, lighting only the wake behind it. It is one of the tragedies of humanity that it has learned so little from its own past. "Study the past to discern the future," said Confucius. It can be said that about the only light that can be shed upon the future is that cast by the records of the past. So one might say, following the figure of Coleridge, that history is not the sternlight of a ship; it is the headlight of the locomotive.

History the Beginning of Culture.—A comprehensive view of the past is the background of any intelligent picture of the present. "History is one," said the late Lord Acton, and that is the first thing to know in the process of culture. To comprehend the historic unity, and to see the world whole are the essential foundations of a cultured person, who is not content to drift like a fly on a chip, on a planet of whose past he knows nothing, and in an age which gives no account of itself. Without a knowledge of the past, human beings would be staggering in the dark toward a denser darkness into which no eye could penetrate.

The study of humanity seen whole, on the earth seen whole; of those events which have causes and are causes, and of this interrelation of cause and effect; of the reaction of man and his environment: this study is one of the noblest of all human tasks.

The Field of History.—There is no sharp dividing line between ancient times and pre-historic antiquity; but wherever that line is to be drawn, it is somewhere near the appearance of the phonetic alphabet which the Phœnicians devised, probably from the Minoan text, and which Cadmus brought to Greece. The alphabet appears after civilizations have risen and fallen and human development has reached far stages; but history begins with the alphabet in which the essential records were enshrined and accurately kept. There are other sources of history than in the written record; as in coins, monuments, ruins and tombs.

Authentic tradition begins to take on vague and indefinite content somewhere about the period of 5000 B. C., but the accurate historic chronicle (and there is yet little accuracy) begins with the written record which began to take shape only after Cadmus brought the alphabet from Phœnicia to Greece, so late, that the epics of Homer had been handed down for generations and learned "by heart," till Pisistratus, who became tyrant of Athens, 560 B.C., edited the first critical text of Homer, one of the most important literary tasks ever accomplished.

THE WORLD 3000 B.C.

Physical Foundations of History.—To the ancients the earth presented itself as a flat disk surrounded by water. The known world was to them a great island. The Hebrews, Babylonians and Greeks held this notion as expressed in Homer; Hesiod thought that the earth was held midway between the sky and the infernal regions. About 500 B. C. Hecatæus of Miletus wrote the first geography and drew the map of the world showing the two continents, Europe and Asia, with the River Oceanus surrounding them. Eratosthenes, the Greek philosopher, 250 years later, conceived the earth as a sphere, and found the true method of ascertaining its shape, estimating its circumference at 29,000 miles. Greek geography developed with the colonization of the Mediterranean, the travels of Herodotus, the expedition of the "Ten Thousand," and Alexander's conquest of India. About 50 B. C., Strabo mapped the world as far as Ireland, which he placed north of England.

A Twofold Presentation of History.—Our department of history presents a series of illustrations which follow in chronological order to give the younger students a picture of the succession of events in America. The reference articles include both American and foreign history, treated topically and alphabetically arranged for easy consultation by more mature students.

FIRST AMERICAN FLAG IN BATTLE

The painting reproduced on the opposite page depicts one of the most stirring episodes in American history. A small body of Americans under Colonel Gansevoort were holding Fort Schuyler in the Mohawk Valley of New York in August, 1777. A much larger force of British under General St. Leger laid siege.

The garrison was without a flag when the enemy appeared, but their pride and ingenuity soon supplied one in conformity to the pattern adopted by the Continental Congress. Shirts were cut up for the white stripes, bits of scarlet cloth were joined for the red, and the blue ground for the stars was composed of an old cloth coat belonging to Captain Abraham Swartwout who was then in the fort. Before sunset this curious mosaic-work standard, as precious as the most beautifully wrought flag of silk and needlework, was floating over one of the bastions.

During the siege occurred one of the bloodiest battles of the war. During this battle the garrison made a sally under Colonel Willet and fell furiously on that portion of the camp occupied by Sir John Johnson and his Royal Greens. The enemy was driven back and a large quantity of clothing, blankets, stores and camp equipage, together with important papers and five British standards, were taken. It was probably during this sally that the first American flag received its baptism of fire in an actual battle. After their return to the fort the five British standards were raised in full view of the enemy upon the flagstaff beneath the crudely made American standard, and the whole garrison, mounting the parapets, made the forest ring with three loud cheers. Of this event the artist, Mr. E. Percy Moran, has made a typically heroic battle picture, one that should appeal to the patriotism of every American.

Abyssinia.—Abyssinia, with an area of 432,000 square miles and a population of from three to eight millions, is an inland country lying between the Anglo-Egyptian Sudan and the Red Sea. The main rivers are the Black and the Blue Nile, through which Abyssinia (or Ethiopia), has made its main contribution to civilization in the water and soil they have carried annually down the Nile. The three months of incessant rainfall in the Abyssinian mountains each year has kept Egypt alive for seventy centuries. Egypt has been intimate with Ethiopia since an early date, and even with Jerusalem, which the Queen of Sheba visited in the time of Solomon, and whose son by him was the first Menelik. The Abyssinians are a black people, with a perverted form of Christianity left over from the monkish invasion of the Dark Ages. The Portuguese entered the country two years before the discovery of America, looking for a lost kingdom in the Far East. They kept a footing for 150 years, but since, as before, the history of the country is a ghastly record of internecine wars. In 1870 Italy, seeking lands to colonize, occupied some of the Red Sea coast but met with disastrous defeat at Adowa in 1896. There is scarcely any manufacturing in Abyssinia, and commerce is in the hands of foreigners. Italy declared war against Abyssinia in 1935. In 1936 the Italians completed their conquest of the country and Abyssinia became a part of Italy.

Adams' (John) Administration—(1797-1801).

I. Political Parties, Formation of.—The Fathers of the American Nation can be roughly divided into two groups as to a state of mind and a way of thinking: particularists and nationalists; these represented the centrifugal and the centripetal, the organizing and the dissenting forces of society. More or less this distinction has lasted to this day, and the recognition of this fact furnishes the clue to the most of American History. Hamilton led the forces who wanted an adequate national government, before and after the Constitution was adopted; Jefferson led those who, as he once said, wanted for a national government but a committee with a few clerks. These stood for state rights and theoretical anarchy sufficiently modified to secure individual rights, especially in property. Jefferson always availed himself of Hamilton's interpretation of the Constitution when it was in the interests of his schemes, and where he did he was generally right, but he objected vigorously to Hamilton and his allies availing themselves of this principle. The rift between the two groups widened into two political parties, known as the Federals and Republicans, but the Republicans stood really for democracy which at that time was a term of reproach and it was the Federalist party that worked for a Republican form of government.

II. Napoleon Averts War Between France and the United States.—Upon the ratification of the Jay Treaty, France broke off relations with the United States, sending Pinckney, who was then our Representative at Paris, back home. One of the first things Adams had to do upon accession to office was to send a Commission to Paris consisting of Elbridge Gerry (Mass.), John Marshall (Virginia), and Charles C. Pinckney the rejected minister, on a mission to preserve the peace. Agents of the French government met them with a demand for a bribe which was refused, upon which they were directed to leave France. There was an immediate change of feeling in this country and preparations were made for war with Washington as Commander-in-Chief, and the building of a navy was begun with vigor and hostilities had already begun when Napoleon came into power and restored peace with the United States.

III. Washington Becomes the Capital.—George Washington died at his home at Mount Vernon in 1799, (Dec. 14th), and in less than a year, Nov. 22, 1800, Congress met in Washington for the first time. As a compromise between Hamilton and Jefferson on the matter of the assumption of the state debts by the national government, the District of Columbia was formed out of an area of ten miles square taken from Maryland and Virginia, in which the City of Washington was begun as Capital of the nation.

IV. Alien and Sedition Laws (1798).—These laws were passed by the Federalists in 1798 and were very unpopular among those who stood out for individual rights against the national security. The Alien law authorized the President to order any persons of foreign birth who might be deemed injurious to the nation to be deported immediately, while the Sedition laws imposed fines and imprisonment upon those who should combine to oppose any measure of the government or publish malicious articles or make scandalous attacks upon the President or Congress. They were designed to preserve the unity and dignity of the national government.

Adams' (John Quincy) Administration (1825-1829).

I. Internal Improvements.—Adams and Clay stood together on the matter of internal improvements, while a reaction was in progress among the southern leaders including Calhoun, who had advocated them. The South was reverting to the narrow views of earlier liberal principles holding

THE WORLD 700 B.C.

that no national improvements should be made at the public expense.

II. Erie Canal.—The Erie Canal, completed in 1825, was the means of turning western traffic into the lakes and rivers by means of this canal into the Atlantic Ocean through the Hudson River. The perseverance of DeWitt Clinton, after whom the canal was derisively called 'Clinton's Ditch', was largely responsible for its construction.

III. First Railroad (1826).—In 1826 the first American Tramway was built at Quincy, Mass., two miles long, and was used to carry stone for building the Bunker Hill Monument. Steam was not used in this country on a railroad until 1829, horse power being employed for a time on the first railroad offering passenger service, the Baltimore & Ohio, chartered in 1827.

IV. "Tariff of Abominations" (1828).—So was the tariff of 1828 called by the South, again on account of cotton. The southerners held that the burden fell upon them, because 600,000 bales of cotton exported annually to foreign countries brought in return nearly every article used in the South. It was twelve years before (1816), when Jefferson and Calhoun had advocated a tariff.

V. Death of Jefferson and Adams.—Thomas Jefferson and John Adams had been political enemies, then friends, and came at last to agree freely upon the issues of the day. During the administration of his son, John Adams died on the fourth of July, 1826, and almost at the same hour Jefferson died, each thinking the other was alive. The American people were profoundly impressed with the singular coincidence.

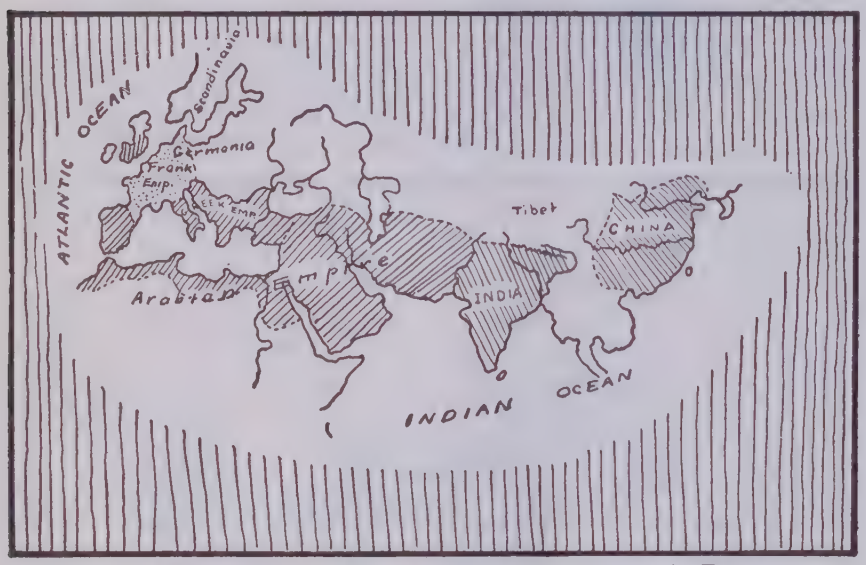
Africa.—Africa is the second in size of the great land divisions of the globe. With the most startling contrasts of desert and tropical growth, it covers an area of 11,262,000 square miles, exclusive of the islands which properly belong to it. Africa is the southwestern extension of the vast Eurasian land mass, connected by the Isthmus of Suez, ninety miles wide. Not long ago, geologically speaking, this connection was much wider, covering even since Pliocene times, the Red Sea and the Gulf of Aden, while the continent was connected with Europe through Spain. The two continents now approach each other to within nine miles at the Strait of Gibraltar. The African coast line is almost destitute of bays, harbors and peninsulas, and contrasts sharply with that of Europe, which with an area of one-third that of Africa, has a coast line 1,000 miles longer. In these features Africa resembles South America, while Europe is like Asia and North America.

The Congo Basin is larger than that of the Mississippi. It drains an elevated area of 1,170,000 square miles, and has next to the Nile and the Amazon, the largest volume of water of any river in the world. The Basin of Lake Chad lies in the center of the continent, the lake of that name having no outlet. The Nile is the only living stream that crosses the great arid region from the Atlas Mountains in the Northwest of Africa to Baluchistan. Two-thirds of this dry land lies west of Suez and is called the Desert of Sahara. All the Great African Rivers, excepting the Niger, rise in the mountains in the south and southeastern parts of the continent: the Nile, Zambezi, Congo, Orange and minor streams. The Nile alone drains a basin of 1,600,000 square miles.

North Africa has been the scene since the earliest age of predatory wars, and the whole of North Africa has been at different times under the sway of many different tribes and nations. The Egyptian wars, the Carthaginian wars, the Mohammedan and Roman wars are but a few of the principal conflicts. After the slave trade was abolished by the English in the last century, societies were organized for the exploration of the Dark Continent. The most notable discoveries were made by the missionary, David Livingstone, who spent 23 years in exploration. Henry M. Stanley who was sent out under the auspices of the New York Herald, found the missing missionary. It was before this period that the French conquered Algeria, one of the conquests made for civilized and not for selfish purposes, the undertaking having been made for the purpose of ridding the Mediterranean of the Barbary pirates. A period of settlement, conquest and development followed. The Suez Canal was finished and opened in 1869, making unnecessary the trip around the Cape of Good Hope on the way from Europe to India, China and Australia. In 1875 British bankers managed to buy a controlling interest (177,000 shares) of the canal stock which gave the British control. For 300 years there had been no such scramble for territory as was made by Europe in Africa about the middle of the nineteenth century. The Germans, Portuguese, Belgians, Italians, French, Dutch and English acquired large territories. The discovery of gold in South Africa brought many English, then the discovery of diamonds drew more. The Dutch, or Boers, forced the foreigners to pay taxes and to render military services, but did not allow them a voice in government. It was another case of taxation without representation, and in addition, compulsory fighting without the franchise. This was the issue of the South African war in which the English were right as they were wrong when the American Colonies fought for less than this. Many Americans sympathized with the Boers who were far more tyrannical than the British had ever been with their ancestors. Through this war the British won domination of the south of the Dark Continent, but immediately gave the people self-government, which they had been denied by the Boers.

The North and South Temperate Zones are now occupied largely by the whites, but the masses of the population of 140,000,000 are of the black races. These include some of the largest and some of the smallest of mankind, the Wahuma of Ruanda, for example often standing six feet six inches in height, while other races are pygmies.

Black Africa lies south of the Sahara Desert. Cut off from the rest of the world by the sand reaches on the north and by the ocean on the other three sides, the black man has dwelt in undisturbed seclusion for uncounted ages. Until modern times the whites have been coming and going, but recently the country has been divided among European nations and now only Abyssinia and Liberia remain independent states. One of the most important elements in the future of this continent is negro fecundity. To this has to be added the fact that the white peoples have introduced measures of sanitation and civilization generally that are rapidly increasing the numbers of the blacks. Now Islam threatens to rule Africa through proselyting among the blacks, among whom they are making many converts. The real danger is that the Arab will make of the negro an arm with which to wield the scimiter and make Africa Mohammedan, and "the executor of sinister adventures."



THE WORLD ABOUT 300 A.D.

Agriculture Department Authorized by Congress (1889).—In 1889 the Department of Agriculture was authorized by Congress and has since been so enlarged, that it is now without doubt the most useful scientific organization in the world. In addition to the 3,000 specialists in all parts of the world, working out the problems of modern science as applied to the needs of the American farmer, there is a vast organization devoted to the social, cultural and economic interests of farm life which have already revolutionized the status of the farmer in this country and aided him in every civilized land on earth. As one example of its influence, the Bureau of Entomology alone covering the field of "bugs," with its affiliated activities among the states, is saving the American farmer $500,000,000 a year.

Alaskan Purchase.—The territory of Alaska belonged to Russia by right of discovery and in the nineteenth century its management was in the hands of the Russian-American Company, who seemed unable to make the enterprise pay. Consequently Russia did not greatly value this possession.

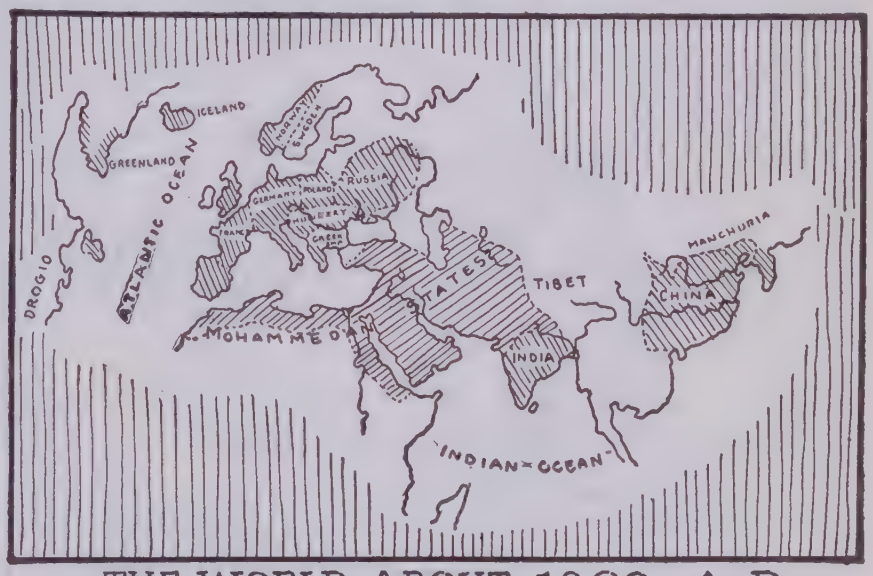
During the Civil War, the danger of attack by England through Canada had made the United States feel the need of a military stronghold in the northern Pacific. Through the influence of Seward, the United States purchased Alaska from Russia in 1867 for $7,200,000. It was used first only as a military station, but later the discovery of gold and the utilization of the rich resources of timber, furs and fisheries turned it into a commercial center as well.

THE WORLD ABOUT 800 A.D.

Algeria.—Lying between the Mediterranean Sea on the north and the Sahara Desert on the south is Algeria. It is a French colony, occupying the central position of the old Barbary states. In ancient times the Numidians were settled in the eastern part of what is now Algeria; the Moors (Mauri) in the western. Thus the history of Algeria, or old Numidia, down to the time of the Turkish dominion, is inseparable from that of Tunisia and Morocco. Under Roman dominion at the close of the Punic Wars, the people of these countries enjoyed prosperity and a high degree of civilization. In 440 A. D. the Vandal conquest resulted in a return to barbarism. Oriental civilization was introduced with the Mohammedan conquest in the seventh and eighth centuries. In 1492, the Moors and Jews, who were driven out of Spain, settled in Algeria, and proceeded to revenge themselves in acts of piracy. Algiers was taken by Spain in 1509, but Horuk Barbarossa, a Turkish pirate chief, drove out the Spaniards in 1515 and established a system of military despotism and piracy. European nations strove in vain to check the outrages of the Barbary pirates. In 1815 a United States fleet, under Stephen Decatur, stopped their depredations on American ships, while about the same time Algiers was bombarded by the British. Piracy continued until 1830 when the French took possession of Algiers, and then Algeria. For seventeen years the Arabs resisted and the Berbers struggled against the force of European civilization. In 1901 France completed the conquest, and in 1912 Tunisia, Algeria and Morocco were united under French dominion. Since French occupation trade has increased and a railway line parallel to the coast has been built. The government, instituted by France, consists of a governor general and an advisory council of government, but the legislative power lies with the French chamber. In 1911, the population of Algeria was 5,563,828, of which 795,522 were Europeans. Among the natives, the independent and industrious Berbers predominate, living in the southern oases and throughout the mountain ranges, like the nomadic Arabs of the plains and steppes to the west, they worship Mohammed, but they do not, like the latter, practice polygamy. In Algeria are to be found French, Tunisians, Moroccans, Spaniards, Italians, Turks, Negroes, Moors and Algerian Jews. Theirs is a country of steep and rocky coasts, few good harbors, agricultural lands used for farming and grazing, mineral wealth and great forests.

America.—400 years before the birth of Christ, Plato wrote an account of a great island called Atlantis which was said to be larger than Africa or Asia. Other ancient writers mentioned it as a mysterious land where strong and powerful people lived and which, because they were so wicked, was sunk into the sea. Navigators dared not journey far to the west for fear that they would encounter impediments strewn in the ocean. Although these accounts are only fables, it is believed by students of history that the Phœnicians, or Canaanites, became acquainted on their sea voyages with the continent of America. The ships of Phœnicia were known to all ancients, and people marveled because they risked the waters beyond the Pillars of Hercules, now known as Gibraltar. Evidences of visits by the ancients are to be found in New England, as for example, the Writing Rock, at Dighton, Massachusetts, containing hieroglyphic inscriptions similar to those found in Asia, and the famous Skeleton in Armor, discovered at Fall River, which closely resembles drawings taken from the sculptures unearthed in the rock-walled cities of Mexico, so markedly like ruins of ancient Asia. There seems to be ground for believing that long before the Christian era an Asiatic race traveled through North America and settled in Mexico. The ruins of the Mound Builders in the West, especially in the Mississippi Valley, covering acres of territory, are other sources of speculation. Historians have formulated theories around them, some saying that these strange builders were descendants of crews from Japan who were driven across the Pacific; others, and more reasonably, that they were an Asiatic race, the Shepherd Kings, who drove their flocks from Central India to Egypt, built the Pyramids, wandered back to Siberia where mounds like those in the Mississippi Valley are to be found. It is possible that they then went north to Behring Strait, at that period very narrow, crossed into Alaska, journeyed south to Mexico, Central America and Peru. As for the inhabitants that Columbus found in the West Indies, who were spread throughout the continent, it is not likely that they descended from the ancient people who are supposed to have preceded them, but more probably they are related to the Mongolian emigrants who came across Behring Straits.

In the eleventh century the Northmen had established a colony in Greenland, and it is probable that prior to the fifteenth century they had seen New England which they knew by the name of Vinland. Following the voyage of Columbus, in 1492, in which he reached the West Indies, Spanish patronage made possible a number of other expeditions during which most of the islands and the continental shores of the Caribbean Sea and the Gulf of Mexico were explored. These were still supposed to be connected with the Asiatic continent until the expeditions of Vespucius, Jacques and Coelho (1501-1503) established the belief that there really was a new world. Cortez (1519-1521) and Pizarro (1531-33) succeeded in their conquest of Mexico and Peru, and explored much of the Pacific coast; Drake (in 1577-1580) reached the northern coast of California. The eastern coast was explored by Spanish adventurers only as far north as Chesapeake Bay; the rest was left for the French and English after the decline of Spanish power in Europe. As for the colonizing of America by European nations—the Spanish settled in both North and South America; the French in the St. Lawrence region particularly, but also to a great extent in the West Indies; the English on the Atlantic coast at strategic points among the islands and along the shore from Florida to the Kennebec; the Portuguese confined themselves chiefly to Brazil. Holland and Sweden made fair showings at first, but the Swedish colonies along the Delaware and the Hudson were soon overcome by Dutch conquest (1655), and the Dutch were in turn overwhelmed by England in 1664. The colonial period in United States history records the progress of the western adventurers in carving a nation from the rough elements of the new world. The struggles with the native Indians, the competition of France and England, after the weakening of Spanish power, over the land and resources, the Seven Years' War between the French and the British, resulting in the practical exclusion of the French, and finally the uprising of the colonists against the restrictions of the mother country and their successful fight for independence—each is a chapter in the story that is typically American—a story



of development founded on a basic idea of initiative and freedom. Similar stories are true of other groups in the Americas, and today all the independent states, north and south, are republican in government, Brazil being the last to become a republic, in 1889.

The name "America" was first employed to designate the entire known western world by Mercator in 1541. It really consists of the two geologically independent sections, already mentioned, extending from the Arctic Ocean to the Isthmus of Tehuantepec in Mexico, in the West and Florida in the East. The northern section is connected with the southern by the two great parallel ridges, Central America and that territory including Haiti, Porto Rico, and the lesser Antilles, joining at the eastern side. Originally the name "America" was used only for central Brazil, in honor of Americus Vespucius, the Italian, who claimed he discovered it. Without Greenland and the Archipelago its area is 16,000,000 square miles. Two-thirds of the continent is north of the equator, and in each great section may be found diversified vegetation and all varieties of climate. In Central America, a region of the trades or easterly winds, the climate is that of a semi-tropical island, with enormous rainfall. All of tropical South America is within the trade-wind belt, where the rainfall makes possible the vast forests of the Amazon basin and the volume of the river and its tributaries. Zoologically considered, South America includes both Central America and the Antilles, and the plains of Mexico, east, west and south of the plateau of Anahuac, but the animal life of South America and North America proper have almost no common features.

North America may be divided into a few great geological units, the Canadian or Cambrian shield, the Coastal plain, the Eastern highland, the Great Central lowland, the Western highland, the Rocky Mountains, the Inter-mountain Plateau, whose southern, higher part is called the Colorado Plateau, the Great Basin, the Columbia lava plateau, and the Pacific border ranges. The Andes Mountains in South America correspond to the Rockies in North America, the Alleghany-Appalachian system in the United States to the Brazilian chain. In each country there is also a lateral range beginning in the north center, turning first south and then east, till it ends somewhat north of the eastern vertical chain, and in each it is the oldest part of the country.

No other drainage systems can equal those of America. The Amazon River alone sends more water to the ocean than the eight largest rivers of Asia together. The Mississippi carries more water than all the streams of Europe. There are more than 100,000 miles of navigable water in the St. Lawrence, Mississippi, Amazon, Orinoco, and Plata systems together, and there are 89,000 square miles of water in the five Great Lakes of North America alone. The Gulf of Mexico bears the same relation to the northern continent as the Argentine plain to the southern; both lie in the same position with regard to the eastern and western mountain chains, but one is submerged. The boundless mineral resources of both Americas are centered along the entire western coast, of which the great continental backbone is the Andes. The treasures in these mountains are practically untouched, though the world's entire supply of bismuth comes from Bolivia, the largest amount of thorium from Brazil, and the deposits of nitrate in Chile supply nearly all the world's consumption of nitric acid. Platinum comes from Columbia, tin from Bolivia, diamonds from Brazil, which is second in their production only to South Africa. Great deposits of coal and iron are to be found in the Andes, vanadium especially in Peru, tungsten in Bolivia, Argentine and Brazil, sulphur in Chile, and asphalt in Trinidad and Bermudez. In North America a somewhat different story may be told of a rapid and reckless exploitation of natural resources until conservation has come to be a word calling attention to the danger of a diminishing supply in the face of extravagant consumption. Faith in the great stretches of undeveloped land and little explored mountain ranges of the northwest incline many to optimism in viewing the North American situation regarding resources. And yet those who see farthest anxiously deplore the unlimited consumption of necessities like oil, coal and timber, foretelling the inevitable fate of a people who "waste their substance in riotous living." The record of the years since the first colonists settled in North America has been a record of discovery and development, made possible by the vast forests, the fertile soil, the powerful rivers, the oil wells, the deposits of coal, iron, gold, silver and minerals too numerous to mention, and the waterways to the sea. The Canadian Northwest, where development has been slower, now presents a field as attractive as, though of a different nature from, that of South America. Its mines, fisheries, forests, fields, the industries of the coast, like shipbuilding, are developing steadily, and its progress in agriculture alone is attracting world-wide attention.

American Federation of Labor.—The Federation of Organized Trades and Labor Unions of the United States and Canada was formed at Pittsburgh in 1881, when a number of separate labor unions joined together with the purpose of fighting the all-powerful Knights of Labor. The Knights of Labor was then the largest organization of workmen in the country and it seemed to be injuring the cause of labor by its autocratic methods. It ruled its members, rather than bringing them freedom. The new Federation aimed to be more democratic, to allow the workman and his local union to be supreme and the national organization was only incidental. This movement met with ready response among other dissatisfied workmen, and in 1886 the convention of independent trade unions added their numbers to it, under the new name, American Federation of Labor. Its membership grew with increasing rapidity and it was finally able to drive the Knights of Labor from the field. Today the American Federation, with its membership of more than 3,000,000, is the largest and most powerful labor organization in this country. It has maintained its democratic methods—the local union is still the dominant factor and the national unit only serves to further co-operation, increase membership and issue propaganda. The American Federation represents the more conservative element in the labor population and stands for trade unionism as opposed to industrial.

THE WORLD ABOUT 1200 A.D.

American Revolution.—The English colonists, who, in the middle of the eighteenth century, occupied the eastern strip of the North American continent (see map), had been largely ignored by England and allowed to control their own affairs. Therefore, when, about 1770, George III. tried to exert new authority in the form of taxes, the colonists refused to pay these taxes. George III. sent troops to force obedience. The colonists opposed these troops, and thus began the American Revolution, in 1775.

A Confederate Congress of delegates from the different states established independent government and organized a revolutionary army under George Washington. On July 4, 1776, the Declaration of Independence proclaimed the thirteen colonies a free nation and the colonists determined not to cease fighting until this freedom was acknowledged.

The English sent over large numbers of troops, among whom were 17,000 Hessians (hired German soldiers). The colonists were aided by the voluntary services of the Frenchmen, Lafayette and De Kalb, the German Baron von Steuben and the Polish generals Kosciusko and Pulaski. In 1778 France acknowledged the independence of the colonies and sent a fleet to their aid.

For the first two years of the war the colonists suffered disastrous defeats; but after the capture of a British army at Saratoga in 1777, Washington gained control of the northeast, and with the surrender of the British General Cornwallis at Yorktown, Virginia, in 1781, the south was won.

By the Treaty of Paris in 1783 between England and the colonies the independence of the colonies was guaranteed.

Antarctica.—Antarctica is the continent that surrounds the South Pole. From that it stretches, astronomically speaking, to the Antarctic Circle. Like the northern part of Greenland it is ice covered, but lying at high altitudes, the South Pole itself being 10,200 feet high. It is covered with snow well up to the coast line, which is often sheer precipitous cliff of granite covered with ice, where the rock forms show continental characteristics.

THE WORLD ABOUT 1500 A.D.

Little is known of the continent, but three regions have been studied, the largest being Victoria Land whose known coast extends from the 160th to the 170th meridian east, and from about latitude 70 to 80 degrees. The sea wall is nowhere less than 4,000 feet high and contains coal deposits in sandstone and granite. Mountain peaks, some of them extinct volcanoes, lie back and rise to an altitude of 15,000 feet. The summer is colder and the winter is warmer than the North Polar regions, the coldest known weather registering minus 67 degrees Fahrenheit. Dawson City has registered much colder weather. No land animals, so far as known, exist; many varieties of birds nest on the beaches, among which are the petrel and the penguin. The vegetation consists of mosses, lichens, and tussock grasses. In the Antarctic waters are found five varieties of seal, while sea-lions and sea-elephants are found well to the north. Sea life is very rich, ranging from mollusks, medusæ and fishes to dolphins and whales.

Antietam.—A creek in Maryland where was fought a decisive battle of the Civil War in 1862. Lee had crossed the Potomac into northern territory in the hope of gathering recruits in Maryland and marching on to Washington. He was met at Antietam by McClellan with a force of 75,000 Federals, against which his 40,000 Confederates held their ground firmly. Neither side was defeated; but Lee saw from this battle the impossibility of advancing into northern territory, and withdrew his troops into Virginia, to continue the war on defensive lines.

Appomattox.—A town in Virginia where Lee surrendered to Grant at the close of the Civil War, April 9, 1865. Lee had retreated from Richmond and Grant was in pursuit, when the Federal General, Sheridan, came upon the front of Lee's army and made escape impossible. The terms of the surrender provided by Grant were just and kind—all Confederate soldiers were released on parole to return to their homes.

Argentine Republic.—When Juan Diaz de Solis, a Spaniard, sailed up the estuary of the Rio de la Plata, South America, in 1515, like all other explorers he proclaimed the lordship of his king over the country round about. Don Pedro de Mendoza, another Spaniard, coming in 1535, chose and occupied the site of Buenos Aires. Other Spanish towns were soon founded, and by 1580 the settlement was firmly established. Buenos Aires flourished and became the chief city of the new viceroyalty. In 1806 the British captured the city but were unable to establish themselves firmly. During a general revolt the republic of the United Provinces of the Rio de la Plata was founded, and by 1826 the independence of the Spanish colonies in South America was completed. The viceroyalty of Buenos Aires had included the provinces of upper Peru, but since the Peruvians differed widely in manners, customs, and language from their neighbors, they were left to do as they wished, while the people of the Rio de la Plata took the name of the Argentine Republic (1853). Years of strife and uprising followed—a decade of national financial discredit due to banking schemes in Europe, and another decade of expense and struggle for national defense. Argentine enjoyed remarkable material prosperity, however, even while she was subduing Indian tribes and conquering the desert. She acquired additions of territory from Chile by treaty in 1881, including the greater part of Patagonia; other boundary disputes were gradually settled, and in 1904 the government was financially reorganized under President Quintana. After eighty years of turbulent political life, Argentine has succeeded in gaining a place among young nations; she has improved her country, built railroads, schools; extended her industries, especially farming and stock raising, and carried on commerce successfully with great nations of the world. Her population, numbering 7,885,237 in 1914, is composed (in the order of their number), of Italians, Spaniards, Russians, Uruguayans, French, Turks, Austro-Hungarians, Brazilians, Chileans, Paraguayans, English, Germans, Bolivians, and Swiss. She is second in size of South American states and contains an area of 1,135,840 square miles. Her government is a federal republic, ruled by a president, a vice-president, a federal assembly composed of a senate and a house of deputies. Provincial governors are elected by the people and territorial governors of sparsely settled parts are appointed by the president.

Armada.—The name of the Spanish fleet sent out by Philip II. in 1588 against the English, in the hope of avenging the execution of Mary, Queen of Scots and forcing the Catholic religion on England.

After numerous encounters with the English fleet, the Armada was defeated off the coast of northern France, near Gravelines. Only half of the original fleet returned to Spain; the rest had perished in storm or in battle.

Asia.—Asia is the largest of all the continents, with an area of 17,250,000 square miles. It covers more than a third of the land surface of the globe with more than one eleventh of its total area of land and sea. It is separated from Europe, which is but a peninsular appendage, by the Urals reaching from the north to the Caspian Sea, thence to the Caucasus range and the Black Sea. Its vast and teeming populations number about a billion souls, or nearly two-thirds of all mankind, and these for the most part have been weeded out by many elements of war and disease and pestilence and famine and flood, leaving the hardy and the immune. This is a fact to be reckoned with in the problem of Asia.

Asia is but thirty minutes from the United States (by aeroplane) at Behring Straits, which are but forty miles wide, while from the southern points of Asia to Valparaiso is half way round the world. The Aleutian Islands of Alaska, reach out into the Pacific Ocean to within 600 miles of Japan. Asia has the greatest extremes of climate, the highest mountains, and the greatest table-lands in the world. It is hardly probable that the first forms of human life appeared in Asia, for the oldest individual remains have been found in Java. But it is pretty certain that the first civilizations of which we have any evidence, and the earliest of evidence comes from Archeology and Comparative Philology, are indigenous to Central Asia, whence, with increasing numbers and decreasing food supply, the first migrations started in all directions like the spokes of a wheel. The plains whose inhabitants first rise out of the historic mists, lie some-

where between the Caspian Sea and the Pamir, which is called the roof of the world. The Pamir is where India, Afghanistan and Turkestan meet, and where the bottoms of their valleys are more than two miles "in the air," while the summits lie thousands of feet higher. The Pamir is a great geographical center. From it ranges of mountains radiate like the leaves of a fan, but mainly to the eastward and westward, the table-land of Thibet, for example, lying between the Himalayas to the south and the Kuenlun to the north. This is the highest plateau in the world, and few people can live there, and these only in the sparsely cultivated valleys. For this table-land lies from 17,000 feet high to the west to 9,000 feet in the east. Large areas in this central portion of the continental domain are sterile or desert spaces, where areas as large as Europe have little soil and few conditions with which to support life. But over the map of Asia

THE WORLD ABOUT 1700 A.D.

one could place the maps of seventy Frances and have room in which to lose Germany and England; or he could put over it the maps of North and South America and Europe combined. Some parts of Asia are abnormally congested with teeming populations, but not more so than some portions of Europe. There are areas of fertile soil in the hinterland large and rich enough to support another population equally great. More people can live on this vast continent than all the people alive today. So that Asia is not in need of American room. Asia could easily support the entire population of the known world without much overcrowding. (See Siberia, Manchuria, Mongolia, etc.)

There are seven great river systems, with the peculiarity that vast regions drain inland into land-locked salt water seas, as if Asia were a world to itself. In the Chinese system there are four great rivers: the Si-Kiang, the Yang-tze-Kiang, the Hoang-Ho and the Amur, flowing eastward to the Pacific Ocean. There are two systems in India, overlapping to the north, the Indus flowing to the Gulf of Arabia, draining the land of the Punjab, or the "Five Rivers," and the Ganges and the Brahmaputra draining towards the Pacific slope. Towards the Arctic the Siberian system drains the land through the Lena, Yenesei and Obi, while those rivers flowing into the Aral, Caspian and Dead Sea have no outlet to the ocean the Caspian being 85, and the Dead Sea 1,300 feet below the sea level.

The great masses of population are found in the immense territory of China, Siberia and India. The Chinese Empire contains 4¼ millions of square miles, or more than one and one-third as much as the United States. The people number, according to the Chinese Customs Reports, 439,000,000. Siberia with the Russian dependencies has 6½ million square miles, with a population of over 25,000,000, and India has 1,789,154 square miles with 325,000,000 people. China contains nearly a third of the human race and India a fifth, while the two territories together are about equal in area to Europe and the United States together.

All the five great races of man live in Asia, the white, black, brown, red and yellow. The red and black races are weak, numerically and otherwise. The great mass of the population is made up of the yellow and brown races with a tenth of the population white. The latter are found in Asia Minor, India, Arabia, Persia, Afghanistan and Baluchistan, with a few scattered elsewhere. The yellow race is distinctly the Asiatic type and numbers seven-tenths of the population, while Asia itself contains, with the Islands, nearly seven-tenths of all mankind. Moreover, yellow blood has percolated into Siberia, Russia, Caucasus, Asia Minor, Afghanistan and Baluchistan. One of the main but remote causes of the Russo-Japanese war was that certain Slavs claimed for their race Asiatic origin, and made this kinship an excuse with the Asiatics for extension and domination in Asia.

Roughly speaking, the two great groups of the yellow races center, the Manchus and Mongols, around the Altai Mountains and the Sinetic or Chinese in the south of China or the region lying to the north of the Himalayas. These two branches include many stocks. It has been suggested that the North American Indians are related to the ancient arctic and sub-arctic stocks, among whom are the Koriaks and Kamchatkans, and of whom there are about ten thousand left. The north, east and west Mongols have centered about Lake Baikal, but have moved so far in one direction as China and to the Caspian Sea in the other, extending even to the Danube. It must be borne in mind that while most of the world's great religions have come from Asia, this is but a matter of geography, for these religions have all been given by the white races, both Semitic and 'Aryan', who are geographically, but not distinctively Asiatic.

Asia Minor.—Asia Minor is a term invented during the Middle Ages to describe the peninsula between the Ægean, Black and Caspian Seas and the Levant, better known as Anatolia. It included a great number of petty states: To the north was Mysia, Bithinia, Paphlagonia and Pontus; to the south, Caria, Lycia, Pisidia, Pamphylia and Cicilia; while in the center lay Lydia, Phrygia, Galatia, Lycaonia, Cappadocia and Armenia. On the western coast in ancient times lay Troas (Troy) immortalized in the Iliad, the history of which is mere tradition. Troy is said to have been founded by Dardanus, succeeded by Erichthonous, celebrated for his splendid horses. Tros named the city Troy, and Ilus changed the name to Ilium which was burned by her Grecian conquerors. (See Phrygia and Lydia.)

Assyria and Babylonia.—The latest and most reliable researches incline to the belief that the earliest cradle of human knowledge is to be found in the low river lands of the Euphrates and the Tigris. There is abundant evidence that the original settlers in part of these fertile valleys, a non-Semitic compound race, styling themselves Shumerians and Akkadians, even in 7000 B. C. had developed cuneiform writing and a flexible language. It is supposed that an offshoot of this ancient stock, which later amalgamated with the Semitic Assyrians and Babylonians, swept over Egypt and established the dynasty of the Hyksos or shepherd kings. Their language long survived in the rituals used in the temples of Babylonia. Ages went by without leaving much in the way of historic documents, but the old Babylonian Empire is generally supposed to have lasted from about 4000 B. C. to 731 B. C. It is also called the Chaldean Empire. The first King Sargon (to be distinguished from a much later one), about 3800 B. C. extended his sway to the Mediterranean shores, and under Hammurabi, one of the wisest and most progressive rulers of antiquity, Babylonia and Assyria were united.

Nothing in ancient times seems to have made the impression on the imagination of every race as did the splendor and extent of the two queen cities, Babylon and Nineveh. The walls girding Babylon were twenty leagues in circumference and from three to four hundred feet high. About 2000 B. C. Babylonia, after having been long subject to Elam, a nation of non-Semitic people to the east, achieved its independence. Assyria was being settled from Babylonia, and in its earlier stages it

developed side by side with Babylonia, from 1900 to about 1000 B. C. Then followed a time when Assyria and Babylon each held the overlordship for a period. In 1237 B. C. the Assyrian Empire appears to have been founded, and while Assur-nasir-pal was king, 884-859 B. C., Assyria became the leading empire of the world. In 745 B. C. King Tiglath-Pileser made himself master of Babylon, and was successful in war against Syria and Armenia. Assur-bani-pal, king of Assyria and overlord of Egypt as well, erected splendid buildings and did much for art and literature. The states subject to the Assyrian monarch were loosely bound, however, and constant rebellion resulted from the despotic method of government. After the death of Assur-bani-pal, Babylon revolted with success. About the same time the Medes in the north rose against the Assyrian yoke; the savage Scythians tribes rushed in, and ruin for the proud and splendid empire followed. Nineveh, the great metropolis, was taken and burned. Babylon enjoyed, however, a brief resurrection, from 608 to 538 B. C., under Nebuchadnezzar and Belshazzar. The latter was dethroned by Cyrus, the Persian, and Babylon became subject.

This ancient people gave much to the world in astronomy, mathematics, an exact system of weights and measures, cuneiform writing, a system of canals and river dykes, irrigation, important industries, including the manufacture of rugs, linen and silk garments, brick, silver and goldware, architecture, arts, especially sculpture, in which they excelled for centuries and which they transmitted to the early Greeks. Their creed, like that of most Oriental nations, was a nature worship originally Some of the most enlightened among them conceived the idea of one all-ruling God. Subsequently their religious conceptions became more and more debased, falling into superstition and the worship of fish gods, bird gods, and of Mylitta, the type of the grossest sensuality. The earliest legends and religious myths of these people tallied singularly closely with those of the early Hebrews, their Semitic kinsfolk.

Austerlitz.—A town in northeastern Austria the site of Napoleon's great victory in December, 1805.

Napoleon was then threatening to spread his power over all Europe so that Austria, Russia and England were joining in military preparations for his overthrow. Napoleon's hope for safety lay in striking at the united armies of Austria and Russia before England could send her aid. This he did at Austerlitz, marching his army of 65,000 against 82,500 Russians and Austrians. By clever strategy he put the enemy to flight, causing them a loss of 27,200 while his own loss numbered but 6,800.

By the Treaty of Pressburg, following, the Austrian and Russian emperors were forced to admit Napoleon's claims to the very territories of which they had hoped to deprive him.

Australia.—Australia means "Southland." It lies, the largest island and the smallest continent, in the Southern Ocean and entirely in the Southern Hemisphere. It was once a part of an enormous continent stretching from the North Polar regions, but now partially submerged, by the shallow waters of those straits which separate Asia and Australia from the Great Island System lying between. Australia is 2,400 by 1,900 miles in extent, covering an area of 2,946,000 square miles, but a little less than the United States proper, or Europe. Tasmania is separated from the Australian mainland by the Bass Straits which average but 200 feet in depth. The land has the main characteristics which the geographers desire of a continent, high and bold coasts with mountain ranges nearby, and a depressed interior. 95 percent of the land surface of the continent being under an altitude of 1,500 feet, while the highest peak, Mount Kosciusko, is but 7,500 feet in height.

A generation after the discovery of America the first map of Australia very much resembled our maps of Antarctica today. Although the Chinese are supposed to have visited the land in the thirteenth century, the first recorded voyage was made by the Dutch in 1606. Afterwards many voyages were made, Captain Cook visiting the island in 1770 (April 14). His party, finding so many plants new to science, named the place "Botany Bay." By 1822 the whole coast had been determined. The Dutch having ignored the land for the greater apparent riches of the East Indies, the English re-discovered it and began colonization. This was caused mostly by the American Revolution which took so great a heritage from the British race. Australia, instead of the United States, became the "dumping ground" for British criminals, where persons condemned for crime had been sold into servitude for the sum of $100 each. In 1798, the first shipload of this type of colonist was sent to "Botany Bay," and an attempt was made quite unsuccessfully, to make "farmers of pickpockets," and it was not till after many crude experiments and as many insuperable difficulties, that free men and women came to emigrate to these lands which are, even though subject to severe drouths, among the best grazing lands in the world. The way Australia has overcome her handicaps is one of the many conspicuous romances of modern history, for it now contains a prosperous population of about 5,000,000.

The most conspicuous geographical and economic features of Australia are the two great plains; the alluvial area covering half a million square miles stretching across the continent, and the Australian Steppes in the northwest covering 400,000 square miles. The climate is very dry, two-fifths of Australia getting annually but ten inches of rain, and part of that not more than five inches. There have been some drouths of dreadful consequences. Nevertheless, next to sheep and cattle raising, agriculture is the principal source of wealth. Timber is an important asset but the land is rich in minerals. Gold was discovered early in this century, starting an industry which has grown in volume till it had aggregated up to 1911, about 2¾ billions of dollars. In 1891 the number of sheep reported was 106,421,068, yielding a half billion pounds of wool, while the number of cattle increased in thirty years, (1865-95), from 3¾ million to 11¾ million head.

The aborigines seem to be a distinct race, without records, and even without traditions of having come from other lands. Their languages and dialects show a remote connection with the Papuan tongues.

Politically, Australia is a commonwealth. The people have realized a commonwealth in fact as well as in name. The railroads are owned for the most part by the government, i. e.: by the people, and this fact has made it possible for lines to be built in areas which offer no immediate dividends, but tend to develop the country, extend population and advance civilization more rapidly than if these highways were built up only where the traffic would warrant. The Commonwealth is a Federal state under the supreme authority of the Crown of Great Britain, by Act of Parliament, dating with the opening day of the twentieth century, January first, 1901. This Act formed a union of the colonies of New South Wales, Victoria, Queensland, South Australia, and Western Australia.

The circumference of Australia is 8,000 miles, or about one-third of that of the earth.

Austria-Hungary.—In 1438 the House of Austria recovered possession of the imperial crown of Germany. There had been endless fighting between the German states, and Maximilian now tried to restore peace. The Diet forbade war between the states, but in vain, for the German princes, drunk with ambition, had no thought of being curbed in their desires. In 1520, Souleïman, the Ottoman sultan, set out to conquer, and succeeded in 1521 in taking Belgrade, the stronghold of Hungary, which state lay east of the Leitha River. Allied with the Protestants of Germany, he captured Rhodes from the Knights of Saint John, and passing the Danube, destroyed the Hungarian army at Mohacz, (1526). Ferdinand of Austria now fell heir to the crown of Hungary, but was dethroned by John Zapoli, a Magyar claimant, whom Souleïman supported. Hungary was ravaged, and the sultan crowned his vassal king of Hungary at Buda. About 1547 Souleïman was busy with wars in Asia against the Persians, and the Hungarians were able to drive back the Ottomans on the Danube. The feeble policy of Austria during the religious wars of the seventeenth century was suddenly changed when an enterprising prince, Ferdinand II., ascended the throne. He blew up the heretical churches and burned all the Bibles he could lay hands on. The Bohemians rose in revolt and chose a king for themselves. Then followed a war in Central Europe, one hundred years after the Reformation, which, though under the mask of religion, was really a political struggle. In fact, Ferdinand was determined to make Germany an Austrian province. For thirty years Protestants and Catholics—Bohemians, Danes, Austrians, Germans, Italians, Spaniards, Bavarians and Swedes struggled one after another, Gustavus Adolphus, leader of the last named, for a time checking the advance of Catholicism and the Austrians on the Baltic shore. Finally Richelieu of France, entered the fray and was successful in the West, aided by Swedish victories at Brandenburg, Silesia, and Saxony. Austria, which had tried to prevent religious liberty in Germany, had been vanquished, and Germany was only nominally an empire, composed of a confederation of politically and religiously independent states. The dream of Otho the Great, of Frederick Barbarossa and of Charles V. for a united empire was still unrealized.

The French Revolution in the eighteenth century aroused the crowned heads of Europe to unite "for the safety of their crowns." France was menaced on three sides. When she had proclaimed herself a republic and executed Louis XVI., Austria, Prussia, Piedmont and England joined the

The REVOLUTIONARY WAR

coalition, followed by Spain and Naples, Holland, Portugal and the German Empire, through the influence of its two leading states. The Austrians desired the French fortresses on the Scheldt, but when Napoleon appeared and by sheer genius placed France again in the foreground, all the armies of Austria were unable to withstand him. In 1805 he entered Vienna and a short time later won the battle of Austerlitz, over the emperors of Austria and Russia, as a result of which Austria lost all influence in Italy and Switzerland. Napoleon, now Emperor of France, conceived a world empire, and part of his plan was the elevation of his relatives to the kingships of states all under the confederation of the Rhine. The old German Empire was dissolved; instead of holding the title of Holy Roman Emperor, Francis II. now descended to the position of merely Emperor of Austria. The 370 German states, constantly at war, were reduced to thirty or forty, and united under the protection of Napoleon into a federated state from which Austria and Prussia, the two half Slav states, were excluded.

Following the fall of Napoleon and the Revolution of 1848, reactionary Austria fell into the hands of the revolutionists. Metternich, representative of autocratic power, fled, and a new constitution was proclaimed. Bohemia took courage from Vienna and declared the full equality of Slavs and Germans in the kingdom. Meanwhile there was revolution in Hungary, and the Viennese, hating the Slavs, momentarily sympathized with the Hungarians. Ferdinand of Austria abdicated in favor of his nephew, Francis Joseph, whom the Magyars refused to accept. The real ruler was the head of the ministry, Prince Schwartzenberg, whose policy, like that of Metternich, was absolutism. He aimed at complete subjection to the Austrian Germans. In the struggle that followed, Hungary was successful and made herself an independent state, until Austria, aided by Russia, crushed her. Meanwhile Prussia was becoming a powerful rival of Austria. Both states, largest and strongest in the German Confederation, were disliked by their neighbors, and neither gave promise of advancing the cause of German union. In 1862 Otto von Bismarck was appointed Minister of Foreign Affairs and President of the Cabinet by King William I. of Prussia. Under him was organized the military system of Prussia, the system of "blood and iron" which was to defeat Austria and France, and reunite Germany. Seven years of war between Austria and Prussia left the former excluded from Germany, abandoning her claims to Schleswig and Holstein and Venetia, while Prussia added much to her territory, including Schleswig - Holstein, (originally wrested from Denmark), formed secret treaties with the states of southern Germany, and strengthened herself by the North German Confederation. Following the Franco-Prussian War (1870-1871), the King of Prussia was made the Emperor of united Germany, from which, of course, Austria was excluded.

Disorder and rebellion marked the early part of the reign of Francis Joseph, who came to the throne of Austria in 1848. The German minority looked contemptuously at the other races, and it was necessary to rule by martial law until 1854. An attempt was made to Germanize all Austrian subjects. The German language was made obligatory in courts, civil administration, and in the schools of the Hungarians, Servians, Roumanians, Croatians, Slavonians and Bohemians. The subjection of other races than the German in the Chamber of Nobles and the Chamber of Deputies was met by the Hungarians with stout resistance. The Austro-Prussian War was a blessing in that it established the fact that Austria was not a German state and should no longer "seek her center of gravity" outside her own boundaries. The rights of her subject races were finally at least partially recognized; there was a complete reorganization—political, financial, military. A Protestant and a foreigner was invited by Francis Joseph to accept the chancellorship of this Catholic and reactionary empire. The independent existence of Hungary was recognized, and a prime minister appointed, (1867). Francis Joseph was crowned king of Hungary and the Hungarian crown and color were added to the imperial flag of Austria. But the question of the internal weakness of Austria-Hungary was not solved by coupling the names together, as the struggles of the present day have continued to show. The race antagonism manifested itself more strongly than ever following the Great War in which those who were related by blood to the Poles and Slavs of Russia were forced to do Germany's will and fight their kinsmen. While peace negotiations with Russia were going on, (1918), the Czechs and Slavs of Austria-Hungary were uniting with the Poles against the Austrian ministry, declaring that their hatred would endure as long as the country remained under the yoke of Germany. They asserted their right to form themselves into free and democratic states independent of the "Fatherland" or Austrian authorities. A revolutionary movement, extending to the army and navy, kept the country in a turmoil and disrupted the monarchy, resulting in the abdication of Emperor Charles (1918). Governments of their own were formed by the Czechs in Bohemia, the southern Slavs at Laibach, and the Croats at Agram. In Hungary great excitement existed over the hope of forming a republic, while the German-Austrians set up a separate administration. A revolution in Hungary, without much bloodshed, resulted in the triumph of the new government which promised to restore freedom of the press, trial by jury, right of assembly and association, and proclaimed military and civil amnesty. An appeal for order went out from the new cabinet, organized by Count Michael Karolyi, promising new rights and privileges and care for soldiers and war victims.

Babylon, Capture of, by Cyrus.—In 539 B. C. Cyrus, the Persian, already renowned for his conquests in the East, marched against Babylon. King Nabonidas of the Babylonian Empire had foreseen this attack and for ten years had been fortifying his city against it. Though Cyrus defeated the king's men in the open field, when they had retired behind the insurmountable wall of their city he was unable to assail them. After vain attempts he withdrew his troops a few miles up the Euphrates River, which river flows into the city of Babylon, and he set them at work with spades to drain the waters of the river into a channel. On a night when the Babylonians were feasting, this drainage was completed and the Persians were able to march along the empty river bed, entering Babylon through the unguarded river gate. A horrible massacre took place in the darkness and on the following morning Cyrus was king of Babylon.

Balkan Peninsula.—The Balkan peninsula is the storm center of modern Europe. It has been called the "Whirlpool of Europe." It lies adjacent to Asia and is peopled with races of distinct types and all with their race hatreds. The situation has been complicated by the presence of an alien and discordant element, this peninsula having been the meeting ground of Asia and Europe and the field of war for a thousand years between the two civilizations, while before that it was the scene of constant internecine strife.

Europe has three great southern peninsulas, of which this is the easternmost. It lies between the Adriatic Sea to the west, and the Black Sea to the east, with the Danube to the north. Its area is about 175,000 square miles, and includes European Turkey, Servia, Bulgaria, Bosnia, Herzegovina and parts of Dalmatia, Croatia, Montenegro, and Greece. Southeast of the peninsula is the Bosphorus, about twenty miles long, connecting the Black Sea with the Sea of Marmora, which in turn is joined with the Ægean Sea by the Dardanelles. Greece, Roumania, Montenegro, Servia and Bulgaria are called the Balkan states, and these have all been carved out of the Turkish Empire during the nineteenth century.

The political significance of the Balkan peninsula is found in its geography, its position being one of the most strategic in the world, culminating at Constantinople, where opens the gateway from western Europe to the countries bordering on the Black Sea and the farther East; it is emphasized in the fact that this spot since a little time before the discovery of America (1453), has been, with the vast hinterland, under the domination of the "Unspeakable Turk." For three centuries this peninsula was a Turkish and Mohammedan possession, with all that meant in its access to regions beyond, which have been ruled by fire and sword.

Ballinger - Guggenheim Controversy. — The progressive element of the Republican party complained bitterly over the alleged support of the President given to the "Guggenheim Interests," in the appointment of the Seattle Attorney of those interests as Secretary of the Interior, who made the attempt to validate immense coal titles in Alaska through illegal applications, which if successful, would have placed in their hands property admitted by their own engineers to be worth $4,000,000,000.

Bannockburn—a creek in Scotland, the site of a famous battle in 1314, when 40,000 Scotchmen under Robert Bruce defeated 60,000 English. The Scotch loss was 4,000, the English 10,000.

Since 1286 the king of England had laid claim to the throne of Scotland and exacted tribute from Scottish lords. After the Battle of Bannockburn and a few Scotch invasions into England, Scotland was granted her freedom in 1328 with Robert Bruce as king.

Belgium.—Belgium as a nation dates from 1830. Under the Congress of Vienna, Belgium (the Spanish Netherlands), was joined to Holland when Norway was made a part of Sweden. When the Spanish colonies declared their independence early

in the nineteenth century, and Metternich proposed the offices of the Holy Alliance to coerce them again into slavery, England objected and laid the train for the Monroe Doctrine, later encouraging Belgium in a successful revolt against Holland. In January, 1813, a conference of ministers in London recognized the new state, which adopted a liberal constitution, but it was not until 1839 that Holland accepted the situation. The crown was offered to the uncle of Queen Victoria, Leopold of Saxe-Coburg. Leopold II. succeeded him in 1865, and reigned until his death in 1909, when he was succeeded by the present king, Albert I.

The neutrality of Beligum was guaranteed under the treaty of 1831, by Great Britain, France, Austria, and Russia. By an international conference in 1885, Leopold II. was made sovereign of the Congo Free State, with 900,000 square miles inhabited by 30,000,000 people. On August 2, 1889, he bequeathed to Belgium all his sovereign rights, and by convention the right was granted to Belgium to annex the state at any time after 1900. Charges of cruelty on the part of government officials against the inhabitants of the Congo Free State and exposures regarding the use of the country as a means of private income for Leopold II. resulted in abolishing his overlordship and annexing the State in 1908.

The two great political parties of Belgium have been the Catholics and the Liberals, the former having opposed the principle of democracy and political equality. During the past few years the Socialists have gained in strength. Before 1893, in a population of over 6,000,000, less than 140,000 people were allowed to vote; a constitutional revision gave 1,350,000 electors a right to cast 2,066,000 votes, the Catholics having retained the right to cast two or three votes each in special cases.

In 1916 there were about 3,000,000 Walloons as compared with 4,000,000 Flemings in Belgium. The Walloons are of a French type, darker than the Flemish, and more vivacious. Because of the difference in the two types, Germany hoped to foster a separatist spirit among the Flemings, and succeeded, during the Great War, in forcing a division, with headquarters for Flanders in Brussels, and for the Walloons in Namur. Protests arose from both sections, and Belgium learned what distrust and hatred of German schemes meant when starvation followed financial oppression, and men were deported to serve Germany's purposes. The inhabitants took refuge in the interior, and the army of occupation of Germany did everything in its power to crush Belgium. When the Allies had recovered Ypres, Mons, Roulers and other important cities which had been seized, and peace was established (November 11, 1918), Belgium faced the future, sick with the remembrance of innumerable horrors, devasted homes, a financial loss of over $275,000,000 in four years, and with her whole transport and industrial system disorganized. Complete reconstruction has been attempted and the Inter-Allied Commission is at work planning ways and means.

Bell's Telephone.—Many inventors had tried to hit upon a device for transmitting speech through space, but they had been electricity experts who studied the theory of sound waves without considering the apparatus of the human ear. Alexander Graham Bell was a professor of vocal physiology and understood thoroughly the mechanics of speaking and hearing. His longing to improve the lot of his wife, a deaf mute, added zeal to his researches.

Through the telegraph he knew the power of wire to carry sound, but how to make it carry the various graduations of sound involved in speech was his problem. While studying the diaphragm of the human ear, which vibrates as it is hit by sound waves and so produces hearing, he was struck with the idea of manufacturing such a diaphragm which should reproduce sound waves exactly as they are reproduced by the human ear. This is the principle of the telephone. There is a diaphragm at either end of the wire, so that the sound waves produced by the voice of the speaker at one end are transmitted to the other end of the wire, where a diaphragm is in contact with the ear of the listener.

Bell worked for two years to perfect his invention after he had gained the leading idea. In 1876 the telephone was patented and exhibited at the Philadelphia Centennial Exposition. At first it received little attention, but the Brazilian Emperor Dom Pedro was struck with wonder on hearing it talk and thereupon the eminent scientists began to examine it, granting it the prize of highest honor at the Exposition.

Although it was not thought at the time that the telephone would ever be more than a plaything, the business management of Mr. Hubbard saw it put to practical use. It is now one of the necessities of life.

Bolivia.—Bolivia, a neighbor of Brazil, Argentine, Peru and Chile, comprises an area of 708,195 square miles of South American territory. For two centuries after the Spanish conquest it was a part of Peru, but in 1825 it proclaimed independence and set up a republican form of government, the first president being General Sucré. Civil wars followed and later (1879-84), Chile wrested from Bolivia the coast province of Atacama, with its valuable nitrate and guano deposits. Boundary disputes with Brazil ended in Bolivia's acquisition of additional territory, 1,221 square miles, commercial facilities and a payment of $10,000,000. In 1917, Bolivia severed diplomatic relations with Germany.

The southwestern part of Bolivia is high and mountainous, the northern and eastern consisting of low terraces and plains. A plateau lies between the Andes, west, and the Cordillera Real, east. There is heavy rainfall on the eastern plains, and the mean annual temperature on the lowlands is 74° F., while it is about 63° on the highlands. Nearly three-fourths of the country is covered with forests from which valuable timber is obtained—mahogany, rosewood, cedar, jacaranda, quebracho, gum trees, and dyewoods. The high plateaus are treeless, and mimosa and bamboo are found in lower altitudes. Among other valuable products of Bolivia are cocoa, cinnamon, rubber, vanilla, sarsaparilla; and the metals tin, silver, gold, copper, iron, lead, zinc, cobalt, platinum, antimony, bismuth, quicksilver; the nonmetals alum, arsenic, borax, talc, mica, marble, salt, saltpetre, asphalt, petroleum, precious stones, such as topaz, turquoise, amethyst, and lapis lazuli. Gold is carried by the streams flowing down into the Amazon; silver is plentiful, though the mines are not extensively worked. In the eastern valleys of the Cordilleras are raised coffee, cocoa, sugar, tobacco, cotton, rice, yucca, manioc, maize, alfalfa, pineapples, oranges, bananas, lemons and peaches; besides sheep and goats. Navigable streams cover several thousand miles; railroads and telegraphs establish communication between the cities. The country depends upon river ports, having no seaport of its own. About fifty per cent of the population are Indian, twenty-five per cent mixed Spanish and Indian, and thirteen per cent white. The state religion is Roman Catholic.

Boxer Rebellion.—A "patriotic" society called the Boxers, began early in 1900 to massacre the native Christians in Northern China and to kill Missionaries and other foreigners. At Pekin foreign ministers and their associates were besieged by Chinese troops who were in sympathy with the Boxers. President McKinley sent warships to protect the resident Americans and these were joined by troops of Japan and the other powers. War was declared, several towns were captured and battles fought and Pekin was taken, after which order was restored.

Braddock's Defeat; the first battle of the French and Indian War in 1755. The English General Braddock led a force of British soldiers and colonist volunteers against the French at Fort Duquesne (now Pittsburgh). Having prepared his attack according to the European methods of open warfare, Braddock was helpless when surrounded by French and Indians in ambush. His brave and desperate fight ended in defeat. Braddock himself was killed and 977 out of his 1,456 men perished.

Brazil.—When Vicente Yanez Pinzon, a Spaniard, discovered the northeastern coast of Brazil in 1500, he did not take possession of the land because a treaty made previously with Portugal had assigned all the new country east of about longitude 50° W. to Portugal. In the same year Pedro Alvares Cabral, a Portuguese, on his way to India, happened upon the Brazilian coast south of Bahia, and took possession in the name of Portugal. It was some time, however, before Portugal gave much attention to colonizing the new territory, the first colony being formed in 1532 by Martin Alfonso de Souza, and other sections being granted to distinguished Portuguese on condition that they would settle them. Bahia, founded in 1549, was the capital until after 1762, when it was changed to Rio de Janeiro. Although the French and Dutch attempted to settle in Brazil, the Portuguese successfully drove them out. The country developed rapidly, owing to the growth of the sugar industry, and the discovery of rich gold and diamond mines in the interior. Expeditions were made to the interior and several towns were founded. When Napoleon drove Dom John, prince regent, out of Portugal, the prince fled to Brazil (1808), and established his capital at Rio de Janeiro. His son, Dom Pedro, remained as regent in Brazil and led the movement for Brazilian independence from Portugal after his father had returned to Portugal as king. Dom Pedro was crowned Emperor Pedro I. of Brazil in 1822. The Revolution of 1889 forced his son, the second emperor, to abdicate, and a federal constitution was adopted. A more carefully prepared constitution was framed in 1893, and insurrections raging at that time were settled by President Peixoto. In 1917, Brazil sympathized with the Allies in the Great War, and declared war on the German government.

Brazil is the largest country in South America, and comprises two-fifths of the southern continent. Its area is 3,209,878 square miles, much of which, especially along the western and northern boundaries, is unexplored. The southeastern coast has excellent land-locked harbors and channels, but in the northeast there are few harbors, except the estuary and the Bay of Maranhão. The Amazon River and its tributaries form the finest system of navigable waters in the world, ships being able to sail long distances up the rivers. Most of Brazil has a moderate and healthful climate, with abundant rains, but a portion of the northeastern coast is subject to periodical drouths, lasting for several years and resulting in many deaths. The warmest region is the Paraguan depression, formed by the Amazon and Paraguay, meeting in the center of the continent, where swamps and rank tropical undergrowth abound. The coast range is the forest region known as the Brazilian Plateau; eastward are open grasslands. North is the Guinea plateau, partly open and partly covered with the scattered growth of trees and brush. Brazil ranks next to South Africa in the production of diamonds. In addition it produces gold, quartz, coal, silver, copper, lead, immense deposits of iron, as yet practically useless because of the lack of coal, also petroleum, lignite, peat, monazite, sulphur, precious stones, rubber, Brazilian nuts, petrified wood, vegetable oils, drugs, cabinet woods, especially rosewood, coffee, which is the largest export, sugar, tobacco, and cacao. Manufacturing is done on a small scale, railroads and telegraph lines connect the towns, and the navigation of rivers makes possible a successful system of commerce. There has been as yet little exploitation of mines, but the past few years have seen an increase especially in the exportation of manganese. Cattle roam the broad, grassy spaces, and the woods are thick with wild hogs, puma, jaguar, sloth, monkeys, birds and reptiles. The forests have been worked for years, and the fisheries are famous, 2,000 varieties of fish having been discovered by Agassiz in the Amazon River alone. The population, a large part of which is Catholic, consists of pure Portuguese, whose language is the national language, negroes, aborigines or native Indians, German and other European immigrants, some Americans, and people of mixed race, the most numerous of all.

Buchanan's Administration (1857-1861)

I. Dred Scott Decision (1856-1857).—The Dred Scott Decision was made by the Supreme Court of the United States, in 1856, but was not made public till after the inauguration of Buchanan, who sympathized with slavery. There had remained the question as to whether a slave taken by his master to a free state became free. A negro named Dred Scott had been taken from Missouri into several free states and upon his return with his master sued for his freedom on the ground that his sojourn in free territory made him a free man. The Supreme Court finally decided that Scott, not being a citizen, could not sue in the Missouri courts. The Missouri Compromise was declared null and void, opening the way for slavery in all free territory, from which, it declared slave property could no more be shut out than a horse or a cow. The South was delighted; the Democratic party in the North was split in two, and the Republicans were more than ever determined to put an end to slavery.

II. John Brown's Raid (1859).—John Brown had been so prominent in the border troubles in Kansas that a price had been set on his head. He settled in 1859 in Harper's Ferry, Va., where he attempted to stir up a slave insurrection and to secure the liberation of the negroes. With less than twenty followers one Sunday night in October, 1859, he seized the United States armory at that place. The slaves failed to support him and several of his men were killed, including his two sons, and he was captured by Colonel Robert E. Lee, of the United States army. He was tried for murder and treason and hung in December of 1859.

III. Lincoln's Election (1860). — The national democratic convention which met in 1860 split over the slavery issue and each portion held its own convention and nominated candidates — one declared for Stephen A. Douglas and the other nominated John C. Breckinridge. A group calling themselves the Constitutional party nominated John Bell. The Republican party met at Chicago on May 16th and nominated Abraham Lincoln. Their platform repudiated the Dred Scott Decision, demanded the admission of Kansas as a free state, did not encourage interference with slavery in the states, but insisted that the territories must be kept free and called for a Homestead law and for a railroad to the Pacific. There were 303 electoral votes cast out of which Lincoln received 180, Breckinridge 72, Bell 39 and Douglas 12.

IV. Confederate States of America (1861).—South Carolina was probably the only state that would have voted for secession at the time of the election of the first anti slavery President. But the leaders precipitated matters, and at a convention passed an ordinance of secession, declaring, "that the union now existing between South Carolina and the other states, under the name of the United States of America, is hereby dissolved." Preparations were made for an independent government and messengers sent to other states. Within six weeks Mississippi, Florida, Alabama, Georgia, Louisiana, and later Texas held conventions and passed ordinances to the same effect. Delegates met at Montgomery, Alabama, on February 8, 1861, and organized a government under the name of "The Confederate States of America," adopting a provisional constitution, electing the next day, Jefferson Davis, of Mississippi, as President and Alexander H. Stephens, of Georgia, as Vice-President. A permanent constitution was adopted March 11. Among the changes made differing from the Constitution of the United States was the declaration of "the sovereign and independent character of each state," the prohibition of protective tariffs and of the appropriation of public money for internal improvements. The Presidential term was six years and he was eligible for but one term. An election was held in which Davis and Stephens received the unanimous electoral vote and the Capitol was set up at Richmond, Virginia, February 22, 1862.

Buena Vista—a town in northern Mexico, the site of a decisive battle of the Mexican War in 1847. 5,000 Americans under General Zachary Taylor held the fortress, the rest having gone to reinforce General Scott at Vera Cruz. Santa Anna led 20,000 Mexicans against the weakened stronghold, but all his attacks were repulsed by the Americans and at length he withdrew his men. The Mexicans lost 2,000 men, the Americans only 750. This victory closed Taylor's successful northern campaign and thereafter all effort was turned toward subduing the south of Mexico.

Bulgaria.—Bulgaria, with an area of about 33,647 square miles and a population of less than 5,000,000, is one of the Balkan states which for centuries paid tribute to the Turk. Like the history of this entire region, that of Bulgaria is devoted to the oppression and killing of Christians by the Turks. Bulgarian independence grew out of sorrow. After the revolt of Bosnia in 1875, the Turks, fearing a general Christian uprising among their sympathizers, sent the Bashi Bazouks among the Bulgarians with orders to kill all whom they found. The Mohammedan fanatics threw themselves upon the villages and towns and massacred thousands of innocent men, women and children to the horror of all Europe, which is and has been well used to horrors. Russia, especially, was aroused through race sympathies, and the Czar declared war upon Turkey, defeating that power. The war issued in the treaty of San Stefano, which gave the most of Turkey to Russia. England resisted this treaty, and insisted upon the revision of the agreement, upon which the Congress of Berlin was called in June, 1878. Montenegro, Servia, and Roumania were declared independent, while Bulgaria was constituted a self-governing principality, paying an annual tribute to the Sultan. A constitution was adopted in 1879 at Tirnova, providing for a legislative assembly elected by popular vote, and Sophia was designated the capital. The prosperity of Bulgaria aroused the jealousy of Servia and war resulted, when Belgrade, the Servian capital, was saved by the Austrians. For seven years Stambouloff was the real ruler of Bulgaria, the main point of his policy being Bulgarian independence, but he was assassinated in the street. The majority of the people of Macedonia are Bulgarians, and this district is a constant source of friction between Bulgaria, Servia and Greece. In the Great War Bulgaria played a sullen and deceitful part and then threw its weight to the Kaiser's Allies, even to the Turks who for centuries had exploited and murdered its people.

Bull Moose Party.—The country replied to the attitude of President Taft towards Big Business in the election of 1910, by electing many democratic governors, and changing the republican majority in Congress of 47 to a democratic majority of 54. President Roosevelt led the progressives in his own party and a new party was organized, called the Bull Moose party which was finally slaughtered by Colonel Roosevelt himself. For a time, however, this party served to crystallize the moral sentiment of the American people, but its influence did not last long for want of leadership.

Bull Run, a small stream in Virginia, the site of two important battles of the Civil War, both disastrous to the Union.

The first occurred on July 21, 1861, when General McDowell advanced from Washington with 18,500 men to meet General Johnston commanding 18,000 Confederates. Both forces were as yet untrained, but the superior organization of the Confederates, the impassable resistance of "Stonewall" Jackson and the addition to their number of fresh re-enforcements, won the victory for the Confederates. The disgrace of this defeat awoke the northerners to the solemnity of their situation.

The second battle of Bull Run, in the last days of August, 1862, was a masterpiece of strategy on the part of the Confederate General, Lee, whose forces numbered half those of his enemy. The Federal army under General Pope was continually attacked from an unexpected direction and forced to change its plan of battle. The subordinate Federal generals did not obey orders and caused great confusion. On the first of September the northerners fell back to Washington, having lost 14,500. The Confederate loss was 9,500.

Bunker Hill, the site of the first pitched battle of the American Revolution. Here the Americans under General Prescott twice drove back the British under General Gage, but, their ammunition having given out, they were forced to surrender. The American force of 1,500 lost 450 men; the British lost 1,050 out of 2,500. This battle not only proved the mettle of the American troops, but so reduced the English force that it was equivalent to an American victory.

Bureau of American Republics.—In 1889 President Harrison, through the influence of his Secretary of State, Blaine, called the first Pan-American Congress at Washington. Here the representatives from all the republics of South and Central America came together to discuss means of increasing trade, furthering intercourse with each other and providing arbitration in case of disputes. Their one permanent work was the founding of the Bureau of American Republics, with its headquarters at Washington. The function of this organization is to collect and distribute information about the American Republics. It corresponds with the governments and answers any questions sent from them. It publishes a monthly bulletin containing the latest information as to the resources and the commercial situation of the republics.

The ambassadors from the various American republics at Washington, together with the United States Secretary of State, form the governing board of the Bureau. Its business is transacted in the beautiful Pan-American Building, donated by Andrew Carnegie.

Canada.—Canada measures 2,700 miles from the Atlantic to the Pacific, and 1,600 miles from the international boundary line to the Arctic outposts, covering an area of 3,729,665 square miles. The area under water is 125,756 square miles. In addition to the nine provinces, there are the Yukon and Northwest Territories, the boundaries of which were revised in 1912. The population in 1911 was 7,204,838.

Many large rivers flow into Hudson Bay, while the St. Lawrence system, including the Great Lakes, drains an area of a half million square miles, part of which, however, is in the United States. The Canadian Atlantic coast line is 10,000 miles, that of the Pacific, owing to many deep inlets, nearly as large, while the coast line of the Arctic ocean is unknown but very large. The whole coast line of Canada is far in excess of the circumference of the globe. In the Hudson Bay country, kept cold by Arctic currents along the coast, the winters are long and the summers short. British Columbia is tempered by the Japan Current, zero weather seldom occurring on the coast. The great interior plain stretching from Winnipeg to the coast, while cold in winter, has a hot summer, and long days with much sunshine, making it an ideal farming country. The soil is very rich and the land capable of growing wheat, owing to peculiar climatic conditions, in some places very nearly to the Arctic Circle. Vancouver and the vicinity have a climate like that of England, while Victoria at the southern extremity of Vancouver Island is called the Riviera of Canada. The forest resources of the Dominion are immense, nearly 400,000,000 acres out of the 550,000,000 acres of forest containing timber of commercial value. There is no finer timber in the world than that of British Columbia. Canada contains the world's most extensive fisheries, supporting 91,000 fishermen and their families. In addition to the great fur industry, carried on by many trappers and tradesmen, fur-farming has come to be remunerative. The mineral resources of the Dominion are great, largely discovered in recent years and aided by the Canadian Geological Survey, as able and useful a body of men as are to be found in the world. They are explorers as well as scientists and are adding much to the Canadian contribution to civilization. The country is especially rich in gold, silver, lead, coal, iron, copper, petroleum and salt, while the nickel deposits furnish most of the world supply.

Nearly half of the population are engaged in Canada's pre-eminent industry, agriculture. Politically and economically, the farmer is a power. There are many large irrigation projects completed or under process of development, the most ambitious being that of the Canadian Pacific Railway along its main line in Alberta. This tract contains 3,000,000 acres. In 1912, there were 32,449,420 acres under field crops. Under the British North American Act of 1867, a federal government was established with the name of The Dominion of Canada. Since that date new provinces have been created and added to the original four: Ontario, Quebec, Nova Scotia, and New Brunswick.

It is probable that Canada was seen by the early Norsemen but John Cabot reached the Gulf of St. Lawrence in 1497. Jacques Cartier followed, among others, in 1534, and took formal possession for the King of France. Colonization projects followed, and the country was gradually developed and exploited, principally for its wealth of furs. In 1663 Louis XIV. dissolved the Company of New France and placed Canada under direct control of the French crown, although later the Company of the West controlled the colonial trade. The English colonists came into conflict with the French in the latter part of the seventeenth century, and the French and English wars began which finally ended in the overthrow of Montcalm by Wolf at Quebec. Rupert's Land and the Northwest Territories, which had been held by the giant monoply known as the Hudson's Bay Company since 1670, were surrendered to the British crown in 1869, two years after the formation of the Dominion of Canada. Like the Louisiana Purchase in the United States, it added a new "Empire" to the existing states, laying the physical foundations of one of the great nations of the future.

The executive authority of government is vested in the King of England, but exercised in his name by the governor general and the ministry which is responsible to the House of Commons. The Canadian Parliament consists of the Senate and the House of Commons. When England entered the Great War in 1914, Canada was called upon to aid her, and a Military Service Act was passed by the Canadian Parliament. Quebec protested that this Act was enforced with greater severity in that province than anywhere else; draft riots resulted and threats of secession from the confederation were heard. German agents were blamed for the undercurrent of disloyalty to England and the national government of Canada. Canada as a whole, however, contributed generously and loyally to the Allied cause.

Carthage.—Carthage was the greatest of all the colonies of Phœnicia. With the waning of Phœnician power, that of Carthage increased. Founded at a strategical point of Africa, with Sicily lying between her and Italy, with a fertile territory around it and a harbor large enough for any vessel, Carthage became the commercial rival of Greece and the political rival of Rome, at one time threatening its very existence. Many of the merchant kings of Tyre emigrated to Carthage upon the encroachments of the kings of the East, helping to make it the head of the Phœnician world. The mother country had grown rich and luxurious and her people were unwilling or unable to defend themselves when Sargon subjugated them. The book of Judges says of the people of Dan (Laish), "They dwelt careless, after the manner of the Sidonians, quiet and secure." This complacency has been the downfall of many a nation since. There were but two classes of people in Carthage—the rich landowners and merchants, and the poor who did the day's work, making an oligarchy. The two judges and the senate were subordinate to the nobles, or the hundred judges. The people had little to say in public affairs. In 480 Carthage made war on the Greek cities in Sicily, which was renewed from time to time. Then came the Punic wars, beginning with Rome relying on its army and Carthage supreme on the sea. In 311 B. C., Rome began to create a fleet, and in 263 B. C., won its first naval battle at Mylae, whereupon the Roman senate decided to invade Africa. Hamil Car maintained himself against Roman attacks for six years. Hannibal took command of the Carthaginian armies

at twenty-eight years of age, and became a leader unsurpassed by any other general in ancient or modern times.

In 218 B. C. Hannibal crossed the Ebro, conquered the people to the Pyrenees, and pushed into Gaul with an army of 50,000 foot, 12,000 horse, and 37 elephants, marched over the Alps, with mountaineers rolling stones down upon his soldiers, losing half his troops and all his draught animals. Reinforced by 60,000 Gauls, he marched through the swamps of Arne, losing an eye, and gained Etruria, defeating the Romans at Cannæ, where the Romans lost 80,000 men with eighty men of senatorial rank. Some of the Italian allies went over to Hannibal. But Hannibal failed to follow up this victory in marching at once to Rome. He took Capua, the second city of Italy, but he was finally defeated by Marcellus, because he could obtain no help from home, and afterward he was defeated by Scipio at the decisive battle of Zama.

Celts.—Far back in the days before histories were written, it is believed that a barbaric people known as Celts (or Kelts) wandered farther than the rest of their race from their home on the vast plateau of Central Asia and were the first of the Aryans to reach Europe. Here they were encountered as early as 2000 B. C., on the western portion of the continent, scattered, wandering tribes.

On their long journey from the plains of Asia to Western Europe some of the Celts fell by the way and settled in Bohemia, in parts of Germany, along the Moselle and Rhine. The rest continued as far as middle France, which became the center of their wanderings.

A characteristic of the Celts in all their doings was a slowness and lack of cohesive plan. This was largely owing to their low stage of civilization. Their religion was yet in a crude stage. Their priests (Druids) brought human sacrifices to their gods. We hear of a Cannulus (god of war), of a Taramicus (chief god), of Belisama (a sort of Minerva), and many others, but in different tribes these gods bore different names. With one portion of the Celts it was Bormo, with others Grannus (a kind of Apollo), that was chiefly worshipped.

Gaul, the France of today, having become their new home, fractions of the Celts continued to seek other regions. Large numbers penetrated Spain, where they mingled with the original inhabitants and formed a new stock, the Keltiberians. In the course of centuries, they gradually drove out or amalgamated with the various tribes in northern Italy. The Romans spoke of this part of their empire as Gallia Cisalpina, Gaul this side of the Alps, and continually waged war with the Celtic invaders. Brennus, chieftain of a great Celtic army, in the early days of the Roman republic, 390 B. C., seized Rome itself. About a hundred years later, we hear of the extermination of his tribe by the Romans, In 278 B. C., a huge band of Gauls ravaged Asia Minor, Macedonia and Greece, and finally, after many battles, founded Galatia. In 238 the Cisalpine Gauls formed a league against the Romans, but were crushed in 225 at Telamon. And at Mutina, in 193, the great Boji (a Celtic tribe) were wiped out. Between 58 and 51 B. C., Julius Cæsar conquered the Celts in Gaul, and the history of that branch of the race thereafter properly belongs to the history of Rome.

Meanwhile, in the centuries preceding, another great wave of Celtic adventurers had crossed over to Britain, also to Ireland. There is scant record today of these migrations; their object seems to have been plunder and conquest, or at best settlement in less crowded territory. Certain it is that by the time of Julius Cæsar England, Wales, Scotland and Ireland were inhabited almost solely by Celts. Here, too, the Romans vanquished.

Cæsar first invaded England with an army and subdued the natives, and after him Claudius and Agricola followed. Agricola carried the Roman eagle as far as Scotland. The Emperor Hadrian built the famous Roman wall from the Tyne to the Solway in 121 A. D., and Antoninus later strengthened this wall. A legend tells of the conversion of the Trinobantes, a powerful Celtic tribe, to Christianity in 180 A. D., but this is not authentic.

Gradually the power of Rome declined and her hold on Britain grew weaker. But this did not mean freedom for the Celts, for at the same time the savage raids of the Picts and Scots from the North grew more frequent.

Between 286 and 294 A. D., a British chief, Cerausius, proclaimed the independence of the island and in 410 A. D., Honorius of Rome renounced all claim to Britain. The last Roman soldiers left and Britain was now exposed to the inroads of the fierce Saxons, Angles and Jutes. Vortigern, king of the Celtic Damonii, defeated the invading hordes of Picts and others in 411 A. D. This, however, was only a respite. The raids of the Northmen continued with increasing strength until the island was given over to the Angles and the Saxons, and what Celts were not exterminated or assimilated, sought refuge in the remote corner of Wales.

It is claimed that the Irish are the best representatives of early Celtic civilization, inasmuch as their isolation caused them to mingle less with foreign races. The history of early Ireland, however, consists chiefly of legends and traditions, and these cannot be relied on for accurate information. There are legendary accounts of five distinct invasions of Ireland: that of Partholan, the Greek; that of Nemed of Scythia; that of the Firbolgs, who came under five chiefs and settled in different parts of the island; that of Tuatha De Danaan, and lastly that of the Milesians or Scots. The Irish also invaded Britain repeatedly, settling in Wales, Cornwall, Devon and in the northern districts of Scotland. The Irish were converted to Christianity during the fifth century, and their great missionary, St. Patrick, did much to plant the new religion firmly in the soil.

Centennial Exposition.—In 1876, by decree of Congress, an international industrial exposition was held at Philadelphia to celebrate the one-hundredth anniversary of America's freedom. This was the first of a series of such international expositions. Congress voted a capital of $10,000,000 to be raised by contributions of $10 each.

The five main buildings of the exposition were Memorial Hall (the art gallery), Machinery Hall, Horticultural Hall, Agricultural Hall and Main Exhibition Building. Other buildings were erected by the national government, by state governments, by foreign governments, by industries and by individuals, making a total of one hundred and ninety buildings. The exposition lasted about five months and its attendance showed thirty-three nations represented.

Central America.—Central America includes the six republics of Panama, Guatemala, Honduras, San Salvador, Nicaragua, and Costa Rica, with British Honduras. To the northwest lies Mexico, to the southeast Columbia or New Granada, and on its other sides are the Pacific Ocean and the Caribbean Sea. This strip of land, comprising Central America, connects North and South America, though the Panama Canal, completed in 1914, makes possible a passage of ships between the two bodies of water. The area of Central America is estimated at about 200,000 square miles; the population is about three and a half million. There are three distinct classes of people—the whites, mestizoes, or the offspring of whites and Indians; and the pure-blooded Indians or aboriginal natives. About one-twelfth of the population is white. The table-lands have a moderate temperature, but the low-lands suffer from excessive heat. The vegetable productions are as various as the climate and the zoology is that of all tropical America. Agriculture is the chief means of livelihood; some of the other industries are mining of gold, silver, iron, lead and mercury, the working of jasper and marble, and the collection of sulphur and salt. Guatemala is known for its large number of active volcanoes, having more for its extent of territory than any other country, except Java. The highest in Central America, Agua, is said to have an elevation of 15,000 feet. The coast lands are narrow, the rivers small and short, but there are several lakes of considerable size.

Central America contains relics and ruins of interest, showing the life of the aboriginal inhabitants who had gained some knowledge of the arts of life. The Spaniards in 1524 organized Guatemala; little by little they subdued the natives. The government, instituted by Spain, was in a measure subject to Mexico, but in 1821 the inhabitants declared their independence. In 1823 the five states united as a republic, but civil dissensions dissolved the union.

Central Asia.—The first known home of any civilization was in the valleys of the Oxus and the Jaxortes Rivers. There is now here a vast desert plateau, probably once fertile, covering large parts of Afghanistan, Turkestan, Thibet, Eastern Turkestan and Mongolia, where there is little rainfall, no outlet for the streams except in rare instances, but where the moisture on the mountain sides, melting into rivulets, enables the earth to this day to support a population. The streams and rivers lose themselves in salty swamps or sink into the sands. The Himalayas separate the frozen plains of Thibet from the sun-baked plains of India and for ages separated their inhabitants. But the mountain chains in Asia run east and west; thus China lay open towards the East. This also shows how the configuration of a country determines migrations as well as the development of tribes. Later the outlets of trade were the same routes over which once lay the paths of invasion and conquest. From Central Asia migrations proceeded eastward to the valleys of the Chukiang, Yang-tse-Kiang and the Hoang-ho; southeastward to the valleys of the Indus and the Ganges; westward toward the valleys of the Tigris and the Euphrates, and further on to the Nile. Not only were these river valleys the routes of commerce and migration, they furnished fertility of soil to the farmer and the tribesman who herded his flocks. Those people, whom we know as the Chinese, came down the Hoang-ho; the Hindus came through the Punjab and the Indus valley.

Chalons, Battle of.—In the middle of the fifth century A. D. the Huns, a barbaric tribe from Central Asia, under the mighty leadership of Attila had conquered much of Eastern Europe and were preparing to subdue Western Europe as well.

The Roman Emperor Aetius and King Theodoric of the Visigoths, the two most powerful rulers in Europe, formed an alliance against these invaders and in 451 their combined armies opposed Attila at Chalons-sur-Marne, in northern France. Although not actually defeated, Attila's army was so slaughtered in this encounter that he was never again able to terrify Europe.

Chile.—The first European to land in Chile was Magellan, the Portuguese explorer, at Chiloe, in 1500. After the conquest of Peru by Pizarro, an expedition was made to Chile under the leadership of a Spaniard, Diego de Almagro (1535). Although unsuccessful, it was followed by another, in 1542, under Pedro Valdivia, who succeeded in annexing the territory as far as the Maipu River, and in founding the capital, Santiago. Northern Chile formerly was a part of the dominions of the Incas of Peru. By 1550, the conquest of Chile was complete to latitude 37° S. The governors of Chile were subordinate to the viceroys of Peru and were appointed by the King of Spain. Chile, with other Spanish provinces, revolted from Spain, was at first defeated, but finally succeeded in establishing her independence in 1818, though the last stronghold was not taken until 1826. In the revolt Don Bernardo O'Higgins, son of one of the last viceroys of Peru, played an important role, and was the first dictator of the new republic. When peace was at last gained, Gen. Blanco Encalada became the first constitutional president. In 1865, Chile and Peru were in war with Spain; a little later Chile defeated Peru and Bolivia and advanced her borders to the north. Trouble with the United States over the wounding of two American marines in a riot at Valparaiso resulted in an apology and payment of indemnity by the government of Chile, though for a time war seemed imminent. Revolutionary outbreaks in Chile were common, for the social organization was feudal and the government, even after the establishment of the republic, remained conservative. The past few years have seen a new growth of liberalism.

Chile lies near Peru, Bolivia, and the Argentine Republic, bounded on the south and west by the Pacific Ocean, and comprising about 307,620 square miles. Its breadth ranges from 50 to 200 miles. The valley of Chile is the richest part, suitable for stock-raising. Cattle graze on the plains and rolling lands lying between the Andes and the coast range. The mountains are covered with heavy forests. In central Chile the land is fertile, but in the southern part it is poor, excessive rainfall making it unfit for agriculture. The whole country is subject to earthquakes, several towns having been almost totally destroyed in recent years. The mineral products are most important, consisting of nitrate of soda, large beds of which are found in the northern deserts and are valuable especially for fertilizing purposes; there are also excellent bituminous coal, copper, silver, gold, quicksilver, lead, iron, antimony, and bismuth. Wheat, barley, maize, hemp, potatoes, beans, apples, pears, peaches and oranges are raised and exported.

The constitution of the republic is modeled on that of the United States, the government consisting of a president, an advisory council, and a legislature composed of a Senate and a Chamber of Deputies. Chile was the first South American state to construct railways, and a fairly extensive telegraph system is in operation.

China.—Ancient China lay in two river valleys: the Hoang-ho and the Yang-tse-Kiang. How the people came there and from where is little known, further than that when they migrated from their home near the Caspian Sea they were already in possession of some degree of civilization, knew some astronomy, cultivated flax and grain, and wove cloth for garments. The Chinese is probably the oldest of all extant civilizations, but the one of whose origins we know the least. This may be due to isolation or distance or both, to race pride

or difference in creed and culture. The legends handed down are purely mythical, dating the Creation, for example, two million years before the birth of Confucius. Mythical dynasties fill in long periods of time which do not concern us here. But it is pretty certain that prior to 2200 B. C. rulers were elected, and that before that date no ruler governed all of China. Suy-Jin-Sho, about 2852 B. C., is said to have taught the use of fire, and Fu-Hi to have invented the process of making iron, while his successor showed the farmer how to use the plow. The Emperor Chun laid down the five immutable laws: duties of fathers to children; of a king to his subjects; of the aged to the young; of married people and friends to each other. The foundations of Chinese civilization are these laws, principally the respect for ancestors, a fundamental idea which has stereotyped Chinese life and thought and kept it unprogressive for four thousand years. The founder of the Chang dynasty was a superior man and celebrated by Confucius (Kung-Fu-Tzse), China's greatest philosopher and moral teacher. Confucius confined his teachings to the daily intercourse of men and their relations to each other. He was a sensible and normal man and untouched by the dreamy tendencies of the Hindu. "He spoke of human affairs," said one of his successors, "and he left the supernatural alone." Law and order were his subjects, not anarchy and intrigue. He expounded the writings of the ancients, enjoined conformity to their principles together with morality of life and fidelity to ethical principles. To the question of a student who asked if there were any one word which might be taken as a general rule of behavior throughout a man's life, he replied: "Is not such a word 'Reciprocity'?" "Do not unto others what you would not have them do unto you," he said. Confucius died 478 B. C., 73 years old, saying: "No wise ruler appears; no one in the whole kingdom desires my advice; it is time for me to die."

Mencius (Meng-tse), appears in 371 B. C., the first Chinese apostle of democracy. He taught: "The people are the chief element in a country; after them are the deities of the arable land and the corn; while the ruler is the least important of all." It is no wonder that he lived in retirement and died neglected, although he received official recognition in 1,300 years and was given fourth place among the scholars in the Halls of Confucius. His refutation of the Taoist, Chan Chu, who taught "Every man for himself," showed him in the "Middle Way" as taught by Aristotle, and he opposed the socialists who claimed that all, even kings, should sow and reap if they would eat. In 247 B. C., the Emperor, Tsin-Chi-Hwang-Ti, accomplished a thorough revolution, introduced many reforms, built roads and canals, erected the Great Chinese Wall after he had driven back Huing Nu, the ancestor of the Huns. He also burned all the books.

The kingdom of the Huns arose in modern Mongolia about 1200 B. C., and created the beginnings of a political unity. After the unification of the Huns under the Chan Tschau dynasty, 1122 B. C., the Chinese feudal system began. The Huns wasted northern Shansi in 910 B. C. and in 700 advanced to Shantung, and in 650 B. C. devastated Pechili. The incursions of these Mongolians from behind the Great Wall were made by the same peoples who later invaded Europe. With cabins on wheels and drawn by oxen, themselves living on horseback with dried meat and desiccated milk packed between the saddles and the backs of their steeds, the Tartars swept over the earth, north, south, and west, laying it waste. In 1203 A. D. these hordes united under Temudjin, better known as Ghengis-Khan, Chief of Chiefs, who after overwhelming his former masters, the Chinese emperors, defeated Persia, Russia and Poland, penetrating Europe as far as the waters of the Oder and Moravia. He imposed his yoke upon Russia for two centuries, dying in 1227, ruling China, Thibet, Persia, and the most of Russia, to which his grandson added Pechu and Cechin, China. It is said that Ghengis-Khan destroyed 18,500,000 human lives.

In 1368 the Chinese Ming dynasty expelled the Mongolians and ruled till after the arrival of the Portuguese in 1514, but not until after Timur (Tamerlane), had scourged the world and the Turks had taken Constantinople and driven an alien wedge into the very trunk of Europe, which

has not been dislodged to this day. In 1644 A. D. China was again overthrown by the Manchu Tartars who reigned till the beginning of the present century. "So the yellow race," says Duruy, "has made a great noise in the world. Through the Huns, it brought about the fall of the Roman Empire; through the Mongols of Ghengis-Khan it raised in the thirteenth century the vastest domain in the universe; through those of Tamerlane it overthrew and crushed the population of twenty kingdoms; through the Turks it held Christendom in check for centuries; through the Chinese it has constituted a great society which for fifty centuries and with unbroken continuity has caused a large portion of the human race to enjoy the benefits of civilized life."

China today has nearly a third of all the people in the world, 438,000,000, according to the Chinese Census Reports.

Chivalry.—The institution of Chivalry arose in the eleventh century and died out in the fifteenth. It was a distinctively religious as well as military institution which developed the spirit of gallantry. The protection of the weak was one of its first duties, but especially when women became its object, being carried sometimes to great excess. Loyalty was held in high esteem, with fidelity to engagements both tacit and defined, and a breach of faith was held to be a disgrace which no valor could offset.

Education for the offices of chivalry was begun at the age of seven, when a youth was a page or valet till the age of fourteen, when he became a squire. Lords and knights trained boys in martial exercises, while the ladies of the castle taught them the duties of religion and love. At the age of twenty-one the squire became a knight, for which he prepared himself by prayer and fasting until he was inducted into his high calling through elaborate ceremonies.

Cleveland's Administration (1885-1889), (1893-1897).

Interstate Commerce Act (1887).—An important act of legislation was enacted by Congress in 1887, establishing the Interstate Commerce Commission. This act was amended by later legislation. The members are prohibited from engaging in any other business, and any person is ineligible who is in the employ of, or holds any official relations to any common carrier, subject to the provisions of the act. The Commission has power to inquire into management of common carriers and is required to enforce the provisions of the act. The general purpose is to prevent discrimination by common carriers, through rebates or otherwise and to secure reasonable and just transportation charges.

CLEVELAND'S ADMINISTRATION

I. Charleston Earthquake.—On August 31, 1886, Charleston was visited by the most violent and most destructive earthquake that had up to that time occurred within the borders of the United States. Seven-eighths of the houses of the city were rendered uninhabitable. The property damage was estimated at $8,000,000. Many persons were killed.

II. The Statue of Liberty.—In 1886 the Statue of Liberty was completed in New York harbor. It was designed by M. Bartholdi. The French people presented it as a gift to the United States in commemoration of the friendship between the two nations.

III. Department of Agriculture.—During the first Cleveland administration, an additional department of government was created by Congress and a Secretary of Agriculture was added to the President's cabinet in 1889.

IV. Columbian Exposition. — The Four Hundredth Anniversary of the discovery of America by Columbus was celebrated in the form of an international exposition in Chicago in the summer of 1893. The total cost of the exposition exceeded $26,000,000. All the civilized nations of the world participated as exhibitors.

V. Rural Mail Delivery.—The free delivery of rural mails was inaugurated on January 1, 1896.

VI. The Monroe Doctrine.—During the second Cleveland administration the controversy over the boundary line between British Guiana and Venezuela became acute. England threatened to act contrary to the long established Monroe Doctrine by landing troops and occupying Venezuelan territory. Cleveland and his Secretary of State, Richard Olney, made vigorous protest and warned England to hold strictly to the prevailing doctrine. The President was prepared to use the United States Navy to enforce the American point of view. England graciously acceded to the American demand and thus gave final authority to the unwritten but effective international code known as the Monroe Doctrine. Cleveland will always be remembered for his vigorous assertion of American principles.

Civil Service Reform.—The custom whereby the President of the United States, on coming to office, would place new people in all government positions had, by the time of Grant's accession (1869-1877), resulted in a vast amount of political corruption as well as inefficiency in the civil service. In 1871 the pressure of public opinion caused Congress to pass the first law of Civil Service Reform, authorizing the President to organize a system for regulating the appointments of minor civil service positions. The President appointed a commission which arranged competitive examinations for applicants to the civil service. This method of appointment was in practice for three years, at the end of which time the influence of the politicians in Congress prevailed in withdrawing the financial support from the Commission.

In 1881 President Garfield was assassinated by a disappointed office-seeker and this horrible calamity aroused public opinion to such an extent that Congress was forced to pass the Pendleton Bill in 1883, again providing for the Civil Service Commission and examinations. The number of offices thus filled was to be 14,000. Each President since has added to the number and in 1912 no less than 367,000 positions were under the authority of the Civil Service Commission.

Excellent work in building up this system has been contributed by George William Curtis, the head of the first Commission; by Theodore Roosevelt, head of the Commission under President Arthur, and by Gen. John C. Black, head of the Commission under Roosevelt and Taft.

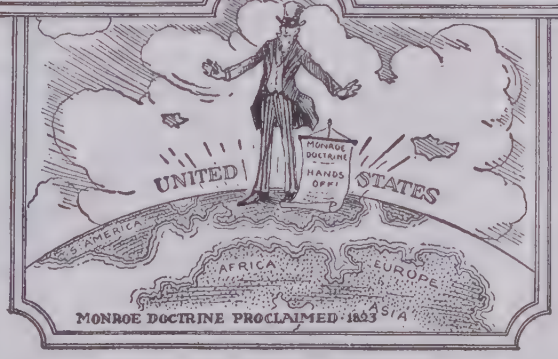
Civil War, Declaration of in United States.—When Lincoln became President, March 4, 1861, he at once made clear his purpose to bring back to the Union the seven southern states which had seceded and were actively preparing for defense. "The Union must be preserved," he said, "with or without slavery." He wished to avoid war and was determined that, if it came, the South must strike the first blow. His Cabinet was divided; some wished a compromise with the South, others would allow the Union to be broken A majority, however, supported the President in sending supplies to the Federal garrison at Fort Sumter. (See Sumter, Firing on.)

When Fort Sumter was attacked, the flag of the Union defeated, the South had willfully broken the law of the land. Lincoln sent a proclamation to Congress, calling for 75,000 volunteers to put down the unlawful rebellion of the southern states. He commanded the members of the Confederacy to "disperse and retire peaceably to their respective abodes within 20 days." Congress approved the proclamation and soon 90,000 volunteers were in readiness. Jefferson Davis, President of the Confederacy, thereupon called for 32,000 volunteers and authorized attacks on northern merchant vessels. Lincoln declared a blockade against all foreign ships entering southern ports and enforced this blockade with United States Warships.

In the North party distinctions were forgotten as Democrats and Republicans united to defend the Union.

Civil War in the United States.—(For events leading up to this war see United States—History.)

The Civil War between the Confederacy of southern states which had seceded from the Union and the northern states which upheld the Union, began in 1861, when the Confederates fired on the Union force at Fort Sumter. The southern states which made up the Confederacy were: South Carolina, Mississippi, Florida, Alabama, Georgia, Louisiana, Texas, Arkansas, North Carolina, Virginia and Tennessee.



The northern (Federal) army was nearly double that of the Confederates and the northerners had the additional advantage of the national fleet which blockaded the harbors of the South. The South had superior military organization under the able General Lee, while the command of the northern troops was continually shifted.

The fighting was mainly on southern territory. Three attempts of the Confederates to cross the border were immediately repulsed. The two chief aims of the Federals were the capture of the Confederate capital, Richmond, and the control of the Mississippi. The latter was attained after the long siege of Vicksburg in 1863; but for four years Lee kept the Union army from Richmond. He was forced to surrender after Grant's "hammering" campaign of nearly a year. Sherman's triumphant march through southern territory (1864-5) did much to weaken the Confederacy and the two naval victories of Farragut aided the success of the North.

The wise and strong leadership of President Lincoln kept up a morale in the North, without which victory would have been impossible.

Columbian Exposition.—In 1893 the World Columbian Exposition was held in Chicago in honor of the four-hundredth anniversary of Columbus' discovery of America. The exposition should rightly

have been on the preceding year, but preparations were not then complete.

Congress voted a sum of $1,500,000 for the enterprise, Chicago gave a fund of $10,000,000 and the total expenditure was estimated at $26,000,000. The site of the exposition was the lake front at Chicago, where many buildings were erected for the various exhibits.

Conservation Policies. — President Roosevelt in his first message to Congress opened "the most vital internal question of the United States," and prevailed upon Congress to authorize him to withdraw at his discretion timber and mineral lands, including more than 100,000 acres of Alaska coal lands. The timber lands amounted to 150,000,000 acres. In May, 1908, he called the famous conference of governors at the White House to outline a policy and in June, 1902, the Reclamation Act was passed, which provided room and homes for tens of thousands of people.

Coolidge's Administration (1923-1929).—By rigid economy in governmental expenses substantial reductions in the income tax rate were made possible under the presidency of Calvin Coolidge. The Dawes reparation plan regarding the manner of payment and collection from Germany of reparations was signed in London on August 30, 1924, by representatives of the Allied powers and Germany.

On May 26, 1924, the president signed an important measure which limited immigration after July 1, 1927. This Act divided the aggregate quota in accordance with the national origin of the entire population according to the latest census.

In the opening of the sixth Pan American Conference at Havana on January 16, 1928, President Coolidge pleaded for friendship and understanding. Richard Evelyn Byrd made his first flight over the north pole in 1926, and on June 29-30, 1927, flew from New York to France. The outstanding event of 1927 was the transatlantic flight of Charles A. Lindbergh from New York to Paris which greatly stimulated interest in Aeronautics.

In 1928 talking moving pictures witnessed a great revolution of the industry.

Crimean War.—In 1853 Napoleon III. of France demanded that Turkey turn over to Roman Catholic monks all the "holy places" in Palestine occupied by Greek Catholics. Russia, the strong Greek Catholic nation, opposed such a measure and declared a protectorate over all Greek Catholics in Turkish territory. Turkey forbade Russia's protectorate, whereupon Russia declared war on Turkey. France and England, failing in their attempts to arbitrate, joined the war on the side of Turkey.

The fighting was chiefly on land, as the Russian fleet avoided encounter with the combined French and English fleets. The Turks defended their own country successfully, while France and England centered their attack on Crimea, a province of Russia on the Black Sea. Here, after the long siege of Sebastopol, Russia surrendered. By the peace treaty in 1856, Bessarabia was ceded to Turkey by Russia, the Danube was opened for foreign navigation, the Black Sea became neutral territory for international commerce and the integrity of the Turkish Empire was established.

Crusades.—The Roman people and their neighbors were still, after the fall of the Empire, killing each other in the wars of the barons, largely because they had nothing else to think about. But at Constantinople (so called by Constantine of the Byzantine Empire), the people were devloping learning and the arts to some degree, maintaining a high standard of comfort, and also some stability of government. As early as 637, A. D., Jerusalem had fallen into the hands of the Saracens,

who permitted the Christians to continue their pilgrimages to the Holy City for political reasons. But in the eleventh century occurred another one of the great Chinese Tartar invasions, this time of the Seljukian Turks, a wild and ferocious race with few human traits or instincts. They overran the whole of the Saracen Empire before they entered Europe, taking Palestine and exposing the Christians to the greatest hardships and indignities, even cruelty and death. The news of such conditions leaked out to the Western world, and Alexius I. (1081-1118), of the Eastern Empire, wishing to regain the provinces that had been taken by the Turk, appealed to Pope Urban II. for aid to help win back the Holy Land. The Pope saw his opportunity in something that could be construed as an act of piety to extend the limits of the church and also of the Papal control and prestige. There was also the possible recovery of Eastern supremacy.

At this juncture Peter of Amiens, a priest called the hermit, returned from the East where he had seen and even experienced much of the hardship endured by the Christians of Jerusalem. It suited the Pope to welcome him and make of him the chief means of the propaganda that was to awaken Christendom to the Papal purposes of militant imperialism. Peter travelled throughout all Western Europe preaching eloquently of the injustice he had suffered in Jerusalem.

Councils were held at Placentia and Clermont, Peter preaching the Holy War, which, considering the state of Europe and the morals of mankind, set a very dangerous precedent. But Europe was aroused. Whatever may have been the motives of the Pope, his words after Peter had spoken at Clermont were those of a statesman: "Go now and take the sword of the Maccabees and protect the people of God..... The barbarous Turks have planted their colours on the very shores of the Hellespont, *hence they threaten war to all the states of Christendom. Unless you oppose a mighty barrier to their triumphant course, how can Europe be saved from invasion?*"

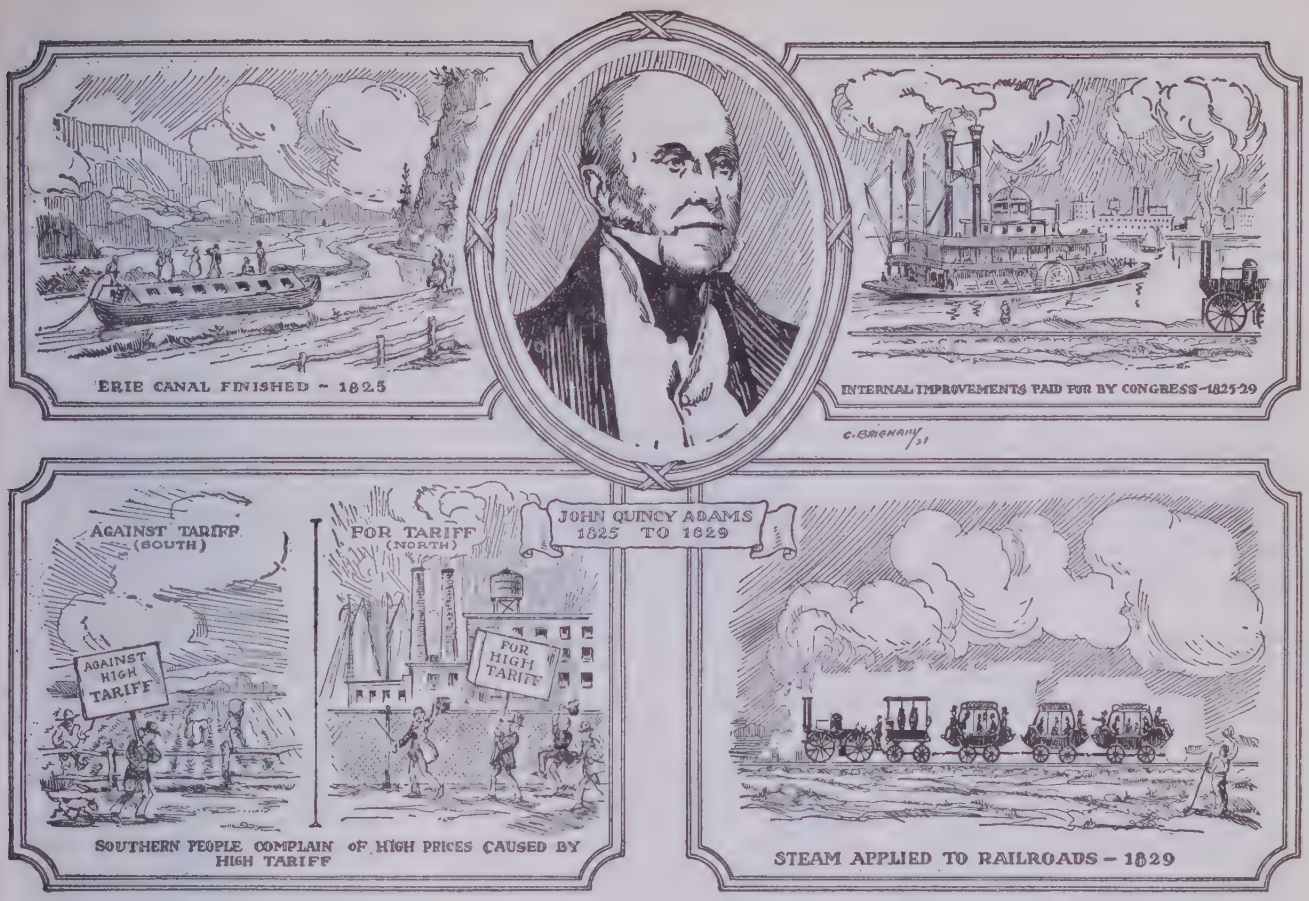
At the conclusion of this address the whole assembly arose and shouted: "God wills it," and then proceeded to enroll for the Crusade, so called from the fact that all agreed to wear a red cross on the right shoulder. They were soon joined by thousands from every quarter of Europe, and the First Crusade had begun. Early in the spring of 1096, A. D., 700,000 of them, divided into two armies, started for the Holy Land. The first army marched under Peter the Hermit. He had no authority and they had no discipline. It was one of those ghastly tragedies born of ignorance or foolish dreaming which have cursed the race from the beginning, though perhaps never more conspicuously than during the Crusades. Peter's army was destroyed. Many were killed on the way through Hungary and Bulgaria on account of the outrages they had committed on the inhabitants, for the Crusade had become a movement, and movements always attract those who have their own axes to grind. The second army was under experienced commanders like Godfrey and Baldwin, and it reached Constantinople.

The cause of the Crusaders became a prey first to the crimes of those individuals who had crept into the army for purposes of personal gain, then to the jealousies and fears of the Byzantines against those of their own faith; then to the jealousies and quarrels of the Roman Crusaders amongst themselves. Indeed it was the old story—the Crusades were destroyed as the Greek civilization was destroyed—they committed suicide—through their crimes and blunders. The Turks were better organized, not better equipped; they were ruled by one mind. The European commanders were divided among themselves. Through these conditions the Cross lost what had been gained in the conquests of the first Crusades and the crescent won through unity of aim and interest and command. The Christians had to call for help, and again a Crusade was preached. Louis VII. of France and Conrad of Germany marched upon the Turks, but both met defeat, after which a violent disease broke out in the Christian camp, terminating the second Crusade without one particle of advantage to the Christian cause. In 1174, the illustrious Saladin was sovereign ruler of Arabia, Syria, Egypt, and Persia. He re-conquered Palestine and laid siege to Jerusalem, taking it after defeating the Christian army on the field of Tiberias, A. D. 1177. Jerusalem remained in the hands of the Turk from that day till General Allenby took it again during the Great War.

Several other Crusades followed with more disastrous results, each one illustrating what nobody seemed to have the intelligence to realize, that the whole tragic movement was and had been a series of object lessons on the insanity of insubordination and dissension in any great task or any great cause.

The results of the Crusades were both good and bad. The Pope failed to unite to Rome the Greek Church whose Heads had betrayed the Christian armies to the Turk. The movement undermined Feudalism and laid foundations for the erection of larger and stronger states in Europe. The Crusaders being brought into close contact with Greece and the Arabs, found to their amazement that these peoples were far more advanced in the arts, amenities and comforts of life than were the people of Western Europe. This led to the revival of learning. Books were brought back. Scholars returned with the Crusaders. Universities were founded, Padua and Paris in 1180; the universities of Naples in 1230; Vienna in 1238; Salamanca in 1240; Cambridge in 1280; Lisbon in 1290.

The Crusades opened up the communications between the East and the West; and an enormous business came to be transacted along these routes. This impulse laid the foundations of the greatness that was to accrue to France, England, Portugal and Spain, the nations first to take advantage of the new commerce. But probably the most important and far-reaching effect of this world movement was that, although defeated, the Crusaders were victors, in that they finally stopped for a period the triumphant advance of the Turk, till Western Europe was awakened and vivified by the new learning and enriched by the new commerce, to be able to stop at last at the Danube the advance of Islam and prevent Europe from becoming an Asiatic satrapy.



Cuba.—Cuba, called the Queen of the Antilles, was discovered by Columbus in 1492, settled by the Spaniards in 1511, contended for by French, Dutch, English and West Indian filibusters, and finally restored to Spain by the treaty of Paris, (1763). In 1848 the United States offered Spain $100,000,000 for the island, and meanwhile insurrections were occurring in Cuba against harsh Spanish rule. The United States battleship "Maine" was blown up in Havana harbor, 1898, while on a friendly visit, and as a result the Congress of the United States adopted resolutions declaring Cuba independent. War with Spain followed, during which Cuba was involved in the fights of El Caney, San Juan, the battle of Santiago, and the struggle before Las Guasimas. Under the treaty of peace the United States formally assumed the government until the Cubans framed a constitution. In 1902 the republic of Cuba came into existence and American troops were withdrawn. The Cubans later made a treaty with the United States by which the products of each are given a preference in the markets of the other.

Cuba is the largest and most westerly of the West Indies, situated at the entrance of the Gulf of Mexico, extending 775 miles from Cape Maysi on the east to Cape Antonio on the west, with a breadth of from 30 to 160 miles, and an area of 45,872 square miles. It is a beautiful island, covered with forests, and remarkable for its mineral waters and its limestone caverns containing stalactites. Its soil is marvelously rich, and agriculture flourishes, the sugar and tobacco industries being highly important. Among other products are copper, asphalt, iron, cocoanuts, palms used for hats and baskets, bananas, guavas, coffee, cacao, rice, maize, cotton and oranges. The population consists of Spanish, Cubans, Chinese, and other mixed nationalities. About two-thirds of these are white.

Custer's Troops Massacred.—In the latter half of the nineteenth century the discovery of gold attracted many settlers to the western part of the United States and one of the most sought after regions was on the border line of Dakota and Wyoming. This territory had long been occupied by the Sioux Indians who were reluctant to give way to the white man. The President ordered them to move westward into Montana, but they remained firm under their leader, "Sitting Bull", and fought off any invaders. An army was sent to drive back this tribe, but did not reckon with their strength. After two other bands of soldiers had been defeated, General George Custer in 1876 attacked Sitting Bull in the valley of Little Big Horn. Custer's troops were greatly outnumbered by the Indians, completely surrounded and cut off from any chance of escape. A horrible massacre ensued in which Custer and every one of his men were killed.

After the news of this disaster a larger army was sent, which succeeded in driving back the Sioux. Sitting Bull was captured and killed Dec. 15, 1890.

Denmark.—Denmark is the smallest of the three Scandinavian kingdoms. Its area is but 15,582 square miles, being connected with the European mainland by a peninsula, only forty miles wide. A part of this area is composed of sand dunes, lagoons and shallow bays, while the coast is indented by deep fjords or inlets. The surface does not reach an altitude of more than 500 feet. Denmark is an agricultural country, nearly 39 per cent of its population of two and three-quarter millions being farmers. The land early became the home of the Angles, Saxons and Jutes, whose brethren settled in

England. From these came the Vikings, who sailed as far as America and conquered large regions in Europe. A united kingdom sprang up about the ninth century. The history of Denmark is mostly like that of other countries, the history of war, mostly fruitless, and irrational and withal cruel. Napoleon brought the country to the verge of ruin, and in 1807, the British fleet reduced Copenhagen, after destroying the Danish fleet. In 1830 the Schleswig-Holstein affair developed animosity between the Danes and Germans, the German population rising against Denmark, until Prussia abandoned the cause of the Duchies and restored the former status. The question of the succession arose again in 1863, when the Germans overran Denmark. Schleswig, Laurenburg and Holstein were taken by Prussia and Austria. In the war between Austria and Prussia in 1866 these Duchies went to Prussia, During the Great War, Denmark, like the other Scandinavian countries, did no fighting.

Egypt.—"Egypt is the gift of the Nile," said Herodotus. This is not only true in the sense that the water has fertilized the borders of the river that runs here through the great desert, but the very life of the people, their trade, religion, industry and daily occupations were determined by the Nile. The fertility of Egypt is due to rainfall, in Abyssinia, and this great natural irrigation system became the mother of artificial irrigation systems, wherein the increase of population necessitated an arrangement since known as conservation. Above the delta, Egypt proper is but a few miles wide, and it is annually enriched by the overflow which reaches over twenty feet in depth. From ancient times these waters have been diked, reservoired, canaled, water-wheeled and otherwise handled and controlled, till the land has been refreshed by waters and soil from the Abyssinian uplands and the lakes of Equatorial Africa. Some of the most prolific causes of local disputes in ancient days arose out of questions of agricultural boundaries and the water rights of the ditches and canals made for drainage and irrigation.

Lower Egypt from the cataract to the sea is 700 miles long and varies in width from one to twelve miles. With little labour a man can raise each year three crops of grain, flax, vegetables and grasses, while grape vines flourish on the hillsides. Metals and building stones come from the Arabian mountains to the east, which, with the desert to the west, protect the people from invasion. The Nile is also the main artery of commerce and makes possible the situation of Egypt, a nation lying between two seas and three continents. Geographically, therefore, Egypt has every advantage. Manetho, who lived about 300 B. C., wrote a chronology from which we have learned a great deal about ancient Egypt.

The ancients considered Egypt as a part of Asia, not considering, as we do today, that the Isthmus of Suez cut it off from that continent. Up to the time of Menes, 5000 B. C., the country was inhabited by Cushites, a Hamitic people, who came by way of the Isthmus, as came later the Egyptians, probably from the plateaus of Central Asia, where their ancestors surrounded the Aryans. The small Cushite states existed for centuries before they were subdued by Menes, whose dynasty lasted for eight centuries. From Menes to the Persian conquest in 527 B. C., twenty-six dynasties are recorded. The ancient Empire at Memphis lasted till about 2800 B. C., the Upper valley having been conquered and made into one kingdom. Memphis degenerated into anarchy and decay when the rival princes of Thebes seized the kingdom, ruling in ten dynasties for 1,708 years, and conquering Ethiopia and the negro tribes of the Upper Nile. About 2000 B. C., a horde of Asiatic invaders, called the Hyksos, or Shepherd Kings, plundered the country as far as Fayum, slaughtering the inhabitants without mercy, burning their cities and destroying their records and improvements. It is believed that King Apepi, or Nub of the Hyksos, was the Pharaoh who made Joseph prime minister. The New Empire began with Ahmes I., the first king of the eighteenth dynasty, which expelled the Hyksos and rebuilt Egypt. Under him and his successors a desire for conquest arose with a military caste which first introduced into Egypt the use of the horse in war. The character of the people changed for the worse, but they became masters of the land, from Ethiopia to the Euphrates.

Under Thothmes I. and III., the palaces of Karnak and Luxor were built and Egypt ruled as far as Nineveh. Rameses II., or Rameses the Great, is said to be the most brilliant figure in Egyptian history, and among Egypt's most famous builders. He was the son of Seti I. Rameses defeated

the Hittites in battle and made a treaty. It is supposed that they taught the Greeks the rudiments of their art. Seti had built the Temple of Ammon at Thebes, "the most splendid single chamber ever built by an architect." Some believe that it was under the reign of Rameses that Egypt fell to the Assyrians from whom the Greeks helped to free it again. This started a Greek settlement in Egypt where the Greeks came to learn the wisdom of the Egyptians.

In 525 B.C., Egypt became a part of the Persian Empire, having been conquered by Cambyses, the successor of Cyrus.

Eighteenth Amendment (1919).—On January 16, 1920, Nebraska was the 35th state to ratify the Eighteenth Amendment to the Constitution of the United States, prohibiting the sale and manufacture of intoxicating liquors. As a war measure for the conservation of grain, the Food Production Bill had been passed on November 21, 1918, prohibiting the sale of intoxicating liquors after July 1, 1919, but the law was feebly enforced and the liquor interests went to the Supreme Court to be defeated unanimously on a decision rendered December 15, 1919.

Ecuador.—At the time of the conquest of Peru by the Spaniards Ecuador formed part of the great empire of the Incas. As the presidency of Quito it was long included in the vice-royalty of Peru. From 1710 it became part of the presidency of New Granda (or Santa Fé de Bogotá). In the revolutionary war against Spain, Ecuador, along with the neighboring territories, secured its independence (1822), and was ultimately erected into a separate republic in 1831.

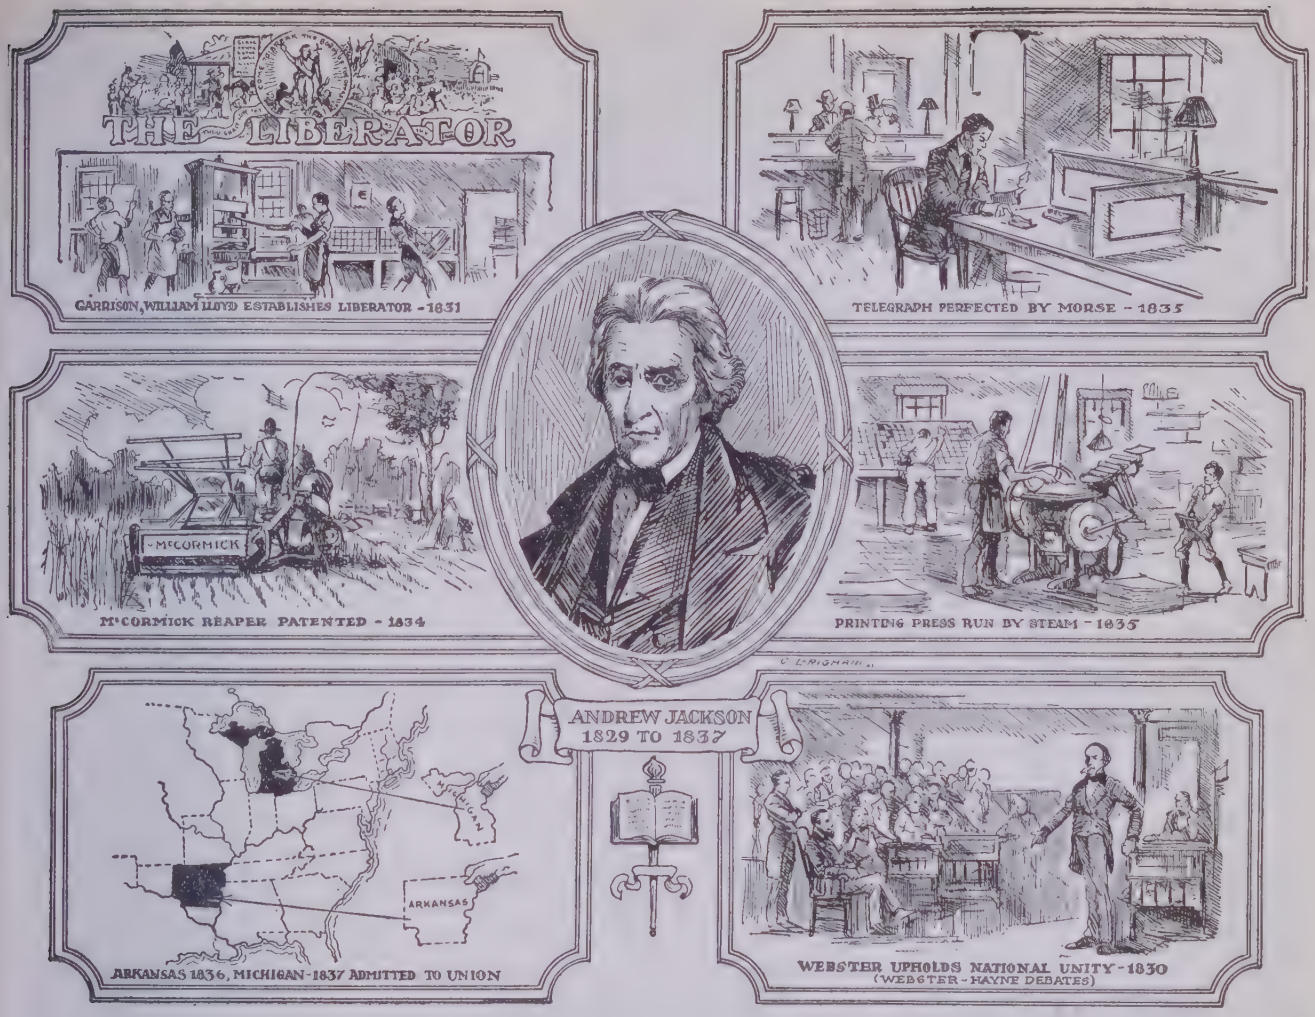
A series of civil wars ensued, lasting almost without intermission for more than twenty years. A free school system has been established and three universities are maintained. Commerce flourishes and the government is progressive. Ecuador has enjoyed great prosperity in recent years. In August, 1868, a very destructive earthquake occurred. In 1869, Garcia Moreno, the head of the clerical party, overthrew the government. He was assassinated in 1875 and Dr. Antonio Borrero, the candidate of the non-official party, was elected president. A constitution was adopted and a president elected, and until 1884 the republic enjoyed a reasonably peaceable government. In 1884 another constitution was formed, which, with modifications in 1887 and 1897, has since been in force.

Emancipation Proclamation.—Lincoln abhorred slavery—yet his aim in the Civil War was not the freeing of the slaves but the preservation of the Union. At first he felt that to proclaim them free would be an unwise war measure, as it might antagonize the few slave states, known as "Border States," which had not seceded. By the second year of the war, however, he perceived that the freeing of the slaves would help the northern cause. In 1862 he recommended a resolution, which Congress passed, offering pecuniary aid and cooperation to any state which would free its slaves. The same year Congress freed the slaves in the District of Columbia and in all territories of the United States.

After the battle of Antietam, when the North had the upper hand, in the Fall of 1862, Lincoln issued a warning that if the Confederate States did not cease fighting and return to the Union by January, 1863, their slaves would be freed. As the Confederates paid no heed, Lincoln issued the Emancipation Proclamation on the appointed date.

According to this document the slaves in all rebellious states became free, with the exception of a few regions which had opposed secession. In the "Border States" slavery was allowed to continue. The army and navy would protect the freedmen wherever their authority extended. The negroes were advised "to labor faithfully for reasonable wages," but such as desired would be accepted for military service.

This move greatly weakened the South by depriving the wealthy class of $2,000,000,000 in property. It strengthened the North by adding to their army within a year 100,000 freed negroes, and by winning for them the moral support of the European powers who were opposed to slavery.



England.—The first people of whom we have record on the British Islands were a few families of savages of the lowest types of mankind. These dwelt on the banks of the southern and eastern rivers, and all they had with which to defend themselves against the cave-lion, cave-bear, hyena, elephant and many other large and dangerous animals, was the use of pieces of flint for tools and weapons alike. These savages died out or fled, probably before the ice age ended. The next race whose remains persist was a people of short stature, narrow heads and high cheek bones, with long hair knotted above their painted faces, who used axes, knives and darts made of bone, stone or wood. They lived on herbs of the forest, shell fish from the shore, or the game they could kill. These were the Iverians. The word Erin comes from Iverio.

About the year 500 B. C. an Aryan people, the Celts, after conquering the most of Spain and France (Iberia and Liguria), invaded and conquered England (Albion). They wore gold and silver ornaments and were armed with implements of bronze. They raised horses and cattle and mastiffs and tilled the soil. But the history of England begins with the invasion of that Island by Cæsar in 55 and 56 B. C. Doubtless the Phœnicians had been trading there for centuries, but they destroyed their records and the Celts had none. At least they had no books, but Cæsar tells us that they used the Greek alphabet for writing brief messages and the like. The Romans opened the country and in a hundred years had conquered it as far north as the Firth of Forth. They held the country for over 400 years.

At the mouth of the Elbe and Rhine, largely in and about Schleswig, lived three races of sea-wolves who called themselves Angles, Jutes and Saxons. They were Teutons of the Dutch rather than the German stock. After the withdrawal of the Roman garrisons, numbering 50,000 men, to oppose the invasions of the Germans in Rome, Vortigern, a British king of Kent, was foolish enough to invite these barbarians, who were good fighters and sailors, to come to England and help him fight the Picts and Scots, promising money and lands. He settled them on the Island of Thanet at the mouth of the Thames, hoping to keep them properly penned up, but under Horsa and Hengist they plundered and massacred their way to London, which they took, and became masters of the country. Thus came the Anglo-Saxons to Angle-land which might as well have been called Saxonland or Jutland as England. The Jutes founded their first kingdom in Kent, the Saxons settling further south under their king Cedric in 495 B. C., who formed the kingdom of Wessex or West Saxons, and Guest tells us that either directly or indirectly he became the ancestor of all the British kings and queens down to this day. It is likely that at this time lived King Arthur, if he ever lived at all, but it is not known whether his kingdom was near the northern boundary or in Cornwall and South Wales. But he was always fighting against the heathen Angles and Saxons and Jutes, only to be conquered himself, that is, the wars between the British and English resulted in Anglo-Saxon supremacy.

Christianity made some progress among the Britons but it was late in subduing the conquering race. In the year 597 A. D. Augustine and the Roman missionaries landed on the Island of Thanet, where Ethelbert, King of Kent, ordered them to stay till he knew what to do with them. He feared that they might get the better of him with their magic arts. But they came to an interview praying for the eternal salvation of those to whom they should come, and were offered hospitality in Canterbury where they preached to all who might listen. Soon Edwin, King of Northumberland, embraced Christianity. He was the strongest of all the English kings and his capital, Edinburgh, was named after him. In his day it was called Edwin's Burgh. After some backsliding, missionaries from Ireland and Scotland came to preach in England. The last of the kingdoms to be converted was Sussex, the people of which the papists taught to fish.

Charlemagne had a friend in England named Alcuin of York. He went to live in France to teach the people who were far behind the people of England in learning, for Charlemagne had to send to York for books for his school. It was in the Court of Charlemagne that Egbert, the first king of all England was trained. After Egbert came the great Danish invasions, followed by many years of pillage and fighting. Indeed there was scarcely a nation in those days free from the terrors of such war for very long at a time. Then we hear of Ethelbert, Ethelbart, Ethelwulf and Ethelred before we come to "England's Darling," or Alfred, who seems to have been one of the noblest characters who ever ruled a people. Under him there was the same series of wars with the pagans, but Alfred conceived the idea that to fight the sea-wolves he must have a navy, and he built the first British fighting fleet which he manned with the bravest sailors in the realm. He defeated the Danish fleet at Swan-wic (Swanage). But the Danes pushed on in great numbers, and Alfred fought against heavy odds till he with a few retainers was driven into a swamp where they nearly starved. In the spring after the dreariest of winters Alfred got his men together and attacked the Danes at Chippenham, defeating them, whereupon Guthrum, the Danish leader, became a Christian, Alfred became his god-father. He treated the vanquished with clemency and set himself to the task of building up the devastated country. He collected and studied all the old laws of the nation, keeping those he thought good and adding others based on the laws of Moses. These laws he laid before the Witan, or council of wise men, Witan

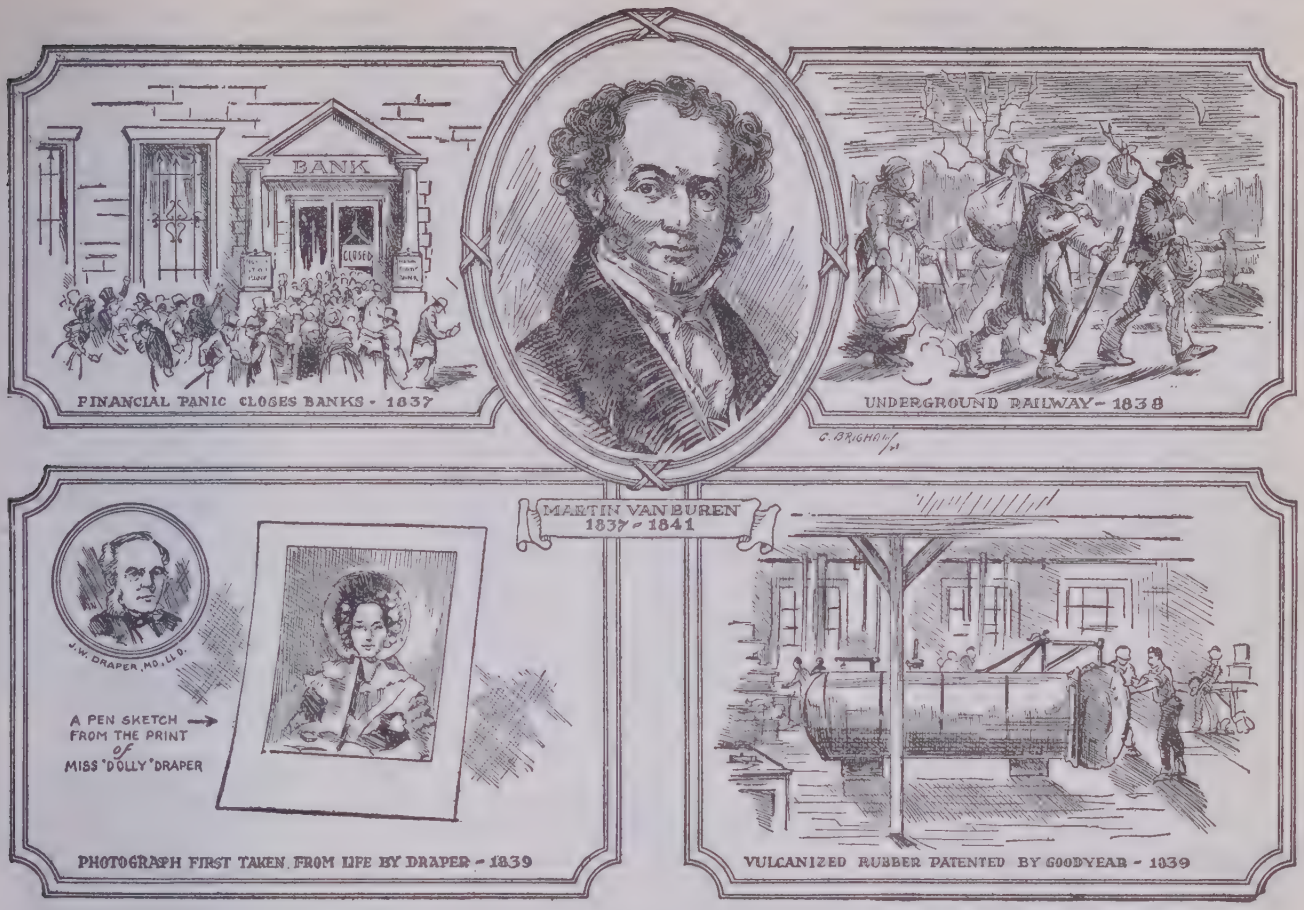
meaning wit or wise. He established justice in the administration of these laws and in many cases he was judge himself. He sent gifts to churches in Rome and Jerusalem and even as far as India, being the first Englishman to open communication with that country. In those days nearly all the working classes were slaves —ploughmen, shepherds, carpenters, cooks, and dairy-maids. These were bought and sold for from five to ten shillings. A slave market in Bristol was maintained for hundreds of years. But little by little this condition was mitigated.

Several kings followed before Ethelred, the Unready, forgot his defences and the Danes began to come again. They defeated the British at the battle of Maldon, after which England endured another period of misery. London was then called Augusta, so named by the Romans. King Alfred had rescued it from the Danes and built a fort on the present site of the Tower of London. The Londoners were rich and powerful and free, and they succeeded in beating back the corsairs. But about this time the English massacred many Danes, whereupon their friends on the continent made fearful reprisals which resulted in the Danish occupation of the island. Later Canute was crowned as king. The Londoners elected as their king Edmund Ironside, who fought many battles with Canute but lost in the end. After many cruelties Canute reformed, became a Christian, and favoured the English in many ways.

After a visit to the Pope at Rome he went to Scotland and made the king do homage to him. This was the king who was uncle of Duncan. With him was Macbeth who afterward murdered Duncan, and of whom Shakespeare writes. Canute died when he was but forty years old, and evil sons reigned after him. The monarchy was under the Danes, Canute and his sons, Harold and Hardicanute until 1042. The Saxon dynasty was restored in the person of Edward the Confessor, who reigned twenty-five years. His wife was the grand-daughter of Canute. He was one of the last Anglo-Saxon Kings. William, Duke of Normandy, who conquered England, was of the blood of Rollo or Rolf the Norseman and his men who, a hundred and fifty years before, had invaded France and conquered it, but were conquered in turn by the civilization of the Gauls, Romans and Teutons, whom they found there. These races all became amalgamated and even their language became French. Not more than 10,000 Normans entered England, and these did not mix for more than a generation. During William's reign of twenty-one years (1066-1087), the feudal system was established. The king became supreme landlord, making every man potentially a soldier, and his throne became the strongest in defence in all Europe. Vast changes were made to bring England up to the standards of Europe, and the Domesday Book was compiled containing the registration and survey of all the estates of England and their owners and retainers. The invaders became builders instead of destroyers. They built some of the most beautiful churches and schools in Europe, and in time themselves became Englishmen. Soon afterward Anselm became the Archbishop of Canterbury, through whose efforts Henry I. granted the Charter fo Liberties which became the groundwork of the Magna Charta under King John. During this reign Flemish weavers began the manufacture of woolen cloth at Worsted, making the name of the article, worsted. Four Norman kings had reigned eighty-eight years when Henry came to the throne and established a centralized despotism.

Henry was the first of the Angevin or Plantagenet line which reigned for 245 years, till 1399. The immediate successor of Henry II. was Richard I., the Lion Hearted, born at Oxford but educated abroad to become the Duke of Aquitaine. He joined the Crusaders and his brother John was made regent. After a brilliant career in the East Richard was imprisoned by one of the Christian Allies, Emperor Henry VI., from whom he was ransomed by a large sum. He perished in battle 1199, aged forty-two.

The reign of John was so perfidious that he was deserted by all but seven of his followers, who were foreigners. At Runnymeade, a meadow between Windsor and Staines, the great charter of English liberties was signed. (See Magna Charta.) The Mad Parliament was held at Westminster in 1258, but in 1295 a large sum of money being needed to defray the expenses of the war with France, Scotland and Wales, the first regular Parliament was called. The exclusive right of the Parliament to impose taxes was established. Later in 1322 it was decided that the consent of Parliament was needed for the validity of any enactment. In 1349 the Black Death carried off nearly a half of the population, and similar destruction followed in 1361 and again in 1369. England struggled through a long period of misery under many feeble and wicked kings, the Lancastrian line beginning in 1399. The Privy Council gradually usurped the powers of Parliament. "The War of the Roses" resulted in the accession of the Yorkist kings of the White Rose. The infamous Richard III. became king at thirty-three years of age in 1483, and reigned two years until he was vanquished in battle by Henry of Richmond, the first of the Tudor Kings.



The Tudor kings came at the close of the medieval period, finding England prostrate and near to inward dissolution through the civil wars. They left to the Stuarts a kingdom strengthened and developed, united with Scotland, and free from Rome. They laid the foundations of the British Empire of today. The great achievement of this period was the religious and political revolution which brought about the separation from the church of Rome. For a long time before Henry VIII., the people had been dissatisfied. Wycliff had voiced the English feeling in his attack upon the organization and discipline of the church, although the nation was not ready to follow him in his views of the doctrines of Rome. The Papacy became the ally of France during the hundred years' war. The clergy had become very wealthy with ill gotten gains and equally corrupt and had ceased to perform properly the duties of their office. The English clergy stood apart from the nation, owing allegiance to a foreign power, till the antagonism reached the limit of endurance. The whole question arose out of the issue of Henry's divorce, ironically enough, since this king so soon found an easier method of getting rid of his wives. He made no important changes in church doctrines, keeping a "popery without a pope," but he gave the English Bible to his subjects, although he was to be its interpreter. Changes of doctrine were made under his son. A reaction occurred under his daughter, Mary but, the sect of the Puritans grew up, and Elizabeth had to manage between these two extremes. The Catholics claimed Mary Stuart for the rightful Queen. The Spaniards interfered and were about to settle the matter with an "invincible armada," but the defeat of this fleet settled the matter. The Puritans grew in power and appeared in increasing numbers in the House of Commons, while the government made many efforts to diminish their influence. James stood for the divine right of kings, and an established church as the support of the monarchy. He taxed the country without the consent of Parliament and pursued a distasteful foreign policy. He imprisoned some of the most distinguished members of the bar. attacked the House of Lords, and was all in all an unkingly man. The House of Commons was the only estate in England which had the power or inclination to offer effectual resistance to the crown. This body made its protestations under James, and more effectually under Charles I., who was false to the core and incapable of keeping faith. The Commons found it impossible to control such a king by constitutional means. As he persisted in his illegal and arbitrary course, the conflict developed, and the Commons determined to regain the liberties of the nation through the elimination of so irresponsible a despot. Charles was beheaded and Cromwell took the helm. Cromwell was a despot but used a kind of despotism with which the people were unfamiliar. His brilliant foreign policy made England stronger than it had ever been. His energy and ability dazzled even his enemies. After his son and successor had made a feeble attempt to carry on the work of the great Cromwell, the mass of the nation hurried to receive the returning Stuarts. It is probable that never in English history has there been such an anti-climax as the reign of Charles II., after Cromwell. The Royal Palace became little better than a public brothel. Men openly scoffed at anything that smacked of morality. The literature of the time was mostly base and sensual, and what Cromwell had built up abroad for the dignity and security of the nation fell away. But a reaction came, and the Whig party was formed in 1679. Such was the despotic rule of James II. that Whigs and Tories united in asking William of Orange to invade the country and assist in the restoration of the ancient liberties of England. James fled to France and Parliament declared William and Mary king and queen of England. In 1700 an Act of Settlement made the English sovereign as much a creature of an act of Parliament "as the pettiest tax-gatherer of the kingdom."

This revolution was a victory for the liberty of the English people and it showed that they had determined that no king should reign in England who did not reign for the good of the people. All the pretensions of the older despots had been wiped away forever. The people even hunted down the "bloody Jeffreys," whom they carried to the Tower, where he finally died in misery. In the reign of William religious toleration made its appearance and the persecution of the dissenters ceased. They built chapels and held services without fear of interference. William saw the growing power of France and the benighted bigotry of the church of Louis XIV., who had been persecuting the Protestants most cruelly. Many of these unfortunate people fled to England, carrying with them many useful trades and arts, especially silk-weaving, in which they were especially skillful. Many of these descendants of the Huguenots are still among the noblest of the people of England and her colonies. Until this time no one could even print a pamphlet without permission, but liberty of the press was established in 1695, upon which a number of newspapers sprang into existence. There had been but one or two before, and these hampered. Later, the speeches in Parliament were allowed to appear.

Meanwhile the wars with France were going on. After Anne came to the throne England and Scotland were united. When she died, the people sent for a petty German Prince, George of Hanover, and made him king. He was the most prosaic and mediocre of individuals and could not even speak English. Whig and Tory strife began to take the place of civil wars. Both parties wished to maintain the British monarchy under the Constitution, the latter feeling that the Constitution was beyond mending, and the former wishing to keep it in touch with the growing needs of the people. The Tories acted for the higher classes, the Whigs for the whole nation. "The Tories wished all people to obey the bishops, to believe the prayer book and to go to church. The Whigs thought all people should judge for themselves, and might become dissenters if they wished." The English and French came to blows about the American colonies and things went badly for England until Pitt came to the front. His very personality inspired the English nation, and he became its idol. He ended the rule of France in America when he sent Wolfe to Quebec, where he defeated Montcalm in 1759. England became interested in India, and the East India Company was formed. There again Pitt fought it out with the French and East Indians as he had contended with the French and Indians in America, and at the battle of Plassey in 1757, defeated the enemy. Since that time the British have ruled India and have kept the peace for the most part in that land of anarchy.

The American Revolution followed, in which the United States was lost to the British crown under George III., who went mad. In the year that the Constitution of the United States was adopted, 1787, England abolished the slave trade. Britain gained more of India and the whole of Ceylon, began to plant colonies in Australia, New Zealand and Tasmania, thus expanding while France was not growing at all. Then came the French Revolution and the wars of Napoleon. Wellington at Waterloo and Nelson at Trafalgar ended this long and bloody war. After the reigns of George IV. and William II., Queen Victoria came to the throne, the greatest and wisest ruler, as well as the best beloved, who ever sat on the throne of England. Her reign saw the development of the great industrial revolution and the material enrichment of the Empire, the Afghanistan wars, the Crimean war and the Sepoy rebellion. In the American rebellion, the English people sympathized with the section that furnished their cotton; the government recognized the Confederacy as belligerents; and for a time the whole nation sought to establish a slave-holding republic in a half of this land. An international tribunal assembled at Geneva awarding money to America, for damage to her shipping. It is believed that it was through the good offices of Queen Victoria that England did not come out openly as an ally of the South. In 1867, the Dominion of Canada was formed, embracing all the provinces except Newfoundland. The Zulu wars in South Africa were soon followed by the South African war in which England contended for rights of representation with taxation and military service. When the English won they proceeded at once to turn over control of South Africa to the Dutch who were in the majority, an act of good faith unexampled in international policy up to that time.

The heroic part which Great Britain played in the war of 1914 is too long and fine a story to be told in so brief a resume as this, but it is well to remember that but for the navy of Great Britain, the world

would have gone to the Hun in thirty days after hostilities began. Whatever may have been the outcome of the "Peace", in the first instance Britain fought, as her Allies fought, for the principle of Public Right against the despotism of Public Might.

Erie, Battle of Lake.—When the prospect of the Americans was dreariest in the War of 1812 a small, hastily built fleet under Commodore Perry defeated an English fleet under Barclay on Lake Erie in September, 1813, and so turned the whole tide of events. Through this victory the United States gained control of the Great Lakes and were able to re-capture Detroit. Out of 490 men the Americans lost 123 and out of 460 Englishmen 135 were killed.

Europe.—The old Assyrians spoke of Asia Minor as Assur, sunrise or East, and they called the land to the West Irib or Ereb. From this came the name Europe, to designate the smallest of all the continents except Australia, its area being 3,796,000 square miles, or one-fourth greater than that of the United States, not including Alaska. The coast line of Europe, lengthened by many islands, channels and deep penetrations of the sea into the land, has been one of the largest factors in its development. The low plains, the rivers, the absence of deserts, the temperate climate, the distribution of rainfall, and the variety of mountainous structures are features of value, responsible for the abundance of crops, the accessibility to markets of the world, and the immense store of mineral wealth. The three most important topographic forms are the highland belts in the south, the secondary mountains north of this, and the lowlands. The highland belt is the western extension of the great mountain chains extending through the Old World from the upper courses of the Yang-tse and Hoang rivers to the Atlantic. The Caucasus Mountains and those of Crimea are a part of this zone, interrupted by the depressions of the Black and Ægean Seas, beyond which lie the Alps, the Apennines, the Balkan Mountains and the Carpathians. Not connected with these are the high Pyrenees and the Sierra Nevadas of Spain. The secondary mountains, or those lying to the north of the highland belt, are shorter and of greater variety, all comparatively low, except the Scandinavian Mountains. The Urals to the east are an isolated group, the longest chain of the continent, rising from Asia and sloping away to the plain on the European side. Vesuvius is the only active volcano. Two-thirds of Europe is lowland, a continuation of the low plains of northern Asia, extending through Russia, northern Germany, and France to the Pyrenees. Especially noteworthy are the high plains of Switzerland, the plains of south Germany and of Castile in Spain. Most important of the mountain-inclosed lowlands are those of the Alpine streams, the Po Basin, the upper Rhine, and the Danube, the upper and lower plains of Hungary, and the Wallachian plain. Roughly speaking, Europe consists of the eastern part, or Russia, with its unbroken lowlands and mountains on the eastern and southern edges, and the western part, the remainder of the continent, composed of plains and mountains. The chief characteristics of the former section are its uniformity and inaccessibility, for the most part, to the sea; that of the latter, its variety, richness and accessibility to the influences of the sea.

The varied and complicated geological structure of Europe can only be touched upon briefly. There is a rich distribution of minerals—for example, extensive iron mines in Alsace and Lorraine and Luxemburg; coal and iron in Belgium, iron in Austria and France, one of the most remarkable fields being around Chavigny and Nancy. Iron, gold and platinum are found abundantly in Russia; silver and zinc in Germany; sulphur in Sicily and southern Italy; tin, iron and coal in England; copper, silver, lead and quicksilver in Spain, and copper in Portugal.

Roughly speaking, and considering only the Indo-European or Aryan stock, the Teutonic peoples live at the north, the Slavs at the east, the Celts, what there is left of them, in the western part of Europe, while the Latins have more completely populated the south. The Celts once possessed Europe from the Alps to the British Islands, but they were broken up by the Roman conquests. The Celtic language is now spoken only in the Scotch highlands (Gaelic), in parts of Ireland (Irish), in Wales (Cymric), and in Brittany (Armorican). The Teutonic race consists of two branches, the Germanic, from which have sprung Germans, Dutch, and English, and the Scandinavian, now divided into Danes, Swedes, and Norwegians. The Slavs include Russians, Poles, the Czechs or Bohemians, the Servians, Croatians, etc. The Greek and Latin group comprises

Italian, French, Spanish, and Portuguese. The Mongolian race is represented by the Turks, Finns, Lapps and Magyars or Hungarians, all of whom have come to Europe in comparatively recent times. European civilization began with the Greeks, flowered in a few centuries into something which quickly faded, for in poetry, art, philosophy and architecture, that brief moment of the Athenian has never been surpassed. With the decline of Rome, vast migrations set in among the northern races; devastating invasions from Central Asia overran the land as far as the middle of France; Europe relapsed into barbarism and anarchy—for anarchy is barbarism—and with the Renaissance or Revival of Letters, followed by the Reformation, a new impulse was given to the human mind and spirit, resulting in what is both good and bad in the so-called western civilization of today. With this awakening, Copernicus discovered the new heavens about the time that Columbus discovered the new earth, and the mind of the Middle Ages expanded indefinitely and infinitely to comprehend the new heavens and the new earth. But almost never was there a time when for some reason or pretext men were not fighting each other in a succession of wars.

Of late years Europe had developed commercially at the expense of her agricultural industry, and is to a large extent dependent on other countries for her food products. In 1933 most European countries were forced to abandon the gold standard by the adoption of silver currency by the United States and Great Britain.

Federal Reserve Act (1913).—The Federal Reserve Act was passed by Congress and signed by President Wilson, December 23, 1913. It divides the country into twelve federal districts, in each of which there is a city with a federal reserve bank. Each national bank is obliged to enter the system, thus becoming a member "bank". The governing committee of the national system (seven members), is composed of the Secretary of the Treasury, the Comptroller of the Currency and five other members appointed by the President. The system has given the United States one of the best instead of one of the worst currency systems in the world; and has prevented the recurrence of the periodical financial panics deliberately "engineered" in times gone by, by those wreckers who built false lights on the shore.

Feudalism.—The word *Feudum*, from which Feudalism is derived, appears first in the records of the Frankish king, Charles the Fat (884-887 A. D.), but the system had existed before that time. After the death of Charlemagne in 814, his empire drifted into chaos, although many of the things he accomplished endured in the industrial, social and political aspects of the Feudal System. The great conflict between the Romans and the Germans brought about the confusion which resulted in the organization of Feudalism, in which the land was divided by the lord between his tenants and the serfs to whom he offered protection in return for service. The great highways which had been the bond of organization of ancient Rome had fallen into decay, and great stretches of the country had become impassable. On the German side of the Rhine there were no roads at all, and rebellious barons could get well under way before the king had tidings of their sedition. Europe was in a state of anarchy, except for the numerous little despotisms which formed a hierarchy of land holders. Service was military or agricultural and later it took the form of money payments. The system was a combination of the old Roman custom of land grant for military service and the German custom of men following their lord as chief. It raised up great lords and depressed the poorer classes, who became villains or serfs, bound to the land. They lost all the old Teutonic privileges of meeting in national assembly and became abject creatures.

The result was a growth of towns, with a fixity of life hitherto unrealized. Houses grew up around castles, and these were defended by walls. Charlemagne founded Hamburg which was to become one of the capitals of the Hansa League, destined to be supreme in northern Europe for two centuries. In Germany these towns were fortified by burgs or fortified castles around which grew up many of those cities of Germany which have become famous. Sometimes these towns joined forces and defied Dukes and Kings, while in northern Italy, from the eleventh century onward there was a great number of city commonwealths. "Feudality recognizes two principles, the land and the sword, riches and force—two principles on which everything depends and to which everything is related, since it is necessary to own land in order to have the right to draw the sword." The suzerain knelt before his lord and swore to be his man—*homo*—thus comes the word homage. They took justice in their own hands, and the duelling system grew up. In France the feudal clergy held a fifth of the land, in Germany a third. But the church increased its possessions through bequests of the dying and gifts of the living. The will of the feudal lord was law. He could exact what he desired and there was no recourse. The serf could neither marry nor change his abode, nor could he bequeath his goods without the permission of his lord. Vassals were continually fighting against other vassals, lords against lords, and all against their sovereigns. To him who had the might of the sword belonged the power to enforce peace and "justice".

Fifteenth Amendment.—The Fifteenth Amendment gave the right of vote to all male negroes and forbade the state governments in any way to deprive them of this right. It was proposed by Congress in February, 1869. Virginia, Georgia, Mississippi and Texas, the only southern states not yet re-admitted to the Union after the Civil War, were to be admitted on condition that they accept this amendment, which they did. The Amendment received the support of the necessary number of states and became law in March, 1870.

Finland.—Finland is a table-land from 400 to 600 feet above sea level, lying chiefly in the extreme northern part of Russia. Its area is about 144,255 square miles and its population about two and a half million, mainly Finns and Lapps. These people were pagans, ruled by independent kings, until the twelfth century, when the Swedes invaded the land and introduced Christianity. In 1808 Russia conquered the Swedes and annexed Finland. When Russia attempted to abolish the autonomy of the country and make it a province, the Finns migrated in large numbers, many of them coming to America. During the late war, Germany's evident design of constituting two minor states, the Ukraine and Finland, in order that a new unified Russia might not rise from the ruins of Bolshevism, succeeded in so far as many Finns were won over to the side of the Huns, who promised Finland expansion and power if she would be a sort of guard for Germany over Russia. Revolution in Finland resulted in conflicts between the Red Guards (Bolshevists) and the White Guards (Pan-Germans). Finland established an independent government, which was recognized by most of the nations of Europe, including Soviet Russia. Civil strife continued, however, until the signing of the Brest-Litovsk Treaty between Germany and the Bolshevist government, of Russia. Four days later (in March, 1918,) Germany signed a treaty with Finland, having meanwhile invaded Finland and occupied the Aland Islands. For a while it seemed that she would make Finland a monarchy under her control, and by the treaty she virtually established a protectorate over the little country. She promised to do everything possible to have the independence of Finland recognized by the world, but Finland had to promise that no territory over which she was sovereign would be given up without first consulting Germany. Consular and diplomatic relations were established between the two countries and a commercial agreement entered into which made Finland a practical vassal of Germany.

Flodden Field.—In 1512 James IV., king of Scotland, sent to Henry VIII. of England a list of grievances which the latter refused to rectify. Thereupon, in 1513, James equipped a formidable army of 60,000, marched across the border and took possession of a number of English strongholds. Henry VIII., who was then fighting against the French, sent the Earl of Surrey with 40,000 men against James at Flodden Field. Surrey succeeded in surrounding the Scotch army and so gained the advantage. The Scotch kept up the fight through the day in spite of the death of their king, eighty of their chieftains and 10,000 men, but at night they silently withdrew. The loss of 4,000 had so weakened Surrey's army that he did not pursue. Peace was made without gain on either side.

Fourteenth Amendment.—During the months that elapsed between the close of the Civil War and the next session of Congress, President Johnson took many steps toward restoring to the southern states their former privileges. The Congress which met in December, 1865, was largely made up of northern Republicans whose attitude toward the South was bitter. They wished to punish the vanquished states more thoroughly and to establish a positive freedom for the negro. The new governments of the southern states granted the negro no civil rights and made his position almost as humble as before the war. Congress brought help to the negro through the Freedman's Bureau and the Civil Rights Law (passed over the President's veto), and in June, 1866, they proposed to the states the Fourteenth Amendment.

The Thirteenth Amendment had made the negro free—the Fourteenth would make him a citizen, with the citizen's right to the protection of the law. Whether the negro could vote would be decided by the states separately, but if a state denied the vote to negroes, her representation in Congress would be diminished accordingly.

The Amendment also annulled all debts incurred by the Confederacy and prohibited the leaders of the Confederacy to hold Federal office until pardoned by Congress.

Although the President had officially readmitted most of the southern states to the Union, Congress regarded them as no better than territories and the acceptance of this Fourteenth Amendment was made the condition on which Congress would recognize them as states. Tennessee acquiesced in July, 1866, and was recognized by Congress, but the other southern states refused to ratify. Congress was determined to bend the south to its will and in March, 1867, passed the Reconstruction Acts.

The South was divided into five military districts, each under the surveillance of a Federal general. These generals, with troops at their command, were to supervise the establishments of new state governments and allow no government to be formed that was opposed to the Fourteenth Amendment. Under this system the ratification was completed on the 28th of July, 1868.

France.—The Franks were a confederacy of German tribes on the lower Rhine. They were neighbors of the Angles and Saxons till in 486 A. D., they invaded and conquered a part of Gaul. Their king, Clovis, grandson of Merwig (from whom comes the name of the Merovingian dynasty), drove out the Visigoths and married Clotilda, a Christian, daughter of one of the Burgundian princes. The Franks soon adopted the language of the Gauls, which had become Latinized. The Romance, or Romanized (Latinized) languages developed into the Provencal tongue of southern France and the French, Spanish and Italian languages. The descendants of Clovis, who died in 511 A. D., kept the crown he had won for nearly two centuries, but the history of these times is another pathetic chronicle of the crimes and follies of feeble and wicked kings. In 687, Pepin, a Mayor of the Palace, founded the Carlovingian dynasty. His son, Charles Martel, distinguished himself through one of the greatest services ever done for Christendom, stopping the Moslem invasion in 732. His son, Pepin the Short, was the father of Charlemagne. Karl, or Charles the Great, came to the throne in 771. He is one of the great men in history, as soldier or politician, and is renowned for his intellectual ability. He found a chaos of nations and institutions around him and left them moulded into a great empire which, although it fell to pieces at his death, was the foundation for the French kingdom which became a bulwark against the hordes of pagans and barbarians that threatened Christian Europe from the East and the North.

The first requisite for kingship in those days was military ability, and in this Charlemagne was distinguished. He was able to defend his realm and his people and to make further conquests. He had an equal gift for administration. To these talents he added wisdom and insight, literary and artistic tastes, love of learning and skill in legislation. He reformed the coinage, founded schools, collected libraries and encouraged scholarship, through which he succeeded in welding unsettled tribes into permanent communities. During his time Christianity first took on a political form. He subdued the Germanic and Tartar tribes to the North and East, conquered the Saxons, vanquished the Avars of Hungary, drove the Lombards from Italy and the Saracens from Spain as far as the Ebro, and was crowned Emperor by the Pope at Rome on Christmas Day of the year 800. He allowed each nation to retain its own laws, chiefs and free assemblies, and his own central government kept in touch with them through the reports and activities of Royal Commissioners who visited them at stated intervals. He died in 814 A. D., after a reign of forty-three years, having ruled an empire that included what is now the whole of France, northern and central Germany, the island of Corsica and northern and central Italy, and much of Austria, except Hungary.

After him we read of such men as Louis the Debonair, or Mild, Louis the Stammerer, Charles the Fat, and Charles the Simple. It was under the last named of these kings that the Norsemen or Normans invaded northern France under Rollo and founded Normandy. The Capetian kings ruled from 987 to the reign of Philip of Valois, 1328. Hugh Capet, the first of these kings and an able man, established Paris as the seat of his government and enacted some good laws. Under the reign of Philip (his grandson), Peter the Hermit preached the first Crusade, and William the Conqueror invaded England. Philip's son, Louis the Fair, reigned wisely and said to his son and successor on his death-bed: "Remember that royalty is nothing more than a public charge, of which you must render strict account to Him who makes kings and will judge them."

After several rulers who did little, came Louis IX., called Saint Louis. His mother, Blanche of Castile, was regent from his accession at the age of twelve years. Louis was one of those rare characters who can be a Christian on a throne, but his zeal for religion prompted him to engage in two tragic Crusades. He died during the second at Tunis in 1270 A. D., in his fifty-sixth year, and in the forty-fourth year of his reign. Philip III., his son, defeated the Saracens in Algiers, and his son, Philip IV., suppressed the Knights Templars.

France had no king of note till 1364 A. D., when Charles the Wise was crowned. He labored with such diligence to repair the losses of his successors that he was able to drive the English from France except

from Bordeaux, Bayonne and Calais. He was a patron of letters and himself had a library of 900 volumes, which became the foundation of the great library of Paris. His successor became insane, but was followed by Charles VII., under whom the English laid siege to Orleans, the scene of one of the most remarkable events in history. When Orleans was about to surrender, a little girl of seventeen appeared from a humble cottage on the borders of Lorraine and asserted that she had received a divine commission to raise the siege of that city and procure the coronation of Charles at Rheims. She was examined by a committee and sent on her mission. The British were defeated and Joan of Arc became to history the Maid of Orleans. But the episode is marked by an act of extraordinary brutality. She fell into the hands of the English, who burned her in the public square at Rouen.

Charles was followed by the sinister and infamous Louis XI. He had a certain cynical ability and did much for the promotion of commerce, but he established the modern system of diplomacy with the advice to his agents that the enemy would lie but they must lie harder. His life was miserable from a guilty conscience and fear of death, and he died miserably.

The War of the Spanish Succession followed not long after the death of Louis XI., in which much blood was shed over the rival claims of two princes to the throne of Germany, made vacant by the death of Maximilian, Emperor of Germany in 1519. Henry II. persecuted the Huguenots, starting the civil wars which devastated France for several reigns. Under Charles IX. the Protestant religion had made much progress with some of the most distinguished men in the kingdom in the ranks of the church, among whom were the Prince of Condè and Admiral Coligny. One of the most memorable events of his reign was the massacre of St. Bartholomew, under circumstances of the foulest treachery. The massacre was aided by the populace and extended over the entire kingdom, some writers estimating the number murdered at 70,000. Whatever that number was, it was certainly large enough to disgrace the reign of Louis XI.

Henry IV. ascended the throne a Protestant but abjured that faith and became a Catholic. After civil wars were ended, he issued the celebrated Edict of Nantes, granting Protestants the free exercise of their religion and a political status in society. The Duke of Sully was his famous Counsellor. But this wise king was assassinated by a monk named Ravaillac in 1610, the twenty-first year of his reign. Louis XI. was nine years old at the death of his father, but upon assuming the throne later, he chose the famous Richelieu as his Prime Minister, who became one of the greatest statesmen and one of the most unscrupulous diplomats that Europe has produced. He laid the foundations of France upon which Louis XIV. built. Since this Louis was only five years of age when he came to the throne, the Queen mother raised Mazarin to the post of Prime Minister. The reign of Louis XIV. is one of the longest in history, and is in some respects the most brilliant. For much of his success he was under obligations to his generals and ministers, Colbert among the latter, with Condè, Turenne and Vauban among the defenders of the realm. He undid the good work of Henry IV., in the revocation of the Edict of Nantes, and all Protestant ministers were required to abjure their faith or leave France. It is not known how many people left, but the highest figure given is a half million. The loss of these Huguenots was an irreparable loss to France. Louis was a vain man, a cruel spendthrift, feeling no sympathies for the common people who created his wealth and fought his battles, but he encouraged art, literature and science. The Louvre and Versailles were built, and alongside the brilliant names of Condè and Turenne are those of Bossuet, Fenelon, Bourdaloue in the French pulpit, Boileau, Racine, Pascal, Descartes and many others who have been leaders in thought. Louis reigned till his seventy-eighth year, or the seventy-third of his occupancy of the throne. He was succeeded by his great-grandson, Louis XV., who also came to the throne at the age of five years, under the regency of the Duke of Orleans. Cardinal Fleury became his Prime Minister. The Austrian Succession broke out after the death of Charles VI. The claimants were Maria Theresa and Charles the Elector of Bavaria. The English and their allies supported the former who won, acknowledged by the Treaty of Aix-la-Chapelle. During this reign also England won the French possessions in Canada. Louis died in 1774, in the fifty-ninth year of his reign. These two kings of France, Louis XIV. and Louis XV., reigned for one hundred and thirty-two years. Louis XVI., grandson of his predecessor, ascended the throne of France at twenty years of age. The conditions in France were appalling, although liberal doctrines had been disseminated by the most brilliant writers of the age, such as Rousseau, Voltaire, the Encyclopedists, to say nothing of those in England, and in America where the revolution was about to break. The American Declaration of Independence was signed two years after the accession of Louis, and the Revolutionary War in America followed, in which France was more interested, probably, than in the cause of democracy, for the reason that it was waged against her age-long foe, England. The Marquis de Lafayette became the spokesman of those Frenchmen who sympathized with the American cause, as Queen Marie Antoinette had always sympathized. It must be remembered that the France that helped the American people in that issue, indeed which saved the cause at that time, was the France of Louis XVI. and his expiring regime. It was the France which, so to speak, was beheaded at the Guillotine, while her executioners of the Red Terror were those with whom later we had our own troubles and nearly came to war.

After the French Revolution—the result of discontent with the old social order—(see French Revolution)—came the political reaction such as nearly always follows in cases of anarchy and confusion. A tyrant arose and offered the people government, perhaps the worst of which was better than none at all. Napoleon certified his authority by sheer military genius to those who believe that Might is Right. It would be a poor type which would not make some pretense of the betterment of the people, as Napoleon did, but at bottom he was an altogether selfish and ambitious human being who bought his buttons with the dreadful price of the blood of Europe. The first allied armies of the five great coalitions of Great Britain, Holland, Russia and Spain invaded France and were overthrown. Napoleon completed the conquest of Italy, compelled Austria to acknowledge the French conquests in the Netherlands, and took possession of the Delta and of Cairo. In 1798, the French fleet was defeated by the English under Nelson in the Bay of Aboukir. The second coalition was formed between England and Russia, which other powers later joined, and the Allies gained some important victories. Napoleon returned to France and became First Consul. He crossed the Alps at the head of his army and defeated the Austrians at Marengo, gaining other victories which resulted in peace for a time. In 1804 he was crowned Emperor of France by the Pope, upon which a third coalition was formed against him, between England, Austria, Russia and Sweden, followed by Prussia. At Austerlitz he defeated the combined forces of Russia and Austria, but Nelson at the cost of his life defeated the fleet of France and Spain off Trafalgar, after which the peace of Presburg was signed. When Napoleon had broken the peace in 1806, a fourth coalition was formed in which England, Austria, Russia, Prussia and Sweden were arraigned against France. Napoleon broke the Prussian power at Jena and Auerstädt, and declared the British Islands in a state of blockade, ordering all ports closed against them. He placed his relatives and friends on the thrones of Europe, and found no end to his growing ambitions. Murat, his brother-in-law, was placed on the throne of Naples, and Joseph Bonaparte on the throne of Spain. The peninsular war was waged from 1808 till 1813, and the Emperor of Austria was compelled to give his daughter, Maria Louisa, to Napoleon as his wife. Then Napoleon determined upon the invasion of Russia—the beginning of his undoing. It was his march from and not to Moscow that has become famous, for the Russians had destroyed all the shelter and provisions by fire and left the French troops at the mercy of a Russian winter. Only 30,000 survived to cross the Niemen on the return home. The fifth coalition was formed between Russia, Prussia, Austria, and Sweden. The Emperor was beaten at Leipzig, after which he fled to Paris, abdicating the throne of France and involuntarily retiring to the Island of Elba. Louis XVIII. ascended the throne. While the Allies were yet holding the Congress of Vienna, Napoleon made his escape and landed at Frejus, where he gathered an army of but 1,140 men, marched to Paris and in twenty days was again seated upon his throne. Upon this, nearly all the powers of Europe made an alignment and the defeat at Waterloo sealed the fate of Napoleon.

Throughout the entire nineteenth century France suffered from revolutions and foreign invasions. In 1852 the second French Empire was proclaimed, and Louis Napoleon made emperor, as Napoleon III. Between 1853 and 1856 occurred the Crimean War, in which England, France, Sardinia and Turkey united against Russia, and succeeded in guaranteeing the independence of the Ottoman Empire, preventing Russia from gaining territory from the Turks. War between Austria and France followed (1859), in which France was victorious, annexing Savoy and Nice, after a plebiscite of the inhabitants. Outwitted by Count von Bismarck of Prussia, who failed to live up to his promises to Napoleon III., and exasperated by Prussia's jealousy, France declared war on July 15, 1870, and there followed a struggle for which Prussia had been preparing for

years. All Germany gave aid in this Franco-Prussian War, and as a result, France was crushed, Napoleon III. surrendering his sword to King William at Sedan. In Paris a frenzied mob seized the government, deposed the Emperor and proclaimed the Republic. Paris was besieged and forced to surrender (1871); the German Empire was proclaimed in the palace of Versailles, and by the Treaty of Frankfort, France was forced to pay Prussia an indemnity of a billion dollars in the space of three years and to give up all of Alsace, except Belfort, and one-fifth of Lorraine, including Metz. As the indemnity was paid evacuation of the Prussians would take place.

Thiers, who had shown his statesmanship in dealing with Prussian demands, was made president of the new (third) French Republic, and to him fell the task not only of raising the indemnity so that the country would be free from the Prussian army of occupation, but also of putting down civil war. This "Liberator of the Territory," although a liberal monarchist, believed that a republican form of government was the only possible one for France, and thus he incurred the enmity of the majority made up of legitimists, Orleanists and imperialists. At the age of 76 he resigned, and Marshal MacMahon, Duke of Magenta, was elected for seven years by the Assembly. On January 30, 1875, the Republic was officially recognized.

War with China and in Africa occupied considerable attention for the next few years. Political struggles continued, with a marked progress in Socialism. In 1894 President Carnot was killed in the streets of Lyons by an anarchist. In spite of the fact that since 1824 nearly every ruler in France has been driven from his position by revolution or assassination or the force of public opinion, and though the political struggles have been long and severe, the Republic has consolidated and strengthened itself. The condition of the peasant class improved, the country prospered, and signs of contentment were apparent until Germany's military machine again tore and devastated the land. The destruction of industries in France's industrial region, carried out deliberately by the German invaders in the Great War, to destroy her economic importance, can scarcely be estimated, but it will require more than 2,000,000 tons of pig iron and about 4,000,000 of steel to replace what was ruined in these regions, at an estimated cost of 25,000,000,000 francs. For four years these modern Huns laid waste the land destroying personal property to the value of 4,000,000,000 francs, and 350,000 homes, the cost of rebuilding of which is estimated at 10,000,000,000 francs. (See Germany and Great War.)

French and Indian War (1754-1760).—A war between the French and English in North America over their disputed possessions on that continent. The French were assisted by numerous Indian tribes and from 1754 to 1758 held unbroken a line of defense barring the English from their territory. The English generals, who led a mixed army of British regulars, colonist volunteers and Iroquois Indians, were ill suited to the hardships of an American campaign. The British organization was also inferior to the French.

After the severe British defeat at Ticonderoga, 1758, new vim was put into the English campaign through the influence of William Pitt, English Prime Minister, and a new general was put in charge. Within the next year the French defense was broken by the capture of six important forts. In September 1759 General Wolfe marched the English forces on Quebec and defeated the French under Montcalm. This opened Canada to the British and led to the conquest of Montreal. In 1760 the fighting on the continent ceased.

A war had at the same time been waging between France and England in Europe, the Seven Years War, which ended in 1763. By the Treaty of Paris in 1763 the French gave up all their possessions in North America. Canada and the territory west of the Mississippi became England's. Spain ceded Florida to England and received Louisiana from France.

The French Revolution.—In the latter part of the 18th century the people of France revolted against the evils imposed on them by an all-powerful king and an idle nobility who owned the land. Two very different classes made up this revolt:

(1) The educated class, with high ideals strove for reform through better laws.

(2) The lower class (peasants), overtaxed and starved, expressed their discontent by violence.

From 1789 to 1792 the educated class brought about peaceable reform through national assemblies, until France was

practically a republic. But as France became engaged in active warfare with Austria (who opposed the republic), the mob violence of the peasants began to dominate the revolution. The king, who had shown himself in league with foreign powers for the defeat of his country, was beheaded in 1793.

Under the pressure of war the Committee of Public Safety was put in power in Paris. This committee ordered some 2,800 persons, suspected of disloyalty to the government, to be beheaded. This became known as the "Reign of Terror," which ended with the execution of the man who had started it in July 1794, and a more moderate government was then established.

Other neighboring countries continued to make war on France until in 1799 these wars became such a menace that it was necessary to place the power of government in the hands of the ablest general, Napoleon. Napoleon gradually changed France from a republic to an empire, with himself as emperor, and thus ended the revolution.

Gallic Wars.—Cæsar's Gallic Wars came at that point in his career when the intrigues by which he had climbed to power were likely to cause him trouble in Rome, while a successful military campaign abroad would glorify him in the eyes of the people. His first move was in 58 B. C., against a Swiss tribe, the Helvetii, who seemed about to invade the Roman Empire. He next entered the territory now known as France to aid a friendly Gallic tribe, the Ædui, in driving off the Germanic invader Ariovistus. He then undertook to subdue all parts of Gaul which did not yet pay homage to Rome. He spent eight years thus, assisted by Crassus and Sabinus. His most difficult task was the conquering of the rebellious Veneti, who had so powerful a fleet that Cæsar was forced to build a fleet likewise. The Senate of the Veneti were executed for treachery and all their people sold into slavery. Among other tribes conquered were: the Belgæ, the Nervi, the Aduatici, the Morini and the Menapii.

Garfield and Arthur's Administration

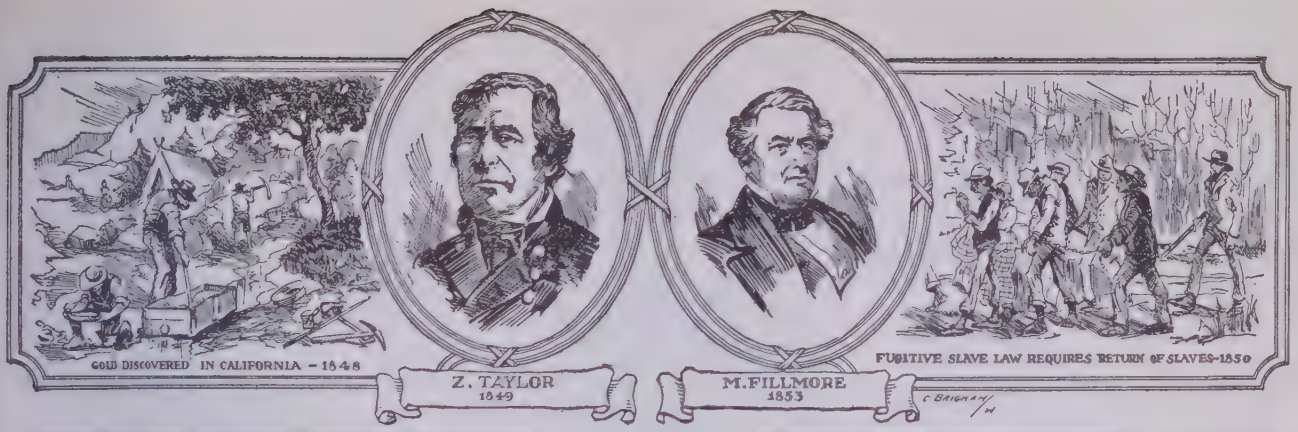
I. The Stalwarts.—Garfield's nomination and election had split the Republican party, especially in New York. The opposition was led by Senator Conkling. President Garfield ignored Conkling in making appointments to office. Conkling resigned as Senator from New York and asked justification in the form of re-election. The New York legislature defeated him, thus supporting President Garfield. The opponents of Garfield were known as "Stalwarts" and included U. S. Senator Thomas C. Platt.

II. Garfield's Assassination.—Garfield had been elected President largely through the efforts of Roscoe Conkling, a shrewd political boss among the Republicans. But Garfield was not himself a politician and did not repay Conkling or Conkling's friends with any important political offices. This "ingratitude" so enraged Conkling that he agitated with his usual skill against Garfield and created a faction of opposition in the Republican party known as the "Stalwarts."

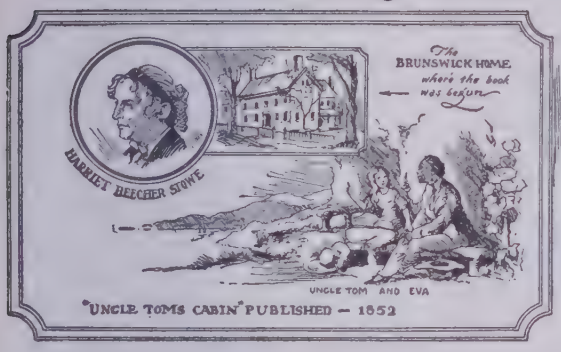
Among the "Stalwarts" was a fanatic named Guiteau. He had had a varied career—politician, lawyer, lecturer, evangelist. He had felt assured of a political appointment from Garfield and his disappointment made him ready fuel for the fire of Conkling's oratory.

Garfield had been warned of plans for his assassination but he paid no heed. On July 2, 1881, as he entered the railway station at Washington, Guiteau crept up from behind and shot him twice in the back. The President lived through a summer of dreadful suffering and died on September 19th.

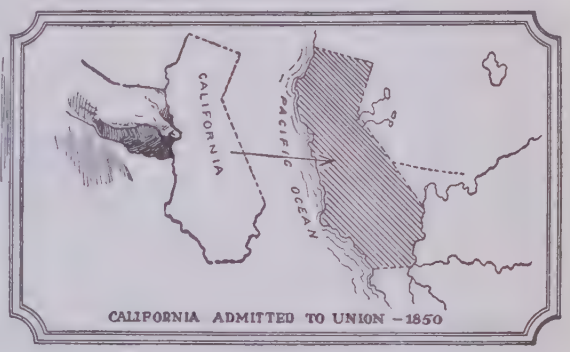
Guiteau, when arrested, throughout his trial and up to the moment of his execution, showed a firm religious conviction that he had fulfilled his duty in ridding the country of Garfield, in making it possible for Vice-President Arthur (who sided with the "Stalwarts") to become President and thus to re-unite the Republican party.



The horror of the country at this insane deed was great; Conkling and the "Stalwarts" were despised and a movement for Civil Service Reform was set on foot to lessen the corruption of political appointment to office.



III. American Federation of Labor.—In 1881 a number of separate labor unions met in Pittsburgh, Pa., and organized the Federation of Organized Trades and Labor. Their first purpose was to oppose the Knights of Labor. In 1886 other organizations joined the new federation which then became the American Federation of Labor. It is now the largest and most influential labor organization in the world with a membership of more than 3,000,000.



IV. Brooklyn Bridge.—This bridge was completed in 1883. It had been begun in 1870. Its span is 1,595½ feet; each land span is 930 feet. Total length, including the approaches, 5,989 feet. It is 85 feet wide. It has four cables, each consisting of 6,300 parallel steel wires in a solid cylinder 15½ inches in diameter, with a total strength of 11,200 tons. The bridge cost $17,900,000.

Germany.—The ancient Germans are supposed to have migrated from upper Asia, in non-historic times, passing by the Caucasus and north of the Caspian Sea to central Europe. Like the Celts, they were tall, fair, with blue, fierce-looking eyes, and light or red hair. Gradually they worked their way into the Roman Empire, sometimes, as under Marcus Aurelius (161-180 A. D.,) being granted the right of settling within its borders, and sometimes pushing their way in with fire and sword. Behind them came other and fiercer tribes, forcing those on the borders farther within Roman boundaries. The empire had declined and broken up into a western and an eastern section, with the emperor at Constantinople quite powerless in the West. Romulus Augustulus, ruler at Rome, was succeeded by Odoacer, a German, who, deposing the former, sent his acknowledgment of submission to Zeno, Emperor at Constantinople, in 476. From that time on, the Germans ruled in the West, which, though nominally under the central power at Constantinople, really consisted of separate, independent kingdoms. Charlemagne, a German and a Christian, king in the West (768-814), was crowned emperor at Rome by the Pope in 800. Throughout many years following, this united German Christian Empire was little more than an ideal, but as an ideal it persisted in the minds of German kings down to the present. Notwithstanding its disunited condition, Germany began to trade with the East; the merchant class grew strong and wealthy and unscrupulous, a few monopolizing all the trade, while the majority of the population, the peasants, lived a monotonous, oppressed existence, relieved only by village brawls and revelries. The peasants' revolt in the sixteenth century, an uprising against the evils of serfdom, was quelled by the autocratic lords in the bloodiest possible manner. At least 100,000 peasants were killed, and German peasantry sank into a wretched condition from which it did not emerge until the nineteenth century. Even Martin Luther, of peasant stock himself, condemned their rebellion, saying that "to rebel against the princes was to rebel against God." From this time on, the movement of Luther for Protestantism was in the hands of the nobles, who for political or conscientious reasons preferred his beliefs to those of the Catholic church at Rome. Most powerful of these princes was Charles V., son of the archduke of Austria, who had fallen heir to the Netherlands, the crown of Spain and Naples, the sovereignty of vast possessions in the New World, and the duchy of Austria and its dependencies—an inheritance of larger dominion than of any lord since Charlemagne. Added to these was the sovereignty of the Holy Roman Empire, voted to him by the electors of Germany. Charles, a Catholic, was successful in driving back the Turks from the borders of Germany and defeating them in the Mediterranean, but in the end he was unsuccessful in his wars with the Protestant German princes. The Religious Peace of Augsburg (1555), meant victory for the Protestants only in that the church was freed from the control of Rome and the Pope. Feudal princes were free to choose either Catholicism or Lutheranism. The Thirty Years' War, (1618-1648), originally a struggle between Catholic and Protestant princes of Germany, eventually became a political struggle, involving nearly all of Europe and dragging civilization down to a low plane. The political provisions of the Treaty of Westphalia (1648), which marked the close of the religious wars, were important in that they remained practically unchanged for two centuries. Switzerland and Holland became independent; France was now the strongest power on the continent; Spain lost her leadership, and the Holy Roman Empire declined to a mere name.

Of all the duchies of German origin, Prussia and Austria became the mightiest. Brandenburg, one of the many states of the Holy Roman Empire, absorbed the neighboring duchy of Prussia. Frederick the Great (1740-1786), crowned King of Prussia, succeeded in extending and strengthening his kingdom, rivalling Austria, which in 1438 had recovered the imperial crown through the House of Austria. Napoleon, Emperor of France, hoped to extend his own power by placing his relatives in reigning positions throughout the Rhine duchies. The Congress of Vienna which sought to regulate European affairs, in 1814, had before it the problem of these petty kingdoms. The advocates of German union, including Prussia, wished to re-establish the old empire, but it was agreed that this should not be done. Fearing Napoleon, however, a confederation of thirty-nine states agreed to send deputies to a Diet at Frankfort, over which Austria was always to preside. Thus the Germany of 1815 was only a collection of independent states, each retaining its sovereign power. Following the over-

throw of Louis Napoleon, nephew of the great Napoleon, elected in 1848, Russia, Prussia and Austria, absolute monarchies, attempted to quell the spirit of revolution in Europe and checked for a time the efforts of the weaker nations to obtain freedom of government. Thus the iron heel of Austria crushed Italy's efforts at uniting itself until France and England gave aid, resulting in the union of Italy, Sicily and Sardinia, thanks also to the brains and courage of Cavour and Garibaldi. Meanwhile Prussia was advancing rapidly in all lines of industry and learning and drawing other states into economic co-operation. King William, of Prussia, (1861), with his chief adviser, Otto von Bismarck, set about to organize a military machine which would make Prussia the mightiest power in Europe. With this behind him, Bismarck succeeded in weakening Austria, excluding that state from the German political system, organizing the northern states into a union under Prussian control, and crushing France in the Franco-Prussian War (1870). France was forced to pay a large indemnity and cede to the victors the two provinces Alsace and Lorraine, while the southern German states joined the northern in proclaiming William Emperor (kaiser), of a united Germany. In the years following 1876, Germany not only had begun to develop within her own borders to a remarkable degree industrially, but she had extended her commerce and founded colonies in all parts of the world. Thousands of her inhabitants migrated to America, hating the imperial system which compelled military service and submission to autocratic rule. Lust for power and conquest led the rulers to lay schemes whereby Germany would surpass every other nation of the world. Colonies were strengthened throughout the East, especially in Africa, where trade with coast cities became most important. William I., who lived to be ninety years old, was succeeded by Frederick I. (1888), who had fought in the Austro-Prussian and Franco-Prussian wars, and who had shown liberal tendencies, marrying the crown princess of Great Britain, eldest daughter of Queen Victoria. During his three months' reign, he protested against the despotic Army Bill of 1862. William II. (1888-1918), became emperor at Frederick's death and reigned until he was forced to flee the country when the fate of autocrats was sealed by the Great War. From the beginning of his reign at the age of twenty-nine, he manifested his love of military power and glory, his absolutist policy, and his belief in himself as the "anointed elector of the Divine Will." In the first year of his reign the free cities of Hamburg and Bremen merged themselves into the "Fatherland". At the outbreak of the Great War, in 1914, the German Empire was a constitutional monarchy of twenty-five states and an imperial territory, Reichsland in central Europe. About 64.5 per cent of the area of the empire and 61.9 per cent of the population was that of Prussia. Under the imperial constitution, the King of Prussia was the Emperor of united Germany, though it must be remembered that the twenty-five states were scattered about in more or less detached fragments. The kaiser's aim was German conquest and dominance. The Pan-Germans and extreme Socialists differed, but the general war aims of the country were clearly enough shown when many statements were published in regard to the minimum which the German Empire would accept, how German power would be extended and the British Empire destroyed by an ultimate coalition between Germany, Russia, and Japan. "The development of a national militarism, based on a spirit of national patriotism," has been stated as a cause of the war in Europe. According to the principle of nationalism, Austria-Hungary should have been divided as the sympathies and tastes of the population might suggest. Thus, obeying the principle, she should have surrendered to Germany her German provinces, granted the Trentino and Trieste to Italy, Transylvania to Roumania, and Bosnia and Herzegovina to Servia. When in June, 1914, the Austrian heir-apparent, Archduke Francis Ferdinand, and his wife were assassinated at Sarajevo, the Austrian-Hungarian government feared that Servian patriots and their ideas of nationalism threatened the Hapsburg empire. They feared this all the more because the Russian orthodox Slavs were in sympathy with the Servian orthodox Slavs. Germany was prepared for the break between Austria and Servia, which served only as an excuse for pushing ambitious designs, long and carefully laid by the German militarists. To understand fully Germany's ideals, one must refer back for a moment to the beginnings of the empire. The democratic and liberal plans of the Frankfort Assembly in 1848 for a national government over a united Germany had failed. Bismarck with his "blood and iron" policy, had succeeded in establishing an empire which was unified, despotic though it was. Henceforth, Germans associated national patriotism with military power, represented by large armies, autocratic officers, and obedient subjects, the last named always to be taught and impressed with the doctrine from the cradle to the battlefield that the strong survive and that Might makes Right. In 1913 the Army Bill of Germany aroused Europe. It was evident that the millions of trained men and the stores of supplies and ammunition were for a purpose. In Africa German colonies and capitalists were contending for control. Vast industrial schemes were under way: the Krupp

munition makers were said by Karl Liebknecht, a German socialist, to be using their financial influence everywhere to stir up hatred which would lead to war. After Austria had declared war on Servia, it took only reports of Russian mobilization to bring a declaration of war by Germany against Russia. War between Germany and France began immediately, and when German troops occupied the neutral duchy of Luxemburg and entered neutral Belgium, England saw fit to declare war on Germany. Montenegro joined Servia against Austria-Hungary, and Japan declared war on Germany. Russia and Turkey declared war on each other and France and Great Britain on Turkey. German submarine warfare and outrages finally brought the United States into the conflict on the side of the Allies, (April 6, 1917). The conquest of German East Africa by the Allies was completed in December, 1917, and that of the protectorate of southwest Africa in July, 1915. German rule in these provinces was no longer to be tolerated, the war having revealed her autocratic aims and methods.

Popular discontent with the war and its burdens during the year 1918, led to revolution in Germany, though it was probably fabulously reported at first that the people were rebelling against military rule in order to cause the Allies to relax their efforts. The attitude of Maximilian Harden is a revelation of a type of German mind of the present. In 1918 he said Germany's cause was hopeless, and he bitterly criticised the kaiser, though in 1914 he had said that the Allies were like the decadent Romans and the Germans like the barbarians who had conquered them. "Your culture, gentlemen," he had said, "has not a healthy smell. Accustom yourselves as soon as possible to the fact that barbarians and warriors inhabit the German land. When Tangiers, Toulon, Antwerp and Calais are under the yoke of these barbarians, they will be glad of the occasion to talk pleasantly with you." By October, 1916, Herr Ebert and the socialists were demanding peace, popular government and the abdication of the kaiser. William's abdication took place in 1918. He fled to the Netherlands, and the revolution went on in earnest. Liebknecht became leader of the radicals or Spartacides, and for a time it seemed that Bolshevism would rule. Several German states seceded and declared themselves independent republics. The Bavarian republic was established and the German fleet fell into the hands of the revolutionists. Heligoland, Kiel, Aix-haven, Wilhelmshaven and Borkum were seized, and Berlin was disrupted by revolutionists. Laborers went on strikes, and peace was far from Germany, though the Armistice with the Allies had been signed November 11,1918. Herr Ebert became the new chancellor and promised popular government, and a new government was set up in Berlin. Each of the separate states continued to be in the throes of internal political strife, twelve governments being overthrown during the week following November 8, 1918. Saxony and Baden declared themselves republics, and Hamburg, Bremen, Ostfriesland and Schleswig-Holstein united in a North Sea Republic, with Hamburg as capital. In 1934, Hitler became Reichsfuehrer and the Nazi regime was established; this system of government won an almost instantaneous popularity in Germany.

Gettysburg.—A town in Pennsylvania, the site of the most decisive battle of the Civil War, on July 1-3, 1863, when Lee's last attempt to invade northern territory was vigorously repulsed by the Union army under General Meade. Both sides showed unusual valor, but the greater determination of the Federal troops gave them the victory. 2,500 of the 73,000 Confederates perished and 3,000 of the 82,000 Unionists. New courage was instilled into the northern army after this victory and their success prevailed from that day until the end of the conflict.

Goths, Ostrogoths, and Visigoths.—The Goths were one of the most powerful of the Germanic nations of antiquity, supposed to be of Scandinavian origin. The oldest extant record of them is in the writings of a contemporary of Alexander the Great, Pytheas, of Marseilles. They appear first in history on the Baltic, selling amber to the Teutons. Tacitus describes them as living under a regal government, enjoying considerable liberty. We next hear of them on the Black Sea about the mouth of the Danube in the third century. They increased rapidly in strength and numbers and in the reign of Philip (244-249 A. D.), ravaged Dacia.

In 402 A. D. Alaric, king of the Visigoths, invaded Italy, pillaged Rome in 410, and died on an expedition to conquer Sicily. The successor of Alaric, Athwulf (410-415), married a sister of Honorius (Placidia), entered Gaul, and in 412 crossed the Pyrenees and invaded Spain. He was assassinated at Barcelona (415 A. D.). His successor, Wallia, ruled over southern Gaul and Spain, and assisted Rome against the Vandals.

The Ostrogoths were conquered by the Huns, and under compulsion joined Attila on his invasion of Gaul. Thousands were cut down by their kinsmen, the Visigoths, at the battle of Chalons, 461 A. D. Theodoric was the greatest of Ostrogothic kings. He won from Zeno, the eastern emperor, a part of his empire and became chief of the Imperial Guard and Consul in 484 A. D., and dethroned Romulus Augustulus, the last of the western emperors, reigning over Italy until his death in 526 A. D. On the whole he ruled wisely and justly. When Theodoric died, Justinian, emperor in the East, sent Belisarius to Rome to hold it for him, but he was unable to subdue the Goths.

Grant's Administration

I. The Centennial Exposition.—The One Hundredth Anniversary of the signing of the Declaration of Independence was celebrated by a great international exposition in Philadelphia in the summer of 1876. It continued five months and was visited by hundreds of thousands of Americans and by people representing 33 different foreign nations. The exposition had excellent results in the industrial growth of the nation.

II. Custer Massacre.—In 1876 General Custer attacked the Sioux Indians commanded by Chief Sitting Bull. Custer's troops were led into ambush and being greatly outnumbered by the Indians, were defeated and all massacred. General Custer was among those killed. Sitting Bull was killed Dec. 15, 1890.

III. The Telephone.—Alexander Graham Bell completed the invention of the telephone and secured patents on his invention in 1876. His invention attracted much attention at the Centennial Exposition.

VI. The Canadian Boundary.—In a treaty with Great Britian, in 1871, the present boundary line between Canada and the United States was fixed. It was then the Oregon territory which had been explored by Lewis and Clark. The United States-Canada boundary line, more than 3,000 miles in length, and the subject of long and continuous dispute, was settled without resort to war, and peace has prevailed for more than 100 years as a result of treaty negotiations. This boundary line history is a model for all the nations of the earth.

Greece.—Greece is a peninsula of Europe as Europe is a peninsula of Asia. The home of the Hellenes, as the Greeks called themselves, was about the size of the state of Maine, but its surface was so mountainous and its coast line so complex, that there was no spot more than ten miles from some high summit or more than forty miles from salt water. Geographically, Greece faced Asia. The most and the best of her harbours opened to the south and east, in close touch with all that was known of the ancient cultures. The three great divisions of Greece were the Peloponnese (present Morea), containing six states; Hellas, north of this peninsula with nine states, the third being composed of the two states of Thessaly and Epirus. Greek history was reckoned by Olympiads, periods of four years, because every four years, as we have presidential elections, the Greeks held their Olympic Games, as far back as 776 B. C. The Greeks had a common language, religion and culture. These tended to keep them together and at peace. But they were always ready to fight each other through jealousy, rivalry or pride, because temperamentally they leaned to the philosophy of individualism, that is, pure selfishness. It is a theory of "Myself", and where that is strong, the national spirit is weak. Thucydides, who wrote the first great real history, took for his subject the Peloponnesian War, in which Greece committed suicide. In this book he writes the greatest of all Greek tragedies, the destruction of the most gifted people that have ever lived. In one of the first chapters he says: "It is one of the marks of the imbecility of ancient times that the Greeks never held anything in common."

The community of language, culture and religion was more than anything else due to Homer, who has given us the first and greatest epic poem ever written. In some ways it was a great thing for Greece that her life and thought could have been interpreted through such a mind. Although many of the ideals were those of battle and carnage which have not ceased to affect the minds of men on the whole the *Iliad* and the *Odyssey* were so far ahead of the standards of the rest of the world as to have been a real revelation. Moreover, Homer shows us many pictures of the daily life and customs of the people.

About 1000 B. C., barbarous and heavily armed tribes from the North called the Dorians, conquered the people of the Peloponnesus in many battles, after which for some centuries we have no record. When the curtain rises again upon Greece there is a new race consciousness; great migrations have taken place; kings have given way to oligarchies; these to tyrants and to some degree democracies up to 500 B. C. Fugitives and traders carried the Greek blood to the islands of the Ægean, and the Asiatic coasts, while about sixty settlements were made on the shores of the Black Sea. In Asia Minor where Miletus and Ephesus were the principal cities, the district

became known as Ionia. About the time of Homer began the rise of Sparta with the legislation of Lycurgus, who ordained two kings, a senate of thirty members and arranged for the people to meet from time to time in open-air assembly to hear and decide all laws.

An anecdote of Lycurgus will show the spirit of his educational system. He brought up two young hounds from the same litter upon two different systems. One dog was fed on choice foods, was pampered and left to follow his own instincts, while the other was allowed a spare diet and trained daily for the chase. One day in assembly the two hounds were brought out before the people. Before them a dish of meat was set on the ground and a hare let loose, and the two dogs were unleashed, The trained dog made at once for the hare, while the mollycoddle brother set upon the dish of meat. "O Spartans," said Lycurgus. "These two hounds are of the same noble breed, come from the same litter; behold how different their tastes! So be it with your children; train them early and they will become useful citizens; but let them grow up in idleness and luxury, and they will become the degenerate victims of vice." The system of Lycurgus was carried to its logical extreme, almost always a bad principle, for in some ways it became harsh and brutalizing. At seven boys were taken from home and put in barracks; their bodies were hardened and their wills educated to obedience. They were whipped on festival days to test their endurance, and they often died without a cry. "The Spartan life is so unendurable," said an Athenian, "that it is no wonder he throws it away in battle." But their austerity and dignity and the enduring character of their constitution, lasting for a half millennium amidst the chaotic conditions of revolutionary states, made them a political refuge and a moral force in all Greece. They were hard and narrow. They did nothing in art, literature or philosophy, but Greece lasted longer for their defences and "they helped to save something better than themselves." The issue was Thermopylæ in 480 B. C., when Xerxes, the Persian, had crossed the Hellespont with an immense host, meeting no resistance till he reached the pass of Thermopylæ, where the Greeks, under Leonidas, devoted themselves to certain death because it did not become a Spartan to desert his post. There they died, betrayed by a Greek, Ephialtes, and above their graves was placed the epitaph: "Strangers tell at Sparta that we lie here in obedience to her laws."

For a long time the "Tyrants" ruled the Sicilian and Asiatic colonies of Greece, always unconstitutionally, and sometimes over unwilling subjects. Greek literature is unfriendly to the tyrant, but he did one good thing in breaking down the power of the aristocracy; he laid the foundations for Greek democracy and helped remove some of those petty political barriers which were always the curse of Greece and finally resulted in the downfall of her civilization. The tyrant was much like the modern "Boss". He rode into power generally in the espousal of the cause of the poor and made officers of his relatives and friends who did his "collections" for him; but he differed from the modern "Boss" in that he encouraged intelligence and patronized the sciences and the arts. During this age the rudiments of democracy appeared in that long warfare not yet ended between the few and the many; literature was developed beyond epic poetry to lyric and elegiac; sculpture made a beginning, and architecture became supreme, while the sixth century B. C. produced some profound philosophers. Intellectual supremacy was in Miletus, then the wealthiest and most populous city in Greece, which also boasted some of the greatest of Greek colonizers, traders, navigators and discoverers. Later supremacy moved from Asia to the European cities of Greece, Sparta, and Athens, the latter the first successful republic and the former the first successful democracy in history. Sparta endured longer than Athens, and both degenerated through their own peculiar vices.

With modifications these two forms of government were continued till absorption in the Roman Empire in 146 B. C. The first break in Athens was the seizure of the government by Peisistratos, who with his family ruled for a half century. It was his son, Hippias, having fled to Persia and taken refuge with Darius, who persuaded that king to war on Greece. Hippias, a Greek, was therefore the occasion if not the cause of the Persian Wars—the first great conflict between East and West—Asu and Ereb— as the Assyrian monuments would have it— Asia and Europe. Meanwhile

Athens had assisted the Asiatic colonies in their revolt against Persia, and Darius landed in Attica with 110,000 men to attack Athens. Out of all Greece there were but one thousand Platean hoplites ready to succor the Athenians, and these joined Miltiades with his immortal ten thousand. Athens defeated the Persians at Marathon, 490 B. C., and ten years later the Greek forces destroyed the Persian fleet at Salamis and their armies at Platea and Mycale, (479 B. C.).

In the age of Pericles, Athens, that is, all of Attica, had a population of about 350,000, of which nearly half were citizens and the rest foreigners and slaves. The latter were often men of culture and of the same color, captives of war, and it was one of these, Æsop, who lived at Samos about 550 B. C., and who made even the frogs "croak wisdom." It is the great distinction of this city, which is Greece to the modern world, that in its brief supremacy it created the first democracy of antiquity, founded the beginnings of science, and produced those philosophers who have never yet been excelled and who will probably determine the course of human thought very largely to the end of time. There is something fitting in the mythical origin of the name of Athens. It is said that during the reign of the first king, Cecrops, of Egypt, two deities, Poseidon and Athena, contended for possession, whereupon the gods decreed that it should go to the one who made the most useful gift to mortals. Poseidon gave the horse; and Athena planted the olive tree and won—hence the name of Athens. The emblem of peace won over that of war. Is it a prophecy of the great democracy?

Pericles in his youth came under the influence of Anaxagoras, the first Greek thinker to declare that mind and not matter rules the universe, and such was the loftiness of his moral tone that friends and enemies declared him the Zeus of Athens, while Aristophanes speaks of him in one of his satires as the Olympian Pericles. He was a greater statesman than Themistocles, as just as Aristides; as ambitious for Athens as Cimon; and he was the greatest orator in Athens. Says one writer: "Persuasion sat on his lips, such was his charm." What Isocrates said of his city at a later time, was especially true of Athens in the age of Pericles: "Athens was the champion of the masses, the enemy of dynasties, denying the right of the many to be at the mercy of the few." There was nothing in this noble ideal to prevent Pericles from marking out his policy to make such a state the foremost in the world, and he succeeded. The first scheme of his policy was in the perfection of the Athenian defences, not forgetting that the world (then as now), was overrun by hordes of predatory savages whose law is that Might is Right. It was not till Athens forgot her ideals and her defences and, it is to be added, not till Sparta arose in jealous fury before the superiority of her neighbor, that the latter projected the Peloponnesian Wars which brought them both to ruin.

A short time after this war was begun, the plague broke out in Athens, having been brought back from Asia, and killed a fourth of the population, Pericles dying of it. The Spartans, who had started the war, sold out the liberties of the Asiatic colonies of Greece for Persian gold with which to destroy Greece, including herself; and it may be said that until the same kind of thing was perpetrated by the German Spartans of modern times, there was never so great a tragedy in the annals of men. These long fratricidal wars so weakened all of Greece that it was but awaiting the pretext of Philip of Macedon, who took advantage of the call for help of a foreigner against blood brothers, to move into Greece to assist the Phocians. From this foothold Philip steadily increased his influence and power, Demosthenes alone seeing through his plans, but with all of his eloquence he was unable to break through the reckless complacencies of the people of Greece who had been blinded by Macedonian propaganda. The empire of Philip grew from small beginnings to rule as far as the Danube and the Black Sea, when his son, Alexander the Great, came to the throne. In 334 B. C., he set out with a great army, conquering Persia and invading India, and died at Babylon at the age of thirty-six. His great empire was soon dismembered and finally fell to Rome.

The Greeks were the first to make the attempt to see the world whole and find the causes which connect things in the great unity. The poets, especially Homer and Hesiod, referred things to the gods. Thales, of Miletus, was the first to try to explain things in some natural order, assuming water as the fundamental principle, while Anaximander, his pupil, substituted the air. Anaximander taught that the earth is round, invented the sundial and made astronomical calculations, while Xenophanes, living in Italy, taught the existence of one changeless God. The followers of Pythagoras taught that philosophy must be a guide to life, while Democritus advocated a system of atomism, teaching the very opposite of a rational unity, the atom being the last reality. Anaxagoras was the first to teach that the ruling principle in the Universe is mind. "In the beginning," he said, "all things were chaos; then came Intelligence and set all in order."

Here one of the noblest characters in history appears — Socrates — with the dictum: "Know thyself." His personal habits and appearance made him the butt of ridicule of the comic poets. He wandered bare-footed in the market place trapping the unwary in argument, and showed himself one of the greatest of geniuses of all time. His principal disciple was Plato, teacher of Aristotle, who was the teacher of Alexander the Great. How much of the thinking of Plato and Aristotle was the work of Socrates we shall never know; but these three men, all contemporaries, in the field of pure thinking have never been excelled. The central point of the doctrine of Socrates was the soul and the moral life. He taught absolute loyalty to conscience; was accused by the bigots of his day and condemned to death for teaching false doctrines. Although opportunity was offered for his escape, he said that he had always taught obedience to the laws and he would obey them—and then he drank the hemlock. Plato, the most distinguished disciple of Socrates, taught that our ideas must have come from God, that they are spiritual realities of which material things are but the shadows. Virtue is resemblance to God, and men used to say that if Zeus had spoken, it would have been as Plato spoke. Plato's school was the forerunner of the modern university, teaching mathematics, science, music and philosophy, with a president and lecture staff, the students including men and women. This school lasted nearly a thousand years, being abolished by Justinian in 529 A. D., because its teachings were not supposed to be in consonance with Christian doctrines.

The battle of Salamis (480 B. C.), connects three of the greatest names in Greek literature. In that battle (as at Thermopylæ), fought Æschylus as a hoplite at the age of forty-five, the first and one of the greatest of all tragic dramatists; Sophocles at the age of fifteen, took part in the celebration of the victory; and Euripides was born on the day the battle was fought. Æschylus produced seventy tragedies of which but seven remain; Sophocles wrote more than a hundred, with the same number remaining; Euripides, the dramatist of the common people, has extant eighteen out of his ninety-two plays. The greatest of all comic poets was Aristophanes, also a contemporary, eleven of whose fifty-four comedies remain.

Hanseatic League.—The old Teutonic word "Hansa" means "league" or "confederacy". It was used to denote a movement among the awakening commercial powers of Europe, arising with the growing towns which sprang up after the disintegration of Feudalism began. It is pretty certain that its first motive was the mutual protection of the cities engaged, against the inroads of the pirates which infested the seas. (See Northmen). While these new trading towns held aloof from each other, they were the prey of the pirates. Hamburg, which had been founded by Charlemagne, made an alliance with Lubeck, which later became the center of the Hanseatic League. Soon other towns joined from the interior as well as on the coast, and by 1370 there were seventy cities in the League. Congresses were held at Lubeck, and their deliberations had great weight. Severe penalties followed the failure to obey these decrees. With growing commerce followed growing ambition, and the League no longer stood for defence alone, but for trade monopoly of the commerce of the North Sea like that of Venice on the Adriatic. These Congresses secured certain privileges and immunities from the Northern kings, as, for example, the use of the herring fisheries of the Sound. They repressed piracy and land robbery and established constitutional government. Their measures fostered the spirit of freedom and the sense of law and order, in those days so feeble. They drew in from the outer places of the earth many of the comforts of life hitherto unknown, raised the standards of living, developed architecture, encouraged agriculture and industry, and in many ways hastened the development of modern civilization, including the arts of navigation and shipbuilding, which they exercised in war and peace. The Hansa towns established agencies which they called "factories". This is a term used by the Hudson's Bay Company to this day in Canada, where the manager is called the Factor. Here the natural productions of the country were gathered and exchanged for the imports of the Hansa towns. They were exempt from taxes and from the laws of the land, being a power to themselves, the principal factories being in London, Bergen, Bruges and Novgorod. Jealousies grew out of the prosperity of the English Hansards, as the merchants resident were called, leading to frictions that were settled at the Treaty of Utrecht, which the Hansa League dictated. The League stretched from England to Russia, a commercial League of Nations which monopolized the trade of northern

Europe. But its very prosperity encouraged competition in other countries. Many towns withdrew from the League, setting up for themselves, and trade began to take the form of the political divisions of Europe. Then the era of discovery set in with the establishment of new trade routes, and the League finally fell in the Thirty Years' War with the ruin of Germany.

Harding's Election (1920). — President Wilson had been re-elected on the record of his Domestic Policies in 1916, but his Foreign Policies and especially his management of affairs at Paris reacted in 1920, in the election of Warren G. Harding as President of the United States by the most significant majority ever given to a Presidential candidate.

Harding's Administration

I. The Washington Conference.—The new administration invited Great Britian, France, Italy and Japan into a major conference on international affairs in 1921. Other nations participated. Disarmament was sought and international questions were settled, partly or wholly. Naval armaments were reduced by agreement on the basis of a 5 - 5 - 3 - 1¾ - 1¾ ratio for the United States, Great Britain, Japan, France and Italy, respectively. Japan agreed to withdraw from China. Most of the vexed questions in the Pacific were amicably settled. The reduction of Naval armaments on the ratios named is to continue ten years. No land armament reductions were agreed upon because France, by common agreement needed her army intact during the period of reconstruction.

II. The Coal and Rail Strikes.—During the summer of 1922 both bituminous and anthracite coal miners went out on strike. No coal was mined for a period of four months. At the same time the railroad shopmen went on strike, badly crippling freight service and interfering somewhat with the mails and the passenger service. The strikes were the result of various grievances, but mostly against wage reductions. The administration made numerous efforts to end the strikes but without definite results. Compromise finally prevailed at the end of September. But a severe coal shortage resulted and there was much real suffering during the following winter.

III. Treaty of Peace With Germany.—The Senate of the United States had refused to ratify the Versailles Treaty under the Wilson administration. War with Germany was not yet technically ended. A separate treaty of peace was therefore concluded between the United States and Germany and was signed by President Harding in July, 1921.

Benjamin Harrison's Administration

I. Oklahoma Opened.—Oklahoma was carved out of Indian Territory, having been purchased from the Indians for $4,000,000. In 1889, April 22, by edict of Congress, settlers were admitted. A rush was made by thousands of prospective settlers who had camped on the border waiting for the signal to go forward to possess the land. Cities grew in a single day; in a few months the new territory had more than 60,000 people.

II. Johnstown Flood.—In May, 1889, unusually heavy rains caused a reservoir above the city of Johnstown, Pa., to break and flood the country below. A high flood hurled itself down on the thriving city as a wall of water fifty feet high advanced rapidly and engulfed houses and people. 2,235 lives were lost; $10,000,000 damage was done.

III. Bureau of American Republics.—President Harrison and Secretary of State Blaine called the first Pan-American Congress to meet in Washington in 1889. An effort was made to unite the various Republics in friendship. Mutual understanding was the first necessity. To secure reliable information and spread it among the people of the various countries was the first endeavor. For this purpose, the Bureau of American Republics was organized, with headquarters in the city of Washington. Out of its work has grown amity among all American Republics. War is each year more remote, while peace and mutual good will and respect are growing more secure.

IV. New States.—During the Harrison Administration, six new states were admitted into the Union—North Dakota, South Dakota, Montana, Idaho, Washington, Wyoming.

Harrison-Tyler Administration (1841-1845).

I. Ashburton Treaty (1842).—Harrison accomplished little before he died a month after his election, but the appointment of Daniel Webster as Secretary of State. Immediately Tyler repudiated the party that had elected him, being a states right Jeffersonian instead of a Jacksonian nationalist. Webster at once opened negotiations with Lord Ashburton, Minister of England, at Washington, for the settlement of the northeastern boundary dispute. There was a large disputed territory claimed by both parties, but a compromise was reached with the present boundaries of Maine. The extradition of certain classes of criminals was agreed upon, a principle but partly held before; also the right of search, Webster managed to get into the treaty a declaration that sailors in American ships would "find their protection in the flag which is over them." Each nation agreed to keep vessels coasting off Africa and work in harmony for the cessation of the slave traffic. War was again averted with Great Britain.

II. Mormons. (1830).—A religious organization composed of followers of Joseph Smith, who organized the Church of Jesus Christ of Latter-Day Saints, at Fayette, New York, April 6, 1830. Smith claimed to have received from an angel an ancient history of the inhabitants of the American Continent from about 2200 B.C. to 420 A.D. This history, it is alleged, was an abridgement made by Mormon the last of their historians. It is claimed that this history, on plates of gold, was hid in a hill near Palmyra, New York, by Moroni, son of Mormon, about 420 A. D. Moroni revealed the record to Joseph Smith who was given divine power to translate it. There were three special witnesses who testified that the angel showed them the "plates" and said they were to bear witness to all the world. There were also eight other witnesses who testified that they beheld the "plates." The testimonies of these witnesses appear in each copy of the Book. Joseph and Hyrum Smith, brothers, were killed by a mob June 27, 1844. Brigham Young led the people west founding Salt Lake City and other settlements in Utah. Because of their industry they became a prosperous people, making the desert to blossom as the rose. About 2,000 missionaries who pay their own expenses are kept in the world by the Church.

III. Texas and the Extension of Slave Territory.—The South considered Texas a promising field for the extension of slave territory. Many emigrants went there from the South with their slaves. In 1836 they revolted from Mexico and of the 57 signers of the Texan Declaration of Independence, 50 were Southerners. The Texans, under General Sam Houston, defeated the Mexicans, led by Santa Anna, who was forced to recognize their independence. In 1837, the United States, and later England, France and Belgium, recognized Texas as an independent power, and the matter of annexation became a political issue. The Whigs and Democrats of the North were opposed to it, but finally in the last hours of Tyler's administration the state was admitted.

Hastings, Battle of.—The battle of Hastings was fought on the 14th of October, 1066, by the English against the invading Normans. King Harold of England was slain and William the Conqueror of Normandy became king in his place. It is said that on the eve of the battle the English feasted and sang while the invaders occupied their time in the confession of their sins. Harold's eye was pierced by an arrow and he was denied Christian burial. On Christmas Day, William was crowned at Westminster.

Hayes' Administration

I. The Disputed Election.—The election of Rutherford B. Hayes was disputed by his opponent, Samuel J. Tilden. Congress finally made the decision through the Electoral Commission which decided all the contested electoral votes in favor of Hayes and gave him a majority of one electoral vote, 186 to 185. This led to a bitter political situation in the early part of the new administration, but the President won the respect of his opponents and his administration was regarded as pure and honorable.

II. Electric Railway.—Thomas A. Edison perfected inventions by which he constructed an electric railway at Menlo Park, N. J., in 1881.

III. Railway Strike.—In 1877 the railroad workers of the Baltimore and Ohio went on strike against a reduction of wages. All freight traffic was stopped and the mails and passenger traffic were interrupted. Damage estimated at more than $10,000,000 was done, to property. Federal troops succeeded in ending the violence.

IV. Life Saving Service.—The United States Life Saving Service was organized in 1871 by act of Congress. This service extends over a coast line of about 10,000 miles, including the Atlantic, Pacific and Great Lakes. It is in operation throughout the year and saves many lives and much property annually.

The Hebrews.—Of all the Semetic peoples—Assyrians, Babylonians, Phoenicians and others—the Hebrews stand out pre-eminent. Their authentic records indeed scarcely go back further than 200 years before the birth of Christ. Their real history begins with Abraham, who came from Chaldea, and settled in the land of Canaan with his sons and their descendants, the twelve sons of Jacob afterwards giving rise to the twelve tribes. It is a moving story we are told of Jacob's favorite son, Joseph, sold by his brethern into slavery to the Egyptians. Joseph rose to power and became the mighty minister of the Pharaoh, one of the Hyksos rulers of Egypt. The tale goes on to say how Joseph forgave his cruel brothers and how he summoned them and

theirs to settle in a fertile district of Egypt—the "land of Goshen"—where they multiplied and grew very prosperous. But after many years had passed, the Egyptians were wroth at their own liberality, and little by little made bond slaves of these foreigners, who cherished their own religion, so much simpler and superior to the superstitions of the Nile dwellers; who kept themselves separate and neither intermarried nor intimately mingled with the native population. Untold hardships the Hebrews had to endure until Moses, about 1400 or 1350 B. C., arose among them and finally induced his kin to emigrate from Egypt. The exodus of the Israelites forms one of the most stirring accounts in the ancient parts of the Bible. The facts about the earlier life of Moses himself are not established. However, the main fact, i. e., that the Hebrews did leave Egypt and after long wandering about through the deserts of Arabia, effected the conquest of Canaan, seems unquestioned. So, too, is the giving of the grand moral code, the decalogue, through Moses and those who came after him. The laws framed and accepted by the Jews were immeasurably superior to those of any other people, recognizing no castes, (as in India), but equality before God. The institution of the Sabbath as a day of rest and reflection alone stamps the Hebrew code as a blessing to the whole world. Charity and forbearance, things unknown to the ancient world, are taught in the sacred scriptures of the Jews. Joshua continued the work of Moses, and the land of Canaan was divided between the twelve tribes. There remained, though, scattering numbers of the native population, heathens given to all the abominations of their sensual religions, who grew in number and rose frequently in rebellion. The period when judges, successors of Joshua administered the land, was an unquiet and unsafe one, and although heroic figures stand out, such as those of Gideon and Deborah, Ehud and Shamgar, Jephtha and Samson, the need of regular kingly rulers became urgent. Therefore, the last of the judges, Samuel, anointed Saul as the first king, and after Saul had proved recreant, chose David (1097 B. C.), from the great tribe of Judah, for king. During the reigns of David and his brilliant son, Solomon, the Hebrew people saw their days of greatest splendor and strength, and Palestine became quite renowned for a time for her military prowess, her wealth and civilization. Jerusalem was taken and made the capital; the power of the Philistines and Moabites was broken; the country was ruled as far as the Euphrates; the Phoenicians became the friends and allies of the conquerors, and Hiram, their prince, aided in building the great temple of Jehovah at Sion. Solomon, however, had already shown signs of unfaithfulness to the God of the Hebrews, and became idolatrous under the influence of his pagan wives. Unwittingly he had thereby begun to destroy the very foundations on which his power rested, and after his death (978) the stately structure began to topple.

The time of the schism and of subsequent captivity drew near. The Hebrew people split into two unequal parts, and their dominions became the kingdoms of Judah and Israel. Only two out of the twelve tribes remained faithful to the house of David, although Jerusalem continued wealthy and respected. In Jerusalem all the Jews sacrificed at least once a year. Israel, the larger half, grew more and more idolatrous and began to admit heathens to their fold. The prophets thundered their laments and their curses against the backsliders; Elijah, Elisha, Amos, Micah, Hosea, Isaiah, Jeremiah emptied the vessels of their wrath over the heads of the culprits, who paid no heed. Not only the moral power declined, but also the temporal. After the schism only Palestine remained in the hands of the Jews. A long and turbid time ensued, both in Judah and in Israel, and this was capped in 721 B. C., by the fall of Israel. The Babylonian king, Sargon, captured Samaria and carried King Hosea off to Nineveh in triumph. Judah, after escaping several previous times, feared even worse in 586, when Nebuchadnezzar, the Assyrian, took Jerusalem and the whole of Judah, and Zedekiah, loaded with chains and rendered blind, was taken to Babylon. The leaders of the nations were massacred most cruelly, and the remnant was sent into captivity.

Under the rule of Cyrus, the Persian, when Jewish captivity "by the weeping willows" had lasted seventy years, the Jews were allowed to return to Jerusalem and to rebuild it and the temple. Alexander the Great, two centuries later, invaded Palestine again, and offered sacrifice in the temple at Jerusalem, showing the Jews leniency. After Alexander's death, however, the Egyptians made themselves overlords of the country for about a hundred years. One of the Hellenistic rulers of Egypt, Ptolemy II., Philadelphus, placed the sacred books of the Jews in the famous library of Alexandria and had them translated into Greek, the so-called Septuagint. After the Egyptians came the Syrians as oppressors, and one of the Seleucides, Seleucus IV., plundered the great temple of its riches, while one of his successors, Antigonus IV., sacrilegiously caused the statue of Jove to be placed upon the very altar of Jehovah.

Against such desecration of their holiest, the Jews rose under the great fighting family of the Maccabees, Judas Maccabeus in the forefront. They freed themselves from the yoke of the Syrians, only to fall under that of the Romans. For almost two centuries they underwent the most cruel reverses; sometimes, for a short period, achieving their independence, and in the time when Jesus of Nazareth was born their lot was bearable. The bitter and lasting strife between the Pharisees (interpreters of the severe code of Moses) and Sadducees (latitudinarians) often disturbed the internal peace. Having become again Roman subjects, the Jews revolted in the days of Nero, the Emperor, the rising becoming more and more bitter under the following Roman rulers. Altogether, it is said, considerably over a million Jews perished during this, the most desperate rising of the Hebrews in History, until in the year 70 A. D., Titus, the son of Vespasian, utterly destroyed Jerusalem. A new town—lia Capitolina—was erected on the site, and the dispersion of the Hebrews began.

Holland.—(Netherlands). The kingdom of the Netherlands (Holland), became an independent state in 1815. The people belong to the Teutonic stock, most of them having descended from the old Batavians. The country had been first subject to the Caesars, then to Charlemagne, but after many vicissitudes assumed international importance in the sixteenth century under Charles V., who had not only inherited the Netherlands, but had been crowned Emperor of the Holy Roman Empire. Under his son Philip II., religious wars with the Protestants were conducted with brutal tyrany and cruelty. In 1581 the Dutch Republic was established as an independent state under William of Orange (the Silent), the wars continuing till 1648. During this period the Dutch achieved distinction in science, art, literature, scholarship and commerce. William II. of Orange, came to the Stadtholdership in 1672 and defeated the ambitions of France. Ten years later he was crowned king of Great Britain and Ireland. Cut off from European commerce, Dutch merchants sought the Indies, where their honest dealings established them in the confidence of the natives. From their first trading post in Java (1603), they extended control over the Spice and Banda Islands, crowding out the Spanish and Portuguese and gaining monopoly of trade in Sumatra, Borneo and neighboring islands. Holland threatened to control the trade of the world, when Cromwell (1651), passed the Navigation Acts, forbidding the carrying of goods to and from England except in ships built and owned in England or her colonies and manned with English or colonial crews. War followed. For a quarter of a century in the English channel Dutch and British natives contended for supremacy of trade in the East, until finally the issue was decided by sea power. The result was that Holland was shut off, though she kept the trade of Java and Ceylon; while the English laid the foundations of their Indian Empire, founding Madras, Bombay and Calcutta. After the French Revolution, the French armies overran Holland and Napoleon made his brother, Louis Bonaparte, King of Holland. Waterloo and the Congress of Vienna led to the proclamation of William V., as William I., King of the Netherlands, in March, 1815. He was recognized as an independent sovereign by all the powers of Europe. Under William II., his son, a better constitution was granted than had been in effect. He died in 1849 and William III. reigned till 1890. In 1898 Queen Wilhelmina, descended from William the Silent, became sovereign in reality as well as in name on her eighteenth birthday, and she still reigns. Holland retains vast colonial possessions in the East, covering 783,000 square miles with a posulation of 38,000,000. These islands are Java and Madura, with the outposts Sumatra, Borneo, Riou Linga Archipelago, Banca, Billiton, Celebes, Molucca Archipelago, the Sunda Islands and a part of New Guinea.

Holy Alliance (1815).—The French Revolution had begun in an attack upon the Bourbons, and it ended in their restoration, with the Red Revolution and the Napoleonic cycle between. The Congress of Vienna was a reaction against revolution and all it stands for, followed by a further arrangement entered into by the rulers of Russia, Prussia and Austria, with the ulterior motive of fighting revolution or even reform in any guise in which it might present itself. After the defeat of Napoleon at Waterloo, Alexander I., of Russia, drew up in his own handwriting a pact which was signed by him, Francis of Austria and Frederick William of Prussia, declaring in the name and according to the principles of Jesus Christ that they would coerce the principles of charity, justice and peace in their internal administration, and in their foreign relations, they would hold the welfare of their subjects to be their greatest object. These three nations would form one Christian nation which should have for its sovereign "Him to Whom alone

power belongs as His possession, because in Him are found all the treasures of love, of knowledge and of infinite wisdom." No kings of constitutional countries could sign this precious "Christian" document, which became an instrument of tyranny and usurpation.

Hoover's Administration (1929-1933).—One of the first official acts of President Hoover was calling into special session the 71st Congress to consider legislation for agricultural relief. March 22nd, the British Schooner "I'm Alone," suspected of being a contraband carrier, was sunk off the Louisiana Coast by the U. S. Cutter "Dexter." On April 25th the two governments agreed to arbitrate the case.

On May 20th, a National Commission on Law Observance and Enforcement was appointed by President Hoover headed by former Attorney-general Wickersham.

In the celebration of the completion of the canalization of the Ohio river from Pittsburgh, Pa., to Cairo, Ill., in October, 1929, President Hoover was the principal figure. He delivered a speech on the waterway policy of his administration and outlined plans for a ten-year program. Thomas A. Edison received a world-wide tribute on October 21st on the fiftieth anniversary of his invention of the incandescent lamp.

The Kellogg-Briand antiwar treaty was officially declared in full force and effect on July 24th, by President Hoover in the presence of an assembly of diplomats and distinguished persons in the White House in Washington. The closing of the year 1929 marked a great collapse in the stock market which proved one of the most disastrous in its history. Commander Richard Evelyn Byrd made a flight over the south pole on November 28-29.

The *Graf Zeppelin*, German airship, made the trip around the world in August. The World Protocol was signed in Geneva on authorization of President Hoover and on behalf of the United States. A five power naval conference in London was held in January, 1930, to discuss the limitation or reduction of naval armaments. The death of Chief Justice Taft of the United States Supreme Court occurred in January, 1930, and Charles Evans Hughes was appointed in his stead to the Supreme Court bench. 1932, 1 year moratorium granted debtor nations.

Hundred Years' War.—On the death of Charles IV., king of France, King Edward III., of England, put forth a claim to the French throne, for his mother had been queen of France. But the French law held that no such right could descend through a woman. Edward's claim resulted in a century of war between France and England.

Hyksos, Invasion of Egypt by.—About the year 2000 B. C. Egypt was conquered by the Hyksos, or Shepherd Kings. The word is derived from Hyk, King, and Schaeu, shepherd. Their conquest put a stop to progress in Egypt for about two hundred years.

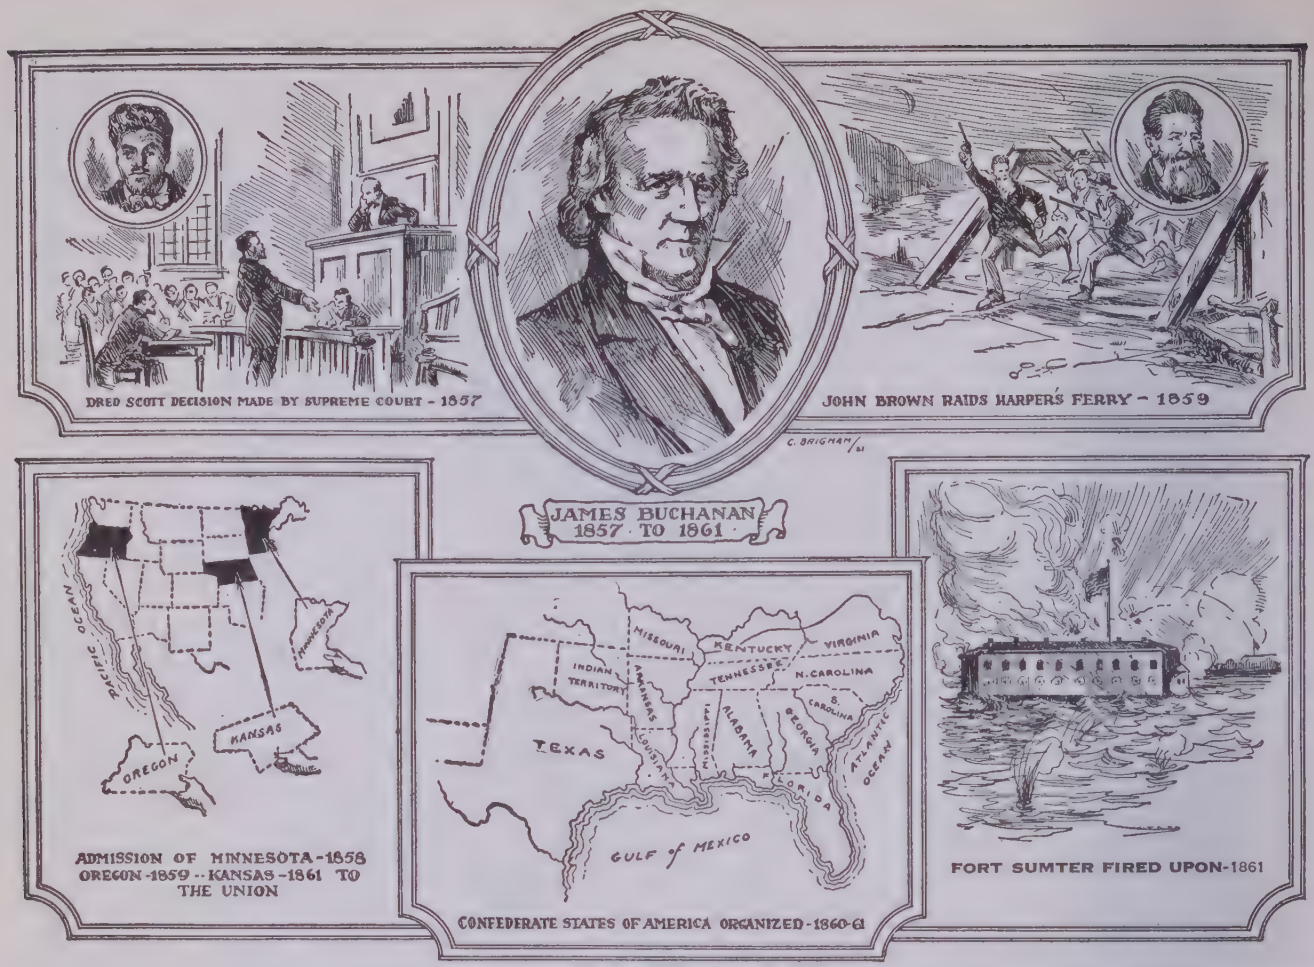
India.—Ancient India lay in the valleys of the Indus and the Ganges. To the former belonged the Punjab, the land of the Five Rivers. The head waters of these two systems overlap at the base of the Himalayas, the Indus flowing to the Arabian Sea, while the Ganges and the Brahmaputra mingle their waters and empty into the Bay of Bengal. The plains watered by these river systems cover an enormous extent of territory. They are guarded on the north by the loftiest of all mountain ranges, a most effective barrier between the two great ancient Asiatic civilizations which have developed on such different principles.

The India of today contains about one-fifth of all mankind, who speak 147 languages, recorded as vernacular in India, in an area as large as Europe, outside Russia. Among them modern scientists have discovered a lingual if not a race kinship with the people of the West. It is known that these tribes which came from the Northwest in Central Asia into the Punjab, conquering and driving out the black peoples and singing the hymns of the Vedas, told their children the same stories that are told by the peasants of Thuringia and Abruzzi to this day. The Indian people had developed a philosophy and a literature a half millennium before the Christian era, but their early history lies in the dark for a long period after the native races had been overcome by the Aryan invaders and had acquired a considerable civilization of their own. How an Aryan civilization (one can speak with no certainty of an Aryan race), came to differ so fundamentally from that of Greece is one of the most interesting of historical problems; but there are two influences that must have counted: their geography and the influence of the native hordes.

Almost no historic documents come down from antiquity till we find the edicts of Asoka engraved on rocks and pillars throughout the land, but these were mainly concerned with the duties of the Buddhists, whose religion has now disappeared from India, though it still probably has the largest number of worshippers of any religion in the world.

The Rig-Veda, which was composed after the invasion of the Indus, is very different from the system which followed in the Ganges territory. It is cheerful in its religious teachings, polytheistic but devoid of the dreamy pantheism and gloomy asceticism that grew in the East. The deities are the powers of nature. Indra was the god of thunder and rain; Varuna the encompassing day, and Agni the god of fire. There were thirty-three gods, but all sovereign power was to be found in Varuna, the upholder of order.

Earlier than 1000 B. C., migrations had taken place to the Ganges where the caste system sprang up, of which we find nothing in the earlier Vedic system. The priests are the Brahmins; the Brahmin in the Vedic is but a worshipper. But the priests composed the literary caste, and mind ruled matter, for they were the only ones who understood the language of the hymns and ritual. Brahma is the supreme being, the eternal source, out of which are evolved, not created, all things which come into being. All life, animal and vegetable, partakes of the universal life, and the doctrine of transmigration appears. The development of individuality is evil; hence to get back to Brahma by absorption is good. The laws of Manu make the Brahminical code, all directed towards the emancipation of the soul from matter.



Against this system came the reaction of Buddha, the Enlightened. Prince Sarvathasiddha (Siddartha), son of the king of Kapilavastu, whose ancestors had come from the delta of the Indus, was born about 500 B. C. It is interesting to note that Cyrus, the Persian, reached the Indus about 540. Eight years later Prince Siddartha renounced the world and retired for some years for contemplation in the desert, returning to preach the faith of Buddha, that the world is a vain illusion and that the solution of life's riddles is to get out of the universe in which he can find no god. Actual records of the monuments show that later Buddhism, at least, was not an atheistic belief but a polytheism, Buddha himself taking the place as an incarnation of Vishnu. For a thousand years Buddha was worshipped as a god. Buddhism has been utterly swept away from India, except in Ceylon in the South and Nepal in the North, although it has permeated China, Japan, Russian Tartary and is today the religion of a fifth of mankind.

There is little authentic history between the invasion of Alexander the Great and the Mohammedan invasion in the eighth century and for two centuries the Moslem power gradually advanced into southern India. In 1398 Tamourlane sacked Delhi and returned to Central Asia. A descendant of his, Sultan Akbar, founded the Mogul Empire and his grandson, Akbar, extended Moslem dominion to the south of the peninsula, reigning for nearly a half century with some religious tolerance. In 1675, the Sikhs, a Hindu sect, established a religious and military commonwealth in the Punjab. The Dutch, French, Portuguese and English established themselves in India, but the British East India Company, a trading power, laid the foundations of British rule which was founded in 1858, and which has served to preserve law and order amongst the various peoples and interest, together with enormous improvements in the material civilization of the country. If Great Britain had done nothing more than keep the peace, that alone would have been a sufficient contribution to the cause of humanity, but the vast extent to which this power has contributed to education and general improvement must be reckoned as among the great services to the human race.

Ireland.—In prehistoric times Ireland seems, like Britain, to have been inhabited by peoples of the Iberian stock, who were successively invaded and subdued by Nemedians, Firbolgs, Tuatha Dé Danann, and Scots or Milesians. Most of these invaders seem to have been Celtic, some of the Cymric (British), and some of the Goidelic branch. The Scots were distinctly Goidelic. Ultimately the resulting races, Iberian at base but Celticized by degrees, had assumed the Celtic type of civilization and the Erse (Goidelic) language. The septs, tribes, or kingdoms were numerous, and constantly at war; though with curious permutations and combinations, some, or many of them, at times accepting the over-lordship of an ard-righ or chief king.

Irish history really begins with the Christianization of Ireland by St. Patrick, a Briton of Strathclyde, early in the fifth century. In the eighth century came Danish or Norse sea rovers, who established themselves in the east of Ireland, and, weakened by Brian Boru, and utterly defeated by him at Clontarf in 1014, were ultimately absorbed in the mass of the population. The intestinal strifes of the Irish potentates still went on as before, and led in 1167-72 to the Norman invasion.

Ireland had to undergo just 100 years later, and under Henry II., the fate England underwent under Henry's great-grandfather, William the Conqueror. Much of the Irish soil was parceled out, as England had been, among Norman nobles; but this change, so far from tending to consolidate Ireland into one kingdom, or into an organized province of the English mon-

archy, seemed but to have introduced additional elements of faction, feud, and warfare. The Norman chiefs fought with the Irish ones, and with one another; and became, as was said, "more Irish than the Irish themselves."

Henry VII. made an effort to reduce Ireland to order on Tudor lines; rebellions, expeditions, slaughterings, and confiscations went on in the reign of Henry VIII. and Elizabeth, the Reformation providing a new element of hostility between the English government and the Irish people. Under James I. vast confiscations took place, and great settlements, especially in Ulster, of English and Scottish immigrants. "The massacre of 1641" was directed against these aliens. Cromwell made a resettlement with a vengeance. The adhesion of the Irish to James II. brought William III. on them; and after the battle of the Boyne and the surrender of Limerick (1691) came the penal laws, which with many vastly more cruel provisions, debarred Catholics from all share in the Irish parliament.

In 1782 the Irish Protestant parliament had greater powers and dignities conferred on it; and under Grattan's influence, the emancipation of the Catholics seemed near. But Irish hopes were blighted by the obstinacy of George III. Hereupon the society of the United Irishmen became a distinctly rebellious organization, and fomented the short and futile rebellion of 1798. The union of the parliaments came into force in 1801.

The next great events in Irish history are Roman Catholic emancipation in 1829; O'Connell's agitation for the repeal of the union, begun in 1842; the potato famine of 1846; the fenian movement of 1867; the disestablishment of the Irish church (1871); Mr. Gladstone's land act (1881); the Home rule movement under Parnell; the home rule bill of 1886, defeated in the House of Commons; and that of 1893, defeated in the House of Lords.

The most important recent events in Irish history have been the visit of the king and queen to Dublin (1903); the Irish land purchase bill of 1903; and the resignation of Mr. George Wyndham, chief secretary for Ireland, over the incident connected with Sir Anthony MacDonnell. On January 7, 1921, the treaty was ratified, establishing the Irish Free State. By this treaty Ireland became a dominion of the British Empire, on the same general basis as Canada. It has its own parliament with a governor-general appointed by the King. Arthur Griffith was the first president of the provisional government. A constitution was adopted October 25, 1921. William T. Cosgrade became the first president under the new constitution. On December 5, 1921, King George gave royal sanction to the new legislation which made Ireland a dominion of the Empire and Timothy Healy was appointed the first governor-general. Ulster, the north of Ireland, remains separate from the Irish Free State, and enjoys its old status in the British Empire, with its own local government under its own premier. A new era of peace now prevails on the island.

Italy.—The area of Italy, 110,646 square miles, contains about 32½ million people, including the Islands of Sicily and Sardinia. Her colonial possessions are nearly half as large again as the mother country. The constitution of the kingdom is that of a limited monarchy, ruled by the hereditary monarchs of the house of Savoy, but only in conjunction with the National Parliament, consisting of two houses. The Senate is composed of the princes of the blood and a number of members appointed by the king for life, numbering in all just now, 334 members. The Chamber of Deputies of 508 members are elected by a majority of citizens above 21 years of age, who are literate and pay certain taxes. By the law of June 7, 1875, all men capable of bearing arms between the ages of 20 and 39 are liable to military duty. Compulsory education is also enforced.

The history of Italy as a nation begins late. It was never so dark for the national ideal as in 1850, after the revolutions of 1848, which after all were but rebellions since they were unsuccessful. At the time Italy comprised the Kingdom of the Two Sicilies, the Grand Duchy of Tuscany, the Duchies of Parma and Modena, the Lombardo-Venetian territory, the Kingdom of Sardinia, or Piedmont, and the States of the Church. In these, as usual in the history of the church, stretching across Italy from the Tuscan sea to the Po, Pope Pius IX. threw the weight of his power to the side of despotism. The bayonets of the Cardinal Antonelli were on the side of what aggressive bayonets generally stand for, while a Catholic Austrian garrison was maintained

in Florence. Piedmont had but 4,000,000 people, but there was a "Fundamental Statute" still in force, with a national army and flag and dynasty. In the struggles of this petty power the young son of Charles Albert, namely, Victor Emmanuel, bore himself well in battle in those struggles which preceded Italian Unity, in which Czvour played the part later essayed by Bismarck in Germany, in expelling Austria and creating a national unity. In the Crimean War Cavour declined the British subsidy and entered the Franco-British alliance as an equal. His army made a fine record while Austria dodged, exasperating her allies. This prepared the minds of the French and English at the Congress of Paris to listen to Cavour on the atrocities of Austrian rule in the peninsula. In 1859 Austria again took the initiative upon which Victor Emmanuel appealed to his compatriots over the whole of Italy and a popular uprising took place in which the Austrian Dukes and the papal tryants were alike expelled. But the victory of Solferino was immediately followed by the peace of Villafranca, between Napoleon the Little and Francis Joseph of Austria, giving the Italians some small gains, but betraying the great cause of Italy, causing Cavour to leave the Ministry.

But the assemblies of Modena, Parma and Tuscany declared alliance to Victor Emmanuel and asked for annexation to Piedmont, followed by the Romagna. Plebiscites by almost unanimous vote backed the assemblies, and Cavour again became Prime Minister over 11,000,000 people. Sicily rebelled against her tyrants, and Garibaldi, with an army of but 1,000 men sailed from Genoa on May 5, 1860, where in his red shirt, he took Sicily and marched on Naples. Here he was hailed as a liberator and dictator of the Two Sicilies. Mazzini, the purest patriot Italy had produced for many a weary century, was not favorable to the house of Piedmont, nor was Garibaldi, to whom all Europe was hostile, Cavour himself being held responsible for the revolutionary movement. Cavour was in a difficult position. His problem was whether he should hold with the powers of Europe or join in the party of progress. After asking the Pope to disband his foreign army and being refused, Cavour took the remaining papal territory in the north and, as he said in a speech, he left Rome and Venetia to the "arbitrament of time."

The Two Sicilies declared for Victor Emmanuel and an emancipated Italy, his troops and those of Garibaldi falling into each other's arms. All the Italian territories except Venetia and the papal territories on the Tuscan seas were now united under the tri-color of red, white and green. and on February 18, 1861, the first National Parliament assembled to enact laws for 22,000,000 people. Rome was as usual reactionary, but Venetia was added to Italy in an almost unanimous plebiscite on November 7, 1866. The French Premier, Rouher declared, "Italy shall never enter Rome," and France united with the Pope against Italy, but after the disasters of the Franco-Prussian War, French troops were withdrawn from Rome and the Italians occupied the city, and the ancient capital of the great Empire became that of New Italy. The Pope was bitterly opposed to all progress, tolerated no compromise or agreement and sought the Catholic powers of Europe. The land was covered with rich monasteries, glutted with wealth, while the people were perishing in their poverty. There were few roads or bridges or other public improvements—the wealth of the country had gone to the dukes and the church. They had neither schools, courts, police, nor a system of raising revenue, but the new king and his advisers began the organization of the kingdom. Shortly after the World War, in which Italy participated on the side of the Allies, Benito Mussolini organized the Fascist party which he led in a triumphant march from Naples to Rome. Victor Emmanuel III was forced to transfer the reins of government to Mussolini who became Il Duce. The latter put through a number of radical reforms and in 1935-'36 warred against Ethiopia which became part of Italian Empire.

Jackson's Administration (1829-1837).—

I. New Era, The.—Washington, Jefferson, Jackson and Lincoln ushered in new eras in American history. Under Jackson came the strange mixture of personal politics coupled with the aim for a national democracy. Jackson never forgot a friend nor forgave an enemy, and he carried this intense personal bias into the White House. Before him, John Quincy Adams had never even removed an enemy unfriendly to him nor his administration; but Jackson made of his advent a house-cleaning under the slogan: "To the Victor belongs the spoils." There never has been a purer "rule" than that of the younger Adams, and within his lights there never has been a President with purer motives than those of Jackson's. It was he, a democrat of the democrats, who struck terror to the hearts of the southerners, when he met the sedition of the South, responding to the toast on Jefferson's birthday: "Our Federal Union: it must be preserved." He also said to a South Carolinian that "if a single drop of blood shall be shed there (South Carolina) in opposition to the laws of the United States, I will hang the first man I can lay my hands on to the first tree I can reach."

II. Spoils System, The.—Up to 1829 there had been in all 74 removals from office and most "for cause." Washington had made 9, J. Adams 10, Jefferson 39, Madison 5, Monroe 9, J. Q. Adams 2. Jackson made a clean sweep of everything worth anything, it being estimated that during his first year he had made 2,000 new appointments. He was the first President who distinctly made public office a reward for party service, and especially personal service to himself.

III. Kitchen Cabinet, The.—Jackson's abilities were those of war more than peace. He knew a smattering of law, had taken a prominent part in frontier disputes and development, had been a country storekeeper, lawyer, district attorney, judge, congressman and senator, before he was thirty-two years old. Jefferson says of him that he never could speak in the Senate "on account of the rashness of his feelings. . .he would choke with rage." Jackson rarely held a Cabinet meeting, but advised with his personal favorites, some of whom held positions in the departments and it became known that the road to favor led through these men who came to be known as "The Kitchen Cabinet."

IV. United States Bank (1816-1832).— The United States Bank had been chartered in 1816 for twenty years. In 1832 the directors asked for a renewal of the charter, although it was still four years before the old one expired. At first, Jackson was not unfriendly to the institution. but he became its inveterate enemy. Although Congress granted the request for renewal, it failed to pass over the President's veto.

V. Nullification (1831-1832).—Jackson persisted in enforcing the tariff law although he never liked it. It was enough that it was a law of the land. Opposing his national policy were many who believed that the Union was a confederacy of states, not a union of the people. Calhoun, the leader of the former party, claimed that the states had never given the Congress power to pass a tariff law. A convention was held in South Carolina declaring the tariff law null and void and that it ought to be resisted. The legislature confirmed the action of the convention and prepared for armed resistance. Jackson sent out his Nullification Proclamation and sent a naval force to collect the duties in the harbor of Charlestown, upon which, the leaders undertook to "nullify" the action of the convention and legislature. Henry Clay introduced a compromise bill which by 1842, made a tariff for revenue only.

Johnson's Administration

I. Negro Citizenship—The Fourteenth Amendment.—The Thirteenth Amendment had made the Negro free but it left him without the franchise. His civil rights were entirely denied by the former slave states. The sympathies of the President, Andrew Johnson, were largely with the southern states while Congress was still vindictive. The Civil Rights Law sought to secure the Freedman's civil status but President Johnson vetoed it. Congress promptly passed it over his veto. The Fourteenth Amendment was enacted to give the ballot to the freedmen. The ratification of this amendment by the southern states was slow, but Congress made ratification the condition on which the seceded states could win recognition as fully readmitted members of the Union. The last ratification was made July 28, 1868.

II. The Ku Klux Klan.—Great disorder prevailed throughout the slave territory after the negro had been freed. The relations between former master and the freedman were not clearly defined. A new social condition had to be established. The trouble was aggravated by the northerners, who came in as temporary government officials. Lawlessness was everywhere. The negro was inclined to be insolent and indolent. A secret association of southern gentlemen was therefore made to overawe the former slaves. The Klan appeared only at night, was always hooded and clad in grave clothes. Much cruelty was exercised. The lawless negro was overcome by more lawless white men. Murder and robbery were committed in the name of the Klan. Congress finally passed special laws by which the Klan was suppressed in 1871.

III.—Alaska was purchased from Russia in 1867 for the sum of $7,200,000. Secretary of State, William H. Seward, was chiefly instrumental in negotiating the purchase.

IV. Nebraska Admitted to Statehood.— Events leading up to the civil war had included the territory of Kansas and Nebraska. The John Brown raid and other conflicts had made this bloody ground. Both slave and free interests tried to get the territory admitted under their own conditions. After the war, admission as a state without slavery was prompt, taking place in 1867.

V. Impeachment.—The conflict between the congress and the President over the reconstruction of the south after the war

finally came to a head in the impeachment of President Johnson. The charges included high crimes and misdemeanors and the trial continued several months. The impeachment failed although the vote in the Senate stood 35 to 19 against the President, a two-thirds vote being required. Andrew Johnson, therefore, completed his term of office for which he had been elected with Abraham Lincoln, 1865-1869.

Japan.—Japan appears in authentic history very late, her past shrouded in the clouds of myths and legends. The Japanese race is largely Turinian, or Mongol, with probably some admixture of Malay. Originally an island people, they have gained large possessions on the mainland of Asia. Out of 4,000 islands, there are 5 which constitute Japan proper, without counting the areas wrested from other nations under a predatory war policy. A few drunken remnants of the degenerate Ainu race inhabit the northern islands, but there are now about 70,000,000 Japanese, increasing at the rate of three-quarters of a million a year. The people have mostly forsaken their religions without taking on new ones, but perhaps the Shinto religion, so called, is the form most in vogue, consisting of elaborate ceremonies and no morals, but blind obedience to the Mikado. There are debased forms of Buddhism in vogue and many other beliefs.

Jimmu Tenno is supposed to be the ancestor of the present dynasty, making a line from about 600 B. C. Sujin, the tenth Mikado, 97-30 B. C., reorganized the government upon an economic basis and opened intercourse with Korea. Little that is definite is known of Japanese history. Christianity was preached there by Xavier, a Jesuit missionary, in 1583, but on account of the fear of foreign domination, the government persecuted the Christians, proscribing Christianity and massacring all the Christians in the realm. In 1853 Commodore Perry, of the United States navy, entered the harbor of Yeddo, and later negotiated a treaty which opened certain ports for trade.

Up to 60 years ago Japan was intensely pacifist and exclusive; since that time it has been intensely militarist and exclusive, demanding of other nations, including the United States, privileges that it will not allow to us. The Revolution of 1868 destroyed the Shogun Dictatorship of Tokugowa and restored autocratic rule to the Emperor, in a reaction against pacifism to the most violent forms of militarism which has been the policy of Japan to this day. Japan has become a military adventurer. Some time ago, Yoshida Shion (who was executed at the age of twenty-nine for a fanatical murder), foretold a new order leading to Greater Japan. The Japanese were to conquer the Kurile Islands to the north and Saghalien, Kanchatka, Formosa, Korea, Manchuria and Eastern Siberia and become the leading power in Asia. Against the protests of Count Ito, one of the most enlightened statesmen of modern times, Japan declared war upon China (finding her totally unprepared), and by her unexpected success secured a recognition from Europe which years of peaceful progress had failed to obtain. This lesson was not lost on Japan. From the Chinese war onward the baleful influences of militarism have been uppermost in that country, and its policy has had scarcely a check. The Kurile Islands were acquired in 1875; the Loochoo Islands to the south in 1876; Formosa in 1895. The Russian war gave South Saghalien and made Japan absolutely predominant economically and politically in Korea, South Manchuria and Mongolia; while under the provisions of the Anglo-Japanese treaty, Korea was definitely annexed in 1910, and half the dream of Shion had been realized. Japan took Tsingtao from Germany at the opening of the Great War, and the Paris Treaty gave Shantung to Japan, throwing China into her arms and that after her aggressions under the "twenty-one points" gained under threat of war. The collapse of Russia gave her North Saghalien and Kamahatka, a free hand in the back country of Asia and Eastern Siberia, which she dominates today. Since the war she has doubled her mercantile marine and is doubling her navy, guaranteeing the control of the Pacific Ocean, which means eventually the islands of the Pacific and their vast resources. Already more than Shion dared to dream for Japan, that nation has won by wielding the sword or rattling the sabre.

The great question for western nations to solve just now is whether Japan is the "last stronghold of militarism or the bulwark of peace in the Far East." Japan now holds third place instead of seventh in the carrying trade of the world; she has doubled and trebled her capital since the war began; she has become a creditor instead of a debtor nation and made extensive investments abroad, especially in war materials left over from the war; has invested $125,000,000 in aerial experiment and turned the Island of Formosa into aerial training grounds; she has doubled her trade with China and quadrupled it with the United States. In 1935, Japan annexed the entire Chinese province, Manchu-kuo.

Jefferson's Administration (1801-1809).

I. The Growth of the National Domain.—The new century beginning with 1801, mark a new era in the history of the United States. In that year Jefferson began his administration and justified the prophecy of his greatest opponent, Hamilton, that it would be cautious and moderate, since in most of the great issues that he met, he acted as would the staunchest of Federals; as for example, in the acquisition of Louisiana Territory, which had just been ceded back to France by Spain. Jefferson saw the significance of the fact of this realm belonging to so powerful a country, and he wrote to Livingston, our representative at Paris, of the dangers of such a neighbor, adding, that from that moment "we must marry ourselves to the British fleet and nation." Livingston was directed to buy the strip of coast extending eastward from the Mississippi and including New Orleans, and at the moment Monroe reached Paris, Tallyrand asked if we did not want to buy the whole of Louisana. Napoleon took the position that such a purchase would establish the power of the United States and weaken England. Jefferson had for years held that under the Constitution, the Federal government possessed only such powers as were expressly delegated to it in that instrument, but Napoleon might change his mind before an amendment could be secured. Louisiana was purchased for $15,000,000, in spite of all his theories, concluding the greatest real estate transaction in the history of the world, consummating one of the most fortunate events in our own history. The character of Jefferson was larger than his doctrinaire theories.

II. Adoption of the Twelfth Amendment (1804).—The Presidential election of 1800 developed a situation which resulted in the adoption of the Twelfth Amendment to the Constitution. Of the electoral votes, Adams received 65 and Jefferson and Aaron Burr each 73, although Burr was candidate for Vice-President. The election was thrown to the House of Representatives, where each state voted one, giving the Presidency to Jefferson and the Vice-Presidency to Burr. The new amendment provided for the vote of the electors for President and Vice-President to be on distinct and separate ballots. It was then no longer uncertain which of the party's candidates would be elected President.

III. The First Successful Steamboat (1807).—Before the end of the year 1787, Fitch at Philadelphia and Rumsey at Shepherdstown, Virginia, had both moved vessels by steam. By 1790 a Philadelphia steamboat company had plied a Fitch boat up and down the Delaware, while Samuel Morey of Connecticut and Elijah Ormsby of Rhode Island had made trips in vessels driven by steam. But it was not till 1807 that Robert Fulton made his trip to Albany on the Clermont, after Stevens had run a boat with a Watt engine on the Hudson and Oliver Evans had navigated a paddle-wheeled steamer on the Delaware and Schuylkill. But people said that no man in his senses would risk his life in a fire boat like the Clermont when there were good packets on the Hudson. By 1820 the Atlantic Ocean had been crossed by the Savannah and the Lakes and the Mississippi had been navigated.

Korea.—Korea is a peninsula lying between the Yellow Sea and the Sea of Japan, separated from Japan only by the Straits of Korea. The coast line of Korea is 1,740 miles, while the area is about 90,000 square miles. The climate is temperate and the soil fertile.

The earliest records of Korea go back to 1122 B. C., when the Chinese immigration took place with Ki-tse, who brought 5,000 Celestials with the Chinese arts and politics. Korea has been isolated to the degree that there is little if any authentic record of historic events. But Japan in 1876, gained a footing through a treaty, China following with the United States in 1882. Germany and Great Britain made their treaties in the next year, and France in 1886, two years after Italy and Russia signed, in 1884.

In 1888 it was rumoured that Russia was about to be placed in control over Korea. Since ancient times the suzerainty of China had been acknowledged, and one of the causes of the Japanese-Chinese war in 1894 was that Japan disputed it. When China renounced her right, Japan began to play an important part in Korean affairs. Russia again openly asserted her right to a voice in Korean affairs, which led to friction with Japan, resulting in 1904 in the Russo-Japanese war, after which Russia recognized Japan's paramount interest in Korea and transferred to Japan the lease to Port Arthur and the railroad to Chang-Chung. Japan denied any thought or wish for territorial rights on the Korean peninsula, and agreed to restore Manchuria. On July 19, 1909, Japan forced the abdication of the Emperor of Korea and on July 25th obtained by a treaty with her own nominees practically sovereign rights in the form of a "protectorate". On April 22, 1910, Japan annexed Korea.

Life-Saving Service of the United States.—Great are the dangers to the sailor off the eastern coast of North America. The prevalence of shipwrecks in this region aroused the anxiety of the American people who felt that something must be done to lessen these dangers. In 1848 eight life-saving stations were established along the New Jersey coast, each equipped with a trained crew. In 1871 the public demand caused Congress to establish the United States Life-Saving Service under the Treasury Department. Under the leadership of Summer I. Kimball this service safeguarded, not only the Atlantic shores, but all the 10,000 miles of United States coastline. From Maine to Florida, along the Great Lakes, along the Gulf of Mexico, along the Pacific Coast, life-saving stations were erected, so that by 1910 these numbered 281. Between 1871 and 1910 the Life-Saving Service dealt with 21,250 disasters; they saved $234,985,892 worth of property out of $293,033,154 involved and out of 146,095 persons whose lives were endangered only 1,277 were lost.

Today a ship within sight of the coast cannot go down unnoticed. All through the year, even in the bitterest winter days, patrolmen watch from the shore, leaving no part untouched, and the men in the stations are ready at a signal to launch their surf boats into the foaming water, or to shoot the stalwart rope from the mouth of their cannon to haul in a stricken vessel

LINCOLN'S ADMINISTRATION

I. Firing on Fort Sumter.—The Confederate States moved promptly to occupy strategic places in their territory. A few forts within their territory continued in the hands of the U. S. Army when Lincoln was inaugurated. Sumter was one of them. It became clear at once that it must be surrendered or reinforced. Lincoln decided on the latter. The Confederate troops fired on the Fort and on the U. S. flag, on April 12, 1861, and thus precipitated the Civil War.

II. Declaration of War.—President Lincoln asked Congress for 75,000 volunteers to put down the rebellion which existed in the South as shown especially by the attack on Fort Sumter Congress approved the President's request on July 4, 1861, voting 500,000 men and $500,000,000

III. Emancipation Proclamation.—President Lincoln issued the Emancipation Proclamation, January 1, 1863. On September 22, 1862, he had issued a proclamation that he would free the slaves in all states that remained in rebellion on January 1, 1863. As not a single state returned to the Union, the final decree was issued as promised. The Border States were not included nor those parts of the seceded territory where secession was opposed.

IV. Reelection of Lincoln.—In November of 1864, Lincoln and Johnson were re-elected. The events of the war had become more and more favorable to the Union cause The reelection of Lincoln was early assured, and showed a strong determination in the North and West to bring the war to a victorious close.

V. Appomattox—Lee's Surrender.—General Grant carried on his campaign with great vigor The South had been weakened by Sherman's raid in the rear of Lee's armies; a series of successes for the Union armies had finally concentrated the conflict in and around Richmond. Finally, on April 9, 1865, a little more than a month after Lincoln's second inauguration, Lee surrendered to Grant at Appomattox Court House. This brought all resistance to an end and promised peace and a reunited country.

VI. Thirteenth Amendment.—By the thirteenth amendment, enacted in February 1865, slavery was abolished from the U. S. as a whole. The Emancipation

Proclamation had affected only the seceded states. The amendment became operative on December 18, 1865 when the necessary number of states — 27 — had ratified it.

Admission of Other New States.—In 1863, West Virginia, the loyal part of Virginia, was erected into a separate state and admitted into the Union. In 1864 Nevada was admitted; and in 1867, Nebraska was admitted, after Vice-President Johnson had succeeded to the presidency.

Lincoln, Assassination of.—The surrender of the Confederacy had ended the Civil War. The tremendous weight of that conflict was lifted from the shoulders of the President, while all over the north re-echoed the joy of victory. Lincoln had entered Richmond, the capital of the south, and on April 14, 1865, conferred with General Grant in Washington over the problems of the surrender. That evening he attended a play at Ford's Theater in Washington, sitting in the foremost box. During the last act a young southerner named Booth, insane in his violent sympathy for the south, entered the box unobserved and shot the President in the back of the head, wounding him fatally. Major Rathborne seized Booth, but Booth cut the major's hand with a dagger, jumped onto the stage and escaped through the rear door. The President lived in a state of unconsciousness for nine hours. The murderer was pursued and on the following day was taken prisoner.

The joy of the north was turned into mourning for the great leader whose wisdom and determination had saved the nation, and whose large sympathy had won the love of the people. And later, as the problem of restoring the shattered south faced the nation, together with the problem of adjusting the negroes to their freedom, it was seen how greatly was needed the guiding hand of him who had been taken away before his task was complete.

Lydia.—Lydia is remembered mostly today as the land over which Croesus reigned, so rich, especially in the gold from the River Pactolus which ran through his territory, that the very name of Croesus has been the synonym of wealth to this day. In his time the soldiers of his realm were among the best in the world, and they carried on successful war with the Phrygians, Mysians and Medes. The religion of the Lydians was a sun worship, after that of Babylonia, but it degenerated into a perversion of the sex principle reduced to a cult. Under the rule of the Mermadaean dynasty they carried war to Artaxerxes of the Medes, their capital, Sardis, being "filled" with gold from the River Pactolus, and from booty gained in battles. Croesus reigned from 563 to 548, B. C., when he formed a league of the Grecian coast towns against Cyrus, the Persian king who defeated him, taking him prisoner, and destroying Sardis. Thereupon Lydia became a satrapy of Persia.

Madison's Administration (1809-1817)

I. War of 1812 (1812-1814). — For more than two-and-a-half years the war of 1812 was carried on from the Gulf of Mexico and the Atlantic to the Great Lakes and under circumstances of which Americans are not proud. The whole period seems to have been filled with cowardice and defeat, and this because of unpreparedness and inefficiency. General Ross captured Washington in 1814 and the President's house and other public buildings were burned. After the treaty of Ghent was signed Andrew Jackson defeated the British at New Orleans and the country once more entered a period of internal prosperity.

Lincoln Memorial, Washington, D. C.

II. States Admitted.—Louisiana was admitted to the Union in 1812, Indiana in 1816 and Florida was invaded by the United States troops under Jackson in 1818, pursuing the Seminoles, who had been protected by the Spanish inhabitants of St. Marks and Pensacola, which places he seized. While there he executed two British subjects, Arbuthnot and Ambrister, who seemed to be intriguing against the United States.

III. Star Spangled Banner Written.—The Star Spangled Banner was written by Francis Scott Key in 1814.

IV. Tariff of 1816.—The North and South united in a Tariff Act in 1816, Calhoun favouring a strong national policy and a protective tariff for domestic industry, even Jefferson advocating that the farmer and manufacturer stand side by side.

McKinley's Administration (1897-1901). Hawaii Annexed (1898).—For five years Hawaii had been a Republic seeking annexation to the United States, and in vain. But the Spanish war had changed the feelings of the American people, and the spirit of expansion of a half century before was again revived in a measure when the Hawaiian Islands were annexed by joint resolution of Congress signed by the President July 7, 1898. Formal transfer of sovereignty took place on August 12th, the islands remaining for a time under the existing form of government with a few changes, till June 14, 1900, when they were organized as a territory.

McKinley, Assassination of (1901).—On September 5, 1901 a large Pan-American Exposition was opened at Buffalo. President McKinley delivered an impressive address on the opening day and on the afternoon of the second day he stood on the Fair Grounds, shaking hands with the people who thronged by. Rather inconspicuous in the crowd was a young workman whose right hand was tied in a bandage. As he approached, McKinley took hold of the youth's left hand. Instantly the right hand was released from its bandage, a pistol raised and two shots rang through the air. The President fell back into the arms of the standers-by. Before losing consciousness he made two requests, that the news be broken gently to Mrs. McKinley and that the assassin receive no injury. For a time it was hoped he might recover, but the shots had proved fatal and early in the morning of September 14th he died. On the day of McKinley's funeral there was a hush over all the land. Work was suspended, few appeared on the streets. The mourning was universal.

The assassin, Czolgosz, was a German Pole, who had been incited to the deed by anarchist propaganda.

Manchuria.—Manchuria lies in the northeast part of the Chinese Empire, although to all intents and purposes it belongs no longer to China but to Japan. Like Korea, Manchuria, as well as Mongolia is on the way to being incorporated into the Japanese Empire. It is a very fertile country, lying in the temperate zone and inhabited by a thrifty people. The area is about 362,000 square miles, with many mountain regions full of mineral resources of the greatest value. The northern reaches are filled with vast forests of all kinds of wood known in similar climates.

In 1891 the first sod was turned by the Russian Government in the construction of the Siberian Railroad, while just ten years later the Russian Minister of Finance announced the completion of the railroad from the Transbaikal territory to Port Arthur and Vladivostock. A year before, in 1900, during the Boxer Rebellion, while the allied armies were engaged, the Russians occupied the right bank of the Amur and set up a provisional administration, declaring from St. Petersburg that the rumours that Russia had intentions of incorporating Manchuria were groundless. Upon Russia's failure to evacuate Manchuria in 1903, Japan began military preparations, resulting in the Russo-Japanese War. In spite of the Japanese promises under the sacred provisions of the Treaty of Portsmouth that she would faithfully observe the integrity of Manchuria and the Open Door, she has violated both of these treaty obligations and now seems to be in control of the whole Asiatic situation.

Manila Bay, Battle of.—The Battle of Manila Bay was fought by Admiral Dewey on the 1st of May, 1898, in Manila Harbor in the Philippines, against Admiral Montojo, whose fleet was supported by land batteries. Admiral Dewey had begun to mobilize the vessels of the American fleet at Hong Kong, when it became apparent that war with Spain was inevitable. It was thought that Manila Harbour had been planted with torpedoes, but the United States Squadron entered it on the night of April 30th and on the morning of May 1st opened fire. The men of the fleet breakfasted between the two engagements, which lasted less than two hours. The Spanish Flag-Ship, "Reina Christina" and the "Castilla" were burned; the "Don Juan de Austria" was blown up, and the entire Spanish fleet was destroyed. Dewey destroyed the water battery at Cavite and anchored off the city of Manila, sending word to the Governor General that if a shot was fired at his fleet from the city, he would lay the whole of Manila in ashes. The Spanish lost in officers and men about 2,000, while the Americans lost neither a ship nor a man.

Mexican War.—The Mexican War grew out of the annexation of Texas to the United States in 1845. Texas claimed the Rio Grande as her frontier, while Mexico insisted upon the Nueces River. The United States supported Texas and war was declared in 1846. General Zachary Taylor won the battles of Palo Alto and Resaca de la Palma, forcing Monterey to surrender. In July of the same year, General Winfield Scott won Vera Cruz and marched on the City of Mexico, fighting the battles of Cerro Gordo, Contreras, Churubusco, Molino del Rey and Chapultepec on the way. Upon the capture of the City of Mexico on September 14, 1847, the Treaty of Guadaloupe Hidalgo was signed, February 12, 1848.

Mexico.—Mexico was the land of the Aztecs and was conquered by Cortes, 1485-1547. Montezuma, the king, reigned over a large territory with many cities, and the people had made considerable advancement in the arts and industries. Cortes founded Vera Cruz with an expedition of 700 men taken from Santiago. He rewarded the hospitality of Montezuma, who received him in the City of Mexico, by making the king his prisoner and seizing the capital. The Aztecs were dismayed by the firearms and the horses of the strangers, but they made a good fight, although with the battle of Otumba, in 1520, Cortes put an end to the horrible religious rites of the Mexicans which were attended by human sacrifices. But his growing power aroused envy at home and he was recalled in 1528, first having visited the peninsula of Lower California.

Mexico remained under Spanish rule till 1821, when independence was achieved under Iturbide, a native of Mexico, after many attempts at revolution since 1808. Iturbide failed in making himself Emperor and the Mexican Republic was organized in 1824, and recognized by the United States in 1829. In 1835 Texas declared itself independent of Mexico, the revolt being led by Colonel Sam Houston of Tennessee, and in 1845 it was annexed to the United States, the leaders of the South wishing to add to the slave-holding territory. This led to the war with Mexico in which General Zachary Taylor and General Winfield Scott distinguished themselves, and the Treaty of Guadaloupe Hidalgo was signed in 1848, under the stipulations of which all claim to Texas was given up by Mexico to the Rio Grande, including New Mexico and Upper California.

Two parties were formed in Mexico after the war in which the church opposed the democratic movement. The church and clergy were possessed of nearly one-half of the landed property in the country. To retain this the church precipitated civil war, and Benito Juarez, was recognized as lawful President by the United States. France, Spain and England demanded reparation for injuries to their subjects during the war, and landed troops at Vera Cruz to enforce their demands, which in the case of England and Spain were met and their forces were withdrawn. But Louis Napoleon had failed to recognize Juarez, meaning to overthrow the government and establish a monarchy instead. Taking advantage of the civil war in America he sought to limit the power of the United States. He persuaded Archduke Maximilian, the brother of Francis Joseph of Austria to accept the throne and promised to support him. But at the close of the civil war the American people were well seasoned and equipped and in no pacifist frame of mind and they demanded the withdrawal of the French troops, whereupon he violated his promises to Maximilian, who was captured and shot. The years of 1868 and 1869 were full of insurrection, but in 1871 Juarez was re-elected but died next year.

Porfirio Diaz was raised to the office of the chief executive in 1876, and although he made of his office a dictatorship, he developed the country with its resources and transportation facilities and more than any other ruler before or since kept the peace.

The Middle Ages.—The term Middle Ages has been applied to that thousand-year lapse of the human mind when the cultivation of literature and the arts was suspended, interest in uplifting things was replaced by warfare, which arose at about the time of the great invasions of Rome, and ended with the taking of Constantinople—roughly speaking—from the downfall of Rome to the discovery of America. This dark and stormy period lies between ancient and modern times. During the greater part of it military and ecclesiastical chiefs ruled. The democracies

The CIVIL WAR

of antiquity were gone; the monarchies of modern times were in process of formation. The great wars were religious wars, or the struggle between the Empire and Papacy. It was preceded by the arrival of the Huns. It was succeeded by the establishment of the Huns in Europe. The invasion of the Germanic barbarians resulted in a mixture of Latin and Teutonic blood, the latter furnishing new blood and the former reacting upon the contact of Roman civilization. "The conquered became the civilizers and teachers of the conquerors." This was the first significant fact of the development of the Middle Ages; the second was that the church became about the only bond of unity, social or political, and welded the Roman and the Teutonic elements into something like a whole. The modern political units, later called nations, began to take form, and the Renaissance burst upon the world.

Monroe's Administration (1817 - 1825).

I. Foreign Relations.—James Monroe of Virginia had put his name to a treaty in 1806, while our representative at London, which Jefferson would not even submit to the Senate, but he had risen above the lines of party strife and shown elements of strength. He negotiated the commercial convention of 1815 with Great Britain, opening trade with the British West Indies and the Treaty of 1818 settling the Fisherics question, the northern boundary of the United States and the navigation of the Mississippi. He also acquired Florida from Spain. The Treaty was signed in 1819 and ratified in 1821. The Spanish-American Colonies south of us had thrown off the yoke of Spain and by 1822 revolutionary governments had been established in every Spanish colony on the American Hemisphere. Our interest in this matter led to the adoption of the famous Monroe Doctrine. (See Monroe Doctrine.)

II. Expansion.—Mississippi (1817), Illinois (1818), Alabama (1819), Maine (1820) and Missouri in 1821 were admitted to the United States, the last state as an offset to Maine, being slave territory, but all of Louisiana Territory north of Arkansas being free. The Missouri Compromise delayed the slavery issue for a generation and gave the North time to consolidate its strength for the final struggle.

III. Lafayette Visits Us.—In 1824 Lafayette, an old man then, visited the United States to wonder at the growth and prosperity of the land he had helped to save.

Monroe Doctrine.—The Monroe Doctrine was a compromise, which, through Clay and John Quincy Adams, defeated the opportunity, offered by George Canning, the British Minister, and supported by Monroe, Madison and Jefferson, of establishing a world-wide principle against the intervention of powerful states in the domestic affairs of small ones, especially with reference to the prevention of any despotism, European or Asiatic, from gaining a foothold on the American Hemisphere.

It arose out of the Holy Alliance. (See Holy Alliance.) This arch hypocrisy of modern history presented an unparalleled situation in Europe, which grew out of the Napoleonic wars and the Congress of Vienna. It arose in the visionary mind of Alexander I. of Russia, who was influenced by one Madame de Krudener, an attractive and discredited divorcee with whom he was used to pray privately. In the first instance England was party to the Holy Alliance so long as she could influence its decrees in favour of representative government. But when this was no longer possible, England withdrew, holding aloof from all part in the Conferences of Troppau and Laybach, although she had her representatives there to watch proceedings. Before this time, Lord Liverpool had said to Castlereagh as he was departing for Aix-la-Chapelle: "The Russians must be made to feel that we have a parliament and a public, to which we are responsible, and that we cannot permit ourselves to be drawn into views of policy which are wholly incompatible with the spirit of our government." This was in 1818. The revolutions followed in Spain, Portugal and Naples, and the year after in Greece, and measures were taken at Troppau and Laybach to suppress the movements for free government. At the meeting at Verona in October, 1822, all five powers were present, England being represented by Wellington. But the Treaty of Verona was avowedly a revision of the Holy Alliance.

Among the declarations of these Holy Allies, as they called themselves, were those to the effect, first, that the maxim of the sovereignty of the people is incompatible with the doctrine of the divine right, etc., and that the high contracting parties engage mutually in the most solemn manner, to use all their efforts to put an end to representative government in whatever countries it may exist in Europe, "and to prevent its being introduced in those countries where it is not yet known."

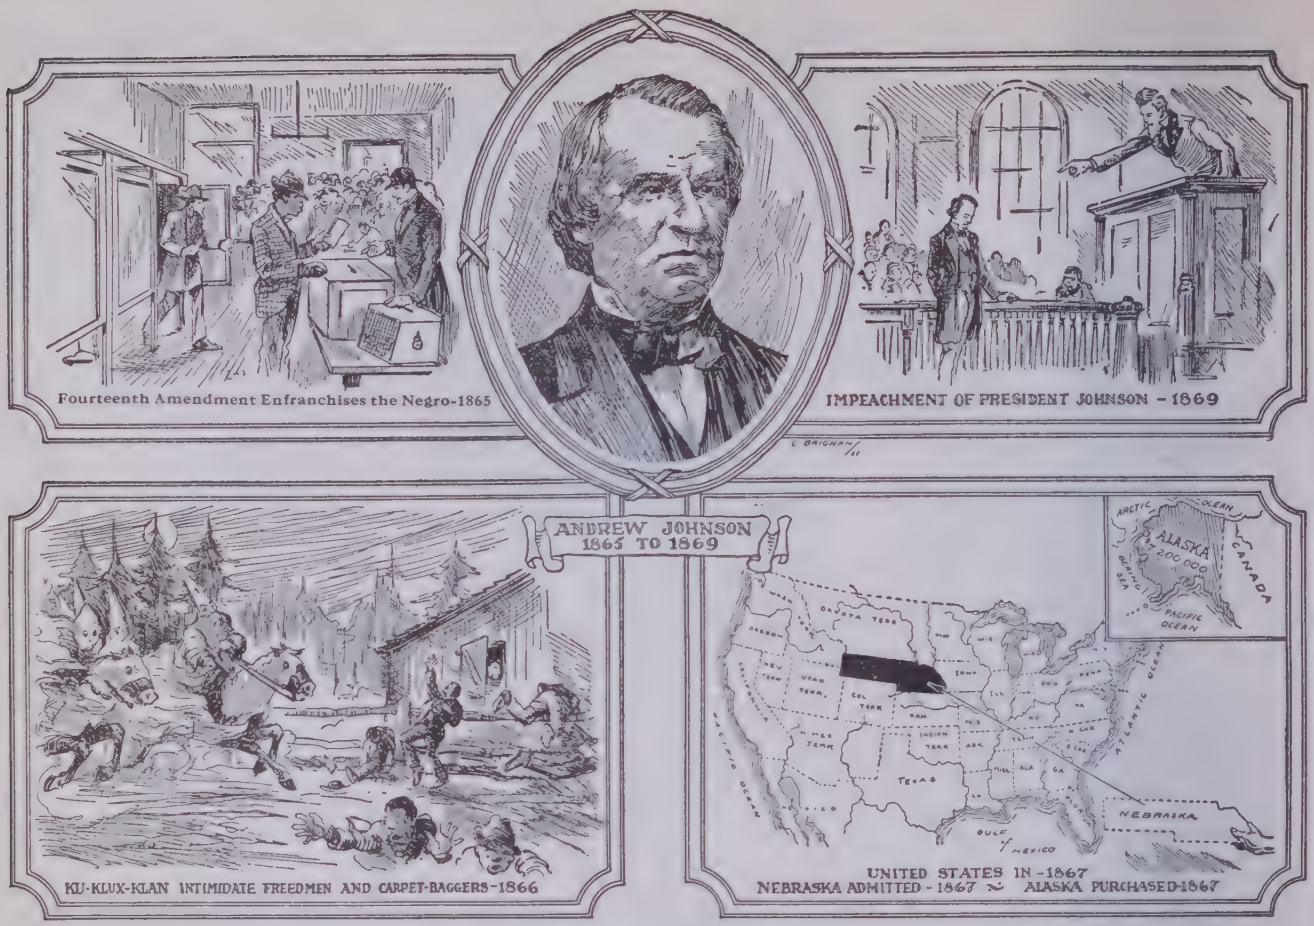
Article second undertook to declare the suppression of the liberty of the press; article third, to sustain the offices of religion, which contributes "most powerfully to keep nations in the state of obedience which they owe to their princes. . . . and the contracting powers join in offering thanks to the Pope, for what he has already done for them, and solicit his constant cooperation in their views of submitting the nations."

Article fourth made France their policemen, with a subsidy of 20,000,000 francs from each nation, Russia and Austria, "to the end of the war."

Wellington protested and withdrew from Verona, making the final break in the interests of democracy as against autocracy, and England turned to the United States. The South American colonies had drifted into something like independence while Napoleon's brother, Joseph, was on the throne of Spain, and Ferdinand, upon his restoration attempted again to fasten upon them the ancient yoke of tyranny. George Canning, Foreign Secretary of Great Britain, through Mr. Rush, the American Minister at London, urged the United States to take joint action against the Schemes of the Holy Alliance. In other words he proposed an Anglo-American Alliance. This, upon being communicated to President Monroe was favourably considered by him and he asked the advice of Madison and Jefferson, who also were much in favour of it. But it was opposed by John Quincy Adams and Henry Clay, and America took the stand alone in the introduction of the American System: to the effect that the American Hemisphere is no longer subject to European colonization, and a declaration against the extension of the system of the Holy Alliance.

Montenegro.—Montenegro is a little mountainous country with an area of but 3,630 square miles. The valleys are tolerably fertile and the climate is good, the mountain sides being covered with timber of many kinds. Farming is in a crude state, the peasants being ignorant, but sheep and cattle and goats are raised in large numbers. There are no manufactures and trade is left to foreigners.

The Montenegrins are Serbs, worshipping according to the rites of the Greek church, and are generally an athletic people. Their history is that of a struggle with the Turks. Sometimes they fought guerrilla warfare in the mountain fastnesses and sometimes they were the allies of other nations, as in 1877-78, when they joined Russia against the hereditary foe.



In 1848 the name of Montenegro was first applied to the mass of mountains then but about 1,500 square miles in area, and with a population of 107,000 people, scarcely larger than a second rate city of modern times. These people have been heroic to the last degree in maintaining their liberties, but their independence was not recognized by the Sultan until 1878.

Morocco.—Morocco, known to the natives as "The Farthest West" (Maghreb-el-Aksa), is an empire or sultanate with an area of about 219,000 square miles, lying west of Algeria on the continent of Africa to the south of Spain. The land produces crops known to the temperate and tropical zones, and while cattle are exported, no animals can be sent out of the country without a royal permit.

There are about 5,000,000 inhabitants divided into six divisions; many Jews whose ancestors were driven from Spain by the persecutions; the Arabs who are descended from the invaders of the seventh century; the Berbers who are still unsubdued; a few Europeans, mostly Spaniards; the Moors, who are the Mohammedans and large numbers of negroes who were brought in from the Sudan as slaves.

The Sultan receives and disburses the entire revenue; justice as it is sometimes called, is bought or sold, so far has commercialism invaded the land. The French have taken advantage of this spirit and have won their way into the graces of the sultan with soaps, phonographs and pianolas, establishing their civilized status, and finally establishing a protectorate in 1913.

Napoleonic Wars.—On October 4, 1795, Napoleon was made Commander-in-Chief of the troops provided for the defence of France. After he had quelled a mutiny among the National Guard, he was appointed commander of the forces of the Interior. The next year he conducted the victorious Italian campaign, which ended in the treaty of Campo-Formio, April 16, 1797. In 1798 he won the battles of Aboukir and the Pyramids and after he had taken Malta and Alexandria he returned to Paris to overthrow the existing government and become First Consul. In 1800 he raised an army of 36,000 men and crossed the Alps, gaining the victories of Montebello and Marengo. He signed the treaty of Luneville with Austria in 1801 and that of Amiens with England in 1802. He gained the battle of Austerlitz on December 2, 1805, signing the treaty of Presburg on December 26th of that year. In 1809 another war with Austria ended with the battle of Wagram, July 5th and 6th. In the beginning of winter 1812 he entered Moscow, but the city was burned to the ground by the inhabitants and he was forced to retreat through the snow

reaching France with but a remnant of his army. That year Prussia, Russia, Austria and Great Britain formed an alliance against Napoleon, which resulted in the invasion of Paris by the Allies and the abdication of Napoleon on April 11, 1814. He was banished to the Island of Elba, from which he escaped in ten months, returned to Paris and gathered together an army. He was finally defeated at the battle of Waterloo on June 18, 1815, and sent to the Island of St. Helena, where he died on May 5, 1821.

Code, Napoleon (1800-1804).—Napoleon gave to France a single legal code which took the place of the confusion of Frankish, Roman, royal, revolutionary, provincial and seigneurial laws and customs, which had made justice in France so dear and precarious. Napoleon himself took a personal part in the councils of the commission of jurists who had undertaken the task, and in 2,281 articles, French life became subject to a fair and uniform code of laws. They covered civil rights and duties; marriage and divorce with the powers and duties of guardians and wards; they modified the equal division of property among children. Other codes of the criminal law with penal codes followed, and Napoleon built frankly upon the principles of social equality and personal liberty, basing his work on the best of revolutonary jurisprudence. Thus the revolution has had its influence over the peoples of half the continent of Europe, for the code was substantially adopted by Switzerland, Holland, Spain, Prussia and the Illyrian provinces.

New Orleans, Battle of.—The battle of New Orleans was fought at the close of the War of 1812 after the peace treaty between the American and British Commissioners had been signed at Ghent. Communication was so slow then, that news of the peace could not reach the armies in time to prevent the battle. Sir Edward Pakenham and his English troops were rowed ashore near New Orleans in the midst of a storm and bitter cold weather, to be met by the American army under Andrew Jackson. 6,000 English troops attacked on the 8th of January, 1815, but the destruction of one-third of their number caused their surrender while the Americans, behind cotton breastworks, lost but seven men killed and the same number wounded.

Northmen.—The Northmen, hemmed in by the Carlovingian Empire and that of the Slavs, betook themselves to the sea. "The hurricane bears us on," they said, "wherever we wish to go." They set out on a career of pillage and slaughter and established themselves at the mouths of the Rhine, Seine and Loire, burning the cities of France and plundering the homes of the inhabitants. It was their devastations which prepared the way for Feudalism. After they had occupied France and the Netherlands, they invaded England and conquered it. Canute married the widow of Ethelred and paved the way for the union of the invaders with the conquered peoples, preventing the Danes from oppressing the English. In 861 A. D., they took the Faroe Islands and in 870 they took Iceland; while a number of years later they sailed as far as Greenland and Labrador, discovering America nearly a half millennium before Columbus. The Northmen were the Scandinavians, a Teutonic people, from whom later were formed the kingdoms of Norway, Sweden and Denmark. It was through the aid of the Northmen that the Duchy of France was raised to the rank of a kingdom, and Hugh Capet became the ancestor of a race of kings.

From time to time the English did as the Carlovingians' kings—bought off the Northmen, with the same final results, that they did not 'stay bought." But the Northmen, mostly Danes, who came to England, became English, as those who settled in France became French. This happened more quickly in Gaul than in Britain, because there were not as many of them and they were assimilated more easily. They adopted the manners and customs of the French till they came to be called Normans. The number of Danes who settled in England was very large. Being of close kin to the English of the Teutonic stock, they were rapidly assimilated and grafted upon the half-Romanized peoples a vitality which has endured.

Norway.—Norway with Sweden forms the Scandinavian peninsula, over a thousand miles long and at its broadest point 275 miles across. It has an area of 124,445 square miles, very mountainous. The people own their farms and have pastures back from the sea many miles, where they put out their stock for the summer. The horses are small but sure-footed, while in the extreme north is the reindeer. The

fisheries of Norway are of great value, including the herring, cod, mackerel, salmon, shark, seal, walrus and lobster. The Lutheran church is the state religion, to members of which alone are the offices open. Elementary schooling is compulsory, and there is a University at Christiania, the capital and chief port, Bergen and Trondhjem being the two other important seaports. (See Northmen.)

Oklahoma, Opening of (1889). — The territory now included in the State of Oklahoma was originally purchased by the United States from the Seminole Indians with the understanding that it would be reserved for Indians and negro freedmen. In the latter part of the nineteenth century the flood of migration westward created the demand that Oklahoma be opened to white settlers. The great cattle kings paid no attention to the law and took possession of certain tracts within the Indians' territory. Other white men made raids into the forbidden land, but were driven off by the Indians.

In 1889 Congress paid the Seminole Indians $4,000,000 with the understanding that there should be no more restrictions on Oklahoma, and on April 22, 1889, it was opened to settlers. Crowds camped outside the boundary awaiting the exact day and hour of opening and as the gates were thrown back, exactly at noon, there was a great cloud of dust and a beating of many hoofs as the pioneers rushed in to choose their homes. By nightfall a city of 10,000 inhabitants had grown up, Guthrie. By June Oklahoma City contained a business block and a number of residents. The scarcity of food, the arid heat and other hardships discouraged many of the eager settlers and large hordes departed. By December, nevertheless, Oklahoma boasted a population of 60,000 people, eleven schools and nine churches.

A movement was started among the neighboring Indians to drive off the white invaders which seemed for a time a real danger but came to naught.

In 1907 Oklahoma was admitted to the Union.

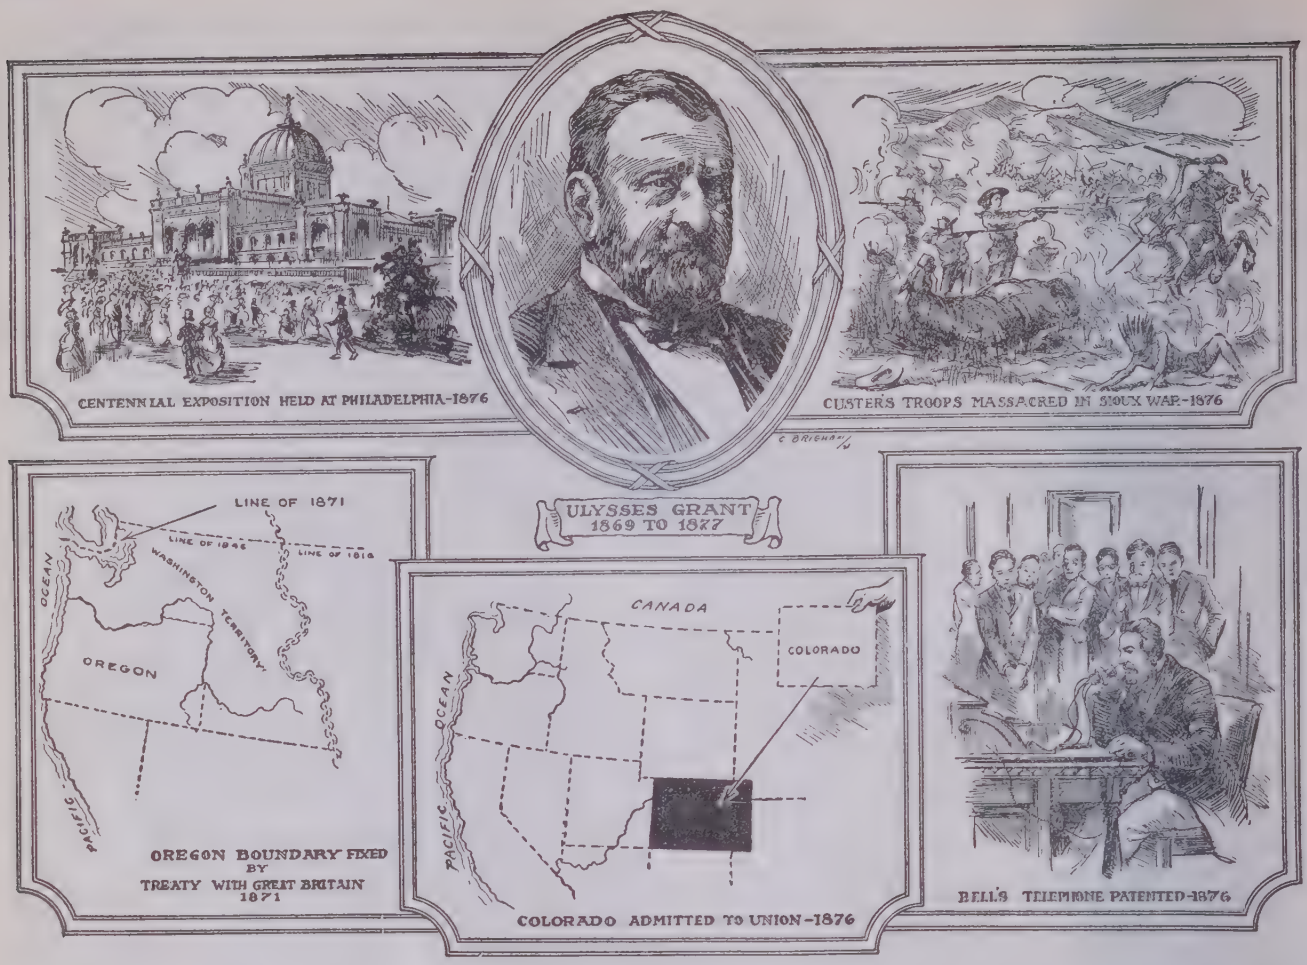
Open Door.—From time immemorial the distinctive policy of Japan has been one of exclusion. An impression prevails that the expedition of Commodore Perry to Japan in 1852-4, was a radical departure from our own exclusive policies and an interference with the hermetically sealed insularity with which Japan had surrounded herself. There were other reasons for this expedition, but the main factor was not only in closing her ports to the civilized world to which she had denied the obligations of a civilized nation, but in that when certain American sailors had been shipwrecked on the shores of Japan, they had failed to receive civilized treatment.

When, later, the Philippine Islands were retained by McKinley after the Spanish war, the Powers of Europe were well under way in what is known as the partition of China. We were next to England in the bulk of our commerce with China and this European policy was inimical to our trade there, to say nothing of the moral aspect of the case. This partition, of course, was concealed under the euphonious title of a "sphere of influence," but it was still effective in the monopoly of trade. It is now known, also, that Germany was preparing to take over the Philippines if the United States withdrew, and that the only thing that would prevent a world war was to take them ourselves.

On September 6, 1899, John Hay, Secretary of State, addressed his famous notes to Great Britain, Germany and Russia, each of which was asked to give the proper assurances, first, that it would not interfere with any treaty, port or vested interests in its so-called "sphere of influence;" second that the Chinese customs should not be interfered with, but should be collected by Chinese officials; and third, that it would not discriminate against other powers in matters of port dues or railroad rates.

Notes to the same effect were later sent to Japan, Italy and France. The only power addressed willing to sign such a declaration was England. All the other nations dodged the issue. A little later Lord Charles Beresford, returning from China by way of this country, asked the United States in an address before the San Francisco Chamber of Commerce to join with England and Japan in the policy of the Open Door. Our own insularity at that time prevented us from making good the policy that later came to be known as an American policy, but which, like the Monroe Doctrine, was first suggested by England and offered by England, but we fell back upon the blessed shibboleth of "no entangling alliances." John Hay favoured an alliance with England and Japan, both of which powers being ready for such an alliance, but we fell back upon the proposition that while we favoured it we would not fight for it, and the scheme fell through. That was doubtless the wish of McKinley instead of John Hay, but our feebleness prevented the making of a policy, which, to be a policy, must be good enough to fight for. Our responsible statesmen failed to realize that the "Open Door Policy" contained a sacred principle. Had we not failed the cause of civilization at that time, the powers might never have made their aggressions, the Boxer Rebellion might not have taken place and the Russo-Japanese War would have been prevented. More: all the terrible forces let loose by that war might have been held in leash and all subsequent history might have been not only different, but the Far-Eastern Question would not be as it is now—the most sinister thing that hovers over the future of the world. During the momentous days that preceded, accompanied and followed the Boxer Rebellion, John Hay stands out as the only living statesman in the world who combined vision with an adequate capacity of thought, but he realized the utter futility of his efforts. In a letter to John W. Foster he wrote the following significant words: (quoted from Litane). "What can be done in the present diseased state of mind? There is such a mad-dog hatred of England prevalent among the newspapers and politicians that anything we should do in China to take care of our imperilled interests would be set down to 'subservience to Great Britain'. How can I make bricks without straw? That we should be compelled to refuse the assistance of the greatest power of the world in carrying out our own policy, because all Irishmen are democrats and some Germans are fools—is enough to drive a man mad."

The upshot of the whole thing was that the "Open Door Policy" was ignored and has since been flouted and this has led to the Anglo-Japanese Alliance. The main opposition at that time came from Russia, later from Japan. Little by little the Policy has been whittled away till now there is not a shred left and Japan is mistress of China and therefore of Asia.



Panama.—Panama is a Republic occupying what was once the Isthmus of Darien and a department of Colombia. It asserted its independence in 1903, and was at once recognized by the United States and later by the principal powers of Europe. Under Spanish rule it had been a part of the Province of New Granada, which in 1718 became a viceroyalty, and encountered many vicissitudes after the war of independence, in successive revolutions. On November 18, 1903, a treaty was signed with the United States providing facilities for the construction and maintenance of the Panama Canal, in which treaty Panama grants a zone five miles wide on each side of the canal with exclusive control for police, sanitary, judicial and other purposes. Panama and Colon remain under Panaman control, but for defence the coast line and the Islands in the zone are controlled by the United States, together with jurisdiction for sanitation and quarantine over both cities and harbours. For this the United States paid $10,000,000 and after nine years will pay annually the sum of $250,000. The canal which has been built is now recognized as one of the greatest and most useful engineering achievements ever accomplished by man.

Panama Canal (1902-1914).—Ever since Balboa, in the sixteenth century, discovered the shortest route from the Atlantic to the Pacific across the Isthmus of Panama, it has been a world-wide dream to connect these two mighty oceans by a water-route through that territory and so increase tenfold the commerce between the East and the West. In the nineteenth century England, France, the United States and the republics of South America all considered projects for the building of a Panama Canal. France actually undertook the work in 1881 but failed to achieve more than a fraction of the excavation, due to the mismanagement of de Lesseps who made it a financial disaster.

In 1902, through the influence of President Roosevelt, the United States purchased the rights to the canal territory from France for $40,000,000 and offered to pay Colombia, in whose domain Panama lay, a sum of $10,000,000. Colombia's refusal to accept these terms might have foiled the entire scheme had not Panama, at this critical moment, shaken off the rule of Colombia and established an independent government. The United States recognized the Republic of Panama and Panama sold the desired region for $10,000,000, by the treaty of 1904.

The building of the canal was at first placed in charge of a commission, by decree of Congress, but there was unavoidable graft and inefficiency in this method and in 1907 Roosevelt transferred the management into the hands of the army engineers with Colonel Goethals at the head given supreme power. Goethals proved to be a master executive. He quelled all labor uprisings and brought about the completion of the gigantic task in 1913. This success would have been impossible without the services of Colonel Gorgas, chief sanitary officer, who wiped out the contagion of malaria and yellow fever, so prevalent on the Isthmus of Panama, and made the canal zone a safe and healthy region.

On August 15, 1914, the Panama Canal was officially opened for commerce and the neutrality of that zone proclaimed. The total cost of the undertaking has been estimated at $361,874,861.

Parthia.—The Parthian Empire flourished for about 500 years (250 B. C. to 226 A. D.). It was built upon the ruins of the Persian Empire of Darius and Xerxes. The Parthians were a branch of that Mongol tribe known as the Scythians who inhabited southeastern Europe and were among the lowest and most ferocious of the wild men of the times. While Cæsar was subduing Gaul, Crassus made war on these Parthians who outmaneuvered and outfought the Romans. Crassus was killed and but a remnant of his army escaped. In 250 B. C., Arsaces I. had defeated the Romans, being the chief of the Dahæ tribe and had become the first king of the Parthians. His son, Arsaces II., cemented the family power, while his son, Arsaces III., twice defeated Antiochus the Great of Syria. Mithridates I. reigned from 174 to 136 B. C., during which long period the Parthians extended their rule over the whole of Media, Bactria, Babylonia, Susiana and Persia. From 136 to 127 B. C., Arsaces VII. was attacked by many hordes of Mongolians, some of them the Scythians, and he and some of his successors fell in fighting them, but they were checked by Mithridates II. (124-87 B. C.), to be defeated by Tigranes of Armenia.

Peloponnesian War.—The Peloponnesian War was a long civil strife in Greece (431-404 B. C.), between Athens and Sparta with their respective allies, resulting in the destruction of Athens. This. one of the most useless tragedies and one of the most startling lessons in all history, had its roots in the growing individualism of the time, the "every-fellow-for-himself" theory of life. During the Golden Age of Pericles' "reign" the Athenians grew to love pleasure and luxury and peace, but they lost the lessons of discipline (on which the Spartan Republic was founded) and they forgot the kind of world they were living in. They lost sight of preparedness and neglected their defences. Men no longer strove for public welfare—they sought their own pleasure.

The conflict was brought on by the Corinthian jealousy of Athens' commercial superiority. Sparta came to the aid of Corinth, and, in the ensuing conflict, Pericles played a waiting game which might have been successful but for the plague which at that time was sweeping Asia Minor and had spread to Athens. Pericles died—half the population of Athens died and the rest were disabled. The war was marked by the utmost cruelty and brutality on the part of Sparta and her allies and Sparta showed a treachery scarcely equalled by allying with Persia for the destruction of Greek civilization. In return for Persian gold, Sparta allowed Persia to rule over all the Greeks of Asia Minor, and with this money the Spartans built fleets with which they destroyed Athens. Spartan supremacy was short-lived, that of Thebes was shorter, and all paved the way for Macedonian rule under Philip of Macedon and Alexander the Great.

Persia.—Early in prehistoric days two Aryan peoples, the Medes and the Persians, migrated from their home at the head-waters of the Oxus, in Central Asia, to the western part of the plains of Iran. Here the Medes settled, but the Persians moved on to the southern border of the Persian Gulf. The Medes and the Persians were fire worshippers. They believed in the age-long conflict between the powers of light and those of darkness: Ormuzd and Ahriman. Once neighbors of the Indian peoples and of blood kin, their religion became a dualism. The one deity made the world good, the other put in it all that is evil; so in man vice and virtue are struggling for the mastery. This is the religion of the Magi who grafted their dualism upon the monotheism of the ancient Iranians, got from the more ancient tribes of Media. We first find the Medes under Shalmaneser II., about 840 B. C., under the Assyrian power. Cyaxares, about 600 B. C., delivered the Medes from the Scythians. Under Cyrus the Great, the Persians gained the Iranian supremacy and founded an Empire that comprised nearly all the civilized nations of Asia. The conquest of Lydia and Babylon by Cyrus, of Egypt by Cambyses, and the victories of Darius, brought the best of the known world under Persian control.

At the time of Solon and Cyrus lived Crœsus, king of Lydia, a country lying on the Black and Mediterranean Seas, as far east as the Halys River. It was a country rich in minerals, and Crœsus became the

wealthiest king of antiquity. He subdued and ruled all the Greek cities of Asia Minor. But he was last and most famous of his line, for he was a contemporary of Cyrus the Great, who coveted his possessions. One of the search-lights of history comes here to enlighten us in a little story of a visit of Solon to Crœsus, who showed him all his gold and precious stones, upon which Solon replied: "When one cometh who hath more iron, he will become master of all this gold." We are told that when Cyrus had dragged Crœsus as a captive behind his chariot to the funeral pyre already lighted for his death, he spoke of Solon, whereupon Cyrus delivered him from death.

Cambyses conquered Egypt in his short reign of seven years and would have attacked Carthage, but for the fact that the Phœnician soldiers who manned his fleets refused to fight against their brethren.

Darius (521-485 B. C.), reconquered countries which had revolted and spread dominion as far as India and North Africa, and on to the borders of Macedonia. He organized his Imperial system into large districts called Satrapies and introduced order into his Empire and among those people whom he had overcome.

The Persian Empire stretched from east to west for 3,000 miles and was from 5 to 1,500 miles in width, covering nearly 2,000,000 square miles. Great roads and postal communications connected the cities and most distant provinces. From Susa to Sardis for 1,700 miles was one road with convenient stations over which couriers of the king rode in six or seven days. The Romans copied the Persian system of communications, which was one of the contributing causes of Roman power.

In 334 B. C., Alexander the Great crossed the Hellespont with 30,000 foot and 4,500 horse and defeated the Persians with 110,000 men. The next year he vanquished Darius at Issus, overran the whole Persian Empire, burning Persepolis, thus announcing that a new conqueror had arisen in Persia which from that time until the conqueror's death became the eastern part of the Macedonian Empire.

About two centuries before Christ, Arsaces founded the Parthian monarchy, while a century later arose the Sassanidæ, who restored the empir of the ancient Persians with its religion and institutions. This empire was overrun by the Mohammedans, who in turn suffered from the invasions of Ghengis and the Turks, followed by the Afghans, who carried destruction everywhere. Nadir Shah, a Persian, avenged the Afghan outrages, but civil war followed till the country was cut to pieces. In 1793 A. D., Aga Mohammed, a eunuch, raised himself to the throne and reigned during his lifetime, founding the present dynasty. In his lifetime war was carried on with Russia in 1813 and 1828, and with England in 1856-7. In 1896 the Shah Nasr-ed-Din was assassinated at Teheran. Muhammed Ali granted a constitution in 1907, but broke faith with the people and a revolution followed, causing his abdication in 1909. In 1935 Persia changed its name to Iran.

Persian Wars.—Darius, of Persia, after he had crushed the rebellious province of Miletus, sent his fleet against the Greeks, but the fleet was lost in a storm off Mt. Athos. In 490 B. C., a second expedition was sent, landing 100,000 Persian soldiers at Marathon. Here they were defeated by 10,000 Athenians and 1,000 Plateans. This glorious battle for a time saved the Greek civilization and made possible its full development during the Age of Pericles.

Themistocles of Athens, realizing that it was but a question of time before the Persians would come again, prepared an Athenian fleet in the face of much opposition by the people. In 480 B. C., Xerxes succeeded Darius as king of Persia and, after reducing Egypt, gathered the vast resources of his empire and sailed against Greece with 1,000,000 men and 1,200 ships. He bridged the Dardanelles and subdued Thrace, Macedonia and Thessaly. At the pass of Thermopylæ he was opposed by King Leonidas with 300 men, who died to a man, having been betrayed by a Greek traitor. The Athenian fleet retreated to Salamis, leaving Athens and Central Greece at the mercy of the Persians. Xerxes burned Athens. Themistocles, by strategy, forced a naval battle in which the Persian king saw the destruction of his fleet before his eyes. On the same day Pausanias, king of Sparta, with 100,000 men defeated the Persians at Mycale on the Asiatic coast. Athens now sought to free the Asiatic Greeks from Persian rule, which was accomplished when Cimon gained two great victories over the Persians off the coast of Asia and one near Cyprus, thus ending the Persian Wars.

Phœnicia.—The Phœnicians, like their neighbors, the Hebrews, were Semites. Both nations were possessed of a strong commercial sense, but while the former excelled as traders and explorers, the latter were pre-eminent in spiritual insight and, for their day, in moral character. The Phœnicians were inventors and cunning, tireless merchants, but their religious ideas were among the most depraved of all ancient times. They invented glassware, purple dyes, many improvements in building ships and in navigation; they were skillful weavers, deft artificers in gold, silver and precious stones. They carried their trade as far as the shores of Britain and the Baltic seas and to the confines of India, but they made no maps, left no records of their travels, and much they might have done for the world has been lost through their secrecy in matters of trade.

The home land of the Phœnicians was a narrow strip of sandy, and for the most part, sterile soil, yielding little to agriculture, but they owned the forests of Lebanon where they got the timbers for their shipwrights, and their main occupation was not in acquiring property, but in making posts for trading purposes, and in the development of colonies at the most advantageous points suitable for their commercial aims. One of their earliest settlements was in the Island of Cyprus in the Eastern Mediterranean which became the shrine of their goddess Astarte (or the Aphrodite of the Greeks), and Crete became another center of commerce. They founded Massalia in Gaul, now Marseilles; Cadiz in Spain, where they found mercury and silver and worked the mines; they got tin from England, amber from the Baltic, and pearls from the Persian Gulf; started caravans overland to India and settled many cities in Sicily, Malta, Leptis, Adrumentum, Utica, on the coasts of Africa, also Carthage, not far from the present city of Tunis. This settlement finally outstripped all other Phœnician cities and became so great as to arouse all the fear and envy of Rome. Tyre and Sidon were their two principal cities and became known the world over.

The Phœnicians were essentially city people and in their cities developed their so-called religion, worshipping the goddess Astarte, representative of the female generative principle, while Moloch was the god of destruction, and therefore of war. To these they made frightful and bloody sacrifices, the mothers sometimes throwing their own children into the flames to propitiate the deities, their religious festivities being grosly sensual. The Phœnicians were a nation of pacifists. They were opposed to war—hated it—and loved trade, and the consequence was that Tyre and Sidon were often sacked and plundered by the more virile races. Tyre alone was plundered fourteen times, to be destroyed finally by Alexander the Great; Sidon meeting a similar fate later on. Phœnicia was at the height of its power at about 1000 B. C., for centuries being subject in turn to Babylon, Egypt and Persia. To the Phœnicians is given the credit of introducing a written alphabet, later adopted by the Greeks and from and through them by the civilized world.

Pierce's Administration (1853-1857).

I. Kansas-Nebraska Law, The.—In January, 1854, Stephen A. Douglas of Illinois introduced the Nebraska Bill, flouting the Missouri Compromise, and providing that all the territory between the Missouri River and the Rocky Mountains, then a wilderness, should be admitted as Nebraska under squatter sovereignty rule. The Bill was recalled and the Kansas and Nebraska Bill was introduced, repealing the Missouri Compromise and making territory north of 36°-30′ open to slavery. The Bill was passed and Pierce signed it, upon which began the seven years' struggle in Kansas. Missouri organized the migration of slave men, calling on the people of the South to hurry in to the new state. Northerners also flocked in and settled. In November of the same year there was an election of a territorial delegate to represent Kansas in Congress, and armed bands flocked over the border from Missouri, took possession of the polls and illegally elected a pro-slavery delegate. The same thing happened substantially in March of the next year, when the legislature was to be elected to determine whether Kansas should be slave or free. As election day drew near armed forces came from Missouri like an invading army and after they had voted, returned to Missouri, "electing" every member but one, who enacted the slave laws of Missouri and slavery was adopted in Kansas. The Free state men repudiated the illegal legislature and held a convention at Topeka, elected a governor and legislature and Senators were elected to Congress to ask admission of Kansas as a state.

II. Underground Railroad, The.—Vermont, in 1850, had passed a Personal Liberty Law which was followed in 1854 by Rhode Island, Connecticut and Michigan, and the next year by Maine and Massachusetts to prevent negroes from being carried back to slavery from their boundaries. Such an attempt was made a crime. An organization through the whole North was effected to aid negroes escaping from their masters to flee to Canada. This was called "The Underground Railroad."

III. Know-Nothing Party.—The death of Clay, in 1852 (June 29th), and of Webster in October of the same year, was a great loss to the Whigs. The Kansas and

Nebraska Bill had alienated every northern Whig and the party began to fall to pieces. The same considerations deprived the Democratic party of thousands who formed an organization known as "Anti-Nebraska Men." The Whigs who could not join the Democrats formed the American or Know-Nothing Party. Large numbers of foreigners had penetrated the Mississippi valley, half of the inhabitants of Cincinnati being foreigners, great numbers over the entire country not being able to speak English. The people of Louisiana in 1841 founded the American Republican or Native American Party. It was a sort of secret cult whose members answered "I don't know" to questions of policy; hence the epithet: The Know-Nothing Party. In New York secret passwords were adopted in an oath bound organization and it spread so rapidly that it carried the elections in Massachusetts, Delaware and New York in 1854 and the next year carried six states and nearly carried six more.

IV. Republican Party, Formation of (1854).—Before the passage of the Kansas and Nebraska Bill (1854), a meeting of citizens was held at Ripon, Wisconsin, recommending the formation of a new party to be called the Republican party. When the obnoxious Kansas and Nebraska Bill had been passed, a thousand citizens of Michigan signed a call and met at Jackson to form a new party to be called Republican. They nominated a fusion ticket on which were Whigs, Free-Soilers and Anti-Nebraska Democrats. The same thing was done in Wisconsin, Vermont, Iowa, Illinois, Indiana, Ohio, New Hampshire and Connecticut, leading to a call for an informal convention at Pittsburgh on February 22, 1856. Here the national Republican party was formed and the Whigs and Know-Nothings ceased to exist.

Poland.—Poland was a former kingdom of Europe, with an area, previous to 1660, of 375,000 square miles and a population of 15,000,000. At the outbreak of the war in 1914, six-sevenths of the old Polish kingdom's area belonged to Russia. Previous to the tenth century the history of the country is purely legendary, but in the days of its power the land was ruled by a military aristocracy as despotic and arrogant as any in Europe. For centuries before and after the historic period begins, Poland resembles a shambles, rent by wars over rival claims of kings and nobles from within and from predatory aggressors from without. In 1240 the Mongols swept over the land, laying it waste and defeating the Poles, Silesians and Teutonic Knights, who in their turn had subdued the heathen Prussians. After the Mongol invasion, Poland split into a number of independent principalities, whose dissensions led to the loss of large districts, which began to be colonized by Germans who developed industries and municipalities, and with these, by large numbers of Jews driven out of western Europe by the persecutions.

In 1333-1370 lived Casimir the Great (III). He amended the laws, consolidated his territories and cultivated the arts of peace. Under his successor Poland became a dependency of Hungary. The greatest prosperity of Poland was under Sigismund I., the Great, who was beloved by the masses. Under his successor Lithuania was joined to Poland in a United realm which extended across Central Europe from the Baltic to the Dniester, with the western boundary within ninety miles of Berlin and the eastern frontier 150 miles from Moscow.

In 1674 John Sobieski came to the throne. In 1683 the Turks laid siege to Vienna with a great army. Sobieski went to the relief of the besieged city and with the German forces defeated the Moslems in one of the most decisive battles of the world's history, finally checking the advance of the Turk in his aim of world domination. This point marks the furthermost advance of the Turk in Europe, and this battle stopped it as that of Charles Martel halted the advance of the Saracen near the plains of Tours a thousand years before. This incomparable service of the Poles stands in vivid contrast with the base ingratitude of the Austrians who later participated in the partition of Poland and the annihilation of her political existence.

With the persecution of the protestants and the interference of Russia, began Poland's decline. Catherine of Russia joined Frederick of Prussia, and, Russia being attacked by Turkey, the first treaty of partition was concluded at St. Petersburg, August 15, 1772. Kosciusko organized a resistance, but dissensions between the Poles defeated the national hope at the moment it was about to triumph. The third and last partition was made October 24, 1795, between Russia, Prussia and Austria. Napoleon promised Poland her sovereignty, but his disastrous defeat in Russia made impossible for him anything more than the establishment of

the Duchy of Warsaw, formed out of the states taken by Prussia in 1793-1795. The partition of Poland was reaffirmed by the Congress of Vienna in 1815, another of the infamies conducted by the "Holy Alliance". By the beginning of the nineteenth century Poland had been reduced to a Russian province. After the rebellion of 1831, the army had been merged in the Russian forces; the university was suppressed; it is estimated that 80,000 Poles were sent to Siberia; and in the Russian official documents Poland was called the government of the Vistula. Independence regained 1919.

Polk's Administration (1845-1849). Whitman's Expedition to Oregon (1832-1843).—In the summer of 1832 four Flathead Indians from the territory now known as Washington came to General Clark at St. Louis asking for a white man's Bible. They were treated with the greatest hospitality, but given no Bible, whereupon a young clerk wrote an account of it to Pittsburgh which resulted in the sending of four missionaries to Oregon, among whom was Marcus Whitman. On a second trip he returned with H. H. Spaulding and their wives, the first white women to cross the Rocky Mountains into the Northwest. Hearing that the English were settling in Oregon, and knowing that the majorities of settlers would end the joint occupancy as agreed to by Great Britain and the United States in 1818, to save the country for America, Whitman made one of the most heroic journeys in the annals of men. He started for Washington at the beginning of winter, 1842, with the passes full of snow, making it necessary to cross Idaho, Utah soon to be the home of the Mormons, and thence to Santa Fe and the trail to St. Louis. Encountering swollen streams, prairie storms, blizzards and wolves, eating the bark of cottonwood trees, he reached Santa Fe February 3, 1843. In five months from the day he left the Columbia River he interviewed the Secretary of State, returning with 200 wagon-loads of emigrants. During the summer of 1846, 558 wagons rolled westward to Oregon and by the end of the year there were 12,000 people in the land and Oregon was saved to the United States.

II. California and New Mexico, Conquest of (1846).—During the Mexican War (see Mexican War), Col. Stephen W. Kearney was ordered into New Mexico. He left Fort Leavenworth in 1846 through what is now Colorado and took Santa Fe declaring the whole of New Mexico as territory of the United States. Thence he proceeded to California to find that it had been occupied by Fremont and Stockton. Daniel Webster opposed the acquisition of California on the ground that it would never be the home of anything but the sage brush and the rattlesnake. Others opposed the acquisition of Oregon, saying that it would never be a state of the Union. The maps of 1820-1850 represented the territory now known as Nebraska, Kansas, Colorado, Wyoming, Oklahoma and Texas as "The Great American Desert," and many believed it like the Desert of Sahara, and useless while there was so much good land to the eastward. But fortunately wiser counsels prevailed and American expansion proceeded apace. Lewis and Clark had penetrated the country to the mouth of the Columbia in 1804-1805, Zebulon H. Pike in 1806, giving his name to Pike's Peak, and Major Long, after whom Long's Peak is named, followed in 1820, and in 1832, Nathaniel Wyeth led a New England party to Oregon settling Idaho, and later came Whitman. In 1842, Lieut. Fremont was ordered by Congress to find a suitable pass for increasing emigration, pushing on to Walla Walla and Vancouver, thence southward to Sutter's Fort, now Sacramento. On a third trip he reached Monterey and was ordered out by the Mexicans. The American settlers, hearing of the war with Mexico raised the flag of The Bear State Republic, and Fremont with Commodore Stockton helped them to hold on till the arrival of Kearney. The matter of boundaries was settled in the treaty of Guadaloupe-Hidalgo, February, 1848.

III. Free-Soil Party, The (1848).—With another election coming on, both parties hedged on the question of slavery in New Mexico and California, and since neither party met the issue in its platform, several elements got together at Buffalo and organized the Free-Soil party, which became the precursor of the Republican party. They nominated Martin Van Buren for the Presidency on a platform containing some important declarations: that Congress had no more right to make a slave than a king; that there must be a free soil for a free people; that there should be no more slave states or territories; and that there be inscribed on their banners "Free soil, free speech, free labour and free men." The Whigs won and elected the hero of the Mexican War, General Zachary Taylor.

Porto Rico and Cuba.—At the close of the Spanish War, Cuba and Porto Rico passed under the military control of the United States. In a few months a government was organized for Porto Rico, which had been ceded to us, and the civil government provided by Congress became effective May 1, 1900. Cuba had not been ceded, Congress, under resolution of April 19, 1898, having signified its determination "to leave the government and control of the island to its people." In June, 1900, city governments were turned over to local officers who had been elected by the people and the War Department of the United States set the date of September 15th for a constitutional convention which met on November 5th and organized a government.

Portugal.—Portugal became a Roman province under Augustus. It was overwhelmed by the Visigoths in the fifth century and under barbarian domination until the Saracens and Moors seized the government in the eighth century. In 1143 Alfonso I. made Portugal an independent kingdom. The House of Burgundy ruled for 440 years. Napoleon deposed the ruling family of Braganza in 1807. After the fall of Napoleon political disturbances followed with a climax in the assassination of Carlos I. and his eldest son in 1908. The second son of Carlos, Manuel II. was driven from the throne and a Republic was established in 1911, with Manuel de Arriaga the first president. Portugal was on the side of the Allies in the world war. In 1921 the prime minister was assassinated and political insecurity was marked by Bolshevistic disturbances. On Dec. 30, 1923, serious bomb outrages occurred.

Punic Wars.—The first Punic War was a contest over Sicily, resulting from the rivalry of Rome and Carthage. Rome was at that time the greatest land power and Carthage the greatest sea power in the world. Upon request of the Messinians, whose whole male population had been put to death, Rome intervened in Sicily. A Roman garrison was besieged at Messina by the Carthaginian fleet in 264 B. C. There was also an unsuccessful attempt to take Syracuse, during which King Hiero deserted the Carthaginians and joined the Romans, who captured Agrigentum. The Romans, who had been endeavoring since 311 B. C., to form a fleet, gained their first naval victory west of Messina in 260 B. C. In 257 the Roman Senate decided to attempt a landing on the shores of Africa and sent a fleet of 330 ships to Sicily, where they took on board the troops. They were met by a Carthaginian fleet of 350 ships, which they defeated. Carthage rallied and defeated the Romans under Regulus at Tunis, two-thirds of the Roman fleet being destroyed in a storm upon their return. The Romans built a new fleet and captured Panormus, defeating Hasdrubal, and later exhibited a hundred captured elephants in Rome. The Romans were defeated at Drepanum and lost a large number of ships. After two more fleets had been destroyed by storms at sea, Rome for a time abandoned naval warfare. Hamilcar defended himself successfully against the Romans for six years, until the rich patriots of Rome built a new fleet privately with which they won the decisive victory at the Ægatian Islands, whereupon the larger part of Sicily became a Roman province.

The second Punic War resulted from the increasing prosperity of the Carthaginians in Spain and the determination of the Barcæ to revenge themselves on Rome. Hannibal's famous expedition to Italy took place during this war. He crossed the Pyrenees with 50,000 men and 9,000 horse and 37 elephants. Scipio failed to stop him and Hannibal crossed the Alps at the pass of the Little St. Bernard and reached the valley of the Dora Baltea with 27,000 men and a few elephants, with which he defeated the consul Scipio. He was reinforced by the Gauls and defeated the Romans at Trebia, over 60,000 Gauls having joined the army. Hannibal released all the prisoners of the Roman allies and thus incited nearly all Italy to desert Roman rule. Hannibal now conducted one of the most brilliant campaigns in history. 70,000 Romans fell in the battle of Cannæ and the rest were captured or dispersed, making the most dreadful defeat in the annals of Rome. But, meanwhile, Carthage had neglected her sea power while Rome had strengthened hers. Philip of Macedon, allied himself with Hannibal, but it was too late, for Rome was again able to transport her troops at will and she began to make war abroad. Carthage failed to support Hannibal in the field. For thirteen years he maintained himself in Italy without reinforcements from home, wherein he earned the name "Father of Strategy" from whom the Romans learned new arts of war. Scipio entered Africa where Hannibal came to oppose him. Here Hannibal was at last defeated and Scipio

earned the title of "Africanus". Carthage sued for peace and Rome, which had been fighting for existence, now won the World Empire.

The third Punic War arose out of the desire of Rome to destroy Carthage. Rome was perfidious, Carthage heroic, and Carthage was treacherously disarmed. In their desperation the Carthaginians raided their temples for arms; women gave their hair for strings for catapults; public buildings were torn down for building materials and metals. But the Roman legions forced their way over the walls and Carthage was utterly destroyed.

Rome.—Owing to their geographical configuration, Greece and Rome seem to have set their faces in different directions. The Greek rivers and harbours open to the Orient, those of Rome to western seas. Back to back they face two worlds, one the past, the other the future. So the two nations stand for the two great opposites of thought and character: individualism and nationalism; versatility and virility, the centrifugal and the centripetal forces in life. This great historic fact lies at the basis of all statesmanship. Rome grew from a village community to a World Empire because she placed order above culture, law above anarchy, and organization above inefficiency.

Rome caught up within itself all the past had done and disseminated itself throughout all the world, for modern Europe has been made out of the remnants of Rome. It has been said that all roads lead to Rome; so all roads lead from it—in the history of civilization. The secret of Rome's greatness is in that she solved the problem of combining the strength of organization with the elasticity of local independence. The Italian peninsula was inhabited by many peoples long before the Romans became an entity. Rome was at first a city state like Athens and Sparta, but her people, while less clever, were more stable, and more highly socialized. They developed the power of doing "team work".

Up to the age of the Republic, 509 B. C., there is little authentic history of Rome, but at this time we find about 60,000 people scattered over about 350 square miles, and caring little for art or literature, for two hundred years without schools, few of course, being able to read or write. Up to this date Rome was ruled by kings in a society divided into the family, the Curia, or brotherhood, and the tribe, divided again between plebeians and patricians. Laws were unwritten and known only to nobles. When the king wished to consult the people on questions of public interest criers went about with ox horns, calling them to the Assembly where a majority of the Curiæ decided whether there should be peace or war or whether some old custom should be changed. New kings were elected upon nomination by the senate, who in turn acted as interrex, during the interregnum.

Rome was built upon seven hills on the left bank of the Tiber, about fourteen miles from its mouth. As the population outgrew the Palatine Hill, it became necessary to drain the swamps lying nearby, and the last of the kings, the Tarquins, built the cloaca maxima and other great sewers through which an ox cart could be driven loaded with hay. In the center of Rome was the market place (Forum), about which centered the industrial life. The Romans seized the lands of their neighbors, made the people slaves, and built public places for religious worship and public administration. Many interesting traditions must be overlooked before we come to the real history of the Republic, about dictatorships, senators, popular assemblies, struggles for popular rights, the demand for a written code which resulted in the Decemvirs and Twelve Tables in 450 B. C., under which the plebeians gained the rights of property and contract and trade, of marriage with patricians, of voting in the assemblies and of holding the lower offices. The Romans adopted many military ideas and customs from the Greeks, and, unlike the Oriental peoples who fought under the lash, the Roman citizens became the most formidable soldiers of antiquity. Subject states were organized into provinces, governed by an officer sent out from Rome, who had little to do with their internal affairs, but who farmed out the collection of taxes to the highest bidders. The Romans exploited the provincials who were kept in a state of serfdom; great estates were built up to the detriment of the small farmers, and many prosperous towns fell into ruins, the traders and artisans flocking to Rome. Thus grew up a class of idlers depending upon the rich for food and circuses, and the morale of the population declined.

In 390 B. C., the Gauls under Brennus sacked and burned Rome, which Camillus

helped rebuild. The Latins (of Latium), were subdued, and after them followed the Samnite wars in which they were subjugated in 292 B. C. The next year the Calabrians fell to the Romans, with which victory the Romans completed their first half-millennium. They founded a navy and sailed against Carthage in the first Punic War, then sent troops under Regulus, to Africa where he defeated the Carthaginian army, but was in turn overcome. The first Punic War lasted twenty-three years, till 241 B. C. Meanwhile Hannibal was overrunning Spain and the African states, advancing into Italy, defeating the Romans at Cannæ and conducting one of the most brilliant campaigns in history. Hannibal was defeated at Zama in 201 B. C., and the second Punic War ended. Hostilities arose between Rome and Syria under Antiochus the Great, who was beaten in the battle which gave Scipio Asiaticus his name. Hannibal, while assisting the King of Bythinia, heard of a plot on the part of his ungrateful host to deliver him to the Romans and committed suicide by taking poison. Next Macedonia passed under the sway of Rome, when Scipio Æmilius destroyed Carthage after it had existed for seven hundred years. Corinth was destroyed and Greece became a province of the Roman Empire under the name of Achaia in 146 B. C.

Tiberius Gracchus, in the interests of the poorer classes, endeavored to revive an old statute called the Agrarian law to diminish the estates of the great land owners, and twelve years later his brother made a similar attempt, but there was much tumult and disorder and both the Gracchi lost their lives.

Barbarian tribes from the North defeated five Roman armies from 113 to 105 B. C., ravaged Gaul and Spain and threatened Rome, when Marius, a Consul of the people, raised an army of volunteers from the poorest class, and led it against the enemy, defeating them decisively. His successors used their armies for political preferment, and civil war ensued. Catiline became the champion of the increasing numbers of the poor, seeking to seize the property of the rich to divide it among them. Cicero was elected as Consul in 63 B. C., and he was able to detect the plot of Catiline and thwart it, delivering his four famous orations against Catiline. Catiline was overcome and killed in battle. Cicero had saved a republic which had existed for the benefit of the aristocrats and those proletarians who sold their votes for any cause. The vast majorities of the population toiled as veritable slaves, to enable the few to live in the most unjust extravagance, when Julius Cæsar arose, a young patrician of transcendent abilities, and as a champion of the commons, became Consul in 59 B. C. Cæsar carried a law for the distribution of the government-owned lands in small holdings among the needy, and through this he built up his own political power. By the year 50 B. C., he had conquered Gaul (France, Belgium and Holland), and through just measures made the people his friends, who kept some measure of self-government. Some of these took service in the Roman army, while others settled down to agriculture and industry and other civilized pursuits. Gaul became a buffer state between the Romans and the Germans. Pompey organized the populace at home and abroad to start another civil war, but they were overcome by Cæsar's trained veterans and the power of the aristocracy was annihilated, their estates were confiscated, and Cæsar became master of the whole Roman Empire. The new Dictator instituted many reforms. He abolished the custom of farming out the collection of taxes to bidders; he built public edifices; he granted citizenship to many of the provincial cities and defended the people against the official class. But his assassination plunged the Empire again into civil war which in the end brought the Roman Republic to an end.

Meanwhile the Greek religion had taken deep root; a notable literature had grown up; aqueducts and public roads had been built, and in the second century Greek architecture had been introduced while the Greek school system had taken root. The Roman children were taught reading, writing and arithmetic, committing to memory the Twelve Tables of the Law. In the grammar schools the pupils studied Greek literature till they had a literature of their own, the teachers being mostly Greeks. With the increase of learning was the growth of slavery and of great fortunes; and with the diminishing of the population came a moral degeneracy with civil wars and class hatred. Rome grew into an absolutism and the institution of Divus Cæsar appeared in which the Imperator was worshipped as a god when he was least godlike of all men. Roman policy was to Romanize Africa, Britain, Gaul, Spain and the whole West, and to this end a vast system of roadways was built through every town and city and to every province in the Empire. These roads were built upon beds of rock through hills and over stone bridges and causeways. They became the highways for armies and messengers of state. Rulers were careful to establish the laws, customs and language of Rome among the provincials, who were given citizenship when they were ready for it, and for the most part they became loyal Roman citizens.

Octavius, who conquered Anthony and Cleopatra, was named Augustus and reigned when Jesus was born at Bethlehem, in Judea. Rome fell to weak and cruel men, the most indecent moral maniac of them all being Nero, who began the Christian persecutions in 64-67 A. D., when Peter and Paul were put to death in Rome, the former being crucified and the latter beheaded. Under Vespasian (68-79), the rebelling Jews were conquered by Titus, who destroyed Jerusalem. Domitian, in A. D. 81-96, instituted the second great Christian persecution, but he was followed by four good Emperors, Trajan, 98-117, Hadrian, 117-138, Antoninus Pius, 138-161, and best of all, Marcus Aurelius, 161-180. A. D. Yet under Trajan and Marcus Aurelius were the third and fourth persecutions of the Christians. The Empire began to sink rapidly under the most infamous rulers known to "civilized" history, the last and most infamous persecution being under Diocletian in 303. A D., the son of whose successor was Constantine the Great, the first Christian Emperor. In 312 A. D., Constantine gave liberty to the Christians and ten years later made Christianity the religion of the Empire, in 330, making Constantinople (Byzantium), the capital.

With the division of the Empire between the East and the West, the seeds of dissolution, which had been nourished for long, began to grow rank weeds and finally smothered the life of the Empire. The people had everywhere been oppressed and robbed, not only by the governors who had to make three fortunes (to pay his bribing debts, to provide for his judge's bribes, and to keep him in plenty for the rest of his life), but the whole economic life of the people had been ruined by money lenders and speculators who had eaten their property and reduced them to debt and starvation. Rome fell through economic causes. She had become rotten. Luxury had degenerated the upper classes; want had weakened her lower classes; the uneven distribution of wealth had caused the scum of Roman society to rise to the top and the dregs to settle at the bottom—and there was little left between. Rome fell because she could no longer hold together.

Roosevelt's Administration (1901-1909). Roosevelt Policies.—President McKinley had been assassinated at the Pan-American Congress at Buffalo in the summer of 1901, and Theodore Roosevelt as Vice-President became the President of the United States. Trusts had been organized under McKinley at an alarming rate. Up to the year 1898 there were but about sixty of these combinations ranging in capitalization from $1,000,000 to $5,000,000, but in the next two years 183 new trusts were organized with a capitalization totalling $4,000,000,000—in two years three times the number and many times the capitalization of all hitherto in the history of the nation. President Roosevelt openly declared that no honest business need fear his administration, but he made war on illegal privileges and the bribery of legislatures, and declared that monopolies should have proper government regulation. During his administration over forty suits were ordered by him and started by the Attorney General.

Roosevelt, F. D. (1933-) Became President after three years of constantly increasing depression. He courageously assumed leadership over Congress and the Government. All banks were closed. The sound ones reopened with renewed public confidence. 18th amendment was repealed. Controlled inflation started. Instituted farm relief. Instituted unemployment relief putting 250,000 men to work on reforestation project. Instituted aid for railroads, banks, industry and small home owners. Law passed making the hoarding of gold a criminal offense. Congress gave almost dictatorial power to President Roosevelt. U. S. abandoned Gold Standard.

1935, $4,800,000,000 spent for recovery and relief. Social Security Act passed. 1936, Roosevelt reëlected. Proposed (1937) wide reorganization in executive departments and Federal Court reform. Sit-down strikes. Minimum wage law for women and Wagner Labor Relations Act declared constitutional.

Rural Free Delivery (1896).—The Free Rural Delivery of mails was inaugurated in 1896, and on January 1, 1913, the parcel post system was instituted in the United States. These two institutions have done more than all other things to destroy that isolation which was so characteristic of the American farmer, especially in those districts where holdings are large and distances from supplies and neighbors are great.

Russia.—Russia in Europe comprises over half of Europe, and Russia in Asia equals a territory about twice as large as the whole of Europe. There is little sea coast; the mountains are mostly along the borders; the rest of the country in both Asia and

Europe is mostly a vast plain; while the three principal rivers, the Dnieper, Volga, and Neva, have largely shaped the whole history of the country.

The Varangians who were exiles of the Northmen found their way through the Baltic and sold their services to the City of Novgorod. This was later subjugated by Rurik in 862, A. D., who assumed the title of grand prince. Thus began the state which later became the Russian Empire. The Scandinavians were blended with the Slavic peoples in course of time. Under Vladimir I. (980-1015), the people were converted to the Greek faith, which is a branch of Christianity. The country came to be divided into many weak and discordant and petty principalities, chiefly because the sovereigns divided their rule among their sons. A ghastly series of petty but bloody wars without result bled the country white. Finally came the invasion of the Mongols who destroyed the principality of Kiev and made the land of Vladimir tributary. For two hundred years, these predecessors of the "Reds," the Golden Horde, kept the yoke on the Volga. Towards the end of the thirteenth century Moscow became the seat of Russian power, from which Muscovy was named. Ivan III., or Ivan the Great (1462-1505), conquered Novgorod which submitted to Moscow and the rule of the Mongols was done. Ivan abolished the law of appanage in his own family, thereby establishing the unity of Royal authority and the unity of the state; but he retained it among the nobility which divided and enfeebled them. Ivan, the Terrible (Ivan IV.), spent fifteen years in breaking the Boyars and in a ukase in 1593, he reduced all peasants to servitude, forbidding them to change masters or land. But the real creator of Russia was Peter the Great, who at ten years of age (1682), became Czar. In 1697 he went to Holland to learn the arts of ship-building, in England he studied her manufactures and in Germany her military machine. The Japanese have evidently taken a lesson from his book. Upon news received at Vienna of a revolt, he hastened back and beheaded 5,000 and broke on the wheel or hung 2,000 more. He organized an army, founded schools including a naval academy, and only a great war prevented the union of the Don and Volga by a canal. He founded St. Petersburg and added to his territory. Later he visited France and engaged engineers and skilled workmen with foundries and manufactories. He established uniformity of weights and measures, built ship yards and canals, founded a commercial tribunal, opened the mines of Siberia, looking as far afield as the Amur in Eastern Asia, and applied the military hierarchy to the administration of the whole empire. He died in 1725, and Frederick II. said of him: "The Czar Peter is the nitric acid which eats into iron."

Russia won a war against Turkey, divided Poland, gave Galicia to Austria. By the 1774 and 1792 treaties, Russia navigates the Black Sea, gained protectorate over Wallachie and Moldavia, absorbed Kouban and Crimea.

The Romanoffs ruled Russia throughout the eighteenth and nineteenth centuries according to the lavish regime of sovereigns who claimed power by divine right. The extravagance of this system aroused the fury of the downtrodden peasantry who took advantage of the situation the World War offered and who overthrew the monarchy by the revolution of 1917, assassinating Czar Nicholas and his family.

After successful economic planning, the Union of the Socialist Soviet Republic (Russia) reached a definite status among world powers under the dictatorship of Stalin in 1935.

Russo-Japanese War.—Japan's pretext for declaring war on Russia was the refusal of Russia to withdraw from Manchuria (a province of China). Japan claimed to uphold the independence of China and Korea and to defend the Open Door, or unrestricted trade, in China. But when, after the war, Japan openly annexed Korea and secretly extended her power over Manchuria, and also ignored the Open Door, it was evident that the underlying motive of the war had been the Japanization of Asia.

The Japanese gained a great advantage before the war was declared. The Japanese Ambassador drank a toast with the Russian Ambassador at Seoul after hostilities had begun. The Siberian railroad had just been finished by the Russians, but it was a single-track road and unable to meet the demands of transportation so far away. The Japanese were nearby and had untold advantages, but in spite of these, they were at their last extremity when President Roosevelt intervened and arrang-

ed a meeting at Portsmouth where a treaty was signed September 5, 1905. This treaty recognized Japan's paramount interest in Korea, which later developed into the absorption of that unhappy country into Japan through cruel and harsh measures. Manchuria was to be evacuated by both countries, but Manchuria is now practically an adjunct of the Japanese Empire. This war has had far-reaching effects in the awakening of the whole of Asia and the raising of many new questions and problems still unsolved, all of which must be reckoned with by the statesmen of the world.

Saracens.—The Saracens were the *Sarak hein*, men of the East. With the rise of Mohammed in the seventh century, a man who could neither read nor write, and who turned his epilepsy to account as inspirational visits from the angel Gabriel whose presence he could not endure, the Saracens developed a religious fanaticism which soon took over the character of brigandage, and aggressive war which is brigandage writ large. One of the successors of Mohammed, Omar, during a reign of ten years, reduced 30,000 towns and cities to his dominion; demolished 4,000 Christian temples; erected 1,400 Mohammedan mosques; destroyed the library of Alexandria with its 500,000 volumes, every book carefully written by hand, and distributed them over the city to keep warm the public baths for six months. Here perished those records of the best thought of antiquity, whose illustrious fragments remain in the few monuments of human genius mostly given us by the Greeks. In less than a half century the Saracenic Empire was more extensive than what remained of the Roman possessions, and in a hundred years from the death of Mohammed his rule and his religion had spread from India to the Atlantic Ocean, comprehending Persia, Syria, Asia Minor, Arabia, Egypt, North Africa and Spain, and threatened to engulf Europe, when the tide of Islam was finally stopped by Charles Martel. Cufa on the Euphrates succeeded Mecca as the seat of the Mussulman Empire, when it was removed by Almansur to Bagdad, the most illustrious Caliphate, the next being Cordova. Haroun al Raschid, the twenty-fifth Caliph, who was the contemporary and friend of Charlemagne, appeared in "The Arabian Nights," and this wise and humane ruler established schools and patronized learned men, becoming the most illustrious of the whole dynasty which is contemporaneous with what is called the Augustan Age of Arabic literature. Bagdad remained the seat of the Saracen Empire for 490 years, until in the six hundred and fifty-sixth year of the Hegira, (A. D. 1258), an irruption from the heart of Asia under Halaku, the grandson of Zhengis Khan, brought the Saracen Empire to an end, abolished the Caliphate, and the conqueror dragged the last of the Caliphs, in a leather bag through the streets till he expired. The Saracens are now the Arabs. (See Arabia.)

Bagdad was called the city of peace. There fell the Saracen Empire. It fell because it had grown rich and rotten. It had departed from the stern discipline of the founders of the faith. Almansur left at his death about $150,000,000 in gold and silver, which treasure was exhausted in a few years by the vices of his children. In a single pilgrimage to Mecca, his son, Mahadi, spent 6,000,000 dinars in gold. In his train were camels laden with snow to cool the fruits and liquors of the imperial table. His grandson gave away about two and a half million dinars of gold before he took his feet from the stirrup. At his marriage a thousand pearls of largest size were showered upon the head of the bride. Gibbon, in giving a vivid picture of this ostentatious magnificence, quotes an authentic memorial found in the cabinet of the dead Caliph: "I have now reigned about fifty years.... Riches and honour, power and pleasure have awaited my call.... In this situation I have diligently numbered the days of pure and genuine happiness, which have fallen to my lot: they amount to *fourteen*: O man, place not thy confidence in the present world." *The luxury of the Caliphs, so useless to their private happiness, relaxed the nerves, and terminated the progress of the Arabian Empire.*

Scandinavian Peninsula (Sweden and Norway).—This peninsula covers an area (Sweden), of 170,516 square miles, and (Norway), 121,779. It is almost surrounded by water, being connected with the main land by Finland and Lapland. The greater part of the land in both countries is mountainous, and lying far north, has a cold climate. The coasts are indented by deep fjords or rocky inlets, but there are some well watered valleys and plains. Nearly one-tenth of the area of Sweden is occupied by lakes, and there are many small rivers abounding in fish. The very rich mineral deposits are mostly in the central districts, including copper, an iron which produces the finest steel, lead, nickel, zinc, cobalt, sulphur, alum, porphyry, marble and coal. Agriculture is mostly confined to the southern districts, which produce enough for local needs, while the forests covering about half of the surface of the country produce the best of fir, birch and pine.

Christianity was introduced into Sweden and Norway in the ninth century by German missionaries, and the people responded to the teachings of the Reformation with the result that the prevailing religion is Lutheran. At the beginning of the seventeenth century Sweden had her most famous monarch and her ablest statesman. Gustavus Adolphus was one of the world's most able soldiers and Axel Oxenstjerna reorganized the administration of the country and promoted industry, commerce and education, while strengthening the army and navy. Gustavus Adolphus was a great champion of Protestantism during the Thirty Years' War, meeting his death at the battle of Lutzen in 1632. The Peace of Westphalia added largely to the possessions of Sweden, but subsequent events whittled away her continental holdings. In 1810 Bernadette was elected crown prince by the states, and by the treaty of Kiel, Norway was ceded to Sweden, that country having been with the allies against Napoleon. Bernadotte succeeded to the crown in 1818, under the title of Charles XIV.

Scotland.—Scotland was known in Roman times as Caledonia and was inhabited by Celtic tribes known as Picts, speaking a Gælic language. The Scots came from Ireland in the fifth century and in 843 A. D., crowned Kenneth as king. Columba was their great missionary, and through him they converted the Picts, Cymri and the English of the northern districts to Christianity. The country was known as Ireland until the tenth century, when the land of the Picts and Scots was called Scotia, or Scotland. The last half of the eleventh century, under Malcolm Canmore (1057-93), was a period of revolution. The English customs were encouraged through his wife the sister of Edgar Atheling, and the English language was encouraged with the advent of English settlers. The southeast was almost purely English, while the Anglo-Saxons moved north, and the Normans came in with the French culture.

The area of Scotland of 30,328 square miles is divided between the Highlands and Lowlands, which are natural geographical divisions, separated by the Rivers Clyde and Forth. To the north the country is almost altogether mountainous with many fertile tracts well watered by rivers and lakes, while to the south the land is more level and richer in minerals and agriculture, yielding immense quantities of coal and iron. The country takes high rank in manufacture, the ship-building enterprises on the Clyde being among the first in the world. Education is universal and the average intelligence is very high. The people, as a whole, are very moral. The Presbyterian religion is the prevailing one.

We have the vivid pictures of the invasions of Agricola by his son-in-law, Tacitus, than whom antiquity produced no abler historian, and it was he who invaded Scotland as far as the Grampians and called the country Caledonia. Followed centuries of warfare, during which the people suffered from the invasions of the Danes, Norsemen and English, when Robert Bruce won the independence of the country at the battle of Bannockburn in 1314. The history of Scotland from that time on is one of continuous warfare with England until the union of the two countries was consummated by the legislative act of union in 1701. From that day there has been peace with prosperity, and Scotland is as truly and devotedly a part of Great Britain with England as is Massachusetts with New York a part of the United States.

Seven Years' War.—The Seven Years' War was a commercial struggle of England and Prussia against France and Austria (1754-1763). Frederick II. (the Great), of Prussia invaded Saxony and took its troops into his army, while France sent two armies into Germany, the one defending the Anglo-Hanoverians while the other was defeated at Rosbach. Without any help save English gold, Frederick for years fought against Austria, Russia, France and Sweden. The withdrawal of the Russian forces after the death of the Czarina alone saved him from defeat. Rallying, he again took possession of Silesia, and Austria sued for peace. Meanwhile the English had defeated the French troops in America (see French and Indian War), and France had lost, besides her Canadian territory, all of her navy. She signed the Treaty of Paris with England in 1763.

Siam.—Siam has no authentic records till A. D. 1350, when the old capital was founded. The Portuguese began to trade there in 1511, but in the next century were supplanted by the Dutch. The trade with Europe was unimportant until Sir John Bowring's treaty opened up the country to the Europeans. A few Siamese youths have been sent to Europe to be educated. France acquired some territory under the treaty of 1807, and two years afterwards Great Britain obtained important rights in the Malay states.

Siam has an area of a quarter of a million square miles of mountainous country, covered in places with swamps and jungles, covered with forests of many valuable woods, such as teak, sandal, rose and other hard woods which are exported from the ports of Bangkok, Meeklong, Puknam and Paklat. The available soil is rich and yields rice, pepper, tobacco, sugar, coffee, sago, gums and fruits. The monarchy is absolute and Buddhism is the prevailing religion. The present dynasty was founded in 1782, and in 1855-6 treaties were made between Siam and England, France and the United States, resulting in the introduction of many of the arts of civilized peoples to those of Siam.

Siberia.—Siberia, with nearly 5,000,000 square miles of territory, is about as large as the United States and Canada, exclusive of the Yukon and Alaska, from the Rio Grande to the Arctic Ocean. Before the war it was divided into four provinces under Russian dominion: Irkutsk, Tomsk, Tobolsk and Yeniseisk. Ninety per cent of the population of 6,470,600 (census 1906), are Russians, the most of the Mongolians living in the Amur district and on the Pacific coast which was not detached from China until 1858. Except in this region near to the Pacific Ocean, practically the whole of Siberia drains into the Arctic Ocean. There are four great rivers, which, until the building of the Trans-Siberian Railroad, were the chief arteries of civilization, affording, with their tributaries about 30,000 miles of navigation. There were 410 steamers plying on these rivers and their tributaries in 1910, 200 operating on the Amur, 140 on the Yenesei and the others on the Lena and Obi. A canal, 586 miles long connects the Obi with the Yenesei.

The Trans-Siberian Railway was begun in 1891 and finished by 1902. The route from Petrograd to Vladivostock is 5,481 miles long. This road cost $172,525,000, but being a single-track road, it offered insufficient means of communication to enable Russia to defeat Japan in 1904, so far from the bases of supply.

The mineral and agricultural resources of Siberia are very great. How great indeed will not be known in many centuries, perhaps, but enough is known of the natural resources of Siberia today, to enable us to grasp some idea of the significance of Russia in the future economic equilibrium of the world. For example, 100,000,000 poods of coal were mined in 1912. Siberia already produces two-thirds of Russia's gold, the same year having yielded 1,014,094 troy ounces, and of silver 134,465 ounces with 3,780 tons of copper. There are immense deposits of iron already known and large quantities in easy reach of tide water, but little attention is being paid to this for lack of development of the country before the Great War and now, of course, because of the resulting chaos. The Urals furnish the most of the world's supply of platinum. There are known to be over 300,000,000 acres of good farming land of which the Amur and the coast furnish 60,000,000 acres.

Russian chronicles show an expedition to have gone to the "land of Siberia." before Columbus discovered America, (1483). Since that time it has been developed and settled, and there have been wars and usurpations. In 1651 Russia came in contact with the Manchus who had just conquered China. The first treaty made with a western power was with Russia in 1689. In 1860 under the treaty of Pekin, Russia secured the country from Ussuri to Vladivostock which was founded in that year. Later the Russians advanced to Port Arthur and Dalny which were taken by the Japanese, first in the Chino-Japanese war and forced to be returned by the powers of Europe and later in the Russo-Japanese war since which they have been held by Japan. Until 1900, convicts were exiled to Siberia by Russia under circumstances of great cruelty, but the system was abolished at the outbreak of the Great War.

Sixteenth Amendment (1913).—The Sixteenth Amendment to the Constitution of the United States was declared in force on February 25, 1913, empowering Congress to lay and collect taxes on private incomes after having been ratified by a sufficient number of states to make the Amendment valid.

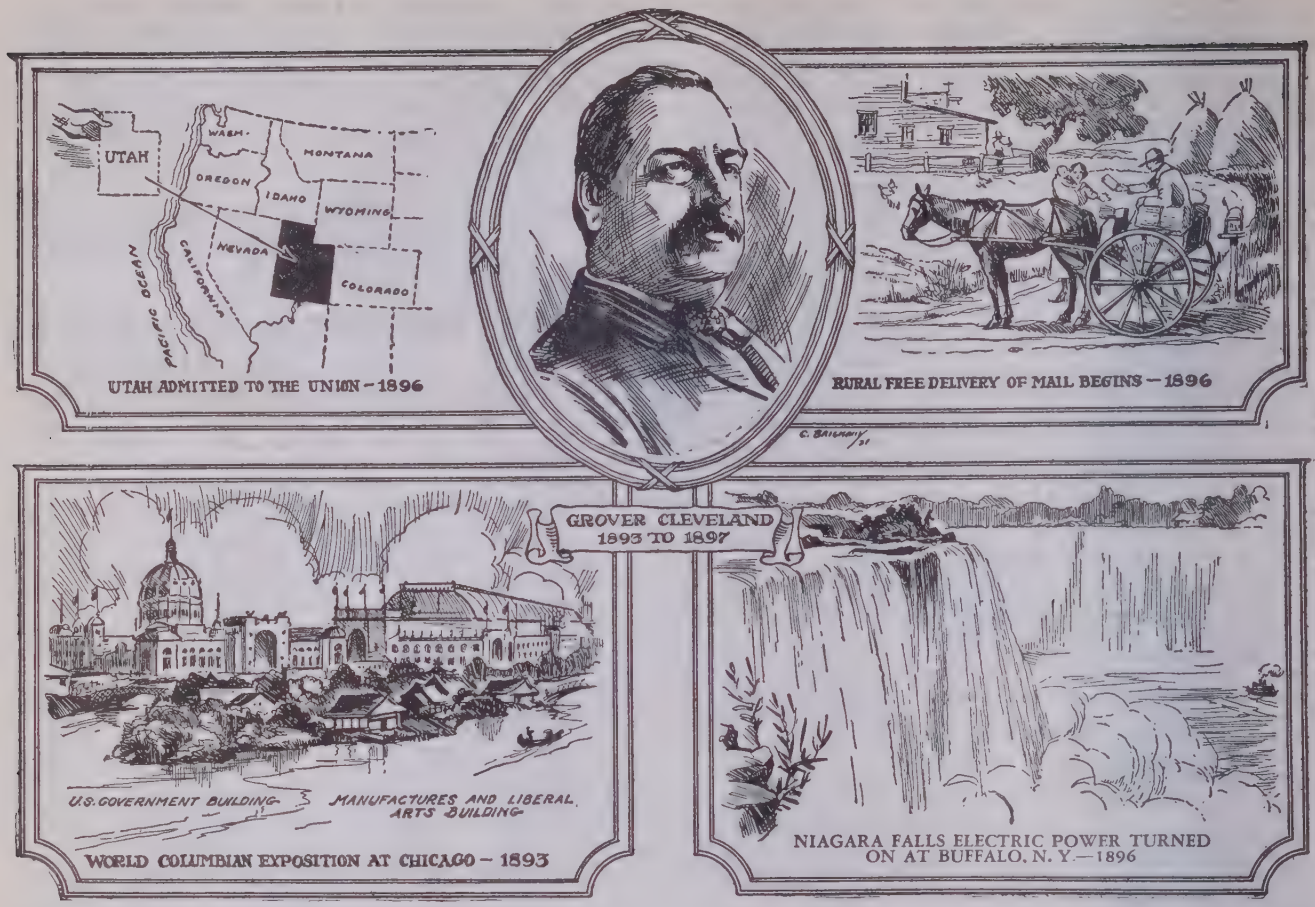
Spain.—Cadiz in Spain is the oldest town in Europe having been founded by the Phœnicians about 1100 B. C. Through Tyre their merchandise was sent out to Egypt and to Nineveh and Babylon. Spain was conquered by the Carthaginians nearly a thousand years later because of the tribal feuds of the Celtiberians and Lusitanians

in the western and central districts and the Cantabrians and Basques at the north. They took Saguntum from the Romans. This provoked the following war. The Romans under Scipio expelled the Carthaginians in 205 B. C. Cæsar gave full citizenship to the Trans-alpine Gauls in Spain but in 409 A. D., Spain was overrun by the Suevi, the Alans and the Vandals, but they were checked by the Visigoths who absorbed the Suevi, and were dominant in the peninsula till the Arabian conquest in 711. The amalgamation of the Berbers with the Arabs and North Africans resulted in the race called the Moors. By this time Spain had become enfeebled by discord, and in the great battle of Xeres de la Frontera, near the Guadalquiver, the Visigothic kingdom was destroyed and in the next eight years the Moors conquered the whole of Spain. They even occupied a province north of the Pyrenees, threatening to encompass the whole of Christendom but were finally defeated in one of the mightiest battles of the world in the plains between Tours and Poitiers by Charles Martel, the grandfather of Charlemagne. It was in the north in the mountainous regions of Cantabria and Asturia that the first successful resistance to the Arabs began, near which grew up the kingdom of Navarre, Castile growing out of Leon which developed from Asturia a Christian country. In the beginning of the eleventh century also starts the kingdom of Aragon. Ultimately through the union of Castile and Aragon arose the Spanish monarchy of the fifteenth and sixteenth centuries. Portugal joined Castile and Aragon in their opposition to Moslem rule, Portugal on the Atlantic, Aragon on the Mediterranean, and Castile in the interior. The two Spanish kingdoms were united with the marriage of Ferdinand and Isabella in 1506, and it is interesting to note that the Moslem kingdom of Granada in the South, the last stronghold of Islam in Spain, was conquered by these two kingdoms in 1492. The union of these two states developed a national character. John II., second son of Ferdinand, poisoned his own son, the Prince of Vianne. He was also the father of Ferdinand "the Catholic," under whose crown the kingdoms of Aragon, Castile and Navarre were brought together.

The cities of Castile were the richest and most flourishing of any in Europe outside those of Italy, and the people had more power, compared with that of their sovereign, than those of any other European country. Christopher Columbus, a Genoese, with the conviction that India could be reached by sailing in a westerly direction, and having applied in vain to other European Courts for assistance, was given three ships by Isabella of Castile. In these he and his little party sailed west and discovered the Island of San Salvador, which he so named in honour of Jesus. Columbus built a fort on Cuba, and founded a colony. Of the continent and ocean that lay between him and India he did not dream; he thought he had found India till he died. He suffered from the plots of the envious; was sent home from one of his voyages by the agent of Ferdinand, in chains, spending the last two years of his life in sadness till in 1506 he died. Cortes conquered Mexico and Pizarro, Peru, whose peoples they treated with the most ferocious and perfidious cruelty in the annals of men. One incident of Pizarro is to the effect that after Atahualpa had provided the ransom of $17,500,000 in gold, he was basely put to death. In 1587, Drake destroyed the Spanish fleet in the harbour of Cadiz, whereupon, Philip fitted out the "Invincible Armada," to chastise England, the army of Parma in the Netherlands, co-operating. But a storm at sea helped the English and but fifty-four out of one hundred and fifty vessels got back to Spain. Explorations of Florida and the Mississippi followed, and the war of the Spanish Succession with the opening of the seventeenth century, resulting in the peace of Utrecht.

Spain began to decline in the sixteenth century, for many reasons; principally that the deluge of gold and silver from America placed a premium on idleness, through which industry declined and money was spent to keep up expensive wars and an expensive Court. Gold was spent abroad for what should have been made at home and Spanish commerce declined with the morale of the people, while in religion and politics grew up an absolutism which has made the history of the Inquisition as infamous as that of Mexico and Peru, under Spanish rule. Under this regime the South American colonies broke away from the mother country and became independent Republics. After a long series of insurrections, and after the intervention of the United States, Cuba became a free country. In the Spanish-American War of 1898 Spain lost Porto Rico, the Philippines and Guam to the United States. Instead of asking an indemnity from a vanquished nation, the United States paid $20,000,000 for the Philippines.

In 1931 came the end of the kingdom of Spain. The king, Alfonso XIII, withdrew from his throne and from Spain, leaving the newly born Republic in the hands of a provisional president, Alcala Zamora. The transition from a monarchy to a republic was accomplished without revolution. In 1936 Miguel Agaña was peacefully inaugurated president. Civil War 1936-7.



Spanish-American War.—During the latter part of the nineteenth century, Cuba was the only remaining possession of Spain in the American Hemisphere, and here Spain ruled with such rigid cruelty that the natives were constantly in rebellion. During the last insurrection the administrations of Cleveland and McKinley maintained strict neutrality while the American people sympathized keenly with the maltreated Cubans. Neither civil, political nor religious liberty existed on the island. Power was exclusively in the hands of the Spaniards who extorted taxes from the natives to pay for the army that enslaved them. General Weyler replaced Marshal Campos, who had failed to pacify the island, and the former's policy of terrorism was denounced even by many of the Spaniards. The American battleship, *The Maine*, was blown up in the harbour of Havana on February 15, 1898, with the loss of 250 seamen and two officers. This disaster fanned the flame of American anger. On April 20, 1898, President McKinley signed a resolution of Congress recognizing the independence of Cuba, whereupon Spain declared war. On land and sea the American forces were victorious—in Cuba, Porto Rico and the Philippines—and by the peace of August 12, 1898, the United States was granted a protectorate over Cuba, Porto Rico and the Philippines with the understanding that these territories were to be released as soon as they had established satisfactory governments. The Spanish-American War ended America's isolation in world politics.

Statue of Liberty Unveiled (1886).—In 1886 the Statue of Liberty was completed and set up in New York Harbour and there dedicated in memory of the old-time friendship between the French Republic, that gave it, and the United States in whose free institutions the French people thus happily testified to their faith. The expense of the pedestal was met by contributions from the people of the United States. The bronze statue itself is 150 feet high but the whole structure rises 300 feet above water. It is now illuminated at night by electricity.

Sumter, Firing on.—When the first group of southern states seceded from the Union in December, 1860, and formed a Confederacy (see Civil War), they began at once drilling soldiers, taking possession of the forts in their territory and seizing the military supplies of the United States. President Buchanan's cabinet was made up of northern and southern men and so could come to no decision to stop these ominous events. Major Robert Anderson, a loyal Unionist in charge of Fort Moultrie, Charleston, S. C., moved his troops to Fort Sumter, where his defence was stronger and there refused to evacuate. A steamer bearing supplies to Major Anderson was fired on by the Confederates and returned without delivering her cargo. Before March, 1861, all the southern forts except Sumter, Pickens and Key West had surrendered to the Confederated States, and seven states had seceded. When Lincoln became President, a fleet was sent to the relief of Sumter, but before it reached its destination the Confederates had fired on the fort. A bombardment of twenty-four hours resulted in the exhaustion of all Anderson's ammunition and he surrendered. No one had been killed on either side. Anderson and his troops returned to New York; Lincoln called for volunteers. Thus began the Civil War.

Switzerland.—Switzerland is a small Republic in Central Europe without a sea port. It is the most mountainous country in Europe in the small area of 15,722 square miles Here are the Alps. The most level tracts are in the cantons of Bern, Basel and Zurich, backed by the Jura Mountains on the French border, while the chief valley is that of the Rhine in the south. Neither are there navigable rivers, but there are many deep and beautiful lakes. Forests cover about one-sixth of the entire area, while agriculture is pursued in the valleys, yielding cereals, flax, hemp and tobacco. The mountain slopes occupying two-fifths of the whole area are good for pasturage, and these yield diary products, hides, tallow, enough for export. There are many factories in the 22 states or cantons which constitute this Republic.

The original inhabitants were the Helvetii and Rhetii (Celts), who were conquered by Cæsar and Romanized. They were overrun in turn by the Burgundians, Germans, Alemannians and Frankish kings and were Christianized in the seventh century. During the Reformation the cantons took opposite sides, but by the treaty of Westphalia, Switzerland was recognized as an independent state. The present constitution was adopted in 1848, revised in 1874, and the railroads were nationalized in 1898. There are large elements of French and German people in the land, but the state was neutral during the war.

Syria.—Syria of old, like Belgium of modern times had the misfortune of being an easily accessible land, lying open to Egypt and Babylon, as well as to the Mediterranean; and thus it became the great highway of the ancient world, as well as one of the chief battlegrounds. The Egyptians and the Babylonians in turn vied with the Hittites to the North for possession, and the small states of Syria were politically helpless between their more powerful neighbors. The most powerful Syrian state was that of the Hittites, who fought alone for two centuries with both Egypt and Assyria, from 1300 to 1100 B. C., but did little except prepare the way for the rise of the Jewish nation.

The two important Syrian peoples were the Phœnicians and the Hebrews, the former living in a narrow strip of country between the Mediterranean and the Mountains of Lebanon, about twelve miles back from the coast. This strip of land, about 120 miles long, was the home of the first great commercial nation in the world. Having found no room for expansion on land, the Phœnicians made themselves ships from the firs and cedars on the mountains of Lebanon, in which ships they crept from port to port, from island to island, trading, plundering, enslaving the inhabitants.

About 1300 B. C., it is recorded that Phœnician ships swarmed the waters of the Mediterranean. So it was that in the ancient world one of the smallest nations became one of the wealthiest.

The Phœnicians developed many industries in fine glass and metal work, pottery and textile fabrics. The famous Syrian purple dye, which had been discovered when a hungry dog, eating a sea snail, was seen to have purpled his teeth, gave them the purple fabrics with which they made one of their great monopolies in trade. Unable to seek land dominion, they paid tribute at home and sought dominion at sea. They had intercourse with Europe, Asia and Africa, discovering Spain in the days of Homer. In Spain they found silver, lead, iron, tin, gold, corn, wool, oil, wax, fruit and wine, and established a trade through which they brought the raw materials back home and took the finished products again to these and further countries, even to the shores of the Baltic, where in turn they got corn, wool, hides, furs and amber in exchange for their manufactured products. They set up caravan trains which went into Syria, Palestine, Egypt, Babylon and to the Indian Ocean, and in 620 B. C., they circumnavigated Africa at the behest of an Egyptian king. To aid in the extension of commerce they established trading posts or colonies wherever they sailed, not only for trading with the civilized peoples of the East, but for developing the raw materials of the West. Gold and pearls came from the Far East; slaves, ivory, lion and tiger skins from the interior of Africa; frankincense from Arabia; linen from Egypt; "tin from England, and iron from Elba." Tyre and Sidon were among the richest cities of antiquity. "What city is like Tyre?" asks Ezekiel (XXVII, 32, 33). "When thy wares went forth out of the seas, thou filledst many people; thou didst enrich the kings of the earth with the multitude of thy riches and of thy merchandise."

Taft's Administration (1909-1913).

I. Payne-Aldrich Bill (1897).—Immediately upon the election of President Taft, the Republican party, pledged in its platform to reform the tariff downward, passed the Payne-Aldrich Bill which was substantially the same as the old Dingley Bill, so obnoxious to the people of the country who were not "stand-pat" Republicans. The Bill was not only signed by the President, but defended by him on the public platform as the best in our history. Many Republican leaders accused him and the party of breaking the election pledges.

II. Titanic Disaster (1912).—The New Steamship, *Titanic*, of the White Star Line, was sunk in mid-ocean on its maiden trip, through striking an iceberg late in the evening of April 14, 1912. 1,503 persons, many of them eminent, in Great Britain and the United States, being drowned, with but 703 saved.

III. Polar Discoveries.—R. E. Peary, U. S. N., reached the North Pole on August 6, 1909, after many unsuccessful attempts made by him and others, while two years later, Captain Roald Amundsen, a Norwegian, reached the South Pole, on December 14, 1911. Captain R. F. Scott, of the British Navy reached the South Pole a few days later, January 18, 1912, and perished there with the remainder of his party on March 29th, of the same year.

Taylor-Fillmore Administration (1849-1853).

I. Slave or Free.—The great conflict was more and more over slavery, which was ever the burning question. The South made an effort to anticipate the action of the North to keep the new territory free soil. Missouri sided with the South and Virginia adopted resolutions to the effect that an attempt to enforce the Wilmot proviso would be met with determined resistance "at all hazards and to the last extremity," and at a dinner, a Senator from South Carolina offered the toast: "A Southern Confederacy." In the North the tension was as great, where the legislatures of every state except Iowa passed resolutions to the effect that Congress had the power and was in duty bound to prohibit slavery in the territories. Suddenly it was found that California was bound to be the home of something besides "the sage brush and the rattlesnake", for gold had been discovered in that territory.

II. Discovery of Gold in California (1848).—In January, 1848, a man named Marshall came into Sutter's Fort (now Sacramento), with particles of a yellow substance which he had found in the sand of the American River while digging a mill race for a Swiss emigrant, named Sutter who ran a mill at that point. A conference was held at midnight behind locked doors, but the news leaked, and the people went wild. Sailors left their ships. Business was stopped. Stores were shut. Everybody flocked to the diggings, and when the news came east, the rush began and people crowded towards California by way of Panama, Cape Horn and across the prairies in wagons, filling up the country with pioneers, known later as Forty-Niners. These men made a free state constitution and applied for admission to the Union.

III. Clay's Compromise and Squatter Sovereignty.—General Taylor died on July 9, 1850, and Fillmore was inaugurated as President of the United States. So bitter had been the controversy which was waged over the extension of slavery, that there seemed little hope of an adjustment. The South demanded the right to take their slaves with them or go after them when they got away. The North wanted California admitted as a free state and the Free Soilers insisted on having no more slave states nor territories. It looked as if the Union were to be split into two republics when Clay came forward with his famous compromise: that California be admitted as a free state; that the slave trade be abolished in the District of Columbia; that there should be a new Fugitive Slave Law; and that the people of Utah and New Mexico should make their states what they pleased. This plan was called Squatter Sovereignty. Clay defended his measure eloquently; Webster denounced the abolitionists and advocated the compromise; Willian H. Seward spoke for the Free Soilers, declaring that all the territories were free, not only under the constitution but by the "higher law" of Justice and humanity.

IV. Fugitive Slave Law, The (1850).—The New Fugitive Slave Law provided that any colored man or woman might be turned over by the U. S. Commissioners to anyone who claimed the negro as an escaped slave, and that he be deprived of the right of giving testimony. It commanded all good citizens to aid in the capture and delivery of slaves to owners and prescribed fine and imprisonment for anyone who harboured a slave or prevented his capture. Immediately "man hunters" invaded the North and dragged back to captivity free negroes who had lived in contentment for thirty years. In spite of all this a few slaves were rescued and freed. Uncle Tom's Cabin appeared and crystallized the growing sentiment of the North against the infamy and the result of this wicked law was that great numbers became abolitionists.
